What is wanted is a broad course of study, comprising both literature and science. But it is imperative that the whole method of teaching languages (both ancient and modern) should be changed. Let boys be set to read easy portions of the best authors as soon as possible, and let the grammar be learned *pari passu* with the translation. The present system of keeping boys for many months learning by rote grammatical exceptions (many of which they will never meet in their reading) before they are put to read an author has resulted, and must always result, in creating a hatred for such subjects, not merely in the boy with a special turn for science, or in the average or dull boy, but in many who have a real talent for literary and historical studies. By an improved method of teaching languages a couple of years might easily be saved in the school life of an average boy, and the time thus saved would be available for other subjects, such as English and natural science. Such a reform would render it possible to bring all boys of average ability (and it is the average boys that we must think of) up to a common standard of proficiency in the subjects which the universities may reasonably require in an entrance examination—classics (including Greek Testament), English, mathematics, and natural science—and at the same time would check the premature specialization of the boys of superior powers.

MRS. SOPHIE BRYANT, D.Sc., lectured in Dublin (May 1) on "The Future of Irish University Education and the Part of Irish Women in it." Though belonging herself to the Protestant minority, she regarded the justice of the Catholic argument—the claim of the Catholics of Ireland, not as Catholics, but as three-fourths of the people of Ireland, for a self-governing, democratic university—as irresistible. Whatever the solution, any new or reformed university must provide education and open up prizes and emoluments irrespectively of sex or of creed. She suggested that steps might be taken in Ireland itself without waiting for Parliament. Why should not that association take a lead in organizing a representative movement containing lay and clerical elements? If this could be done and the nucleus of a fund collected, she thought it would be hard for the Liberal party when it came into power to refuse to Ireland what it had granted to Manchester, Birmingham, and Liverpool.

ON Conference Day (April 29) at the Alexandra College, Dublin, Mrs. Bryant spoke on "The Training of Teachers." She dwelt on the fundamental fact that every one teaches, more or less, and every one is taught; the instinct to communicate one's ideas and feelings to another is very urgent, both the teaching and the learning instinct being strong. "The mind of a child," said Mrs. Bryant, "is like a delicate sea anemone; strike it, or breathe hard on it, and it closes against you." Ideas could not be got into it from the outside; it must grow of its own action. It had to be remembered that, while some were born teachers, there were many that were not, and when so many teachers were wanted in the world, some of the latter class were required to go on with the teaching work of the time, and these, if left to themselves, would not develop that knowledge, insight, and tact which is natural to the more gifted. In order to bring the education of the country up to its proper level, the rank and file of the teachers stood urgently in need of preliminary professional training.

MR. A. C. BENSON has contributed to the *National Review* an interesting article on an Eton education—its weak side and its strong side. Describing the average boy who leaves Eton, he says: "The basis of his education has been, as a rule, the classical basis; that is to say, the greater part of his working hours have been devoted to Latin and Greek. A small percentage of fair classical scholars, and a still smaller sprinkling of distinguished classicists, is the result. But the average boy leaves Eton with no mastery of either of these languages. He cannot, as a rule, construe at sight an easy passage in either or turn a piece of English into either language without a large crop of mistakes." The boy "never reaches the stage at which classics become literature." He urges that for the large class of boys not intended for the university the strictly classical programme might be with advantage modified. He believes that a boy who left the school with a thorough knowledge of French, "who knew the elements of science, so as to be able to understand something of what was going on in the world around him, in heaven and earth and sea, in field and wood," who knew arithmetic and had a reasonable knowledge of geography and history, would leave school a fairly educated man. Mr. Benson would have a very simple core of education on the lines just indicated, and then any evidence of special capacity—linguistic, mathematical, scientific, or historical—should be carefully observed, and at a certain age of a boy's studies should converge more closely upon a special subject, care being taken at the same time that the general education should not be neglected.

ARCHDEACON GIFFORD, whose scholarly edition of Plato's "Euthydemus" we noticed only last month, has died at the age of eighty-four. A favourite pupil of Dr. Kennedy, he returned from his Cambridge successes to be second master at Shrewsbury for half a dozen years; and at twenty-seven he succeeded Prince Lee as Head Master of King Edward's School, Birmingham, which he administered for fourteen years with conspicuous success. At forty-one he retired from teaching, and became successively Rector of Walgrave and of Much Hadham, and Archdeacon of London and Canon Residentiary of St. Paul's. From 1889 he lived in retirement at Oxford. He was more distinguished as a classical scholar than as a theologian or a preacher.

UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

CAMBRIDGE. THE May term is upon us with unusual vigour; not content with dust and east wind, it has given us a real scarlet fever scare. As the danger is now over, and the epidemic stamped out, it may be advisable to give the bare facts to prevent exaggerated reports gaining currency. At the end of last term, when all but the belated ones had gone down, a considerable number of cases broke out in the town and among the few undergraduates left in residence. The medical authorities quickly traced the outbreak to a definite milk supply, and even were able to discover the actual and precise cause of the infection. The authorities at Trinity (to which college the infected milk had been supplied) promptly communicated with all their men, and as a result several cases were detected which would otherwise have escaped detection. Although the total number of cases was very large, there have been prac-

tically no secondary cases, and we are now revelling in a clean bill of health in pleasant anticipation of the usual post-terminal festivities.

The long-deferred election to the vacant Provostship of King's has resulted in Dr. James being appointed. Rumour has it that a junior member of the college, on being informed of the fact that Dr. James was now Provost, remarked sympathetically that his friends would be sorry, as they all hoped "Monty" would get the post. Dr. Montague James is a strong man, popular with all classes, who knows what he wants, and generally gets it. He will be a success.

There has been a very pretty debate in the Senate on a matter of vast importance, whether the new University buildings in Downing Street shall be fenced off from the highway, and, if so, whether the necessary line of demarcation shall take the form of chains and posts or of vertical rails. The Master of Christ's led the Posters, while Profs. Hughes and Clark marshalled the forces of the Railers. Before these notes see the light the momentous question will be decided by the Senate, the Council having given us two alternative graces so that we may back our fancy in the usual way.

A propos of discussions in the Senate, there has been a proposal made by the Senate that reporters should be allowed to attend, but by 38 votes to 31 the Senate rejected the suggestion. It is perfectly possible that the great London dailies consider university news hardly worth reporting, though it is equally true that, if any great personages come to inspect or open a new institution, we get a splendid advertisement for our wares at a comparatively infinitesimal expenditure of time and trouble.

A curious little point of university procedure has recently arisen, the decision of which may lead to important results. Politicians and constitutional lawyers know the far-reaching effects due to the absence of the King from the Cabinet meetings and the increase of power due to the secrecy of Cabinet deliberations. A similar process of evolution is going on with regard to our Boards of Studies. Some of the Boards, in presenting their reports, have appended the signatures of those only who concur; but the Special Board for Biology and Geology has struck out a new line by sending in reports signed by the Chairman on behalf of the Board. To this the Vice-Chancellor took objection; but the Chancellor, on a reference, has given his decision in favour of the Board.

The University has just published its official guide to the various examinations, Tripos and Poll, which are coming upon us thick and fast. The Guildhall, Corn Exchange, various assembly-rooms, holes and corners in various places, are utilized to accommodate the examined crowds. A wise idea has suddenly struck the Council—that it might, perhaps, be cheaper to build examination-rooms than to incur large sums annually for hire. Another suggestion has irreverently been made by an irresponsible outsider that there is a lack of convenient rooms for dancing in Cambridge, and the Council's proposition may be supported for what may be called extraneous reasons.

We are still without news as to the name of the new Bishop of Ely; but a Cambridge Head, who is also a professor, would fill the office to perfection. Dr. Cunningham, the Vicar of St. Mary's, is still without preferment, probably because a wise Prime Minister fears to confine so many-sided a man in the narrow limits of an episcopal palace.

A movement has recently been started with a view to making the Little-go a University entrance examination, and it is desired by the promoters of the idea that the two older Universities should continue to have a conjoint test. The plan, if adopted, would rid us of the reproach that the University is engaged in the education of a large number of fourth-form boys. There are many colleges which take men who know little Latin and less Greek, and to deprive these of the fee-paying and game-playing undergraduates would, indeed, be a cruel blow. The scheme will not pass; but it will be interesting to see what valid arguments can be urged against it.

The break of the Coopers Hill institution has led to the University of Oxford making a bold bid for the remains, but Cambridge follows where the sister University leads. We are going to establish a Diploma in Forestry, with a man to show people how to get it, and doubtless we shall soon have an incursion of students able and willing to make a practical study of forestry in our glorious Backs.

There is a strong opposition to the continuance of the Studies Syndicate after its elaborate report has received so crushing a defeat. It would be perfectly easy to appoint a syndicate of impartial men which would remedy the admitted defects in many of

our examinations. Men with a mission will not condescend to details; details are the death of the unhappy victims.

The examinations are well upon us. By the time these notes are in print the place will be getting gay for the final flutter before the Long. If the weather continues as in May, the ladies will have to bring up their furs for the festivities.

SIR ARTHUR RÜCKER'S annual report (May 10) dealt London. in detail with the operations of the University. Some of the preliminary work done since the reorganization of the University had begun to bear fruit in the academic year now approaching its termination, and the activity of the University had been extended in several directions. The question of the conditions of entrance to universities had been prominently before the public during the year, and it was satisfactory to be able to state that there had been no falling off in the number of candidates for the London Matriculation. A very important step had been taken by the Universities of Oxford, Cambridge, and London, which had agreed upon a scheme for the mutual recognition of the certificates given for their respective entrance examinations. Already twenty-five persons had been matriculated as students of London University under this agreement. Considerable progress had been made with the project for the concentration of the teaching of the preliminary and intermediate medical studies in a few centres under the control of the University. Arrangements were in progress under the auspices of the University for establishing centres at University and King's Colleges, and Mr. Alfred Beit had given a munificent donation of £25,000 in aid of the scheme for the establishment of a third centre on the South Kensington site. It was much to be hoped that this generous gift would be supported by other large subscriptions. It was a matter of vital interest to the public that the unique opportunities for medical education afforded by the great metropolitan hospitals should not be wasted; and, if they were to be utilized, it was essential that the whole curriculum of medical education should be easily accessible to London students. No doubt it was undesirable that this end should be attained by mingling the resources of the hospitals and the medical schools; but, if the two were to be separated, it was necessary that medical education should receive the same public help that was ungrudgingly given to engineering. It was not too much to say that medical men did more unpaid work for the public than did the members of any other profession, and that, in return, less help had been given by the public to medical education, in London, at all events, than to any other of the principal branches of applied science. Large as the gifts to the University were, it was unfortunately true that much money was needed to make up for the neglect of University teaching in London in the past. Though the increase in the Government grant to university colleges would be of great value, the equipment of both University and King's Colleges needed improvement, and the salaries of the professors were quite inadequate. The whole question of retiring pensions, to which a private donor had just devoted £2,000,000 in America, was untouched in London. Public confidence in the University was proved by the fact that the Goldsmiths' Institute and upwards of £80,000 had been given to the University in the course of the year, and the gathering of the various colleges around the University as a centre was being followed by the beginnings of a corporate life among the students, for whose benefit the University existed.

THE transfer of the Civil and Mechanical Birmingham. Engineering Departments from the old University buildings in the centre of the city to Bournbrook was effected during the Easter holidays. The premises for the students in Electrical and Mining Engineering and Metallurgy will be ready for occupation by October, but the great halls completing the first block of new buildings will not be ready for another twelve or eighteen months. The experimental mine is practically complete. The power station, the electric light equipment, and the plant for the production of Mond gas for heating purposes are also ready.

In October the new clubhouse for the undergraduates will be opened, with accommodation for 500 members. The University Council gave the site and £2,000 towards the cost of building and furnishing, which is between £6,000 and £7,000. The remainder has been raised through the liberality and energy of the Vice-Chancellor (Lord Mayor Beale) and a number of friends.

THE University Court has approved a fresh Manchester. statute on the subject of the Matriculation Examination. There is to be a Joint Board of eighteen members—five from each of the Universities of Liverpool, Manchester, and Leeds, and (unless otherwise determined by the agreement between all the four universities) three from Sheffield University—with power to co-opt not more than three persons of educational experience. Also it was resolved that “any Committee to be constituted for considering objections made by the Universities of Manchester, Liverpool, or Leeds to proposed statutes and ordinances of the University of Sheffield should consist of twelve members—three to be appointed by each of the said universities.” The Vice-Chancellor remarked that after some years the representation of Sheffield on the Joint Board might be increased. He also intimated that it was advisable that the examination should not be affected before the next academic year, and it was left with the Council to fix the date when the substituted statute should come into operation.

It was decided to alter the ordinance as to the second examination for the Mus.B. degree, so as to provide that the following diplomas be accepted as exempting from the examination in proficiency in playing a musical instrument:—Associateship of the Royal College of Music, Associateship of the Royal College of Organists, Associateship of the Royal Manchester College of Music, Licentiateship of the Incorporated Society of Musicians, Licentiateship of the Royal Academy of Music.

THE matriculated students for the past year Edinburgh. number just over 3,000, a figure not reached since 1893-4. In Arts there is a slight falling off, which is more than counterbalanced by the increase in Science. Divinity, Medicine, and Music all show satisfactory increase. In Law there has been a sharp decrease from 399 and 388 in the two previous years to 344 in 1903-4, a figure lower than any since 1876-7. This suggests, the Finance Committee of the General Council of the University state in a report, the urgent need for the new regulations for the degree of B.L., which have been for some time under consideration by the Courts of the four Scottish universities. In addition to the 1,487 matriculated medical male students, there are 105 non-matriculated female students of Medicine in attendance at classes in Edinburgh and qualifying for graduation.

At the half-yearly meeting of the General Council of the University the Business Committee presented a report dealing with the place of modern languages in bursary competitions. Delegates from the Councils of the Scottish universities had had a conference on the subject, and the feeling was that, in view of the changes made by the Carnegie system and otherwise, the bursaries should be given for excellence in a number of subjects, varied to suit the bent of the student's mind. The Conference did not wish specialization to take place too early. The report was approved, and it was decided to send the recommendations to the University Court. The Council unanimously approved the Scottish Education Bill, and expressed the sincerest wish that it would be passed in this Session of Parliament.

PROF. A. PEDLER, F.R.S., Vice-Chancellor of the Calcutta. University of Calcutta, and Director of Public Instruction, Bengal, at the recent convocation of the Senate of the University for conferring degrees, said that fifty years ago university education in Bengal had no existence, the doors of western learning had not been opened, and the knowledge of western science was absolutely beyond the reach of any one in the country. During the last half-century the possibilities of obtaining western knowledge and western culture, and the facilities for higher education, have been rapidly developed, until a whole network of educational institutions has been spread over Bengal. The form of education being given to the people is not, however, affecting them in the most satisfactory way: there is a want of concentration of effort, of thoroughness of method, and of the intelligent appreciation of means to ends. After a comparison between what has been accomplished in Japan and in Bengal, Prof. Pedler came to the conclusion that the secret of the brilliant success of university education in Japan is to be found in the observance of certain cardinal principles: patience in obtaining results; thoroughness in work; concentration of university work in a few really well equipped and strongly staffed colleges, each institution being devoted to one special section of learning, which is taught thoroughly; adaptation of the courses to the practical wants of life and of modern civilization, as ex-

emplified by the large proportion of graduates who elect the practical rather than literary courses of study; originality as shown by the large number of young men who undertake research work, and by the large number of original contributions to science. In the future, Prof. Pedler remarked, it will be necessary in Bengal to adopt all these principles and to adhere to them with uncompromising tenacity, if university work is to be placed on a really satisfactory footing.

BIRMINGHAM AND UNIVERSITY IDEALS.

ADDRESS BY THE LORD CHANCELLOR.

THE Earl of Halsbury (Lord Chancellor) addressed the undergraduates of Birmingham University (May 13), in his capacity of Warden of the University Guild, on University Ideals. After preliminary compliments to Mr. Chamberlain (Chancellor) and Sir Oliver Lodge (Principal), he said:

UNIVERSITIES OLD AND NEW.

He would touch first on the history of some of the great universities which had existed in the history of the world. In these days the ideal of a university which their Chancellor was responsible for was a collection of persons who were capable of teaching everything, and an invitation to those who came within the influence of the place to come and learn everything: that was the reverse of what a university was formerly. He remembered very well the observation made by a very dear friend of his, the late Sir Frederick Bramwell, that the thing that made him most melancholy in the world was to go into a large library, because he thought when he saw all the books that, if he should live the longest life that a man could, and be the most diligent student that the world had ever seen, how little would he know of what they contained! If that were true of a library, what could be said of a place where they were expected to learn all that could be learned in the world? The prominent idea that must occur to everybody's mind when they contemplated this subject was what an abyss of ignorance must remain in the most diligent and most able, even at the end of our lives. But that pessimistic view, although he was afraid it was a true one, was no justification for not trying to do what they could. They could and ought to do something to make themselves better for the place they had to fill in the world. William Cobbett used to say that a man had no excuse for not making himself a more valuable machine; he would sell for more. He thought it would be an injustice to say that Cobbett meant that for more than a figure. But it was meant, possibly, to put the proposition that the animal, as he started in the world, had to acquire, improve, and exalt the faculties that he found within himself, and, if he did not do it, he was responsible for remaining the dull and earthly thing that he was when he began.

UNIVERSITIES AND THE WORLD'S WORK.

Having referred to the treatise of Cornelius Agrippa on the uselessness of the arts and sciences, the Lord Chancellor said that one of the advantages of looking back was to observe the vague and useless wandering after the right direction in which to seek for knowledge. Their Chancellor had given expression to his idea of what a university should be—a great school of universal learning which would provide for the cultivation of the mind in the broadest sense, and maintain in that city the highest standard of intellectual attainment. The university which the ideal of their Chancellor presented had a new feature—he did not mean absolutely new, but new in its ideal, in the foundation of a university—namely, to have as subjects of investigation all sorts of human knowledge. A university, like everything else, must have its growth and development. We were now forty millions of people, and, besides the mere question of population, the exigencies of modern life had increased. He would take one of the familiar examples—what had been called the “bread and butter philosophy.” We had wealth of scientific knowledge in the world. It was there, and, if they would co-ordinate the different modes by which it could be cultivated, they might look forward with great hopes to the future. Birmingham had risen to the occasion, and he was told that the new University was designed with a degree of munificence, and with the contemplation of producing such a university as Mr. Chamberlain desired.

A CHAIR OF GREEK.

Might he say he thought there was a grievous omission? There was no Chair of Greek. The one thing by which a university would live and thrive would be its reputation. Did they think it would be good for the reputation of the University of Birmingham in the eyes of the other universities that it had no Chair of Greek? But, in truth, it had no Chair of Latin either, because, although he knew a distinguished scholar taught Latin and Greek too, he thought it could hardly be said that the university which had no Chair, except one in which these two studies were rolled into one, was adequately representing the needs of the occasion. He asked any one who looked back on the history of the world's literature, was it possible to take the highest line of individual development and cultivation if one had never read any Homer, or if those who had studied philosophy could regard their studies as complete without knowing any Plato and Aristotle? There should be an oppor-

tunity, at all events, presented to those who desired to cultivate a higher study. He hoped his constituents would clamour for a Chair—in the decorous way, of course, in which the undergraduates of Birmingham University, he was sure, clamour—and the munificence which had characterized the benefactors of Birmingham hitherto would be effectual in procuring it.

ANOTHER ESSENTIAL STUDY.

There was another study which he thought must be treated with a very tender hand. No word of his must be directed against any school of thought, moral or religious. The Principal had called attention to the embarrassment arising from the differences of the Churches, but apart from those differences the course of such study was one which no university could neglect, and, might he say, as an old man speaking to young men, there was one aspect of the study which no man ought to omit? Whatever the differences might be, let them seek for that light which was to lighten every man in his own conscience, and direct his own faiths in himself. Men ought not, like the great apostate spirit, to turn their backs upon the sun, and because of that attitude refuse to recognize the illumination which was filling the whole of the atmosphere around. What he thought they ought to do was to seek for more and more light, from whatever source it came—light, light, more light—the dawning of the greater light which we saw surrounding the world's atmosphere, and when that light did come we might, at all events, hope that we had done nothing to darken, but had aided and assisted, its dawning, until it burst into the full blaze of meridian glory, into the light-like life without period in duration, without measure in capacity for ever and ever.

Mr. Chamberlain (Chancellor), moving a vote of thanks to Lord Halsbury, said they had listened to the address with interest, and with general agreement. He proceeded:

EDUCATION, GENERAL AND SPECIAL.

It had given him some information, because he had supposed that the idea of a university was that of a place of universal learning and teaching, instead of being merely an index of the variety of the sources from which it obtained its students. But he gave a defence of the whole scheme of these new modern universities which had been growing up recently in this country. Here, in the course of the last few years, Birmingham, Manchester, Liverpool, and Sheffield had obtained charters, and for himself he would not be satisfied until similar universities were placed in every great and populous district. The Lord Chancellor had not only defended them, but had made some criticisms for which they were grateful. On the other hand, he (Mr. Chamberlain) would honestly claim that they had done a great deal in a short time; and even Rome was not built in a day. The sympathy of all the authorities was entirely with the advice which his Lordship had urged upon them, and all that they were waiting for at that moment was the very factor which might be amongst those whom he was addressing—one who would find them £20,000 for the endowment of a chair. He took it that the idea of the Lord Chancellor—as it was certainly their own idea—was that what they called general education—what was called in old days the education of a gentleman—must still be the foundation of every special study, and that in spite of the enormous increase of knowledge, and of the fact that, in the complexity of subjects with which it dealt, it was necessary to specialize if they were to do anything thoroughly. Yet, however deeply they might go into particular questions, their education was incomplete if they did not know something else of others. In fact, in these modern times, we seemed to be between two dangers—in the first place, of gaining a smattering of everything and a knowledge of none, and, in the second place, of getting a knowledge of one and of being apathetic with regard to all the others. They hoped; however, to avoid the extreme. . . . He hoped that their University, new as it was, would find favour in the Lord Chancellor's sight, especially because it was a continuation and not a condemnation of the old. It was intended to meet new needs and growing necessities, and not to put aside as if it were useless and worthless all that had been done by their ancestors in the past.

THE OBJECTS OF THE UNIVERSITY.

In the new University they had two main objects. On the side of Arts they had no idea of rivalling or competing with the great, venerable Universities of Oxford and Cambridge. They could not, if they would, equal the opportunities, the privileges which they provided, and they would not, if they could, deprive them of one single scholar who would otherwise enjoy those privileges. But it was perfectly clear that in the great towns there were hundreds and thousands of people who desired a liberal education, and for whom it would be impossible to obtain it in connexion with the older universities. Therefore the Birmingham University supplemented and extended their work in directions which they could not possibly reach. To bring home to the people at large these opportunities—or as great opportunities as they could—was one of the objects of the new University. But no doubt their great feature, their special *raison d'être*, was to teach science as it had never been taught before, and also to proceed with the work of scientific research. The buildings which they would visit in the afternoon would constitute a university which was unequalled by any university in America or on the Continent. If this country was to hold its own in the strenuous competition to which it was submitted, our commercial and industrial education must be reformed, and, if they were to elicit the interest of the

enormous population of which they were the centre in the work they were doing, and to secure their local patriotism, they must, in the education they provided, pay some regard to the special needs of those for whom they catered. Towards the £1,000,000 that they required they had obtained £450,000; but, if they went back to the foundation of Mason's College, considerably over £1,000,000, almost entirely from local sources, had already been expended. They had been well treated by the authorities of Birmingham, but not so well by the governing bodies of the district. But he could not think that the latter would continue to receive the benefits of the institution without making adequate contribution in return. They had done so well that he was justified in being sanguine as to the future, and he hoped that the work which they would accomplish would be such that the Lord Chancellor would not be ashamed of his wards.

CURRENT EVENTS.

A PAPER on "Sir Joshua Reynolds's Contributions to Principles of Method" will be read by Prof. Findlay, M.A., Ph.D., at the meeting of the members of the College of Preceptors to be held on June 16.

* * *

EXCURSIONS of the London Geological Field Class conducted by Prof. Seeley will be made on June 3 (Leighton), 10 or 12 (Barrington), 17 (Sheerness), and 24 (Cuckfield).

* * *

A COURSE of Nature Study for mistresses in primary and secondary schools will be held at the Horticultural College, Swanley, July 31–August 12. Introductory address by Mr. T. S. Dymond, F.I.C., H.M.'s Inspector for Rural Education, on July 31, at 4 p.m. The course will include (1) Studies in Plant Life and Plant Geography, (2) Studies in Pond Life and Birds, and (3) Garden Lectures and demonstrations. Valedictory address by Mr. S. G. Rawson, D.Sc., Director of Education, Worcestershire, on August 11, at 8 p.m. Particulars from the Principal.

* * *

THE Rede Lecture at Cambridge University will be delivered by Sir Francis Younghusband on June 10, at 11.30. Subject: "Our True Relationship with India."

* * *

A VACATION term for Biblical study for women will be held at Girton College, July 31 to August 19.

* * *

BANGOR University College will celebrate its twenty-first anniversary on July 1.

* * *

AN International Congress of Childhood will be held at Liège (in connexion with the International Exhibition) on September 17–20. Membership fee, 10 francs. Secretary: M. Louis Pien, Rue Reubens 44, Brussels.

The purpose of the Congress is to consider the best means of promoting the physical, intellectual, and moral development of the young in the home, the school, and society. The Congress will be organized in four sections—(1) Education of Children; (2) Study of Children; (3) Care and Training of Abnormal Children; (4) Parents' Associations, Mothers' Clubs, and other Supplementary Agencies for the Improvement of Youth.

* * *

THE International Ornithological Congress will meet at the Imperial Institute, June 12–17, under the presidency of Dr. R. B. Sharpe. Particulars from Mr. E. C. Fagan, Natural History Museum.

There will be five sections—(1) Systematic Ornithology, Geographical Distribution, Anatomy, and Palæontology; (2) Migration; (3) Biology, Nidification, Oölogy; (4) Economic Ornithology and Bird Protection; (5) Aviculture—to receive special attention in order to lay stress on the importance of making observations on wild species in captivity.

* * *

AN International Exhibition of Pedagogy, under royal

patronage, will be held in Barcelona from May to October, 1905. A limited number of copies of the official programme can be obtained on application to the Director of Special Inquiries and Reports, Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, S.W.

THE University of Manchester has conferred Honours. the honorary degree of LL.D. on Dr. Nicholas Murray Butler, President of Columbia University, New York; and the degree of M.A. on Mr. Sydney Chaffers (Bursar), Miss C. I. Dodd (Lecturer on Education and Mistress of Method), Mr. Edward Fiddes (Registrar), and Miss Edith C. Wilson (Tutor for Women Students).

CAMBRIDGE UNIVERSITY has resolved to confer (June 14) the honorary degree of LL.D. upon M. Paul Cambon (French Ambassador), Sir Edmund J. Monson, G.C.B. (late Ambassador at Paris), Sir Robert B. Finlay, M.D., LL.D., K.C., M.P. (Attorney-General), Dr. Paul Vinogradoff, D.C.L. (Professor of Jurisprudence, Oxford); the honorary degree of Litt.D. upon Lord Reay, Father Denifle (Vatican Archivist), the Rev. Dr. Driver (Regius Professor of Hebrew, Oxford), Father Ehrle (Prefect of the Vatican Library), Mr. Basil L. Gildersleeve (Professor of Greek, Johns Hopkins University), and Mr. Frederic Harrison; and the honorary degree of Se.D. upon Commander R. F. Scott and Sir Francis E. Younghusband, K.C.I.E., LL.D.

Cambridge University has conferred the honorary degree of M.A. upon Mr. Robert Stephenson (late Chairman of the Cambridgeshire County Council) and Mr. H. G. Aldis (Secretary of the University Library).

OXFORD UNIVERSITY proposes to confer the honorary degree of D.Litt. upon M. Émile Senart, Member of the Institute of France (L'Académie des Inscriptions et Belles-Lettres).

THE University of Wales has resolved to confer the honorary degree of LL.D. upon Lord Tredegar (formerly President of Cardiff University College) and Lord Rendel (President of the University College of Wales); the honorary degree of D.Sc. upon Sir John Williams, Bart., K.C.V.O., M.D., LL.D., F.R.C.P.; and the honorary degree of D.Litt. upon Prof. Henry Jones, M.A., LL.D. (of Glasgow University), and Mr. J. Gwenogfryn Evans, M.A.

THE University of Toronto will confer the honorary degree of LL.D. on Earl Grey at the June Convocation.

THE freedom of the City of Edinburgh has been conferred upon Lord Reay (as having been Chairman of the London School Board), Lord Young (as framer of the Scottish Education Act of 1872), and Miss Flora Stevenson, LL.D. (as member of the Edinburgh School Board from its commencement, and, latterly, its Chairman).

MR. FREDERICK WILKIN, of Lower Causley Wood, Wadhurst, Sussex, has founded a scholarship for ethnological and archaeological research at King's College, Cambridge, in memory of his son, Mr. Anthony Wilkin, late of King's. The estimated income, some £40 a year (tithe rent charge on Wadhurst Parish), is to be accumulated for five years, and the first studentship (about £200) will be offered in 1910.

CAMBRIDGE UNIVERSITY has accepted £630, subscribed by friends of the late Sir Leslie Stephen, for the endowment of

a memorial lectureship in literature, and the Senate has approved regulations for the appointment of a lecturer.

THE Drapers' Company have offered £5,000 towards the cost of the new buildings for the Department of Agriculture at Cambridge University, provided an equal amount be raised by voluntary contributions before the end of the year.

UNDER a decision of the Court of Session, some £9,000 has been confirmed to the University of Aberdeen—a bequest by the late Mr. Alexander Milne, C.I.E., sometime of Assam.

EPSOM COLLEGE appeals for some £16,000 to clear up its finances on occasion of its jubilee year. It was opened in 1855, and has maintained steadily 50 foundation scholars and 50 pensioners. Past Epsomians should promptly respond.

THE Ontario Government announces a provisional grant of £100,000 towards the proposed new buildings of the University of Toronto, which are estimated to cost £320,000.

AT the recent installation of Dr. Edwin A. Alderman as President of the University of Virginia it was announced (says *Science*) that, in addition to the conditional gift of £100,000 from Mr. Carnegie, Mr. Rockefeller had given £20,000, Mr. Jefferson Coolidge £10,000, and *alumni* and friends £10,000 towards the endowment fund.

Scholarships and Prizes. AT Caius College, Cambridge, there will henceforward be several post-graduate research studentships, subject in general to the condition that the student elected must have kept not less than nine, nor more than fifteen, terms of residence at the college. These studentships are: (1) the Frank Smart Studentship, restricted to Botany, £100 a year for one, two, or three years; (2) the Shuttleworth Studentship, given by preference for Zoology or Physiology, at present £110 a year, for one, two, or three years; (3) the Ramadge Studentship, for Legal History (or, failing qualified candidates in that subject, then for Theology, Languages, Archaeology, or other literary study), £100 for one year in alternate years; (4) and (5) two studentships of £120 a year, tenable for one, two, or three years, which are not restricted as to subject, and may be given either for literary or for scientific research; (6) a studentship, at present of £80, for one, two, or three years, given by preference for research in some branch of Literature or Arts.

A Choral Exhibition, £40 for 3 years, will be awarded in the course of this term to candidates coming into residence in October. Apply to the Master.

Appointments and Vacancies. DR. M. R. JAMES, Fellow and Tutor of King's College, Cambridge, has been appointed Provost of the college, in succession to the late Rev. A. Austen Leigh.

SIR EDWARD M. THOMPSON, K.C.B., Director and Principal Librarian of the British Museum, has been appointed Sanders Reader in Bibliography at Cambridge University for 1905-06.

MR. EDWARD P. CULVERWELL, M.A., Fellow of Trinity College, Dublin, has been appointed to the new Chair of Education in the University.

PROF. SANJANA, M.A., whose name is well known in our mathematical columns, has been appointed Principal of Samaldas College, Bhavnagar.

MR. A. R. LORD, B.A. Oxon., Assistant to the Professor of Moral Philosophy and Lecturer on Political Science in Aberdeen University, has been appointed Professor of Philosophy and History in the Rhodes University College, Grahamstown, Cape Colony.

* * *

MR. JAMES GILCHRIST, B.Sc. Edin., has been appointed Lecturer in Civil Engineering in the University of Leeds, in succession to the late Dr. George Wilson.

* * *

MR. E. PROVAN CATHCART, M.D., Assistant Bacteriologist at the Lister Institute of Preventive Medicine, has been appointed Grieve Lecturer in Physiological Chemistry in the University of Glasgow.

* * *

MR. HAROLD LAWSON MURPHY, B.A., has been appointed Assistant to the Professor of Modern History in the University of Dublin.

* * *

THE REV. A. A. DAVID, M.A., Dean and Assistant Tutor of Queen's College, Oxford, has been appointed Head Master of Clifton College, in succession to Canon Glazebrook. He was an assistant master at Bradfield (1890-92) and at Rugby (1892-98).

* * *

THE REV. ALBERT ERNEST HILLARD, M.A. Oxon., Head Master of Durham School (since 1899), has been appointed Head Master of St. Paul's School, London.

* * *

MISS HARRIETT A. MARTIN, Head Mistress of the Cork High School, has been appointed Lecturer in Education (Post-Graduate Course) in Queen's College, Cork.

* * *

Literary Items. THE Lektors in English, French, and German at Lund University have started a monthly trilingual review, the *Skandinavisk Månadsrevy*, "for the guidance of teachers and learners of these three languages and of persons interested in the corresponding literatures." We wish the project all success.

* * *

MESSRS. P. S. KING & SON announce the early publication of Dr. Reich's "Select Documents illustrating the History of Mediæval and Modern Times" in a volume of some 800 pages.

* * *

THE "History of Literary Criticism in the Renaissance," by Prof. J. E. Spingarn, of Columbia University (Macmillan Company), has received the rare honour (for an American literary work) of being brought out in an Italian version (G. Laterza & Figli, of Bari). The translator is Dr. Antonio Fusco; the author has made many additions and corrections; and there is a preface by the distinguished critic, Benedetto Croce, editor of *La Critica* of Naples.

* * *

MESSRS. SAMPSON LOW, MARSTON, & Co. announce that the third volume of the "Times History of the War in South Africa" is ready.

* * *

A "MILITARY Geography of the Balkan Peninsula," by Lieut.-Colonel A. F. Mockler-Ferryman, F.R.G.S., F.Z.S., and Prof. L. W. Lyde, is the first volume of a series which is "to classify and analyze the geography of probable and possible theatres of war in such a way as to give full information about each area on strictly educational lines." Messrs. A. & C. Black are the publishers.

* * *

In view of the Trafalgar centenary, a new "Life of Nelson," profusely illustrated, and containing the recently discovered portraits of the great admiral and Lady Hamilton, has just

been published at a popular price by the Walter Scott Publishing Co.

The Walter Scott Publishing Company are offering a cheapened issue of the "Scott Library," containing over one hundred and twenty of the world's best books. The price will be one shilling a volume, and the size and quality of the paper and printing will remain as heretofore.

* * *

THE first number (May) of the *University Review* (6d. net, Sherratt & Hughes), "published for the benefit of the Students' Representative Organizations of the Universities of Great Britain and Ireland," appears in handy form and generous get-up, with half a dozen fresh articles by distinguished educationists, a great variety of educational news, and three full-page illustrations. We give it a cordial welcome.

General. LORD BALFOUR OF BURLEIGH, the Earl of Jersey, and Lord Justice Cozens-Hardy are the members of the Privy Council Committee appointed to select the site or sites for the National Museum and National Library for Wales. Aberystwyth is asking for the National Library alone; Swansea, Carnarvon, and Llangollen are each claiming the National Museum alone; Cardiff wants both the Museum and the Library.

* * *

THE Charter forming the University College of Sheffield into a University has been signed.

* * *

It has been decided to transfer the Cheshunt Congregational College to Cambridge.

MEMORIAL OF JOHN HARVARD.

GIFT FROM THE UNITED STATES AMBASSADOR.

A MEMORIAL of John Harvard, the founder of the Harvard University, which has been given to St. Saviour's Collegiate Church, Southwark, by Mr. Choate, the retiring United States Ambassador, was unveiled by his Excellency, in the presence of a distinguished company (May 22). The memorial takes the form of a handsome three-light window, with a representation of the Baptism of Christ by John the Baptist as the central figure, and the arms of Emmanuel College, Cambridge, and Harvard College shown. At the base of the window is the inscription: "In memory of John Harvard, founder of Harvard University in America. Baptised in this church November 29th, 1607."

Mr. Choate said he had presented the memorial from a desire to signalize his long residence in London by an appropriate gift, which should be in itself emblematical of the deep-seated and abiding relations of friendship which united England and the United States. As a loyal son of Harvard, he thought nothing could be more fitting than a permanent memorial of the principal founder of Harvard University. John Harvard was born in that borough, close to the end of London Bridge, and was baptized in that venerable church in 1607. He was educated at Emmanuel College, Cambridge, where he spent eight years. Seeking larger freedom of thought than could be found in the London of that day, he emigrated to Massachusetts, where he died within two years of his arrival, prematurely, as it seemed, but in the fullness and perfection of time, as was now manifest. Finding the infant colony without means to establish a college in the wilderness in the first decade of their settlement, he bequeathed to its foundation his library and the half of his fortune, which amounted in all to about £1,700. Now, after the lapse of three centuries, that little college in the pathless wilderness had become a great and splendid university—great in prestige and renown, rich in endowment, and richer still in the loyal fidelity of its sons. Unknown and of little account when he sailed from England, John Harvard had been a benefactor to the New World, and his generous and timely gift had borne fruit a million fold. He hoped that memorial would long remain, in order that Americans might come to see the very spot where one of their proudest institutions had its origin, and that it might remind Englishmen who visited it how inseparable were the two nations in their history and in their destiny. He trusted also that it might tend to keep alive a kindred spirit between the universities of the two countries, for

Harvard was just as surely the offspring of Oxford and Cambridge and the own daughter of Emmanuel as Old England was the mother of New England. So long as ideas ruled the world, let the Universities of both countries stand together for truth, and with one voice let them say to the youth of both lands: "Take fast hold of Instruction, let her not go, for she is thy life."

The Archbishop of Canterbury, acknowledging the gift on behalf on the Church, said that when the story of the present epoch was written it would be found that none had done more to cement the friendship between England and America than Mr. Choate.

CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

INEXACT SCIENCES IN THE SCHOOL-ROOM.

To the Editor of "The Educational Times."

SIR,—One special difficulty of school teaching—not a religious difficulty, either—was somewhat humorously illustrated the other day in the London County Council. Lord Welby complained that an elementary-school mistress had been dictating what "he could not describe in any other way than as being a Jingo lecture," inculcating the principles of the Tariff Reform Association. Mr. Edward Collins thereupon complained about a similar lesson on "Free Trade, and a eulogy of Cobden and of Bright." Sir William Collins happily found some means of filing down the proportions of both enormities, and pacifically admitted that "it certainly would be undesirable that political matters should be introduced into public schools." Well, but every book of English history that comes down to the death of Victoria raises quite a crop of such questions; and, if the children are not taught recent history, the complaint is that the school is out of touch with current life. The same chances of distortion occur in earlier periods, but then—strangely enough—they are not held to matter particularly. Is it not just possible that both sides of political and economic opinion would do well to assume the same broad outlook and tolerance on questions of recent date? The really important matter probably is to present the solid facts, and, at the same time, to keep the proselytizing impulse under firm control. Then an incidental opinion, whether in favour of Tariff Reform or of Free Trade or of whatever else, would in due course get rectified in the only proper way, by the pupil's own thinking. Any temporary school opinion—of a little Liberal or of a little Conservative—is of vastly less importance than adult partisans seem generally to imagine. The inculcation of mere opinion is, of course, intolerable; but teachers are, it is to be hoped, very rarely indeed so perverse or so thoughtless as to attempt that. Would not a generous toleration of divergent views be amply compensated by instruction in the broad facts of the questions at issue?—I am, &c.,

ELEMENTARIUS OLIM.

London, May 18, 1905.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on May 17. Present: The Rev. J. O. Bevan in the Chair; Prof. Adams, Rev. J. B. Blomfield, Mr. Bowen, Mr. Charles, Miss Day, Mr. Eve, Mr. Hawe, Miss Jebb, Mr. Ladell, Miss Lawford, Dr. Moody, Mr. Morgan, Mr. Rule, Rev. Dr. Scott, Mr. Starbuck, and Mr. Storr.

The minutes of the last meeting were read and confirmed.

The thanks of the Council were voted to heads of schools who had afforded facilities for holding the College examination of teachers for certificates of ability to teach.

The following persons were elected members of the College:—

Mr. J. H. Blunt, L.C.P., 51 Ordnance Road, St. John's Wood, N.W.
Mr. T. M. Thirlby, B.A. Lond., L.C.P., 2 Berwyn Road, Herne Hill, S.E.

Mr. H. A. Waldegrave, 144 Parrock Street, Gravesend.

The following books had been presented to the Library since the last meeting of the Council:—

By A. & C. BLACK.—Nicklin's Old Testament History, Part III.
By the CLARENDON PRESS.—Péchinot's Balzac's Une Ténébreuse Affaire; Robertson's Taine's Voyage aux Pyrénées.
By HACHETTE & Co.—Barrère's Eckmann-Chatrion's L'Invasion; ou le Fou Yéof; Gerothwohl's Hugo's Ruy Blas; Nagel's Storm's Immensee.
By J. MURRAY.—Hall's School Manual of English Grammar; Russell & Bell's Notes on Volumetric Analysis.
Calendar of Queen's College, Galway.

MACMILLAN'S BOOKS

SUITABLE FOR THE

Oxford Local Examinations, 1906.

ENGLISH.

- Keary—The Heroes of Asgard.** 2s. 6d. [Preliminary.]
- Macaulay—Lays of Ancient Rome** (containing "Horatius" and "Lake Regillus"). With Introduction and Notes. By W. T. WEBB, M.A. 1s. 9d. [Preliminary.]
- **Horatius.** Separately. 6d. [Preliminary.]
- Scott—The Lay of the Last Minstrel.** With Introduction and Notes. By G. H. STUART, M.A., and E. H. ELLIOT, B.A. 2s. [Preliminary and Junior.]
- **The Lay of the Last Minstrel.** Edited by F. T. PALGRAVE. 1s. [Preliminary and Junior.]
- Shakespeare—Henry V.** With Introduction and Notes. By K. DEIGHTON, 1s. 9d. [Junior and Senior.]
- **Macbeth.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d. [Junior.]
- **The Tempest.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d. [Junior and Senior.]
- Short Studies of Shakespeare's Plots: Macbeth, The Tempest.** By C. RANSOME. Sewed, 9d. each.
- Burke—Thoughts on the Cause of the Present Discontents.** With Introduction and Notes. By F. G. SELBY, M.A. 2s. 6d. [Senior.]
- **Speech on Conciliation with America, &c.** With Introduction and Notes. By F. G. SELBY, M.A. 3s. 6d. [Senior.]
- Spenser—Faerie Queene. Book I.** With Introduction and Notes. By H. M. PERCIVAL, M.A. 3s. [Senior.]
- Keats—Poetical Works.** Edited by F. T. PALGRAVE. 2s. 6d. net. [Senior.]
- Shelley—Poems.** Selected and Arranged by S. A. BROOKE. Contains "Adonais." 2s. 6d. net. [Senior.]
- Tennyson—Gareth and Lynette.** With Introduction and Notes. By G. C. MACAULAY, M.A. 2s. 6d. [Senior.]
- **Geraint and Enid.** With Introduction and Notes. By G. C. MACAULAY, M.A. 2s. 6d. [Senior.]
- **The Holy Grail.** With Introduction and Notes. By G. C. MACAULAY, M.A. 2s. 6d. [Senior.]
- **The Coming of Arthur and The Passing of Arthur.** With Introduction and Notes. By F. J. ROWE, M.A. 2s. 6d. [Senior.]
- Outline of English Grammar.** By J. C. NESFIELD, M.A. 1s. 6d. KEY, 2s. 6d. net.
- Manual of English Grammar and Composition.** By J. C. NESFIELD, M.A. 2s. 6d. KEY, 2s. 6d. net.
- Oral Exercises in English Composition.** By J. C. NESFIELD, M.A. 1s. 6d.
- Junior Course of English Composition.** By J. C. NESFIELD, M.A. 1s. 6d.
- Senior Course of English Composition.** By J. C. NESFIELD, M.A. 3s. 6d. KEY, 1s. net.
- Errors in English Composition.** By J. C. NESFIELD, M.A. 3s. 6d.

LATIN.

- Cæsar—The Gallic War.** Edited by Rev. JOHN BOND, M.A., and Rev. A. S. WALPOLE, M.A. 4s. 6d. [Senior.]
- Cæsar—Gallic War.** With Notes and Vocabulary. **Book I.** By Rev. A. S. WALPOLE, M.A. 1s. 6d. [Junior and Senior.] **Books II. and III.** By Rev. W. G. RUTHERFORD, LL.D. 1s. 6d. [Senior.]
- Virgil—Æneid. Book I.** With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d. **Book I.** By Rev. A. S. WALPOLE, M.A. 1s. 6d. [Junior and Senior.]
- Horace—Odes. Book I.** With Notes and Vocabulary. By T. E. PAGE, M.A. (Elementary Classics.) 1s. 6d. (Classical Series.) 2s. [Senior.]

GREEK.

- Demosthenes—Philippic I., Olynthiacs I.-III.** Edited by J. E. SANDYS, Litt.D. 5s. [Senior.]
- Xenophon—Anabasis.** With Notes and Vocabulary. **Book II.** By Rev. A. S. WALPOLE, M.A. 1s. 6d. [Junior and Senior.] **Book III.** By Rev. G. H. NALL, M.A. 1s. 6d. [Senior.]
- Æschylus—Persæ.** Edited by A. O. PRICKARD, M.A. 2s. 6d. [Senior.]
- Euripides—Alcestis.** With Notes and Vocabulary. By Rev. M. A. BAYFIELD, M.A. 1s. 6d. [Junior and Senior.]
- **Alcestis.** Edited by M. L. EARLE, Ph.D. 3s. 6d. [Junior and Senior.]

FRENCH.

- Jules Verne—Le Tour du Monde.** Edited by L. BARBÉ. 2s. [Junior.]

CHAOS AND CONTRADICTION

IN PRESENT-DAY EDUCATIONAL THOUGHT.

At the Evening Meeting of the members of the College of Preceptors on May 17, Mr. JAMES WILSON, M.A., in the Chair, Mr. F. H. HAYWARD, D.Lit., M.A., B.Sc., F.C.P., read a paper on "Chaos and Contradiction in Present-Day Educational Thought." He said:

NO RECOGNIZED AUTHORITY.

The main point which I would enforce and illustrate in this paper is that there is in Britain no such thing existent as recognized *authority* on matters of educational doctrine. That chaos and conflict which, prevailing among Protestant sects, is regarded by themselves as a sign of energy and vitality, and by Catholics as a sign of fundamental error, certainly flourishes in the rankest luxuriance among educationists. It seems to resolve itself not always into mere difference of emphasis, but quite frequently into absolute difference of standpoint.

I shall have but little time in the present paper for general reflections. But I venture on the remark, here and now, that the way out of our difficulty is not "less theory," but "more theory." At present our teachers distrust the name, and with very good reason. But ultimately theory will unify—or, at least, help to unify—educational thought. It will not make good teachers out of hopeless teachers; but it will help all teachers to see a new significance in their work.

MEDICAL PETITION.—COMMERCIAL PRESCRIPTION.

I now proceed to the first on my list of present-day contradictions. It is taken from an episode which is, doubtless, within the recollection of you all. Fifteen thousand medical men petitioned the Board of Education to introduce the teaching of hygiene and temperance into primary schools. So far, so good; though there is something a little surprising—if surprise is permissible in educational affairs—in the fact of such a recommendation coming from outside the school itself. But surprise gives way to amazement when we hear of the supplementary suggestion.

Coming fresh from their vivisectional failures, the doctors proceed to tell *us*, the teachers and masters of this country, what subjects we should leave out in order to make room for hygiene and temperance. For some occult reason they decided on the omission or subordination of history and geography; or perhaps one may more correctly say the lot fell upon those hapless subjects, which, accordingly, were cast overboard like Jonah. But history and geography, like Jonah, were not yet done with; a great and benevolent fish appeared in the form of the Associated Chambers of Commerce. Sir Albert Rollit, within a few weeks of the presentation of the medical petition, had to prescribe for English schools; and his prescription was—*a more careful teaching of history and geography*. Thus medical men were recommending for schools the omission of the very subjects which commercial men were strongly urging. Surely, if we teachers had clear views on educational matters, some definite sense of educational values, and, above all, some show of authority with regard to the educational affairs of the nation, we should have the right to tell medical men, commercial men, military men, and all other non-educators, to mind their own business before minding ours.

PROF. ARMSTRONG v. PRESIDENT STANLEY HALL.

Unfortunately, however, chaos and contradiction prevail among professional educationists themselves. Take two distinguished men like Prof. Armstrong of England and Prof. Stanley Hall of America. The former is closely identified with the proposals for the teaching of elementary science issued by the British Association. What is the sum and substance of those proposals? To make our teaching *exact and quantitative*;

to base it on measurement. But there comes Dr. Stanley Hall, the great leader of the American "child-study" movement, an educator who says equally hard things with Dr. Armstrong about the inefficiency of science teaching, but prescribes a precisely opposite remedy. Listen to his words, and remember that he is condemning in America the very thing that Prof. Armstrong is advocating in England. "The half-score of text-books in physics I have glanced over," says Dr. Hall, "seem essentially quantitative, require great exactness, and are largely devoted to precise measurements, with too much and too early insistence on mathematics. . . . The normal boy in the teens is essentially in the popular science age. He wants and needs great wholes, facts in profusion, but few formulæ."

FOR AND AGAINST "FACTS."

Dr. Stanley Hall, in the great work on "Adolescence" from which I have just been quoting, has suggested other contradictions. "Boys," he tells us, need "facts in profusion." Now this is a very interesting confession, because there is a dead set against the giving of "facts," "information," or "mere knowledge" made by sundry gentlemen, who, seeing clearly enough that the time is educationally out of joint, esteem themselves, like Hamlet, born to set it right. For example, there is Mr. Harold Gorst, who possesses the double distinction of being the son of Sir John Gorst and the father of a book called "The Curse of Education." Now this book, which is appearing on railway bookstalls, along with "Dr. Nikola" and "Sherlock Holmes," at the modest figure of sixpence, is simply a kind of Rousseau's "Emile," minus all the sparkle and plus a few additional fallacies. It represents educational reaction dressed in the garb of educational radicalism. Of course, the author runs down "facts" as vigorously as Mr. Gradgrind ran them up. On the first page he speaks of the British child being "stuffed"—a favourite and fine word, "stuffed"—with "six pounds of facts," the German and French child with "seven pounds"; and he recurs again and again to the expression. Mr. Gorst will therefore be interested—though, perhaps, also pained—to hear that Dr. Stanley Hall believes the normal boy to need "facts in profusion." What, too, will he think of the introduction of an examination paper on "general information" in connexion with sundry examinations? The situation is ludicrous. Here, on the one side, are teachers and examining bodies discovering that pupils are frequently grossly ignorant of common necessary "facts," and, to remedy the evil, prescribing a paper on "general information"; here, on the other side, are platform orators and writers of books with sensational bookstall titles telling us that there is a surfeit of "facts" and "information."

The contrast is really sharply marked. I find it, for example, in two gentlemen with whom I have been brought into slight personal contact. Sir Thomas Acland, whose name is known and honoured in the West Country, says that "the great purpose of education is not to accumulate facts, but to cultivate the powers of observation"; while ex-Prof. Laurie brings it as a complaint against mediæval education that the minds of the pupils did not receive "the nourishment of facts." Edward Thring, I need scarcely say, was another "fact" iconoclast, and so, I think, is his disciple, Prof. Armstrong. "Drawing out the powers of the mind," says the former, "is different from packing in dead facts, even when the packing is neatly done." Now it seems to me generally an extremely difficult task to discover what Edward Thring was really driving at; so, with regard to the words just quoted, I hesitate to express any amazement and disapproval, and venture merely to claim that the "neat packing in" of facts—in other words, the conferring of knowledge in accordance with the psychological laws of the mind—is surely a supremely important thing. Nay, I feel constrained to quote a fellow-Herbartian, if he will allow me to call him so—I mean Prof. Adams. On page 131 of his wonderfully lucid book, compared with which Edward Thring's three books seem a London fog variegated with fireworks, he says: "Since each new fact is acted upon by the facts which form part of the apperceiving soul, it follows that, the more facts that have been organized into faculty, the more readily will the mind act." This, of course, is the invariable attitude of Herbartians, who, though they may differ among themselves upon many things, are not in the habit of joining the hue and cry against knowledge and instruction.

I could find other pairs of writers whose views upon the "fact" question are in conflict. The late Mr. Quick's attitude was, on the whole, wise and moderate, and showed a striking

absence of that one-sidedness and partisanship which are so often identified with the work of our present-day "educational reformers." But in one place he has a tilt at what he calls "storing the pupils' memory with facts—facts about language, about history, about geography." On the other side may be adduced a quotation from the well known work, "Essays on a Liberal Education," which represented, forty years ago, all that was radical and progressive in secondary education. In this work we find Mr. Wilson, now Archdeacon Wilson, urging, in connexion with the teaching of natural science, that "a certain broad array of facts must pre-exist before scientific methods can be applied."

DEFINE YOUR TERMS.

Of course, I do not mean to suggest that these contrasts of view are necessarily absolute and irreconcilable. Possibly the word "facts" varies somewhat in its meaning and use. But I do claim that such real or apparent contradictions as those I have adduced reveal something unsatisfactory in present-day educational thought. They show that we have not yet succeeded in hammering out any clear educational categories. Education appears to be in a state similar to that which, theologians tell us, preceded the formulation of dogma—a state in which orthodoxy and heterodoxy, apostolical tradition and wild heresy existed side by side undifferentiated. It is because, as it seems to me, Herbart is pre-eminently *clear* that he is so valuable to us at the present time. If only men of Thring's calibre or of Dr. Laurie's calibre possessed both the definiteness of standpoint and the categorical lucidity of Herbart, educational thought in this country would be in a different state from what it is. However, this is not the moment for such general reflections. I hasten to add that certain educationists use precisely similar language about "knowledge" and "information" that others use about "facts." This is not surprising, as "facts," "knowledge," and "information" mean, I suppose, much the same thing. Prof. Armstrong tells us that "mere knowledge counts for very little," as if there were any "mere" knowledge, as if all knowledge did not possess, as the Herbartians contend, the possibilities of apperceptive energy, and as if Spencer himself had not declared: "Knowledge is turned into faculty as soon as it is taken in." In contrast to Prof. Armstrong's contention, I will again quote from "Essays on a Liberal Education." "In the education of the upper classes," says Mr. Wilson, "there is too little of positive and exact knowledge and too much of mere training and drill. We have too much distrusted the virtue of knowledge." Again, De Morgan's educational ideal, "to know everything about something and something about everything," goes quite counter to the somewhat absurd attacks upon "knowledge" and "information," to which I have referred; while Sir Oliver Lodge's retort to Mr. Benson is in the same sense. "A master's business," Mr. Benson had said, "is to try to see that there is mental effort." "Not a bit of it," replied the Principal of Birmingham University. "A master's business is to supply proper pabulum."

"PROPER PABULUM."

It is plain from such quotations as these that the Herbartian objections to a purely formal or gymnastic ideal of education—objections put into a classical and, I venture to think, almost an immortal form in the fifth chapter of Prof. Adams's book—are very living and pertinent objections, aimed at real dangers. Many of our educationists, in their theoretical disquisitions, seem to forget the need for what Sir Oliver Lodge calls "proper pabulum." Time was when the mind was compared to a sheet of paper on which the teacher had to impress certain marks; when societies were formed for the "diffusion of information" among the "working" or other classes; when men spoke of knowledge being "power"; when ideas were supposed to come from without and to enter the mind and give it a content and a fullness; when Disraeli's words, "The duty of education is to give ideas," would have been regarded as sound sense and not dangerous heresy. Now all is changed. On every side is heard the voice of the educational prophet (if not the educational cheap-jack) assuring us that knowledge is of little worth; that education is a process of drawing out and not of putting in; that training is more important than instruction; that the mind is not a *tabula rasa*, but a perpetual-motion machine. Educational philosophy is daily stressing more and more the efferent at the expense of the afferent, forgetting that the afferent may become the efferent, or that, in Spencer's words, "knowledge" may become "faculty." True, there are voices on the other side, but they do not so catch the popular ear—the ear of the Educa-

tion Committee-man for example—as the voices depreciatory of knowledge.

FROEBEL *v.* HERBART.

And here I have a bone to pick with the followers of Froebel. It seems to me that the stress they lay upon the efferent side of mental life very easily lends itself to error and perversion. When Froebel said, "What can be put into a man is, properly speaking, *there* already," he uttered words which fill me with such amazement that, if I did not know how great Froebel really was, I should put him down for an educational madman in virtue of a declaration such as this. One remembers the words of Prof. James: "An adult man's interests are almost every one of them intensely artificial; they have slowly been built up." One remembers, too, that the Catholic Church and other Churches have always, rightly or wrongly, insisted on the early creation in the child's mind of certain apperception masses; and I know, from personal contact with people, how this factor profoundly modifies the whole mental structure.

We Herbartians are sometimes supposed to be educational revolutionists; at any rate, a Board of Education not usually regarded as violently republican or radical prescribes for teachers the study of Froebel in preference to the study of Herbart. But, ladies and gentlemen, if you will look into the question, you will find that Herbartianism is moderation, conservatism, even reaction, compared with the red, wild revolutionism patent or latent in the words of Froebel just quoted: "What can be put into a man is, properly speaking, *there* already." The child, for Froebel as for Wordsworth, is "father of the man," an "eye among the blind," a "mighty prophet," a "seer blest," on whom surely, then, no sacramental hands need to be laid, and still less the nerveless or leprous hands of modern education.

Now I venture to say that, if the child is all this, and if doctrines such as these are sound educational truth, no Board of Education has the right to administer an Education Act whose essential principle seems to go wholly counter to Froebel's view. Priests—and even, in a sense, teachers—must alike stand aside, put off the shoes from off their feet, and (in a new sense) worship on holy ground at the shrine of a divine child. The Herbartian view—so conformable with the common and orthodox views of men—that the teacher is called upon to build *into* the mind of the child a structure which, though not foreign to that mind, is at least new to it—is a view which, though it must ultimately be brought into harmony with the view of Froebel, confronts it at present in seemingly sharp contrast. "Seemingly," I say; for I cannot believe that the contrast is to be suffered to exist much longer. In Germany the Herbartians, according to the hostile words of an educational freethinker, have become "the most distinguished coadjutors in Church teaching, for their system gives religion the widest scope for bringing everything into her service." How little, in England, do the various parties recognize their true friends and their true enemies! It was not so very long ago that, with a shiver, I awakened to the consciousness that Herbartianism was a conservative force; and I fancy that many of the orthodox ladies who wax enthusiastic over Froebel will some day awaken, with a shiver, to the consciousness that Froebelianism is a foe to much that they regard as specially vital.

Some one will reply that Froebel never meant what he said when he used the words I have quoted—just as some one else will presently tell me that one of Froebel's most eminent followers, Mr. W. H. Herford, does not really mean the words which I shall quote from him about "Nature." Somehow or other the Froebelians have a lax and easy-going way of using language, but it seems necessary to remind them that fallacies cannot be transformed into facts by gushing over them or by quoting Wordsworth's "Ode." The late Mr. Quick tells us about a German teacher who, faced by the circumstance that his pupils were *gedankenlos*, found it necessary, before calling upon them to write an essay on a given subject, to present them with a large amount of material to write about; he found it necessary, in short, *vieles einzupumpen*. For my own part, I sympathize sincerely with the German teacher, and am daily engaged in the same conscientious practice, despite the horrible things said by Edward Thring about "pumping" and the rest. I mention the point because, as it seems to me, Froebelians and others wholly ignore it; in fact, the question of the relation between the receptive and the active sides of mental life has never yet in England been seriously grappled with at all.

I have spent far more time than I wished in discussing—and discussing, I fear, in a very airy and inadequate fashion—this

question of the relation between the innate and the receptive, the efferent and the afferent, the Froebelian and the Herbartian factor. The want of clear ideas upon this question seems to me at the root of many of our present-day contradictions. I will adduce a few more examples.

A CASE OF OPPOSITE INFERENCES.

I have already mentioned both Prof. Adams and Prof. Armstrong. In reading over their works I came across a reference in each to Sherlock Holmes, and was struck by the fact that the two educationists drew exactly opposite inferences from the skill and efficiency of the famous detective. Prof. Armstrong seems—I speak with caution—to trace that skill and efficiency to a process of mental discipline rather than to knowledge and apperceptive power; while Prof. Adams traces it to these latter. "Holmes's apperception mass," he says, "contained the German word *Rache*, which means 'revenge.' Holmes was right. Lestrade was wrong. But it was not a matter of reasoning backwards or forwards: it was a matter of knowledge." And here let me say that any one who wishes to realize how enormous (superficially, at any rate) is the contrast between the only two orthodoxies that arouse any real educational enthusiasm—I mean Froebelianism and Herbartianism—had better read a chapter or two of Prof. Adams's book after imbibing a dose of "self-activity" and "drawing out" doctrine. He will then read such sentences as the following:—"We seem to find ideas exercising a power that is independent of the mind. . . . The kind of apperception masses in the mind really determines what kind of mind it is. . . . Ideas enter our minds in spite of us." It is no good mincing matters. The two standpoints are unreconciled by the educational thought of to-day, though I am far from thinking that they are irreconcilable.

MAKE CHILDREN THINK FOR THEMSELVES?

I pass on to another contradiction, though one that is, perhaps, ultimately traceable to the fluctuating views on the knowledge question to which reference has been made. Our pseudo-reformers assure us that the great thing necessary is to make children "think for themselves." Educationists, in fact, seem to be slowly, and perhaps unconsciously, separating into two camps—those who lay stress on power, skill, sharpness, efficiency, independence (including this capacity of "thinking for oneself"), and those who lay stress mainly on goodness, and, in consequence, on giving to children what Mathew Arnold called an acquaintance with "the best that has been thought and said in the world." Education will never begin to progress in earnest until these views have been synthesized. However, waiving this wide question, I would quote, in reply to the much-in-evidence maxim that teachers must make their pupils "think for themselves," the words of Mrs. Shelley relative to her own son: "Teach him to think for himself? O my God! Teach him to think like other people!"

BOOKS *v.* NATURE.

I have a second ground of controversy with the followers of Froebel; though in point of fact, my complaint is mainly against some of the unguarded expressions which they and others let fall. Mr. Gorst, and the educational crusaders who draw their inspiration from Froebelian and Pestalozzian sources, or rather, perhaps, in the long run from Rousseau, assure us that schools should be less "bookish." Now I need not give or discuss the reasons for the onslaughts of these men upon books; there is always a reason for an onslaught, and I would be the last to deny that premature devotion to literary work in schools has been a great evil, and that the realities of Nature have a prior claim, though not a final claim, over the invented symbols, and even the recorded thoughts, of man. But I live in a county which, however attractive in many ways, stands in no need of any anti-book movement, and I therefore universal the words of Mr. H. G. Wells: "The first and most universal function of the school is to initiate into the ampler world and the more efficient methods of the reading and writing man."

Froebelians may reply that they do not disparage books, they only object to their premature introduction into school. Well, Mr. W. H. Herford—a neighbour of mine on the shores of Tor Bay—is an exponent of Froebel. He assures us in a work which he edited two years ago that "one day we shall believe that *all* we truly know, the stuff of all real knowledge, we learn from Nature; *all the rest*—hearsay, rote knowledge—being "vox et praeterea nihil." That is pretty strong, surely! Are, then, the rhapsodies of the Hebrew prophets, the "Republic" of Plato,

and the "Utopia" of Sir Thomas More products of "Nature" in any real sense? Strange to hear the voice of Rousseau sounding in our ears after half a century of Darwin! Strange, I remark once again, that excellent and orthodox ladies do not see, what the theologians saw at the time, that Froebel's standpoint, when divested of gush and delusion, is revolutionary in the highest degree! My own views on "Nature" are far from definite, and, therefore, I do not wish dogmatically to assert that Froebel's mystical and symbolical way of contemplating her is wholly wrong; but I would urge that, in the course of evolution, latest developments are often the highest developments, and that books, in the words of Milton, "are not absolutely dead things, but do contain a progeny of life in them; . . . they do preserve as in a vial the purest efficacy and extraction of that living intellect that bred them. . . . A good book is the precious life blood of a master-spirit, embalmed and treasured up on purpose to a life beyond life." I prefer this to Wordsworth's stanza:

Books! 'tis a dull and endless strife:
Come, hear the woodland linnet,
How sweet his music! on my life,
There's more of wisdom in it.

Tastes differ, I suppose. I am certain, for my own part, that, if listening to the woodland linnet is an act of greater wisdom than the reading of certain books, the reason must be that the books in question contain trash unsurpassable anywhere except in the "Lyrical Ballads."

THOROUGHNESS?

Another interesting case of chaos and contradiction is concerned with the question of "thoroughness." Some writers make a great point of this. I heard a prominent West Country educationist, who had noted the comparative ineffectiveness of much of our present-day teaching, say that the multiplication of subjects was a grave peril, and urge the need of "thoroughness." But I turn to the pages of Edward Thring and I come across these words: "There is something so wise, so unanswerable, in the modest yet firm requirement that the lessons must be done 'thoroughly,' and a boy not advance till he has mastered what he is doing, that the request commands assent at once. The fallacy is—it cannot be done." I do not attempt to adjudicate in this case; I merely point out that, while one earnest educationist urges the need of "thoroughness," another urges its impossibility.

THREE R'S—NAY, FOUR.

Another controversy rages over the "three R's." From the one side come complaints that we no longer teach the "three R's" so efficiently as in the good old times of forty or seventy years ago, when the curriculum was limited and unambitious, and troublesome "theorists" had not invaded our shores. But from another side comes, with the complaint that the teaching of the "three R's" is necessarily a very mechanical business to a considerable extent, an exhortation to apply ourselves to a "fourth R"—namely, reasoning. Our pupils have not only to read, write, and reckon, but also to reason; this, in the opinion of Prof. Armstrong and of Sir William Collins, Chairman of the London Education Committee, is the "fourth R" which is so infinitely more important than the other three. To all which it may be replied that education will have to find a place both for the mechanical and for the rational, in the same way that it will have to find a place both for the receptive and the active factors to which reference has been previously made. All these exhortations to apply ourselves to a "fourth R" and the like are mere testimonies to the fact that we have at present no philosophy of education that possesses any authority.

CONFLICTING TEXT-BOOKS.

The next on my list of present-day contradictions is taken from a Board of Education syllabus. It is, no doubt, quite right to prescribe for teachers who have to take the Certificate Examination a number of famous educational books for study; but in the present state of educational theory—or, rather, in the present absence of educational theory—there is some danger of teachers losing all respect for educational books. "How 'much,'" they say, "have we to accept, and how much to reject? How much of Herbert Spencer's book on Education is established truth, and how much is error?" Nobody, apparently, can say. I was struck, therefore, by the fact that for the Certificate Examination of 1906 Spencer and the two Arnolds were given as alternative subjects. Now, Spencer despised history and the classics, and laid chief stress on science; while the Arnolds despised

science, and laid chief stress on history and the classics: at any rate, this statement is approximately true. Thus those teachers who study Spencer will imbibe exactly opposite principles from those imbibed by teachers who study the Arnolds.

"MERE MEMORY."

Certain of our reformers, not content with attacking "mere knowledge," "mere facts," "mere information," and the like, have some hard things to say against "mere memory." I remember a passage—a ludicrous passage, when you consider the question from all sides—in which Edward Thring spoke of how "secondary" a thing memory is. Could there have been a more unsuitable expression? Is not memory the most primary and indispensable of all mental functions? However, if you attend long enough to the utterances of educational cheap-jacks, you will be certain to come across an attack upon "memory," and then, perhaps, for change, you will look at the daily paper for January 7, 1905, and read, in the report of a teachers' conference, that Mr. Phene Spier laid stress on the importance of "cultivating the memory."

THEORIES OF ART TEACHING.

In the same report you will read that the Principal of the Birmingham Municipal School of Art spoke of the "great danger in the present system of trying to teach design in elementary schools." I speak with deference, because art is a department of work with which I am not very familiar, but I do know that, if the encouragement of design is a wrong thing, then Froebel and all his followers are utterly mistaken, and another great educational delusion must be added to the historic list. I am told by art teachers that on the whole subject of art teaching there is complete chaos of view among Government examiners and others; some, in the spirit of Froebel, laying stress upon a kind of free and easy creativeness, others upon exact reproduction of objects and copies.

GRAMMAR v. HYGIENE.

For an unusually kaleidoscopic example of educational chaos I would refer you to the two dates February 15, 1905, and February 17, 1905. It is not often that, in my exciting researches on educational chaos, I have come across an instance of one voice of authority unconsciously contradicting another within the space of three days. Such, however, is the present instance. Sir John E. Gorst, speaking on the King's Speech three months ago in the House of Commons, urged that, if the young mothers of the nation had less grammar and geography and a little more knowledge of hygienic questions, it would be better for the nation. Two days later I opened a West Country newspaper, and read how His Majesty's Inspectors were urging that, "in view of the difficulty experienced in secondary schools, pupil-teacher centres, and evening classes, owing to the lack of knowledge of English grammar on the part of many of the pupils coming from elementary schools, all children in the standards should receive instruction in the elementary principles of grammar, and a certain minimum standard knowledge in this subject be expected of pupils in the higher standards."

CORPORAL PUNISHMENT.

I could add considerably to the list of contradictions already presented to you. Take, for example, the striking subject of corporal punishment, upon which much difference of opinion makes itself felt. I do not propose to argue the case for or against prohibition; but I would point out that defenders of the practice—and I am one of them—are gravely divided as to the class of offences to which it is most suitably applied. Most Education Committees representing popular and empirical opinion seem to regard corporal punishment as legitimate only in the case of "grave moral offences." I could quote many rules issued upon this basis. But Edward Thring, in one of the wisest parts of his suggestive, though often perplexing, writings, argues at considerable length—and, I think, with success—that corporal punishment is specially *unsuitable* for moral offences, and should be used for purposes of external discipline only. Teachers who follow Edward Thring will have to disobey their rulers, and those who obey their rulers will have to go counter to the views of Edward Thring.

Again, I could quote both from Thring and from Dr. Laurie, as well as from other authorities, the recommendation that when corporal punishment is administered at all it should be administered in private. The Bristol Authorities, however, are

of a different opinion, and say expressly that it should be administered "in front of the class or school."

CO-EDUCATION.

Again, questions like co-education are still absolutely unsettled, Dr. Stanley Hall, in his great work on "Adolescence," having pronounced an unfavourable verdict where a favourable one was expected.

ADMINISTRATIVE CONTRADICTIONS.

Of administrative contradictions there is legion. A distinguished educational administrator said to me that once on a time a candidate for an educational post presented himself before his Committee with fifteen advanced science certificates. "Needless to say," remarked the administrator, "he was not appointed." Yet I might call attention to the fact that at Bristol the unfortunate applicant would get £10 extra for every five such certificates, and I fancy that under the London Committee the more you have the better. Again, practical experience of a very definite kind counts for much in certain educational walks of life, and its absence is fatal to an applicant; yet Arnold was appointed to Rugby, and many public-school masters and many of His Majesty's Inspectors are appointed to their posts, with little or no such experience. Contrariwise, a knowledge of "theory" is supposed to be of priceless value in certain kinds of educational work; but woe to the man who doesn't know how to bottle up his stock of theory at the right moment!

THE REIGN OF CHAOS.

I must now begin to bring my remarks to an end. They have been numerous enough, I hope, to show that the testimony of Prof. Findlay and of Mr. H. G. Wells to the chaotic state of educational thought in England is true. The former says: "Our study of education is in its infancy"; the latter says: "There is nothing having any authority higher than individual opinion; nothing threshed out and permanently established. From one lecturer in education comes one assertion, and from another another, and the algebraic result is scarcely a matter for boasting."

HERBART TO THE FRONT.

Even on the question of the aim of education there is fundamental divergence of opinion, though there are a few signs that the Herbartian formula is coming increasingly into favour. I am by no means absolutely convinced that Herbart's "character-forming" formula and its implications are a perfectly and ultimately adequate solution to our difficulties, but I do claim that they are illuminating and unifying; they bring together so much; they link instruction with apperception, apperception with interest, interest with character; they put everything in a new, or at least a vivid, light; they knock on the head hoary old fallacies—such as that "virtue cannot be taught," that the mind can be exercised *in vacuo*, that training is distinct from instruction, that ideas are dead things, and that education is merely a process of drawing-out similar to the conjurer's method of drawing eggs out of his own forehead. I believe, in short, that Herbart was the clearest and most constructive—though I do not say the most original—of all educationists, and that his way of regarding education would do much to remove the chaos that prevails both as to aims and as to methods. How great is that chaos! "The aim of education is to give ideas," says one authority, in language that would shock the Froebelians, who talk sometimes as if the educator can "give" nothing and must draw out everything. "The aim of education is to develop the powers of observation," says a second. There are scores of other formulæ ranging from "the harmonious development of all human powers"—Pestalozzi's favourite, though by no means his only one—to "efficiency," which appears to be Mr. H. G. Wells's.

Surrounded by chaos such as this I turn, not with blind devotion or with unreasoning depreciation of other writers, but nevertheless with some confidence, to the great work published just a hundred years ago. In the "Allgemeine Pädagogik," Herbart says: "We know our aim"; and the work itself is a sufficient proof that the boast was no idle one.

The Rev. J. O. BEVAN thought that the contradiction in the theories of educationists was startling if the opinions quoted by the lecturer were intended to have universal application. But it was probable that the contradiction was apparent rather than real, for every teacher knew that the essential differences between the sexes and between children of various grades of life demanded differential treatment, and

it was hardly likely that all these differences were present to the minds of educationists when they gave expression to their theories. In practice the teacher's work was determined not by one or another extreme theory, but by the actual requirements of the pupils under his care, with due regard to their sex, to the length of their school career, and to their future station in life; and even methods which might be considered ideal, although they might serve to inspire the teacher, were not always found capable of adoption in their entirety. The objection to teaching facts seemed to apply to the memorizing of isolated facts rather than to the study of facts brought into proper relation with one another.

Mr. ORCHARD considered that the lecturer had proved his point that there was much confusion in educational thought, and he suggested that the College of Preceptors might usefully convene a conference to consider the basis of a sound theory of education.

Miss FINDLAY said those present were indebted to Dr. Hayward for putting before them so clearly the present chaotic state of educational theory in England, since the first step towards improvement was to see plainly the existing situation. Teachers could not rest where Dr. Hayward had left them; they must sift the doctrines of the authorities quoted, in the hope of finding some principles that could be accepted as guides for their own work. To this end she would like to speak on one or two points raised by the lecturer. First, as to Dr. Stanley Hall's position regarding giving children masses of facts. She had attended a vacation course at Clark University, presided over by Dr. Stanley Hall, in the summer of 1897; and in one or more lectures Dr. Hall had certainly spoken in the sense of the passage quoted by the lecturer. On the other hand, at that very course the chief place was assigned to Nature study, conducted by Dr. Hodge, of whose work Dr. Hall had again and again spoken in very high terms. The dominating feature of the method advocated by Dr. Hodge in natural science was that nothing should be received on authority; the student should be trained rigidly in first-hand observation and experiment. She had the greatest admiration for Dr. Hall as a scientific student of child-life, but in this and other matters she had been unable to understand his views on practical education. Next, as to the contradictions in the doctrines of Froebel on the one hand and Herbart on the other, she thought these were to a great extent reconcilable; they seemed to disappear on a deeper study of their writings. For instance, Herbart's doctrine of apperception gave a partial and a specially intellectual phase of Froebel's doctrine of self-activity. Some differences in their theories might have arisen from the fact that Herbart's practical work in education was limited to children above ten years of age; while Froebel was greatly interested in the beginnings of child life. In the Herbartian Practice School at Jena, and in a similar school in America, in which she had observed the work for a long period, she had formed the opinion that strict Herbartian method tended in young children to mental overstrain. It aimed mainly at directly developing reasoning power and abstract ideas, whereas Froebelian teachers aimed rather at training through motor and sense experiences. It was misleading to represent Froebel as too one-sided in regard to his doctrine of the unfolding of the child mind. Every kindergarten student was aware of the minute detail characterizing the courses of "gifts," "occupations," &c., which Froebel himself planned. Indeed, it was on this side of the work that Dr. Stanley Hall and other great modern students of infants condemned much of the kindergarten practice; they said that it left not too much, but too little, freedom for the development of the mind. Great men should be judged from their work as a whole; and a truer conception of the schools Froebel desired to see was derived from the account of the school established by him at Keilhau, contained in the autobiography of George Ebers, the great German novelist and Egyptologist, than from any English kindergarten. Ebers' description of life at Keilhau (he spent four years there) suggested a school like Bedales. Why should any slur be attached to Froebel's educational theory on the ground that he was a mystic? He was a mystic only in the sense that all great idealist philosophers are mystics. As to his advocacy of symbolism, she had understood better reasons for the value he placed on the use of symbols in abstract thinking from listening to Professor Geddes's lecture. Professor Geddes seemed to find symbols of as great service in thinking as did Froebel; and he too said that teachers would do well to adopt them more widely in the school-room. She knew that many people looked upon the doctrines of Herbart and Froebel as antagonistic; and the task of reconciling them at all adequately would be long. Yet she believed that would one day be satisfactorily done, and it would then be found that much sound work had been accomplished by these two great educators in the way of laying firm foundations for a science of education.

The CHAIRMAN remarked that, whatever might be the "chaos and contradiction in present-day educational thought," they were not allowed to have any very injurious influence on practice. The schoolmaster as autocrat in his school either ignored altogether the conflicting theories that the lecturer had just described or, if open minded, sifted them, rejecting what he thought hurtful, and adopting for trial such as seemed likely to prove helpful. Thus order and congruity ruled in the class-room, whilst "chaos and contradiction" prevailed

amidst outside educational theorists. Diverse opinions seemed to him inevitable except in societies where the yoke of authority had crushed out all tendencies to change. The history of thought in every progressive community was the record of the displacement of old ideals by new ones, more conformable to contemporary facts, the supersession of old methods in favour of others of greater convenience or greater fruitfulness. Ideals and methods, it was true, had changed very slowly in the development of English systems of education. For three and a half out of the past four centuries, in spite of the creation of four great modern literatures, great discoveries in mathematics and in the physical and natural sciences and great advance in economic and mental science, hardly any modification was made in school practice. It had only been in our own time that recognition had been given to modern literatures and science as suitable subjects for training, developing, and equipping the minds of pupils in secondary schools. The tardy recognition of other subjects than Latin, Greek, and mathematics was mainly responsible, he thought, for present-day difficulties. Our great problem now was to determine the subjects best fitted for training, development, and knowledge, and in what proportion they should be dealt with at school, remembering always that school life is only a preparatory stage. For a satisfactory solution he looked to the experience of teachers guided by the light obtainable from psychology and biology.

Dr. HAYWARD having replied to the remarks of the several speakers, a vote of thanks to the lecturer concluded the proceedings.

VISIT TO A MOHAMMEDAN UNIVERSITY.

By M. PIERRE ARMINJON.

[From the *Revue de Paris*.]

["The mosque El Azhar [at Cairo] contains a school to which Mussulmans resort from all parts of the world for instruction in the law and religion of Islam. There are special apartments and libraries appropriated to all the Mohammedan nations. The instruction is gratuitous, and, besides Mohammedan law and religion, embraces Logic, Grammar, Rhetoric, Versification, Algebra, &c. The whole number of students is over 9,000, of the teachers 300."—"Blackie's Popular Cyclopædia" (Art. "Cairo").]

... ENFONÇONS nos bottines dans les énormes chaussons de paille que nous tend le portier. Ainsi équipés, nous traversons un vestibule et laissant à droite les bureaux de l'Administration et, à gauche, les locaux de la bibliothèque commune, fondée en 1897 et riche de 12,700 ouvrages, nous débouchons dans une vaste cour carrée entourée de portiques. Quel spectacle! Accroupis sur les dalles de marbre que chauffe le soleil ou étendus sous leur manteau à l'ombre du péristyle, plusieurs milliers d'enfants, d'adolescents, d'hommes faits et même de vieillards, causent, discutent, dorment, rêvent tout éveillés, lisent en balançant leur buste, selon un rythme lent et régulier, mangent de compagnie des galettes de pain assaisonnées d'une salade multicolore à demi-liquide. À travers les groupes circulent touristes aux kodaks braqués, marchands de victuailles, un large éventaire assujéti sur leur torse cambré, porteurs d'eau au tablier bariolé, l'échine courbée sous une énorme jarre fermée d'un bouchon de glace et entrechoquant avec fracas des gobelets de cuivre, matous affamés quêtant sournoisement une pitance que leur disputent des bandes bruyantes de moineaux. Tout à coup, un silence relatif se fait. Aux appels sonores des *mouezzins*, les corps se redressent, les yeux deviennent fixes et la prière commence. L'heure qui suit est consacrée aux cours. Laissons-nous entraîner par le flot des étudiants.

Nous voici au milieu d'une immense salle de 3,000 mètres carrés et dont 126 colonnes soutiennent le plafond de bois noirci, très bas. C'est le *liouan* ou la partie de la mosquée réservée à la prière. Quatre *kiblehs*, une par rite, niches creusées dans le mur du fond, permettent aux fidèles s'orienter vers La Mecque. Adossée à ce mur, une chaire de bois précieux délicatement fouillé et incrustée sert le vendredi au prône du *khatib* (prédicateur). Chaque professeur s'accote à l'un de ces piliers, le visage tourné vers le *kibleh*, ses étudiants groupés autour de sa chaise, les jambes croisées sur la natte de paille qui recouvre le dallage, les babouches soigneusement rangées en festons ou en spirales à l'intérieur du cercle. Il récite l'invocation qui ouvre tous les chapitres du Coran: "Au nom de Dieu clément, miséricordieux..." et commence sa leçon.

Quel qu'en soit le sujet, celle-ci consiste toujours dans l'explication du commentaire classique d'un ancien ouvrage ou même du commentaire de ce commentaire. Un des élèves lit le texte à expliquer et le professeur se borne le plus souvent à en reproduire avec moins de concision et plus clairement l'idée que l'auteur a

ordinairement exprimée en termes archaïques. Les auditeurs ne prennent pas de notes, mais ont tous entre les mains un exemplaire du livre sur lequel porte la leçon; ils interrompent souvent, parfois avec insistance (le règlement les autorise à le faire seulement trois fois) pour réclamer, en langue vulgaire, des éclaircissements toujours donnés de bonne grâce.

Le maître traite de la nature de Dieu et de ses attributs, parmi lesquels il place naturellement la prescience.

"Dieu savait donc de toute éternité," interroge un des étudiants, "que l'oncle du Prophète et son protecteur, Abou Taleb, refuseraient toujours obstinément d'adopter la vraie foi?"

"Oui."

"Abou Taleb ne pouvait donc faire autrement que de rester dans l'erreur, puisque telle était la volonté éternelle de Dieu. Alors, comment est-il puni pour ne pas avoir accompli un acte impossible?"

"Impossible, non; il n'y avait aucune impossibilité à ce qu'Abou Taleb se convertit; mais Dieu savait qu'il ne se convertirait pas."

"Je ne vois pas la différence," réplique le questionneur.

Sans rien ajouter, le professeur reprend son commentaire.

Laissons-le, en nous promettant de revenir l'entendre à la première occasion.

Pour sortir, nous passons au milieu d'une troupe d'enfants des deux sexes, rangés le long de la cloison de bois délicatement ajourée qui sépare le *liouan* du portique. Sous l'œil sévère et la baguette menaçante du maître, ils tiennent à la main une tablette d'argile vernissée et s'efforcent d'y transcrire un verset du Coran, qu'ils déchiffreront et apprendront par cœur. Non loin d'eux, contraste piquant, sur lequel j'attire l'attention du cheikh qui me guide, cinq hommes à barbe blanche forment le cercle et causent amicalement:

"Qui sont ces bons vieillards?"

"Des étudiants; voilà cinquante ans qu'ils étudient."

"Pourquoi étudient-ils si longtemps?"

Mon guide sourit et lève le doigt au ciel:

"Pour profiter là-haut de la science qu'ils auront acquise sur cette terre."

Nous voici de nouveau dans la grande cour. En face de nous, s'ouvre un passage voûté. Au moment de nous y engager, nous remarquons des avis épinglés au mur: "O étudiants, ô mes frères," dit l'un d'eux, "je prie celui de vous qui a trouvé dans la cour un encrier de cuivre finement ciselé de demander Ali el Saoui du *riouak* (section) Ibn Mâmer, qui suit les leçons du cheikh el Nechaoui, et Dieu le récompensera." Pénétrons dans le passage; il débouche dans une salle qui communique avec la *medah*, cour d'ablutions disposée, depuis les récentes restaurations, suivant toutes les règles de l'hygiène moderne. De vigoureux gaillards se douchent au jet des robinets. Un escalier nous conduit à un étroit couloir sur lequel s'ouvrent des chambrettes exiguës sommairement meublées de trois ou quatre lits bas et étroits faits en forme de cages à pigeons avec des branches de palmier. Nous sommes au milieu d'un *riouak*, c'est-à-dire d'un appartement d'étudiants construit et entretenu à l'aide d'un *ouakf*. On compte vingt-neuf de ces logements, la plupart situés en dehors de la mosquée, quelques-uns pourvus d'une riche bibliothèque dont profitent seuls leurs habitants. Un cheikh spécial préside à chaque *riouak* et y maintient l'ordre et la discipline.

Nous sortons d'El Azhar par une porte latérale qui ouvre sur une ruelle de l'autre côté de laquelle se trouve la section des aveugles (*Zaouiah el Emiyan*). Une vingtaine de ces malheureux suivent une leçon que leur fait un professeur également aveugle. Celui-ci commente un livre tenu par un lecteur charitable et clairvoyant.

Dans presque toutes les mosquées situées au centre du quartier arabe, des cours sont faits aux étudiants de l'Université, trop nombreux pour pouvoir trouver place dans El Azhar. D'autres, et ceux-ci méritent de nous retenir un instant, furent institués en 1895 sur les sciences jusque-là négligées, telles que les mathématiques, la géographie, l'histoire, et sont restés facultatifs, n'étant pas sanctionnés par un examen. Ils sont professés par des maîtres étrangers au corps professoral ordinaire d'El Azhar et que secondent des répétiteurs choisis parmi les étudiants. Plusieurs de ces derniers cours se donnent dans la petite mosquée de Mohammed Bey, située en face de la principale façade d'El Azhar. Un répétiteur, garçon de 18 ans, vient de poser le problème suivant: "Une moutré retarde de 35 minutes toutes les douze heures: de combien retarde-t-elle au bout d'une demi-heure?" L'auditoire reste muet. Avec une bonhomie souriante, le jeune répétiteur résout le problème et en fait la démonstra-

tion. Un peu plus loin, un effendi en vêtements européens couvre le tableau d'équations du second degré. Dans une des salles les plus retirées de la mosquée du Sultan Moayad, un autre effendi, professeur à l'École normale indigène, enseigne l'histoire islamique; il parle d'abondance, sans commenter aucun livre, et ses auditeurs prennent des notes.

REVIEWS.

THE GRACCHI—AND MARIUS.

A History of Rome during the Later Republic and Early Principate. By A. H. J. Greenidge, M.A., D.Litt. Vol. I.: *From the Tribunate of Tiberius Gracchus to the Second Consulship of Marius, B.C. 133-104.* With two Maps. (10s. 6d. net. Methuen.)

Dr. Greenidge presents the first fruits of a prolonged and minute study of the very important period of Roman history extending from the rise of the Gracchi to the accession of Vespasian. The work will be comprised in six volumes of considerable magnitude: the present volume runs to five hundred demy octavo pages. The period and the scale alike recall George Long's "Decline of the Roman Republic," and the first volumes of both histories cover practically the same years. The dry and trenchant style of Long is far removed from the easy, if sometimes rather full, style of Dr. Greenidge; but the new historian is not less alive to the duty of scholarly precision than his able and accomplished predecessor. Dr. Greenidge also takes up a standpoint of wider outlook: he handles with impartial interest not only politics, military history, and legal technicalities, but also social life in the broadest acceptation. While he has steeped his mind in the original authorities, he has brought to the interpretation of the ascertained facts a large breadth of culture and a power of vivid representation in terms that are capable of seizing the modern educated mind. The first instalment assures us that the complete work will be a most valuable contribution to the fuller understanding of the decline of the Roman Republic and the rise and early progress of the Imperial system.

The first chapter reviews at great length (one hundred pages) the social and economic conditions preceding and determining the conflict of interests in the Gracchan period—a very able study, placing systematically and comprehensively before the reader a varied mass of considerations pertinent to the struggle and not elsewhere readily accessible in compact form: the decline of colonization in Italy, the grounds of social discontent, the growth of luxury and the search for means of supporting it or of checking it, the business life of Rome (finance and banking, and the difficulties of the small trader), the economics of agriculture (the newly imported agricultural ideal of the large plantation, or *latifundium*, worked by slave gangs), pastoral brigandage, slave revolts, and the leaven of Hellenic culture working variously throughout a perplexed society. "The men who measured happiness by wealth and empire might still have retained their unshaken confidence in the Fortune of Rome." But—

But there were men in Rome who measured human life by other canons: who believed that the State existed for the individual at least as much as the individual for the State: who, even when they were imperialists, saw with terror the rotten foundations on which the Empire rested, or with indignation the miserable returns that had been made to the men who had bought it with their blood. To them the brilliant present and the glorious future were veiled by a screen that showed the ghastly spectres of commercial imperialism. It showed luxury running riot amongst a nobility already impoverished and ever more thievishly inclined, a colossal capitalism clutching at the land and stretching out its tentacles for every source of profitable trade, the middle class fleeing from the country districts and ousted from their living in the towns, and the fair island that was almost a part of their Italian home, its garden and its granary, in the throes of a great slave war.

Inevitably there occur particular points that are difficult to fit into the general sketch, and even readers that know the period well will hesitate here and there to accept the full scope of Dr. Greenidge's speculations: causes and motives, and economic causes not least of all, unless definitely known, cannot but appeal differently to different minds. But Dr. Greenidge is always suggestive and stimulating, never negligible.

The materials for the period of the Gracchan reforms are incomplete and often refractory, affording scope to the faculty

of historical divination. Dr. Greenidge has surveyed them with indefatigable care, and formed his conclusions patiently and loyally, without straining after any preconceived theory of adjustment. The whole story is worked out in an extremely satisfactory way. In like manner the Jugurthian war is narrated with conspicuous ability. The running footnotes are very useful for reference to the authorities. The contrasts with Mommsen are instructively marked; and, though Dr. Greenidge will not supersede either Mommsen or Long, yet his treatment is so carefully founded on thorough examination of the authorities and so ably and distinctively conducted as to entitle him to independent rank side by side with them. Scholars will pick out occasional oversights, misapprehensions, and speculative adventures; but these are only details, all but inevitable, and perhaps never of essential significance. The volume must find room on the scholar's shelf, as well as in the school library, and all readers will look forward to its successors with expectant interest.

"THE GOLDEN AGE OF HIGHLAND POETRY."

The Literature of the Highlands. By Magnus Maclean, M.A., D.Sc. (7s. 6d. net. Blackie.)

Having treated generally the literature of the Celts in a previous volume that pleased us well, Dr. Maclean now devotes a special volume to "the Gaelic literature of the Highlands after the Forty-Five—the golden age of Highland poetry." The field has been but little cultivated, and naturally invites the labours of the enthusiastic literary Celt. But the Southron, as well as the clansman, and, indeed, all the lovers of poetry and poets, will be much beholden to Dr. Maclean for opening up to readers of English such fresh and interesting vistas of distinctive literary achievement. Very welcome is his lucid and simple presentation of "information from the best available sources regarding the lives of the bards, their choice poems, the charming heritage of hymn and song and proverb peculiar to the Celts of Scotland, translations and translators, travellers and historians." The compilation implies prolonged and insistent labour, and the critical comment is marked by literary as well as by ethnic appreciation. Does the work certify a fresh impulse to the serious study of Gaelic, like the new movement in Irish and Irish literature?

The Gaelic literature appears to have sprung up and developed through centuries in oral tradition without the aid of print, and with but the slightest aid of writing. When Drumossie Moor put an end to the active domestic use of the claymore, and the clansmen had time to bethink them of the arts of peace, the Highlands "had not a single original production of their own in print, if we except a vocabulary compiled by Alexander Macdonald," and "the Gaelic volumes in circulation did not exceed half-a-dozen," consisting of translations of popular religious works—"Knox's Liturgy, the Psalter, Calvin's and the Shorter Catechism, and the Confession of Faith." "Yet, like the winged thing that it actually was," Highland literature "flitted about from glen to strath and strath to island by oral transmission, invading the memory and imagination of the people and stirring their hearts, so that, besides the productions of the popular poets, there was at the time of the last Stuart Rising a large residuum of ancient Ossianic ballads and prose romances circulating freely throughout the Highlands without the intervention of pen or paper, pencil or printing-press."

The themes of the bards, some of the most prominent of whom could neither read nor write, extended quickly beyond the old range of elegies and eulogies and war songs, and the prevalent lyric treatment was applied to every congenial subject. Devotion to the Chief was transmuted into devotion to the Prince, with an independent strain corresponding to the increased distance of the object of loyalty. By the middle of the eighteenth century the bards sang of Nature both in its objective aspects and in its relation to their subjective moods. Ewen Mac-lachlan, as well as James Thomson, celebrated the praises of the circling Seasons. Ardent feeling found vent in love songs, and, touched by religion, passed into hymns. It is indeed singular that the poems of fancy and imagination are but few; less striking is the poverty in philosophic poetry, and the destitution in drama. Prose is of late development: "the most outstanding classical Gaelic prose" is the work of the Rev. Dr. Norman Macleod, father of the more famous Norman of *Good Words*, the Queen's Chaplain. The Ossianic compositions of Macpherson proved a greater source of Celtic inspiration than even the romance of Prince Charlie. There is special interest in Dr. Maclean's brief notice of Jerome Stone, Rector of Dunkeld

Grammar School, who was cut off by fever at the early age of twenty-nine, but had first anticipated Macpherson in drawing attention to the ancient survivals of the Gaelic muse: indeed, "it is almost certain that it was to his initiative that the renowned Badenoch bard owed the knowledge he had, four years later" than the publication of Stone's first translation in the *Scots' Magazine* of 1756, "of the Ossianic fragments." Stone's collection of ancient ballads is preserved in the library of the University of Edinburgh, which has the only Professorship of Gaelic in the three kingdoms—the creation of the enthusiasm of the late Prof. Blackie.

For the detailed handling of the various bards and prose writers we must refer to the volume itself. The chapter on Macpherson shows Dr. Maclean at his best in literary and psychological analysis. The discussion of English renderings of Gaelic poetry tends to excite fresh emulation: "few would ever divine that in the tuneful Gaelic these poems are of the most exquisite order"; and only a small fraction of the whole has been translated. Undoubtedly Dr. Maclean's work will stir interest in the remarkable development of Gaelic literature since the fateful Forty-Five.

FRENCH DRAMA IN ENGLISH DRESS.

Corneille and Racine in England. By Dorothea Frances Canfield. (6s. net. Columbia University Press; Macmillan.)

The volume belongs to the interesting and opportune series of "Studies in Romance Philology and Literature" issued under the auspices of Columbia University. It is "a study of the English translations of the two Corneilles and Racine, with especial reference to their presentation on the English stage"—"an attempt to bring to light a forgotten movement in the literary history of our own language, and a forgotten phase of the renown of Racine and Corneille." The author confines herself rigidly within the limits prescribed, neither digressing into general influences of French drama upon the English stage nor discussing translations that were merely literary exercises. The work bears marks of a post-graduate exercitation: laborious diligence of research, ready and confident (if not always and altogether consistent) delivery of judgment, a certain superior manner of treatment, freedom of style, and sustained briskness of interest. There is considerable scope for difference of opinion, but that is really a very small matter in the circumstances—a piquant incident: the important thing is that the investigation has been carried out with fullness and sincerity, so as to present the subject in an adequate concrete form within manageable compass. We should hardly have ventured to call the movement a "forgotten" one; but the extent to which it may have been forgotten is the measure of Miss Canfield's service in bringing it to mind, and a large expansion of such service is the definite tracing and systematizing of the leading facts, with unwearyed attempts at verification in detail. Students of the period will find the work an attractive and instructive collateral aid, with "considerable of the atmosphere" of the time; and the bibliography appended will guide them to deeper inquiry. When Miss Canfield says that "the severe simplicity of Racine's diction is often replaced by what would be bombast if any one but Otway had written it," we are not to infer that one must know the author before formulating a characterization of his style, but rather to note an ingenuous indication of her kindly appreciation of Otway's genius. An aspiring translator on line-for-line principle may drink in courage from the apparent approval of such enterprising fidelity as a "feat of linguistic ability"; but, when he passes from Rutter's "Cid" to Carlell's "Heracles," he may be daunted to find reference to "rule of thumb," and that, while "every line is complete and every couplet ends a sentence," yet the result is "dryness and jerkiness quite remarkable." Reconciliation may, however, lie in the idiosyncrasies of the particular translator. There are many points of valuable rectification in detail, and many suggestive inquiries, but there is one that we cannot but stickle at. It is a date; and dates are capable of such troublesomeness as nobody but a researcher could ever dream of. Miss Canfield tells us that the date of Rutter's translation of the "Cid" "is given clearly in the British Museum copies as January 26, 1637 (O.S.)"—which seems to accord with Prof. Saintsbury's 1636 (though truly Prof. Saintsbury, albeit a historian of French literature, does not pride himself on such matters). "Now," proceeds Miss Canfield, "the date of the French privilege is given as the 21 Janvier, 1637 (N.S.), while the play was not actually printed until March 23, 1637 (N.S.)." These dates establish the curious

and significant fact that Corneille's epoch-making play was printed in English as soon as in French." Whereupon she develops a very interesting speculation as to the Earl of Dorset's alacrity of attention to theatrical matters in Paris. But, on the contrary, do not the dates plainly show that the English translation appeared in print no less than nine months after the French original, and that "the curious and significant fact" is not a fact at all? However, such occasional points are of no moment in comparison with the substantial investigation worked out with indefatigable labour and invincible geniality. The result does indeed "clearly illustrate the futility of attempts to establish, permanently, artificial standards of beauty." But that result is incidental: so far the investigation is a work of supererogation; its merits lie elsewhere.

ALTERNATING CURRENTS.

A Treatise on the Theory of Alternating Currents. By Alexander Russell, M.A., M.I.E.E. Vol. I. (12s. Cambridge University Press. Cambridge Physical Series.)

The practical electrician of the present day requires to be equipped with a considerable amount of mathematical knowledge. In the early days, when he had to deal only with direct currents, a few simple formulæ representing the laws of Ohm, Joule, &c., were sufficient to carry him through his day's work. But now, when the alternating current occupies so large a part of the field of electrical industry, he can no longer afford to remain ignorant of the far more complicated formulæ upon which calculations of alternating current plant depend. In the present volume Mr. Russell supplies the student with a clear and complete exposition of the mathematical theory of the alternating current and of many of its industrial applications. His methods of treating many of the problems are decidedly novel, and are explained when possible without having recourse to the most general and abstruse equations. The reader is supposed to be familiar with the elementary theory of electricity and magnetism, and to have a working knowledge of trigonometry and of the elements of the calculus. The important magnitudes of inductance and capacity are discussed and explained in the early chapters of the book. The capacities of cables, the theory of the power factor, electric meters and methods of measurement as carried out in the test room, and the problems of two-phase and polyphase currents are all discussed in considerable detail. The method of duality explained in chapter xvii. is a very ingenious and novel application of the mathematical theory of reciprocals to the solution of electrical problems.

In the second volume it is proposed to discuss the theory of alternators, motors, transformers, converters, and the transmission of power by polyphase currents. The treatise, when complete, will be a valuable and creditable addition to the Cambridge Physical Series.

GENERAL NOTICES.

CLASSICS.

Sexti Properti Opera Omnia. With a Commentary. By H. E. Butler, M.A. (8s. 6d. net. Constable.)

Mr. Butler's aim has been "to provide a commentary which should take into account the more recent results of Propertian criticism, and should afford English readers a somewhat fuller guide to this difficult author than has hitherto been available." He has bettered his profession very considerably: the notes are extensive and well considered, and cannot but be extremely serviceable to students. The enterprise is beset with difficulties, and occasional divergence of view should not be allowed to minimize recognition of Mr. Butler's patient and thoughtful labours. The text has been submitted to careful examination, and the critical footnotes are based on the works of Baehrens and Postgate, Mr. Butler agreeing entirely with Prof. Postgate on the question of the relative values of the MSS., but suggesting the greatest caution in the application of the Professor's "heroic remedy" of difficulties by transposition of lines. The introductory account of Propertius and his works is concise and pointed. An able, painstaking, and welcome edition.

Cornelii Taciti Historiarum Liber III. Edited by Walter C. Summers, M.A., Firth Professor of Classics in the University College, Sheffield. (2s. 6d. Cambridge University Press—Pitt Press Series.)

We do not think it worth while to quarrel with Prof. Summers for calling Tacitus "the greatest of Latin prosaists": the opinion rests on grounds that it would be irrelevant to inquire into now, and we prefer to regard it as a sign of the special interest of the commentator. The introduction is divided between compendious and instructive

remarks on the characteristics of Silver Latin and a pointed historical summary of the events narrated in the book in hand. The notes (pages 63-160, including index to notes) are fresh and independent, pithy, and thoroughly well thought out. There is a map of Rome, and a map of Italy mainly illustrative of the march of the Flavian army on Rome. A very able and adequate edition, and sure to be most serviceable to students.

MATHEMATICS.

Elementary Mensuration. By G. T. Chivers. (5s. Longmans.)

Mensuration is less rich in text-books than most branches of elementary mathematics, and Mr. Chivers is probably correct in his estimate of the demand existing for a work such as the present one. Be that as it may, the book is intrinsically good. In order to make it specially helpful to students to whom a knowledge of mensuration is requisite, but who are unacquainted with the calculus, the author has derived the formulæ demonstrated without the help of subjects more advanced than algebra and trigonometry. He discusses very fully the mensuration of plane rectilinear figures and the circle, Simson's rules and how to apply them, the mensuration of solids bounded by plane faces, and so on. A brief preliminary explanation of the essential characteristic of each conic enables the author to give some useful propositions connected with the approximate rectification and quadrature of these curves. The theorems of Guldinus and their relation to the measurement of the surface and volume of a solid of revolution are included, and there are chapters also on the metric system and on specific gravity. For purposes of reference and for the benefit of the advanced student who can supply the proofs from outside reading, a collection of important formulæ depending on the calculus appears in the final chapter of the volume.

Elementary Algebra. Part I. By Chintamani Mukerjee, B.A. (Allahabad: The Indian Press.)

The many good points which characterize the little volume before us will be appreciated wherever it may be employed as a text-book. The theory of the subject is rendered interesting, as well as intelligible, to the beginner, and algebra and arithmetic are carefully compared and contrasted, the study of their mutual relation receiving closer attention than we generally find in books of a similar type. The form in which the little work has been brought out differs in many respects from that of the ordinary English text-book; but it seems probable that the author did not contemplate a wide circulation in this country.

Constructive Geometry. By John G. Kerr, LL.D. (1s. 6d. Blackie.)

Dr. Kerr has arranged an interesting course in geometry suitable for science students in their first year. The work is marked by an individuality for which we seek in vain in so many of the text-books now being produced. It is, in addition, more than usually free from unsatisfactory passages. The course includes most of the subject-matter of the first three books of Euclid, and the pupil's knowledge is obtained chiefly as the result of experiment and the synthesis of observed facts; deductive reasoning is, however, also used. The idea of motion, particularly that of rotary motion, is freely employed in the demonstrations, but we are obliged to confess that this is not always productive of greater simplicity, and that in evading some of the difficulties experienced by the student commencing Euclid the author has introduced others that will probably cause equal trouble. Some of the propositions of Euclid do not form part of the text, but are set as "riders" amongst the numerous exercises. Each chapter closes with a concise summary of its contents and an examination paper. In dealing with the substance of Book II. of the "Elements" Dr. Kerr treats the propositions as geometrical verifications of the corresponding equations in algebra, and he confines himself to the consideration of commensurable magnitudes.

New School Arithmetic. By Charles Pendlebury, M.A., F.R.A.S. assisted by F. E. Robinson, M.A. (Complete with or without Answers, 4s. 6d., or in Two Parts, 2s. 6d. each; Answers separately, 6d. net. George Bell.)

The sixteenth edition of Mr. Pendlebury's well known and deservedly popular treatise on arithmetic forms the basis of the new issue. In the task of revising, enlarging, and rearranging the earlier text, the author has been ably assisted by Mr. F. E. Robinson, M.A. The features which call for special notice in the present volume are the excellent use made of graphical methods in the explanation of rules, the greater prominence assigned to the metric system of weights and measures, the attention devoted to graphs and some of their many applications, the adoption of algebraical symbols where these appear to offer material assistance in simplifying a demonstration, and the introduction of chapters on elementary mensuration and on logarithms. The earlier portions of the complete work have also been published separately as Part I. of the text-book.

SCIENCE.

Electromagnetic Theory of Light. By Charles Emerson Curry, Ph.D. Part I. (12s. net. Macmillan.)

The present volume handles the more familiar phenomena that can be satisfactorily explained by Maxwell's theory, the rest being left over for treatment in a second Part. The introductory chapter puts the

reader in position in a thoroughly businesslike way. Spherical and primary and secondary waves, the interest of which is largely theoretical, are treated at some length in the first four chapters, as "indicating another fertile field of research offered by Maxwell's equations." The remaining chapters are vigorously practical. Dr. Curry's object is "to account for the manifold phenomena of light as electromagnetic phenomena, deriving the same from the fundamental differential equations for electromagnetic disturbances." In treatment he "lays more stress on a rigorous development of the fundamental laws of optics than on the derivation of the many consequences or secondary laws that can be deduced from the former by familiar principles and have little to do with our conception of the nature of light," and, moreover, can be found in ordinary text-books of any considerable compass. The historical sketches introducing each chapter are very welcome, and the well chosen and fairly numerous examples appended to each chapter will be of very real service. The whole work is extremely able, and the exposition is lucid.

Messrs. Grevel issue a third edition, revised and augmented, of Mr. Pattison Muir's translations of the popular lectures on *Chemistry in Daily Life* by Prof. Lassar-Cohn, of the University of Königsberg (5s.). A very able, instructive, and practical exposition, which any intelligent reader can readily follow without special technical knowledge.

Messrs. Warne publish Part I. of "*Wild Flowers, Month by Month*, in their Natural Haunts," by Edward Step, F.L.S. (8d. net.)—flowers of March. The selection is judicious and the description popular without sacrifice of scientific quality. The illustrations from photographs are numerous and good, and the get-up is artistic.

ENGLISH LITERATURE.

Gower: Selections from the Confessio Amantis. Edited by G. C. Macaulay, M.A. (4s. 6d. Clarendon Press.)

On grounds both of literary and of linguistic interest, the work is to be welcomed in supplement of the usual extracts from Chaucer for illustration of the history of our literature and language towards the end of the fourteenth century. The selections exhibit the general plan and framework of the "*Confessio Amantis*," and include some of the more interesting stories. Whether Gower "represents the average literary taste of the time better than Chaucer" is a question that may be left to experts: for school purposes there can be no question of the importance of the wider exemplification he offers. The introduction deals fully and carefully with Gower and his works, Latin as well as English, and provides adequate preliminary explanation of the characteristics of his language (orthography, phonology, inflexion) and of his metre. The Notes and the Glossary will enable a student to make his way through the extracts with intelligence and comfort. Mr. Macaulay has put a great deal of arduous and sincere work into the little volume.

New volumes of "*Heinemann's Favourite Classics*" are three plays of Sheridan (6s. net each): (1) *The Rivals* (with portrait of Downton as Sir Anthony Absolute); (2) *The School for Scandal* (with portrait of Sheridan after Gainsborough's painting); and (3) *The Critic* (with a plate representing King as Puff). Each play is furnished with an introduction by Edmund Gosse.

ENGLISH READERS.

Longmans' British Empire Readers—Introductory (88 pages, 8d.), Books I.-VI. (128, 144, 192, 224, 256, 288 pages; 10d., 1s., 1s. 3d., 1s. 6d., 1s. 8d., 1s. 9d.)—form a new series, with the chief aim of fostering a love of good reading. There are original stories, fairy tales, varied extracts from well known writers for the young and from standard authors in prose and poetry, moral lessons being largely suggested in the earlier volumes. The illustrations, many of them coloured, and nearly all of them specially drawn for the series, are very abundant and exceptionally good. The graduation of the books rests on the interest of the matter rather than on the difficulties of the vocabulary; and, if the principle be granted, the matter is very fairly graduated. The type, paper, and binding are excellent. The series has been very carefully planned and ably executed, and it will undoubtedly prove attractive. The publishers invite teachers to apply for specimen copies.

Steps to Literature (Edward Arnold) is a well selected, carefully graduated, and most attractive series. Book I. (112 pages, 10d.) gives "*Tales of the Home-land*"—folk-tales and fairy-tales, with rhymes and simple verses. Book II. (144 pages, 1s.) presents "*Tales of Many Lands*," with simple rhymes and poems. Book III. (192 pages, 1s. 3d.) contains "*Stories from English and Welsh Literature*," from Bede to Tennyson, with simple poems of high merit. Book III. A (224 pages, 1s. 6d.) gives "*Stories from the Literature of the British Isles*." Book IV. (224 pages, 1s. 6d.) consists of "*Literary Readings relating to the Empire*"—legends and myths of various countries, travel tales of Empire pioneers, literary descriptions of great historical events, and poems relating thereto. Book V. (224 pages, 1s. 6d.) consists of "*Literary Readings relating to Europe*"—tales from the Greek and Latin classics, the Song of Roland, the Nibelungenlied, the Heims-kringla Saga, and other romances, literary extracts relating to the

people or countries of Europe, and English poems with a European background. Book VI. (256 pages, 1s. 6d.) offers "Glimpses of World Literature." The books are all correlated with the "Home and Abroad Geographical Readers." The volumes are beautifully printed and got up, and very liberally and effectively illustrated.

Meiklejohn's Poetry Books—"a new selection"—are, so far, four in number (2d., 3d., 3d., 4d.: Meiklejohn & Holden). The matter is varied and attractive throughout, and sufficiently graduated. The books are well printed and very tastefully got up. The children will read them through and through of their own accord.

FRENCH READERS AND WRITERS.

(1) *A First French Writer*. (2) *A Second Year French Writer*. (3) *A Third Year French Writer*. By G. H. Wade, M.A. (2s. 6d., 3s. 6d., 3s. 6d. Rivingtons.)

Each of the three volumes of the series contains exercises, lessons, and vocabulary. The first volume, while presupposing preliminary or simultaneous study of English grammar and sentence-construction, exercises the pupil carefully and systematically from simple sentences on to continuous prose. The second aims at giving "such a grounding in the uses of the infinitive and of the compound sentence as is required for the writing of continuous prose." The third "is mainly occupied with those idiomatic constructions and terms of phrase which are most commonly required in the writing of French prose"; and special attention is bestowed on connecting particles and prepositions—both difficult and important matters. The "lessons" are all grammatical: they set out the main points very clearly and with full illustration, and they are to be worked in with the exercises. Mr. Wade has evidently been at great pains to select the most suitable matter and to dispose it effectively; and we have no doubt that the volumes will prove eminently successful. They are attractively printed and flexibly and strongly bound.

The Matriculation French Reader, edited by J. A. Perret, Officier d'Académie (2s. 6d., Clive), contains a judicious and ample collection of prose and verse extracts suitable for examinations of the standard of the London University Matriculation. The passages are roughly graduated; and notes and a full vocabulary are appended. A careful and useful compilation.

Mr. W. G. Hartog, B.A., has compiled a substantial and varied volume of *Lectures Scientifiques* (Rivingtons), containing extracts from modern French scientific works in Chemistry, Physics, Mathematics, Physiology, and Botany, with a glossary of technical terms. The book will be especially valuable for students reading for a degree in science at a university (e.g., London) that requires capacity to read with understanding French scientific works. The glossary supplements the ordinary dictionary.

HISTORY.

Wellington, Soldier and Statesman, and the Revival of the Military Power of England. By William O'Connor Morris. (5s. Putnam—Heroes of the Nations Series.)

The late Mr. O'Connor Morris had devoted long and earnest study to the Napoleonic period, and he contributed the "Napoleon" volume to the present series. While he treats the whole range of Wellington's career with ample knowledge and care, he is most at home in discussing disputed questions in the history of the Peninsular and Waterloo campaigns. His views on several points have been challenged by writers of knowledge and ability, but, in view of the elements of doubt, the student should not neglect Mr. O'Connor Morris's arguments and conclusions, grounded as they are upon a very wide acquaintance with the authorities available and upon industrious independent study. The style is engaging; and there are maps of India in 1804, and of Spain and Portugal (illustrating the Peninsular War), together with some 30 welcome illustrations.

The Constitution of the Kingdom of Norway: an Historical and Political Survey. By H. L. Brækstad. (Nutt.)

In view of the constitutional difficulties that have been agitating Norway and Sweden for some time past and have quite recently become acute, Mr. Brækstad's able essay is very welcome. He sketches the constitutional position from the Union of 1814 under Bernadotte (Karl Johan), and he has historical sense enough to present the disputed questions without Norwegian prejudice. An excellent translation of the Norwegian Constitution and of the Act of Union is appended. The volume is nicely printed and attractively got up.

Messrs. Ginn & Co. have just issued a revised edition of *Ancient History*, by Philip van Ness Myers, formerly Professor of History and Political Economy in the University of Cincinnati (7s. 6d.), a very laborious, well balanced, attractively written, and careful work, commencing with the Eastern Empires and reaching down to the restoration of the Roman Empire in the West by Charlemagne. There are 12 plates, 21 coloured maps and 14 sketch maps, and 184 illustrations. The volume is liberally printed and strongly and flexibly bound.

EDUCATION.

Der Säemann, "Monatschrift für pädagogische Reform, herausgegeben von der Hamburger Lehrervereinigung für die Pflege der

künstlerischen Bildung," with the co-operation of numerous well known names throughout Germany (Leipzig: Teubner), has now been running for half a year. It takes a wide range, embracing literary, artistic, and social subjects, as well as purely pedagogic matter, and treating them with much fullness and vigour. The articles are instructive and stimulating, and, if the "Pädagogische Reform" is not pressed very urgently, it may yet follow gradually on persistent discussion. The journal gives good promise of wide usefulness.

We must acknowledge our inability to do justice to the *Museum*, a Polish monthly journal, edited by Dr. Boleslaw Mankowski, and published at Lwow. By a dim rushlight of Russian, we can see that the articles are substantial and handle large questions of immediate interest, and that the abundant news matter keeps readers well informed as to what is doing educationally far and near. Dr. Kazimierz Lutoslawski contributes to a recent number the fullest account of the forthcoming Sanitary Conference in London that we have yet seen anywhere—with special reference to the bearings on schools. The journal is in its twenty-first year, and manifestly thriving and deserving to thrive.

MISCELLANEOUS.

"A Study" of *Chamberlain*, by John M. Robertson, M.A. (6d. Watts), is a cool and remorseless application of the author's historical and political scalpel. It is severely condemnatory, though it cannot be said to be unfairly critical from Mr. Robertson's standpoint.

The *University Correspondence Prospectus*—a handy reprint from the "Calendar," containing particulars as to the courses and books for the London University Examinations of two years ahead—exhibits a large organization that has developed remarkably upon its inherent merits. In 1903-4 the College passed 1,092 students at London University, including 16.9 per cent. of the Matriculation successes (548 out of 3,245). These successes undoubtedly rest on the administrative capacity of the Principal and the academic qualifications and pedagogic experience of the staff. The University Tutorial Press has similarly expanded to large dimensions, providing text-books specially adapted to the various subjects and courses. Our review columns have often testified to their very high level of ability. The College is doing eminently useful work, especially for such of its students as cannot attend either day or evening classes.

The Caledonian Railway Company publish in good time for the summer holidays (1) *Through Scotland*, and (2) *Oban and the Land of the Gael*, excellent descriptive guide-books, by George Eyre-Todd (2d. each). Mr. Eyre-Todd weaves in a good deal of history and romance, and there are capital tour maps and a first-rate general map in (1), and plenty of good illustrations in both; (2) is very daintily got up. And here is also an *Illustrated Official Guide to Hotels and Furnished Lodgings* in all parts served by the Caledonian Railway, with a special map (Glasgow: J. M. Munro, 123 Hope Street).

The Midland Railway Company publishes a capital map, showing primarily their hotels and buffets, and incidentally commercial routes and historical places of importance.

FIRST GLANCES.

MATHEMATICS.

Arithmetic, Advanced. Part I. By the Rev. J. Lightfoot, M.A., D.Sc. 2s. net. Key, 2s. net. Normal Press.

[Examples very abundant. Answers.]

Arithmetic, Methods in. By Geo. R. Purdie, B.A. 1s. 6d. Pitman.

["An aid to the intelligent treatment of the earlier stage."]

Arithmetic, The "Council," for Schools. By T. B. Ellery, F.R.G.S. Scheme B. Part V. 3d. Black (School Arithmetic).

Arithmetical Examples. Edited by J. Logan, F.R.G.S. 1s. Swan Sonnenschein.

[Elementary, Intermediate, Advanced; for Schools and Colleges. 600 graduated exercises; answers.]

Arithmetical Test Cards, Term, McDougall's. Scheme B. (1) Class VII. 1s. net per packet. (2) Answers, Class V. 2d. net.

OXFORD UNIVERSITY PRESS.

Books suitable for Candidates at Oxford Local Examinations, 1906.

RELIGIOUS KNOWLEDGE.

- The Oxford Helps to the Study of the Bible.** New, Enlarged, and Illustrated Edition. Pearl 16mo, 1s. net; Nonpareil 8vo, 2s. 6d.; Large-type Edition, 5s.
- Oxford Helps to the Study of the Book of Common Prayer.** By the late W. R. W. STEPHENS, D.D. 2s. 6d. net.
- Revised Version of the Holy Bible—**
Pearl 16mo, 10d.; Ruby 16mo, 3s.
- Revised Version of the New Testament—**
Nonpareil 32mo, 3d.; Brevier 16mo, 6d.; Long Primer 8vo, 9d.
- The Greek Testament,** with the Readings of the Revisers and with Marginal References. 4s. 6d.; on India Paper, 6s.
- Old Testament History for Schools.** By the late T. H. STOKOE, D.D. In Three Parts. With Maps, 2s. 6d. each.
- Manual of the Four Gospels.** By the same. 3s. 6d. Or, separately, Part I, *The Gospel Narrative*, 2s.; Part II, *The Gospel Teaching*, 2s.
- Life and Letters of St. Paul.** By the same. 2s. 6d. Or, in Two Parts, each 2s.
- First Days and Early Letters of the Church.** By the same. 3s. Or, separately, Part I, 1s. 6d.; Part II, 2s.
- Graduated Lessons on the Old Testament.** By U. Z. RULE, M.A. Edited by LL. J. M. BEBB, M.A. In 3 Volumes, 1s. 6d. or 1s. 9d. each.

ENGLISH.

- A Primer of Historical English Grammar.** By HENRY SWEET, M.A., Ph.D. 2s.
- Shakespeare.** Edited by W. G. CLARK and W. ALDIS WRIGHT. *Macbeth*, 1s. 6d. *Henry the Fifth*, 2s. *The Tempest*, 1s. 6d.
- Spenser's Faery Queene.** Book I. With Introduction and Notes by G. W. KITCHIN, and Glossary by A. L. MAYHEW. 2s. 6d.
- Sir Thomas More's Utopia.** Edited, with Introduction, Notes, and Glossary, by J. CHURTON COLLINS. 3s. 6d.
- Burke.—Thoughts on the Present Discontents:** the two Speeches on America. Edited by the late E. J. PAYNE. 4s. 6d.
- Keats's Odes.** Edited by A. C. DOWNER. With 4 Illustrations. 3s. 6d. net.
- Scott.—Lay of the Last Minstrel.** Edited by W. MINTO. 1s. 6d. Separately, Introduction and Canto I., 6d.
- Shelley's Adonais.** Edited by W. M. ROSSETTI and A. O. PRICKARD. Second Edition. 3s. 6d. and 5s.
- Poems of English Country Life.** Selected and edited by H. B. GEORGE and W. H. HADOW. 2s.

FRENCH.

- Concise French Grammar,** including Phonology, Accidence, and Syntax. For use in Upper and Middle Forms. By A. H. WALL. 4s. 6d.
- French Primer.** For use in Middle and Lower Forms. By the same. 2s.
- Bug-Jargal.** By VICTOR HUGO. Edited by LOUIS SERS. (*Oxford Modern French Series.*) 2s.

GERMAN.

- Kinderfreuden,** von A. E. C., being an Illustrated German Reading Book for Young Children. 1s. 6d.
- Short German Plays,** for Reading and Acting. With Notes and Vocabulary by EMMA S. BUCHHEIM. 3s.
- Passages for Unprepared Translation into German.** Selected by EDUARD EHRKE. 3s.

LATIN AND GREEK.

By J. B. ALLEN.

- An Elementary Latin Grammar.** New and Enlarged Edition. 2s. 6d.
- A First Latin Exercise Book.** 2s. 6d.
- A Second Latin Exercise Book.** 3s. 6d.
- An Elementary Greek Grammar.** Containing Accidence and Elementary Syntax. 3s.
- Lives from Cornelius Nepos.** Edited by J. B. ALLEN. 1s. 6d.
- Reddenda Minora;** or, Easy Passages, Latin and Greek, for Unseen Translation. By C. S. JERRAM. Revised and Enlarged. 1s. 6d.

LATIN AND GREEK—(continued).

- Anglice Reddenda;** or, Extracts, Latin and Greek, for Unseen Translation. By the same Editor. 2s. 6d. Second Series, 3s. Third Series, 3s.
- Easy Greek Reader.** By EVELYN ABBOTT. 2s.
- An Elementary Latin Dictionary.** By C. T. LEWIS. 7s. 6d.
- A School Latin Dictionary.** By C. T. LEWIS. 12s. 6d.
- An Abridged Greek Lexicon for Schools.** By LIDDELL and SCOTT. 7s. 6d.
- An Intermediate Greek Lexicon.** By LIDDELL and SCOTT. 12s. 6d.
- Caesar.—The Gallic War.** Edited by C. E. MOBERLY. With Maps. *Books I and II*, cloth, 2s. *Books I-III*, stiff covers, 2s.
- Cicero.—Philippic Orations, I-III, V, VII.** By J. R. KING. 3s. 6d.
- Horace.—Odes, Book I.** Edited by E. C. WICKHAM. 2s.
- Virgil.—Aeneid, Book I.** Edited by C. S. JERRAM. 1s. 6d.
- Aeschylus.—Persae.** Edited by ARTHUR SIDGWICK. 3s.
- Demosthenes.—Philippic I, Olynthiacs I-III.** Edited by E. ABBOTT and P. E. MATHESON. 3s.
- Euripides.—Alcestis.** Edited by C. S. JERRAM. 2s. 6d.
- Xenophon.—Anabasis, Book I.** By J. MARSHALL. 1s. 6d. *Book II.* By C. S. JERRAM. 1s. 6d. *Book III*, 1s. 6d. *Book IV*, 1s. 6d. *Books III and IV* together, 3s.
- Each volume has the full Vocabulary bound up with it. The Vocabulary can also be had separately for 1s.
- Primer of Greek Prose Composition.** By J. Y. SARGENT. 3s. 6d.

HISTORY.

- Companion to English History (Middle Ages).** Edited by F. P. BARNARD. With 97 Illustrations. 8s. 6d. net.
- A School History of England.** By O. M. EDWARDS, A. J. CARLYLE, R. S. RAIT, and others. With numerous Maps. 3s. 6d.
- Historical Geography of the British Colonies.** By C. P. LUCAS. Introduction: Origin and Growth of English Colonies. With 8 Maps. By H. E. EGBERTON. Vol. II. The West Indian Colonies. With 12 Maps. 7s. 6d.

MUSIC.

- A Chart of the Rules of Harmony.** By A. SOMERVELL. 1s. net.
- A Chart of the Rules of Counterpoint.** By the same. 1s. net.

NATURAL SCIENCE.

- An Elementary Treatise on Heat.** By BALFOUR STEWART. 8s. 6d.
- Woolcombe.—Practical Work in General Physics.** By W. G. WOOLCOMBE. 2s. each Part.
- PART I. General Physics. PART II. Heat. Second Edition, Revised.
- PART III. Light and Sound. PART IV. Magnetism and Electricity.
- A Class-Book of Chemistry.** By W. W. FISHER, M.A. 4s. 6d.

GEOMETRY.

- Geometry for Beginners.** An Easy Introduction to Geometry for Young Learners. By G. M. MINCHIN. 1s. 6d.
- Experimental and Theoretical Geometry.** By A. T. WARREN. Second Edition. 2s. (Following the plan recommended by the Mathematical Association.)
- Elementary Plane Trigonometry.** By R. C. J. NIXON. 7s. 6d.
- Euclid Revised.** Edited by R. C. J. NIXON. 6s. *Book I*, 1s. *Books I, II*, 1s. 6d. *Books I-IV*, 3s. *Books V, VI*, 3s. 6d.
- Geometrical Exercises from "Euclid Revised."** By A. LARMOR. 3s. 6d.
- The "Junior" Euclid.** By S. W. FINN. *Books I and II*, 1s. 6d. *Books III and IV*, 2s.

MISCELLANEOUS.

- Arithmetic.** By R. HARGREAVES. 4s. 6d.
- Book-keeping.** New and Enlarged Edition. By Sir R. G. C. HAMILTON and J. BALL. 2s.
- Ruled Exercise Book to the above, 1s. 6d.; to Preliminary Course only, 4d.
- Elementary Political Economy.** By E. CANNAN. 1s.
- Cornwall-Lewis's Remarks on the Use and Abuse of some Political Terms.** New Edition, with Introduction, by T. RALEIGH. Paper, 3s. 6d.; cloth, 4s. 6d.

COMPLETE CATALOGUE POST FREE ON APPLICATION.

London: HENRY FROWDE, Oxford University Press Warehouse, Amen Corner, E.C.

Stages I., II., III., and Honours, of the Science Department of the Board of Education. Careful selection, lucidly presented.]

Electricity, What do we know concerning? By Antonia Zimmern, B.Sc. 1s. 6d. net. Methuen.

[For general readers and young students. Simple and attractive; final chapter on radio-activity.]

Physics, Notes and Questions in. By John S. Shearer, B.S., Ph.D., Assistant Professor of Physics, Cornell University. 7s. 6d. net. Macmillan.

[1,497 questions: 205 figures; numerous tables appended. "Selected with reference to the needs of students who are expecting to use physics either as a basis for engineering work, for teaching, or for scientific purposes." Mostly involve nothing but simple arithmetic; a few involve use of the calculus. Able and discriminative; must be very useful.]

Poisonous Plants of all Countries, with the Active Chemical Principles which they contain and the Toxic Symptoms produced by each Group. By A. Bernhard Smith. 2s. 6d. net. Wright (Bristol); Simpkin, Marshall, & Co.

Statics, Elementary, An Introduction to: treated Graphically. By R. Nettell, M.A. 2s. E. Arnold.

[138 examples of practical type; numerous figures. Well conceived and effectively worked out.]

MODERN LANGUAGES.

Anecdotes et Récits: a Reader for Elementary and Middle Forms. By W. G. Hartog, B.A. Lond. 2s. 6d. Rivingtons.

[27 simple graduated passages, followed by oral and written exercises, with simple English passages for retranslation. Illustrations. Vocabulary. Very useful.]

Arnold's French Reading Books.—La Fée Grignotte (Madame de Girardin) and La Cuisine au Salon (from La Théâtre de la Jeunesse). Edited by J. G. Anderson, B.A. 9d.

[Good notes; sentences for retranslation; considerable grammatical appendix (on important points); vocabulary. Careful, helpful, and attractive.]

Blackie's Little French Classics.—(1) Adventures in Switzerland (Dumas), edited by Alexander Wright, M.A.; and (2) Le Voyage de Chicot (Dumas), edited by George Heyer, M.A.

[Interesting passages; brief notes.]

Blackie's Modern Language Series.—(1) Select Tales of Hans Andersen. Edited by the Rev. H. J. Chaytor, M.A. 2s. (2) Choix de Lectures Françaises. Edited by Richard Kaiser. 1s. 6d. (3) A Handbook of French Dictation. By D. A. Wynne Willson, M.A. 2s. (4 and 5) Français pour les Commencants, by Jetta S. Wolff, 1s. 6d.; and Teacher's Handbook to the same, by J. S. Wolff, 2s. 6d. net.

[(1) Text in German; brief notes; exercises for retranslation; vocabulary; illustrations. Excellent reading book. (2) Select passages, prose and poetry, from good modern authors; interesting and varied; irregular verbs (in text); complete vocabulary. Very serviceable. (3) Exercises of wide scope; preliminary hints on pronunciation, and exercises illustrating select points of grammar and syntax. Handy and helpful. (4) Simple matter in everyday vocabulary, directly connected with the numerous illustrations; very practical. The handbook gives translation, with notes.]

HISTORY AND GEOGRAPHY.

Africa, Bacon's Handbook of. By Henry P. Cornish, F.R.G.S. 3d.
[To accompany Bacon's Excelsior Map of Africa. Clear and discriminating; much information in narrow space.]

British History, Problems and Exercises in. By J. S. Lindsey. Vol. II.: Medieval. 6s. Heffer; Simpkin, Marshall, & Co.
[Chronological synopsis; 160 full answers to typical questions; references to books; and much miscellaneous matter. Elaborate.]

Colonies, The British, and their Industries. By the Rev. William Parr Greswell. 1s. 6d. Philip (School Series, No. I.).
[Sixth edition, revised and enlarged.]

Empire, British, McDougall's Short Commercial Geography of. 6d.
[Well packed with information. Maps and charts.]

England and Wales, McDougall's Geography of. 4d.
[Numerous illustrations. Relief and coloured maps.]

Geographical Terms explained. By E. E. Denney, A.C.P., and P. Lyddon-Roberts, A.C.P. 9d. net. Normal Press (Normal Tutorial Series).

[Most industrious collection.]

Geography, Test Questions in. Selected and arranged by Arthur T. Flux. 1s. Meiklejohn & Holden.

[From various public examination papers. Very serviceable.]

World, An Elementary Geography of the. By Lionel W. Lyde, M.A., F.R.G.S., Professor of Economic Geography, University College, London. 1s. 4d. Black (Black's School Geography).

[Judiciously selective; lucidly arranged. 9 maps.]

FRANCIS HODGSON, 89 FARRINGDON STREET, LONDON, E.C.

MATHEMATICS.

15657. (Professor NEUBERG.)—Les diagonales AC, BD d'un quadrilatère ABCD se coupent à angle droit en O. On sait que les projections de O sur les côtés du quadrilatère sont situées sur une même circonférence. Si p est la puissance de O par rapport à cette circonférence et R le rayon, démontrer que

$$1/p = 1/(OA \cdot OC) + 1/(OB \cdot OD),$$

$$4R^2/p^2 = (1/OA - 1/OC)^2 + (1/OB - 1/OD)^2.$$

Solutions (I.) by the PROPOSER; (II.) by C. M. ROSS.

(I.) Soient $(a, 0), (0, b), (a', 0), (0, b')$ les co-ordonnées des points A, B, C, D. Les équations de la droite AB et la perpendiculaire Oa étant $x/a + y/b = 1, y = (a/b)x$, les coordonnées de a sont $x = ab^2/(a^2 + b^2), y = a^2b/(a^2 + b^2)$. Exprimons que ce point est sur la circonférence

$$x^2 + y^2 - 2mx - 2ny + p = 0;$$

on trouve $1 - 2m/a - 2n/b + p(1/a^2 + 1/b^2) = 0$(1).

Par analogie, si β, γ, δ sont sur la même circonférence, on a

$$1 - 2m/a' - 2n/b + p(1/a'^2 + 1/b^2) = 0$$
.....(2),

$$1 - 2m/a' - 2n/b' + p(1/a'^2 + 1/b'^2) = 0$$
.....(3),

$$1 - 2m/a - 2n/b' + p(1/a^2 + 1/b'^2) = 0$$
.....(4).

Ces équations se réduisent à trois, car (1) + (3) = (2) + (4); donc les quatre points $\alpha, \beta, \gamma, \delta$ sont concycliques.

Si l'on soustrait (1) de (2) et de (4), on obtient

$$m = \frac{1}{2}p(1/a + 1/a'), \quad n = \frac{1}{2}p(1/b + 1/b')$$
.....(5).

En portant les valeurs (5) dans (1), il vient $1 - p(1/aa' + 1/bb') = 0$; ce qui démontre la première formule proposée. Ensuite

$$R^2 = m^2 + n^2 - p = \frac{1}{4}p^2 [(1/a + 1/a')^2 + (1/b + 1/b')^2] - p,$$

$$4R^2/p^2 = (1/a + 1/a')^2 + (1/b + 1/b')^2 - 4(1/aa' + 1/bb')$$

$$= (1/a - 1/a')^2 + (1/b - 1/b')^2.$$

Les formules proposées peuvent s'étendre à un octaèdre à trois diagonales rectangulaires concurrentes (*Mathesis*, 1904, p. 258). [Rest in Reprint.]

15752. (Professor M. W. CROFTON, F.R.S.)—Show that $n^n - 1$ is divisible by $4n + 1$ if the latter is a prime number.

Solutions (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.;

(II.) by R. W. D. CHRISTIE; (III.) by F. N. MAYERS, M.A.

(I.) This is a known theorem. It may be proved thus, $2^2 \cdot n \equiv -1$, and $2^4 \cdot n \equiv -2^2 \pmod{p}$; therefore

$$(2^4)^{\frac{1}{2}(p-1)} n^{\frac{1}{2}(p-1)} \equiv (-1)^{\frac{1}{2}(p-1)} (2^2)^{\frac{1}{2}(p-1)} \pmod{p}.$$

Herein $2^{p-1} \equiv +1, \frac{1}{2}(p-1) = n$; and $(-1)^{\frac{1}{2}(p-1)}, 2^{\frac{1}{2}(p-1)}$ both $\equiv -1$ when n is odd, and both $\equiv +1$ when n is even; therefore $n^n \equiv 1 \pmod{p}$ always.

(II.) (1) Let n be odd. We have

$$4n \equiv -1 \pmod{4n+1},$$

i.e.,

$$4^n n^n \equiv -1,$$

$$4^n n^{2n} \equiv -n^n \equiv -1 \text{ (hyp.)}.$$

$$4^n \cdot n^{2n} - 4n \equiv 0 \pmod{4n+1};$$

i.e.,

$$4^{n-1} n^{2n-1} \equiv +1 \pmod{4n+1} \text{ (even),}$$

$$4^{n-2} n^{2n-2} \equiv -1 \pmod{4n+1} \text{ (odd),}$$

$$4^n n^{n+1} \equiv -1 \pmod{4n+1} \text{ odd;}$$

$$4^0 n^n \equiv +1$$

or $n^n \equiv +1$ as per hypothesis.

(2) Let n be even

$$4n \equiv -1 \pmod{p},$$

$$4^n n^n \equiv +1 \pmod{p},$$

$$4^n n^{2n} \equiv n^n \equiv +1 \text{ (hyp.)},$$

$$4^{n-1} n^{2n-1} \equiv -1 \text{ (odd),}$$

$$4^{n-2} n^{2n-2} \equiv +1 \text{ (even),}$$

$$4^n n^{n+1} \equiv -1 \text{ odd,}$$

$$n^n \equiv +1, \pmod{4n+1}, \text{ as before.}$$

I may here give an interesting deduction from the working. By Wilson's theorem we have $(4n)! \equiv -1, \pmod{4n+1}$, and $4n \equiv -1$, thus

$$(4n-1)! \equiv 1 \pmod{4n+1},$$

and the above theorem leads to others.

(III.) It is evident that the problem amounts to showing that n is a biquadratic residue of $4n+1$; for, if $n \equiv a^4, n^n \equiv a^{4n} \equiv 1 \pmod{4n+1}$. Or, if we denote $4n+1$ by p ; that $\frac{1}{4}(p-1)$ is a biquadratic residue of p . If we divide the residues of p into four classes A, B, C, D, being respect-

ively of the form $g^{4n}, g^{4n+1}, g^{4n+2}, g^{4n+3}, g$ being a primitive root of p , as is done by Gauss in his *Theoria Residuorum biquadraticorum*, it is evident that class A are all biquadratic residues, class C quadratic residues and biquadratic non-residues, and the other two classes are non-quadratic residues. It is evident that the quotient of any two numbers of the same classes one by the other will be a biquadratic residue, for it will be of the form g^{4l} .

(1) If p is of the form $8n+5$, 2 is a non-residue, and 4 therefore belongs to class C. But -1 , from the well known biquadratic character of -1 , belongs to the same class. For $(-1)^{\frac{1}{4}(p-1)} = -1$; $\frac{1}{4}(p-1)$ being odd. Hence $\frac{1}{4}(p-1)$ belongs to class A.

(2) If p is of the form $8n+1$, both $p-1, (-1)^{\frac{1}{4}(p-1)} = +1, \frac{1}{2}(p-1)$ being even, and 4 belong to class A; for in this case 2 is a quadratic residue; so that in this case $\frac{1}{4}(p-1)$ obviously belongs to class A.

The classes A, B, C, D are defined by Gauss as being such that, if a belongs to the first, second, third, or fourth class, $(a)^{\frac{1}{4}(p-1)}$ will be congruent to 1, $f, -1, -f$ respectively; these four quantities being the four roots of $a^4 \equiv 1 \pmod{p}$.

9749. (Professor CATALAN.)—ABC étant un triangle donné, soit D le point de contact avec BC du cercle inscrit I. On projette les sommets B, C en E, F sur la bissectrice AO; puis l'on construit les parallélogrammes DEBG, DFCH. Cela posé (1) les points B, G, C, H appartiennent à une circonférence; (2) le centre de cette circonférence et le centre I du cercle inscrit sont également distants du côté BC.

Solutions (I.) by R. F. DAVIS, M.A., and J. A. H. JOHNSTON, M.A.; (II.) by Professor SANJANA, M.A., and Rev. R. A. THOMAS, M.A.; (III.) by T. DENNIS.

(I.) By construction, GD is parallel to BE, and is therefore perpendicular to AO. Similarly, HD is perpendicular to AO; and G, D, H are collinear. Since BEDI is cyclic,

$$\angle BDE = \angle BIE = \frac{1}{2}(A+B)$$

$$= \frac{1}{2}(\pi - C),$$

or DE is perpendicular to IC. Similarly, DF is perpendicular to IB.

$$\angle GBC = \angle BDE = \angle CID = \angle CFD$$

(since CIFD is cyclic)

$$= \angle GHC;$$

thus BGCH is cyclic.

Let CI meet GH in J, and the perpendicular from G on BC in K. Since D is the orthocentre of the triangle IEL, ID is perpendicular to EL. Therefore EL is parallel to BC and BDLK is a parallelogram, so that DL = BE = GK, and KG is consequently = 2ID. Now in the triangle GBC the distance of the circum-centre from the base BC is half the distance of the orthocentre K from the vertex G; that is, = ID.

(II.) As BE, CF are parallel, DG, DH are in a straight line, and

$$DG \cdot DH = BE \cdot CF = bc \sin^2 \frac{1}{2}A = (s-b)(s-c) = BD \cdot DC;$$

so that B, G, C, H are concyclic. Again $\angle BDI = \angle BEI$; therefore $\angle BDE = \angle BIE$; thus $\angle GBC = \angle BDE = 90^\circ - \frac{1}{2}C$. Hence the radius (ρ) of the circle BGCH = $GC/(2 \sin GBC) = GC/(2 \cos \frac{1}{2}C)$; so that

$$4\rho^2 \cos^2 \frac{1}{2}C = GC^2 = GD^2 + DC^2 + 2GD \cdot DC \cos GDB$$

$$= c^2 \sin^2 \frac{1}{2}A + (s-c)^2 + 2c(s-c) \sin \frac{1}{2}A \cos \frac{1}{2}(C-B).$$

Employing the formulæ $r \cos \frac{1}{2}C = (s-c) \sin \frac{1}{2}C = c \sin \frac{1}{2}A \sin \frac{1}{2}B$, we get

$$\frac{r^2 \cos^2 \frac{1}{2}C}{\sin^2 \frac{1}{2}B} + \frac{r^2 \cos^2 \frac{1}{2}C}{\sin^2 \frac{1}{2}C} + 2 \frac{r^2 \cos^2 \frac{1}{2}C}{\sin \frac{1}{2}B \sin \frac{1}{2}C} \cos \frac{1}{2}(C-B)$$

$$= \frac{r^2 \cos^2 \frac{1}{2}C}{\sin^2 \frac{1}{2}B \sin^2 \frac{1}{2}C} [\sin^2 \frac{1}{2}C + \sin^2 \frac{1}{2}B$$

$$+ 2 \sin \frac{1}{2}B \sin \frac{1}{2}C (\cos \frac{1}{2}C \cos \frac{1}{2}B + \sin \frac{1}{2}C \sin \frac{1}{2}B)]$$

$$= \frac{r^2 \cos^2 \frac{1}{2}C}{\sin^2 \frac{1}{2}B \sin^2 \frac{1}{2}C} (\sin^2 \frac{1}{2}C - \sin^2 \frac{1}{2}B \sin^2 \frac{1}{2}C + \sin^2 \frac{1}{2}B - \sin^2 \frac{1}{2}B \sin^2 \frac{1}{2}C$$

$$+ 2 \sin \frac{1}{2}B \sin \frac{1}{2}C \cos \frac{1}{2}C \cos \frac{1}{2}B + 4 \sin^2 \frac{1}{2}B \sin^2 \frac{1}{2}C).$$

$$= \frac{r^2 \cos^2 \frac{1}{2}C}{\sin^2 \frac{1}{2}B \sin^2 \frac{1}{2}C} [(\sin \frac{1}{2}C \cos \frac{1}{2}B + \cos \frac{1}{2}C \sin \frac{1}{2}B)^2 + 4 \sin^2 \frac{1}{2}B \sin^2 \frac{1}{2}C]$$

$$= \frac{r^2 \cos^2 \frac{1}{2}C \cos^2 A}{\sin^2 \frac{1}{2}B \sin^2 \frac{1}{2}C} + 4r^2 \cos^2 \frac{1}{2}C.$$

Thus, finally, $4\rho^2 = a^2 + 4r^2$; therefore $\rho^2 = r^2 + (\frac{1}{2}a)^2$. As the centre is in the perpendicular bisector of BC, we see that its distance from BC equals r , i.e., ID. [Rest in Reprint.]

15704. (R. F. WHITEHEAD, B.A.)—Expand $\theta/\sin \theta$ in ascending powers of $\cos \theta$.

Solution by the PROPOSER.

$$\frac{\theta}{\sin \theta} = \int_0^{\frac{1}{2}\pi} \frac{dx}{1 + \cos \theta \cos x} = \int_0^{\frac{1}{2}\pi} dx (1 - \cos \theta \cos x + \cos^2 \theta \cos^2 x - \dots)$$

$$= \frac{1}{2}\pi \left(1 + \frac{1}{2} \cos^2 \theta + \frac{1 \cdot 3}{2 \cdot 4} \cos^4 \theta + \dots \right) - \left(\cos \theta + \frac{2}{3} \cos^3 \theta + \frac{2 \cdot 4}{3 \cdot 5} \cos^5 \theta + \dots \right).$$

15105. (SARODA PRASAD BAUERJEE.)—From a point O, taken at random in a triangle ABC, the lines BO and CO are drawn to meet the opposite sides in E and F. Find the mean area of the circle circumscribed about AEF.

Solution by the PROPOSER.

Let us take AB and AC for the axes of x and y ; and, as usual, let $AB = c$ and $AC = b$. If x', y' be the co-ordinates of O, the equation of COF, which joins $(0, b)$ and (x', y') , is

$$x(y' - b) - x'y + bx' = 0.$$

Putting $y = 0$, we get $AF = \frac{bx'}{b - y'}$.

Similarly, $AE = \frac{cy'}{c - x'}$. Now,

$$EF^2 = AF^2 + AE^2 - 2AF \cdot AE \cos A$$

$$= \frac{b^2 x'^2}{(b - y')^2} + \frac{c^2 y'^2}{(c - x')^2} - 2bc \cos A \frac{x'y'}{(c - x')(b - y')}.$$

And, if R be the radius of the circle circumscribed about AEF, and S its area, we have $R = EF/(2 \sin A)$. Therefore

$$S = \pi R^2 = \frac{\pi}{4 \sin^2 A} EF^2.$$

Hence

$$M(S) = \frac{1}{\Delta ABC} \frac{\pi}{4 \sin^2 A} \times \iint \left\{ \frac{b^2 x'^2}{(b - y')^2} + \frac{c^2 y'^2}{(c - x')^2} - 2bc \cos A \frac{x'y'}{(c - x')(b - y')} \right\} \sin A dx' dy'$$

$$= \frac{\pi}{2bc \sin^2 A} \iint \left\{ \frac{b^2 x'^2}{(b - y')^2} + \frac{c^2 y'^2}{(c - x')^2} - 2bc \cos A \frac{x'y'}{(c - x')(b - y')} \right\} dx' dy'.$$

Now, since the integral is to extend over the entire area of the triangle ABC, the limits of y' are from 0 to $b(1 - x'/c)$, and that of x' from 0 to c . Transforming the integral by putting $x' = cu$ and $y' = bv$, we get $dx' dy' = bc du dv$, and the limits of v are from 0 to $1 - u$ and those of u from 0 to 1. Hence

$$M(S) = \frac{\pi}{2 \sin^2 A} \int_0^1 \int_0^{1-u} \left\{ \frac{c^2 u^2}{(1-v)^2} + \frac{b^2 v^2}{(1-u)^2} - 2bc \cos A \frac{uv}{(1-u)(1-v)} \right\} du dv$$

$$= \frac{\pi}{2 \sin^2 A} \left\{ c^2 \int_0^1 \int_0^{1-u} \frac{u^2 du dv}{(1-v)^2} + b^2 \int_0^1 \int_0^{1-u} \frac{v^2 du dv}{(1-u)^2} - bc \cos A \int_0^1 \int_0^{1-u} \frac{2uv du dv}{(1-u)(1-v)} \right\}.$$

Now the first two integrals can easily be seen to be each equal to $\frac{1}{6}$. The last integral, namely,

$$\int_0^1 \int_0^{1-u} \frac{2uv du dv}{(1-u)(1-v)} = \int_0^1 \frac{2u du}{1-u} \int_0^{1-u} \frac{v dv}{1-v} = \int_0^1 \frac{2u du}{1-u} \int_0^{1-u} \left(\frac{dv}{1-v} - dv \right)$$

$$= \int_0^1 (u-1) \log u \frac{2u du}{1-u} = - \int_0^1 2u du - 2 \int_0^1 \frac{u \log u}{1-u} du$$

$$= -1 - 2 \int_0^1 \frac{1 - (1-u)}{1-u} \log u du$$

$$= -1 - 2 \int_0^1 \frac{\log u du}{1-u} + 2 \int_0^1 \log u du$$

$$= -1 + 2 \cdot \frac{1}{6} \pi^2 - 2 = \frac{1}{3} \pi^2 - 3.$$

Hence $M(S) = \frac{\pi}{2 \sin^2 A} \left\{ \frac{1}{6} b^2 + \frac{1}{6} c^2 - bc \cos A \left(\frac{1}{3} \pi^2 - 3 \right) \right\}$

$$= \frac{\pi}{12 \sin^2 A} \left\{ b^2 + c^2 - 2bc \cos A (\pi^2 - 9) \right\}.$$

15699. (JAMES BLAIKIE, M.A.)—Prove that $m^{2n+1} + (m-1)^{n+2}$ is a multiple of $m^2 - m + 1$. [E.g., $1000^{12} + 999^9 = M(999001)$.]

Additional Solution by R. W. D. CHRISTIE.

We have $(m+1)(m^2 - m + 1) = m^3 + 1 = 0 \pmod{m^2 - m + 1}$; therefore $m^{2n+1} (m^3 + 1) = m^{2n+1} + m^{2n+1} = 0 \pmod{m^2 - m + 1}$ (1). Again $m^2 = (m-1) \pmod{m^2 - m + 1}$; thus $m^{2n+1} = (m-1)^{n+2} \pmod{m^2 - m + 1}$ (2); therefore (1) becomes $(m-1)^{n+2} + m^{2n+1} = 0 \pmod{m^2 - m + 1}$. Similarly its cognate $m^{2n-1} \mp (m+1)^{n+2} = 0 \pmod{m^2 + m + 1}$, the sign plus or minus according as n is odd or even.

15724. (S. C. BAGCHI, B.A.)—The transformation

$$\xi = \alpha x + \beta y, \quad \eta = \gamma x + \delta y$$

makes a point (ξ, η) on the curve c_2 correspond to a point (x, y) on the curve c_1 . If $\alpha\delta - \beta\gamma = \pm 1$, show that, when c_1 satisfies $\phi(p^2\rho) = 0$, c_2 will satisfy the same functional equation, where ρ is the radius of curvature at a point and p is the distance of the tangent at that point from the origin.

Solution by the PROPOSER.

The correspondence is obtained by linear substitutions for ξ and η . The operators of the first and second degree are respectively

$$\alpha (\partial/\partial \xi) + \beta (\partial/\partial \eta), \dots \text{ and } \alpha^2 (\partial^2/\partial \xi^2) + 2\alpha\beta (\partial^2/\partial \xi \partial \eta) + \beta^2 (\partial^2/\partial \eta^2), \dots$$

Now on making these operators perform their functions on the given form it is at once found that the new shape of $\phi(p^2\rho) = 0$ differs from the original by the presence of the extraneous factor $(\alpha\delta - \beta\gamma)^2$. Therefore the given theorem follows.

15739. (Professor SANJANA, M.A.)—Evaluate

$$\left[(\tanh ax)^{-2} - (ax - \frac{1}{3} a^3 x^3)^{-2} \right] / x^2$$

when $x = 0$.

Solution by C. M. ROSS.

$$\tanh ax = (\epsilon^{ax} - \epsilon^{-ax}) / (\epsilon^{ax} + \epsilon^{-ax}) = ax \left(1 + \frac{a^2 x^2}{3!} + \dots \right) / \left(1 + \frac{a^2 x^2}{2!} + \dots \right).$$

Hence expression becomes

$$\left[\left(1 + \frac{a^2 x^2}{2!} + \dots \right)^2 \left(1 + \frac{a^2 x^2}{3!} + \dots \right)^{-2} \right] / a^2 x^2 - \left[1 - \frac{1}{3} a^2 x^2 \right]^{-2} / a^2 x^2$$

$$= \left\{ \left(1 + \frac{2a^2 x^2}{2!} + \frac{2a^4 x^4}{4!} + \dots \right) \left(1 - \frac{2a^2 x^2}{3!} - \frac{2a^4 x^4}{5!} + \dots \right) \right\} / a^2 x^2$$

$$- \left(1 + \frac{2}{3} a^2 x^2 + \dots \right) / a^2 x^2$$

$$= \left\{ -a^2 x^2 \left(\frac{2}{3!} - \frac{2}{2!} + \frac{2}{3} \right) - \left(\frac{2}{5!} + \frac{4}{2!3!} - \frac{2}{4!} + \dots \right) a^4 x^4 \right\} / a^2 x^4$$

$$= - \left(\frac{2}{5!} + \frac{4}{2!3!} - \frac{2}{4!} \right) a^2 + \text{higher powers of } x^2 \dots = -\frac{4}{15} a^2,$$

since higher powers of x^2 vanish in the limit.

15693. (Professor NANSON.)—If a fixed straight line cut one of a series of concentric similar and similarly situated conics at angles θ, ϕ , the length of the intercepted chord varies inversely as $\cot \theta + \cot \phi$.

Solution by Professor SANJANA, M.A.

The conics will be represented by $x^2/a^2 + y^2/a^2 k^2 = 1$, where a is variable and k is constant ($= 1 - e^2$). Let the extremities of the chord in any one conic have eccentric angles α and β . The tangents at these points are $x \cos \alpha/a + y \sin \alpha/ak = 1$, $x \cos \beta/a + y \sin \beta/ak = 1$, and the chord is $x \cos \frac{1}{2}(\alpha + \beta)/a + y \sin \frac{1}{2}(\alpha + \beta)/ak = \cos \frac{1}{2}(\alpha - \beta)$. Hence $\cot \theta$ is

$$\frac{[1 + k^2 \cot \alpha \cot \frac{1}{2}(\alpha + \beta)] / [k \cot \frac{1}{2}(\alpha + \beta) - k \cot \alpha]}{[\sin \alpha \sin \frac{1}{2}(\alpha + \beta) + k^2 \cos \alpha \cos \frac{1}{2}(\alpha + \beta)] / [k \sin \frac{1}{2}(\alpha - \beta)]};$$

so $\cot \phi = \sin \beta \sin \frac{1}{2}(\alpha + \beta) + k^2 \cos \beta \cos \frac{1}{2}(\alpha + \beta) / [k \sin \frac{1}{2}(\alpha - \beta)]$.

Thus

$$\cot \theta + \cot \phi = [\sin \frac{1}{2}(\alpha + \beta) (\sin \alpha + \sin \beta) + k^2 \cos \frac{1}{2}(\alpha + \beta) (\cos \alpha + \cos \beta)] / [k \sin \frac{1}{2}(\alpha - \beta)]$$

$$= 2 \cos \frac{1}{2}(\alpha - \beta) [\sin^2 \frac{1}{2}(\alpha + \beta) + k^2 \cos^2 \frac{1}{2}(\alpha + \beta)] / [k \sin \frac{1}{2}(\alpha - \beta)];$$

also the square of L, the length of the chord, is

$$a^2 (\cos \alpha - \cos \beta)^2 + a^2 k^2 (\sin \alpha - \sin \beta)^2$$

$$= 4a^2 \sin^2 \frac{1}{2}(\alpha - \beta) [\sin^2 \frac{1}{2}(\alpha + \beta) + k^2 \cos^2 \frac{1}{2}(\alpha + \beta)].$$

Therefore

$$L^2 (\cot \theta + \cot \phi)^2 = 16a^2 \cos^2 \frac{1}{2}(\alpha - \beta) [\sin^2 \frac{1}{2}(\alpha + \beta) + k^2 \cos^2 \frac{1}{2}(\alpha + \beta)]^3 / k^2.$$

Now, as the chord is a fixed straight line, the ratios of the coefficients in its equation are fixed; so that $k \cot \frac{1}{2}(\alpha + \beta)$ and $ak \cos \frac{1}{2}(\alpha - \beta) / \sin \frac{1}{2}(\alpha + \beta)$ are fixed. From the former we get $\frac{1}{2}(\alpha + \beta)$ constant, and then the latter gives $a \cos \frac{1}{2}(\alpha - \beta)$ also constant. Thus $L^2 (\cot \theta + \cot \phi)^2$ is fixed, and therefore L varies inversely as $\cot \theta + \cot \phi$.

15730. (JAMES BLAIKIE, M.A.)—ABC is a triangle of which O is the circum-centre, and BC, CA, AB meet a given straight line in P, Q, R; F' is the foot of the perpendicular from O to the given line; and P', Q', R' are points in the line such that F is the mid-point of PP', QQ', RR'. Prove that AP', BQ', CR' meet in a point on the circum-circle of ABC.

Another Solution by Professor SANJANA, M.A.

Since F is the mid-point of UV, P and P' are isotomically conjugate to U and V; so are Q and Q', R and R'. Hence AP', BQ', CR' are concurrent. (See Question 14233, Reprint, Vol. LXXV., p. 28.) Again (PP', QQ', RR') is an involution of which U and V, F and ∞ ,

are conjugate points: hence, the connectors of the quadrilateral ACBX

and the circle ACB cut the line UV in eight points in involution. Thus X also lies upon the circle. (Converse of § 273, Lachlan, *Modern Pure Geometry*.)

The PROPOSER wishes to point out that this is the more general theorem of which Question 15691 is a particular case.

[N.B.—For solution by the PROPOSER of the present problem, see *Reprint*, Vol. VIII., N.S., p. 76 (now in press).]

15747. (J. L. S. HATTON.)—If

$$ax^2 + by^2 + cz^2 + 2hxy + 2gzx + 2fyz = 0$$

be the general equation of the second degree in trilinear co-ordinates, show that the necessary and sufficient condition that it should represent a circle is

$$(a + b + c - 2h \cos C - 2g \cos B - 2f \cos A)^2 + 4 \begin{vmatrix} a & h & g & \sin A \\ h & b & f & \sin B \\ g & f & c & \sin C \\ \sin A & \sin B & \sin C & 0 \end{vmatrix} = 0.$$

Solutions (I.) by J. A. H. JOHNSTON, M.A.;

(II.) by Professor SANJANA, M.A.; (III.) by C. M. ROSS.

(I.) The necessary and sufficient condition for a circle in Cartesian is that $(a-b)^2 + 4h^2 = 0$, implying $a = b$ and $h = 0$. This may be written

$$(a+b)^2 + 4(h^2 - ab) = 0 \dots\dots\dots(i).$$

Now $(a+b)$ and $(ab-h^2)$ for all linear transformations have associated invariable forms, e.g., it

$$X = x \cos \phi + y \sin \phi - p_1, \quad Y = x \cos \chi + y \sin \chi - p_2, \\ Z = x \cos \psi + y \sin \psi - p_3,$$

and if these values be substituted in the general equation

$$aX^2 + bY^2 + cZ^2 + 2fYZ + 2gZX + 2hXY = 0,$$

it is at once demonstrable that $(a+b)$ transforms into

$$(a + b + c - 2f \cos A - 2g \cos B - 2h \cos C),$$

and $(ab-h^2)$ into $A \sin^2 A + B \sin^2 B + C \sin^2 C + 2F \sin B \sin C$

$$+ 2G \sin C \sin A + 2H \sin A \sin B,$$

where

$$\chi - \psi = 180^\circ - A, \text{ \&c.}$$

The condition for a circle in trilinears may therefore be written by (i.),

$$(a + b + c - 2f \cos A - 2g \cos B - 2h \cos C)^2 - 4(A \sin^2 A + \dots) = 0,$$

which is the required result.

This result is given in Salmon's *Conic Sections*, p. 352, sixth edition, and proved in another way. [Rest in *Reprint*.]

15756. (Professor NEUBERG.)—Trouver $\int_0^1 \cos x \cos 2x \cos 3x \cos 4x \, dx$.

Solution by C. M. ROSS.

$$\cos x \cos 2x \cos 3x \cos 4x = \frac{1}{4}(\cos 4x + \cos 2x)(\cos 6x + \cos 2x) \\ = \frac{1}{4}(\cos 4x \cos 6x + \cos 2x \cos 4x + \cos 2x \cos 6x + \cos^2 2x) \\ = \frac{1}{8}(1 + 2 \cos 2x + 2 \cos 4x + \cos 6x + \cos 8x + \cos 10x).$$

Hence

$$\int \cos x \cos 2x \cos 3x \cos 4x \, dx \\ = \frac{1}{8} \int dx + \frac{1}{4} \int \cos 2x \, dx + \frac{1}{4} \int \cos 4x \, dx + \frac{1}{8} \int \cos 6x \, dx + \frac{1}{8} \int \cos 8x \, dx + \frac{1}{8} \int \cos 10x \, dx \\ = \frac{1}{8}x + \frac{1}{16} \sin 2x + \frac{1}{32} \sin 4x + \frac{1}{48} \sin 6x + \frac{1}{64} \sin 8x + \frac{1}{80} \sin 10x.$$

Hence, between the given limits, expression on the dexter becomes .1998.

N.B.—The angles are taken to be in radian measure.

The Integration of $\int \frac{dx}{a \sec x + b \operatorname{cosec} x}$.

By GEORGE SCOTT, M.A.

$$\int \frac{dx}{a \sec x + b \operatorname{cosec} x} = \int \frac{\sin x \cos x \, dx}{a \sin x + b \cos x} = f(x).$$

Put $a = r \cos \alpha$, $b = r \sin \alpha$; then

$$f(x) = \frac{1}{r} \int \frac{\sin x \cos x \, dx}{\sin(x+\alpha)}$$

$$[\sin(x+\alpha) + \sin(x-\alpha)][\sin(x+\alpha) - \sin(x-\alpha)] = 4 \sin \alpha \cos \alpha \sin x \cos x,$$

or
$$\sin x \cos x = \frac{\sin^2(x+\alpha) - \sin^2(x-\alpha)}{2 \sin 2\alpha}.$$

Hence
$$f(x) = \frac{1}{2r \sin 2\alpha} \left[\int \sin(x+\alpha) \, dx - \int \frac{\sin^2(x-\alpha) \, dx}{\sin(x+\alpha)} \right],$$

$$\sin(x-\alpha) = \sin[(x+\alpha) - 2\alpha] = \sin(x+\alpha) \cos 2\alpha - \sin 2\alpha \cos(x+\alpha);$$

therefore

$$\int \frac{\sin^2(x-\alpha) \, dx}{\sin(x+\alpha)} \\ = \int \left\{ \cos^2 2\alpha \sin(x+\alpha) - \sin 4\alpha \cos(x+\alpha) + \frac{[1 - \sin^2(x+\alpha)] \sin^2 2\alpha}{\sin(x+\alpha)} \right\} dx$$

$$= \int \left[\cos 4\alpha \sin(x+\alpha) - \sin 4\alpha \cos(x+\alpha) + \frac{\sin^2 2\alpha}{\sin(x+\alpha)} \right] dx$$

or
$$= \int \left[\sin(x-3\alpha) + \frac{\sin^2 2\alpha}{\sin(x+\alpha)} \right] dx;$$

therefore

$$f(x) = \frac{1}{2r \sin 2\alpha} \left[\int \sin(x+\alpha) \, dx - \int \sin(x-3\alpha) \, dx - \sin^2 2\alpha \int \frac{dx}{\sin(x+\alpha)} \right]$$

or

$$f(x) = \frac{1}{2r \sin 2\alpha} [\cos(x-3\alpha) - \cos(x+\alpha) - \sin^2 2\alpha \log \tan \frac{1}{2}(x+\alpha)] \\ = 1/r [\sin(x-\alpha) - \sin 2\alpha \log \tan^{\frac{1}{2}} \frac{1}{2}(x+\alpha)].$$

where $r = \sqrt{a^2 + b^2}$, $\alpha = \tan^{-1}(b/a)$.

10582. (R. KNOWLES, B.A.)—The equation to a conic referred to a tangent and normal as axes being $ax^2 + bxy + cy^2 + gy = 0$, prove that, c being the eccentricity, the equation to its transverse axis is

$$[4a(a+c) - (2-c^2)(b^2-4ac)]x + 2b(a+c)y + bg(2-c^2) = 0.$$

[N.B.—For (b^2-4ac) read $(4ac-b^2)$.—ED.]

Another Solution by W. F. BEARD, M.A.

Let the equation of a conic referred to its centre be $ax^2 + 2hxy + by^2 = 1$; let e be its eccentricity; then

$$(e^2 - 1)/(2 - e^2)^2 = (h^2 - \alpha\beta)/(\alpha + \beta)^2 \dots\dots\dots(1).$$

Also the lengths and equations of the axes are given by

$$1/r^4 - (\alpha + \beta)/r^2 + \alpha\beta - h^2 = 0 \text{ and } (\alpha - 1/r^2)x + hy = 0 \dots(2), (3)$$

(see Smith's *Conics*). From (1) and (2),

$$1/r^4 - (\alpha + \beta)/r^2 + [(1 - e^2)(\alpha + \beta)]/(2 - e^2)^2 = 0;$$

therefore $1/r^2 = (\alpha + \beta)/(2 - e^2)$ or $[(1 - e^2)(\alpha + \beta)]/(2 - e^2)^2$.

The second value is easily seen to give the transverse axis. Thus its equation is, from (3), $\{\alpha - [(1 - e^2)(\alpha + \beta)]/(2 - e^2)\}x + hy = 0$; or, from (1), $[\alpha(\alpha + \beta) - (2 - e^2)(\alpha\beta - h^2)]x + h(\alpha + \beta)y = 0$. The equation of the given conic referred to its centre is $ax^2 + bxy + cy^2 = 2ag^2/(4ac - b^2)$, and the co-ordinates of its centre are $bg/(4ac - b^2)$, $-2ag/(4ac - b^2)$. Thus the equation of its transverse axis is

$$[4a(a+c) - (2 - e^2)(4ac - b^2)]x - bg/(4ac - b^2) \\ + 2b(a+c)[y + 2ag/(4ac - b^2)] = 0 \\ \text{or } [4a(a+c) - (2 - e^2)(4ac - b^2)]x + 2b(a+c)y + bg(2 - e^2) = 0.$$

QUESTIONS FOR SOLUTION.

15786. (I. ARNOLD.)—An equilateral triangle ABC is suspended at A and its side is kept vertical by a ring at B. It is required to find what the angular velocity of the triangle round AB must be in order that there may be no pressure at B.

15787. (W. J. DOBBS, M.A.)—Show how to resolve a given force into three forces of given magnitudes acting respectively through three given points situated in one plane with the line of action of the given force.

15788. (R. CHARTRES.)—Evaluate $\int_0^\beta \log \cos x \, dx$, β being not greater than $\frac{1}{2}\pi$.

15789. (Lt.-Col. ALLAN CUNNINGHAM, R.E.) [Suggested by Question 15734.]—Find perfect square numbers, each containing all the 10 digits, under the following conditions:—

- (1) The least square possible.
- (2) The greatest square containing no repeated digit.
- (3) The least square which, when reversed, is still a square.
- (4) The least square which is unaltered by reversal.

15790. (Professor SANJANA, M.A.)—Resolve into prime factors (or at least into six factors) the numbers $6^{42} + 1$ and $24^{20} + 1$.

15791. (A. H. BELL.)—When is a triangular number a pentagonal number? Required, a general solution with examples.

15792. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Sum to n terms the series $1 + 24 + 162 + 640 + 1875 + \dots$

15793. (Professor NANSON.)—Eliminate x, y, z, x', y', z' from

$lx + my + nz = 0, \quad lx' + my' + nz' = 0;$

$(abcfgh)(xyz)^2 = 0, \quad (abcfgh)(x'y'z')^2 = 0, \quad (abcfgh)(xyz)(x'y'z') = 0.$

15794. (ROBERT W. D. CHRISTIE.)—Where p_n, q_n are any convergents of $p_n^2 - 2q_n^2 = \pm 1$, prove

$2 \tan^{-1} q_n/q_{n+1} \pm \tan^{-1} 1/p_{2n+1} = \tan^{-1} 1 = \frac{1}{2}\pi \dots\dots\dots (1),$

$2 \tan^{-1} p_n/p_{n+1} \mp \tan^{-1} 1/p_{2n+1} = \tan^{-1} 1 = \frac{1}{2}\pi \dots\dots\dots (2);$

and show that Euler's and Machin's series are simple cases (signs alternate).

15795. (S. C. BAGCHI, B.A.)—The picture of a system of latitude and longitude obtained by orthogonal projection on one of the polar-tangent planes is the same as that (on any plane) obtained by inversions from properly chosen centres.

15796. (C. E. YOUNGMAN, M.A.)—With four given concyclic points as foci, two circular cubics are drawn. Prove that their asymptotes coincide with the axes of the parabolas determined by the four points.

15797. (Communicated by M. V. A. SASTRY, B.A.)—If n_1, n_2, n_3, n_4 be the lengths of the four normals and t_1, t_2, t_3 the lengths of the three tangents drawn from any point to a semi-cubical parabola $ay^2 = x^3$, then will $27n_1n_2n_3n_4 = at_1t_2t_3$. [An elegant solution wanted.]

15798. (H. J. RAYMOND.)—Determine, by a purely geometrical construction, using straight lines and circles only, the straight line common bisector of the areas of any two triangles lying in the same plane.

15799. (D. BIDDLE.)—From a point A on the circumference of a given circle, a straight line of a diameter's length is drawn in any direction in the same plane. (1) Find, on the circumference, another point P such that a straight line drawn from it through the centre shall meet the given line in X, making $AX = AP$. (2) Find the locus of X.

15800. (R. F. DAVIS, M.A.)—Prove that the semi-axes of the ellipse which is inscribed in the triangle of reference and has for its centre the point whose trilinear co-ordinates are a, β, γ are determined by the equation $a\sqrt{(a^2 - \rho^2)} + b\sqrt{(\beta^2 - \rho^2)} + c\sqrt{(\gamma^2 - \rho^2)} = 0$.

15801. (W. F. BEARD, M.A.)—P is a point on an ellipse; PM, PN are drawn perpendicular to the directrix and axis; CK is drawn parallel to SP to meet the normal at P in K. Prove that KN, SM are parallel.

15802. (Communicated by JAMES BLAIKIE, M.A.)—Étant donnés deux points A et B, on prend les points I et I' qui partagent le segment AB dans un rapport donné a/β et l'on considère toutes les droites D telles que le rapport de leurs distances aux points A et B soit égal à a/β . Démontrer que les plans ID et I'D sont rectangulaires. En conclure:— (1) que les droites D qui passent par un point fixe S engendrent un cône dont les sections circulaires sont perpendiculaires aux droites SI et SI'; (2) que les droites D qui sont situées dans un plan Π enveloppent une conique ayant pour foyers les projections des points I et I' sur le plan Π . Indiquer ce qui arrive lorsque le point S est situé sur la sphère qui a pour diamètre II' ou lorsque le plan Π est tangent à cette sphère. (See Guichard, Compléments de Géométrie.)

15803. (Professor NEUBERG.)—ABCD étant un rectangle donné, trouver sur le côté AD un point X tel que les volumes engendrés par le triangle ABX et le trapèze BCDX tournant autour de la droite BX aient un rapport donné K.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10819. (W. J. GREENSTREET, M.A.)—Show how to find the meridian altitude of the Sun when an observation precisely on the meridian cannot be had.

12057. (Professor RAMASWAMI AIYAR.)—Prove that a harmonic polygon can be inverted into one having any assigned point (within the circum-circle) for its symmedian point.

12070. (R. TUCKER, M.A.)—The polars of A, B, C with respect to the Brocard circle intersect in l, m, n . Show that Al, Bm, Cn meet in a point whose polar with respect to the same circle is

$a/a^3 + \beta/\beta^3 + \gamma/\gamma^3 = 0 \dots\dots\dots (1).$

If the polar of A meets AC in E and AB in F, and BE, CF meet in a (b, c for the other polars), then Aa, Bb, Cc meet in $a/a^3 = \beta/\beta^3 = \gamma/\gamma^3$. The polars also meet the sides of the triangle where the line (1) meets them.

12079. (R. A. ROBERTS, M.A.)—A particle moves freely in a plane which passes through the axis of a uniform circular plate attracting according to the law of the inverse fifth power of the distance; if the velocity in any position be that from infinity under the action of the force, show the orbit is a nodal bicircular quartic, of which the two points in the plane on the circumference of the plate are foci. Show also that this quartic may become a confocal conic or a circle with respect to which the two points are inverse, if the particle move initially in the tangent to either of these curves.

12255. (Professor SYLVESTER.)—Find the mean value of the tetrahedron of which two points are taken in two opposite edges of, and the other two anywhere within, a given tetrahedron.

[See Professor Sylvester's solution of Question 1887, Reprint, Vol. v., p. 35.]

12361. (G. S. CARR, B.A.)—If (with the usual notation of the Calculus of Variations) V is a function of y, p, q, r, s, \dots , not involving x explicitly, show that, when $\int_a^b V dx$ takes a maximum or minimum value on account of a variation in the form of the function y , we shall have (writing d for d/dx and D for D/Dx)

$V = [(d + D)P + (d^2 - D^2)Q + (d^3 + D^3)R + (d^4 - D^4)S + \dots][p/(d + D)],$
 d operating only upon p , and D only upon P, Q, R, S, \dots

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. VII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, May 11th, 1905.—Prof. A. R. Forsyth, President, in the Chair.

Mr. W. M. Roberts was admitted into the Society.

The following papers were communicated:—

"On the Intersections of Two Conic Sections," Mr. J. A. H. Johnston.

"On a System of Conics yielding Operators which annihilate a Cubic, and its Bearing on the Reduction of the Cubic to a Sum of Four Cubes," Mr. H. G. Dawson.

Informal communications were made as follows:—

"High Pellian Factorisations," Lt.-Col. A. Cunningham.

"The Stability of a Loaded Column," Prof. A. E. H. Love.

KOH-I-NOOR
PENCILS

Best in every Way.

Many firms have tried to make a better pencil than L. & C. Hardtmuth's. Years and years they have tried. But it hasn't been done yet. Ask the artist. Ask the student. Ask the photographer. Ask any one who uses a pencil. "Best"—the laconic unanimous answer, meaning

HARDTMUTH'S.

IN SEVENTEEN DEGREES for all Pencil Purposes.

IS YOUR PENCIL A KOH-I-NOOR, OR IS IT AN IMITATION?

Of Stationers, Artists' Coloutmen, Photographic Dealers, &c. Dainty Illustrated Booklet post free from—

MESSRS. BELL'S MATHEMATICAL BOOKS

Written on Modern Lines to meet the Requirements of the various Examining Bodies.

NEW SCHOOL ARITHMETIC. By CHARLES PENDLEBURY, M.A. With or without Answers, 4s. 6d.; or in Two Parts, 2s. 6d. each. KEY to Part II., 8s. 6d. net. [Shortly.]

** The "New School Arithmetic" is to a great extent a new book, and not merely a revision of the present work. It is based on the suggestions of the Mathematical Association, and special attention is given to the **Metric System, Graphical Methods, Approximation, &c.**

Algebraical Symbols are employed where convenient, and there are chapters on **Mensuration** and on **Logarithms**.

The original "Arithmetic" will also be kept in print, and will be revised and kept up to date with each new edition as hitherto.

NEW SCHOOL EXAMPLES IN ARITHMETIC. Extracted from the above. With or without Answers, 3s.; or in Two Parts, without Answers, 1s. 6d. and 2s.

ELEMENTARY ALGEBRA. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Revised Edition. 4s. 6d. Also in Parts.

PART I.—To Quadratic Equations. 2s. 6d.; or, with Answers, 3s.

PART II.—Including Logarithms (4-Figure Tables), Binomial Theorem, Exponential and Logarithmic Series, Interest, Undetermined Coefficients, and Partial Fractions. With or without Answers, 2s. 6d.

TEACHERS' EDITION, with the Answers to each set of Examples printed opposite them. Two Parts, 5s. net each.

KEY to Part II., with numerous Graphical and other Figures, 5s. net; KEY to Part I. *in the press*.

EXAMPLES IN ALGEBRA. Extracted from the above. With or without Answers, 3s.; or in Two Parts; Part I., 1s. 6d.; or with Answers, 2s.; Part II., with or without Answers, 2s.

EXAMPLES IN ALGEBRA. By C. O. TUCKEY, M.A. Fourth Edition. With or without Answers, 3s.

These Examples are intended to provide a complete course of Elementary Algebra for classes in which the book work is supplied by the teacher.

ELEMENTARY GEOMETRY. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Complete Fourth Edition, Revised, 4s. 6d. Also in Parts. Books I.-III., Seventh Edition, Revised, 2s. 6d. Books I.-IV., Fourth Edition, 3s.

Also published in the following forms:—

Book I., 1s. Books I. and II., 1s. 6d. Books II. and III., 1s. 6d. Books III. and IV., 1s. 6d. Books II.-IV., 2s. 6d. Book IV., 1s. Books IV. and V., 2s. Book V., 1s. 6d. Books IV.-VII., 3s. Books V.-VII., 2s. 6d.

ANSWERS TO NUMERICAL AND MENSURATION EXAMPLES, 6d.

COMPLETE KEY, 6s. net.

A NEW TRIGONOMETRY FOR SCHOOLS. By W. G. BORCHARDT, M.A., and the Rev. A. D. PERROTT, M.A. 4s. 6d. Also in Two Parts, 2s. 6d. each. KEY to Part I., 5s. net. COMPLETE KEY *in the press*.

The authors hope that this book will supply the need felt for a Trigonometry based on *four-figure Logarithm Tables*, the authorities responsible for the various Cambridge Examinations, Army Entrance Examinations, &c., now dispensing with seven-figure Logarithms. The book lays stress on the more *practical parts* of the subject. *Squared paper* is freely made use of, and 600 Miscellaneous Examples are provided.

DIFFERENTIAL CALCULUS FOR BEGINNERS. By ALFRED LODGE, M.A., Mathematical Master at Charterhouse. With an Introduction by Sir OLIVER LODGE, D.Sc., F.R.S., LL.D., Principal of the University of Birmingham. 4s. 6d.

ELEMENTARY PRACTICAL MATHEMATICS. By H. A. STERN, M.A., late Open Mathematical Scholar of Corpus Christi College, Oxford, &c., Principal of Cedar Court Army College, Roehampton, and W. H. TOPHAM, Science Instructor at Cedar Court Army College, and at Harrow School. Crown 8vo, 2s. 6d.

CONTENTS:—Introductory Remarks—Contracted Arithmetical Processes—Graphical Methods—Measurement of Length—Measurement of Angles—Measurement of Mass—Measurement of Area—Measurement of Volume—Measurement of Specific Gravity—Calibration of Tubes and Graduated Vessels—Appendix on the Construction of a Common Hydrometer—Index—Answers to Examples.

** This volume forms the first portion of a treatise on "The Elements of Practical Mathematics and Physical Measurement," by the same authors, now in the press.

SCHOOL WALL MAPS.

The most Artistic and Reliable Maps published. Mounted in a most substantial manner, and the colours warranted not to fade. They are kept thoroughly up-to-date, and New Editions have recently been published of the most important Maps. They can be had in four sizes, as follows:—

72 by 63 inches, Price 21s. each. 10 Maps in Series.

50 by 42 " " 12s. " 50 Full and 20 Outline Maps in Series.

*30 by 40 " " 6s. " 6 in Series.

34 by 28 " " 6s. " 20 in Series.

A Handbook given free with every Wall Map.

* *The Wall Atlas Series, specially adapted for both Teaching and Test purposes.*

Just Published. New Editions of the

Howard Vincent Map

AND THE

Navy League Map of the British Empire.

FOR SCHOOLS, PUBLIC LIBRARIES, &c.

Both these are large Maps of the World on Mercator's Projection, with the British Empire coloured Red, and showing the Ocean Routes, Royal Navy Stations, Coaling Stations, &c.

Size of each, 72 by 63 inches. Price of each, on Cloth, Rollers, and Varnished, 21s.

The Nature Study Drawing Charts, Cards, and Books.

Illustrating the Correlation of Drawing and Object Lessons.

In Three Parts, 20 Coloured Designs in each. Size of each Chart, 15½ by 22½ inches. In strong, serviceable, and compact Cloth Case to hang up. Price of each Set on Strong Paper, in Case, 8s. 6d.; Mounted on Ten Cards, 10s. 6d. net.

Handbook, containing hints and instructions, free with each Set. Drawing Books and Cards, corresponding with the Charts, price 4d. net and 1s. 6d. respectively.

A Special List of Drawing Publications sent on application.

SECOND-HAND SCHOOL, CLASSICAL, ELEMENTARY,
AND ADVANCED SCIENTIFIC BOOKS.

Mathematical, Theological, and Foreign Books.

THOMAS NELSON & SONS' Royal School Series.

THE NATURAL METHOD OF TEACHING MODERN LANGUAGES.

The confessed excellence of commercial education in Germany is no doubt due in part to the use of modern scientific methods of instruction. Especially is this the case in the teaching of modern languages. Teachers in this country will find in the following books of "NELSON'S SCHOOL AND COLLEGE SERIES" manuals which not only follow the methods most approved in Germany, but which are in many respects in advance of any text-books hitherto published at home or abroad. The method adopted is—

1. **Conversational**, as suits a spoken language.
2. **Systematic**, keeping in view both the form and the meaning of words.
3. **Concrete**, being based throughout on objects, pictures, and actions.

To facilitate class teaching and revisal work, the pictures in each book are issued separately in the form of **large Wall Sheets**.

Elementary Object Lessons in French (Book I.). By ALEC CRAN, M.A., Senior French Master, Royal High School, Edinburgh; Examiner in French and German for the University of Aberdeen. Post 8vo, cloth. With many Illustrations. Price 1s. 6d.

**Advanced Course
of
Object Lessons in French.**

By ALEC CRAN, M.A.

With Vocabulary. Fully Illustrated.

Cloth, price 1s. 6d.

This volume completes the series of three books of Object Lessons and Picture Lessons in French. Books I. and II. contain, in addition, Elementary Grammar Lessons and Exercises for Translation into French. As many as possible of the most familiar words and expressions have been included, and an attempt has been made to base the lessons on subjects which, it is hoped, may be found both useful and interesting.

Object Lessons in French (Book II.). By ALEC CRAN, M.A. Post 8vo, cloth. With many Illustrations. Price 1s. 6d.

This book contains a series of somewhat more advanced conversational lessons, which are fully illustrated by pictures and diagrams.

Elementary Object Lessons in German (Book I.). Being a Translation of "Elementary Object Lessons in French." By J. J. TROTTER, M.A., German Master, Royal High School, Edinburgh. Post 8vo, cloth. With many Illustrations. Price 2s.

Object Lessons in German (Book II.). Being a Translation of "Object Lessons in French." By J. J. TROTTER, M.A. Post 8vo, cloth. With many Illustrations. Price 2s.

Nelson's First German Reader. Edited by J. J. TROTTER, M.A. Post 8vo, cloth. Price 2s.

Phonetic Drill Sheets. For use with Cran's "Elementary Object Lessons in French." A Series of 7 Sheets, 39½ inches by 28 inches, printed on strong Manilla paper, and mounted on roller. Price 15s.

Elementary French and German Object Lesson Wall Sheets. A Series of 11 Sheets, 21 inches by 31 inches, printed in tints on strong Manilla paper, and mounted on roller. Price 15s.

These Sheets contain the pictures from "Elementary Object Lessons in French," printed without the text, to serve as subjects for oral conversation.

French and German Object Lesson Wall Sheets. A Series of 11 Sheets, 21 inches by 31 inches, printed in tints on strong Manilla paper, and mounted on roller. Price 15s.

These Sheets contain the pictures from "Object Lessons in French," printed without the text, to serve as subjects for oral conversation.

Nelson's Royal Geographical Text-Books

These Text-Books aim at being really Geographical. Special attention is given to the physical features and conditions of each country, as explaining the industrial and other facts. For this purpose **Relief Maps** are freely used, as well as **Coloured Maps** and Sectional Maps. They are eminently **helpful** and **teacher-like**, and are intended as companions to the well-known and highly popular **Royal Wall Atlases**.

No. I. **British Isles**. Price 6d.

No. II. **Europe, including British Isles**.
Price 9d.

No. II.a. **Europe, exclusive of British Isles**. Price 4d.

No. III. **The World**, New and Revised Edition.
Price 1s.

No. IV. **Africa**. Price 4d.

No. V. **America**. Price 4d.

No. VI. **Australasia**. Price 4d.

No. VII. **Asia**. Price 4d.

COLLEGE OF PRECEPTORS.—

The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 29th of July, 1905, at 3 p.m.

C. R. HODGSON, B.A., *Secretary.*

COLLEGE OF PRECEPTORS.—

(Bloomsbury Square, W.C.)

At the Certificate Examinations to be held in June and December, 1905, alternative First Class papers will be set on Theoretical and Practical Geometry, in accordance with the Syllabus for the Cambridge Local Senior Examinations.

C. R. HODGSON, B.A., *Secretary.*

COLLEGE OF PRECEPTORS.—

EXAMINATIONS, 1905.

1. DIPLOMAS.—The next Examination of Teachers for the Diplomas of the College will commence on the 28th of August, 1905.

2. PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.—The next Practical Examination will be held in October, 1905.

3. CERTIFICATE EXAMINATIONS.—The Christmas Examination for Certificates will commence on the 5th of December.

4. LOWER FORMS EXAMINATIONS.—The Christmas Examination will commence on the 5th of December.

5. PROFESSIONAL PRELIMINARY EXAMINATIONS.—These Examinations are held in March and September. The Autumn Examination in 1905 will commence on the 5th of September.

6. INSPECTION AND EXAMINATION OF SCHOOLS.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

PRIZES.

Diploma Examination.—The following Prizes will be offered for competition:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5. The Doreck Scholarship of £20 will be awarded on the results of the Christmas Examination.

Certificate Examination.—Prizes will be awarded as follows, subject to the conditions stated in the Regulations:—

First Class.—Four Prizes for General Proficiency; two each for Classics, Mathematics, Modern Languages, Natural Sciences, and English subjects; one for Scripture History.

Second Class.—Four Prizes for General Proficiency.

Third Class.—Four Prizes for General Proficiency.

Two Medals will also be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

PROFESSIONAL PRELIMINARY

EXAMINATIONS.—The COLLEGE of PRECEPTORS will hold an Examination for Certificates recognized by the Board of Education, the Scotch Education Department, the Incorporated Law Society, the General Medical Council, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, on the 5th, 6th, and 7th of September, 1905.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool, Manchester.

Examination Fee, 25s.
Regulations and Entry Forms may be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

COLLEGE OF PRECEPTORS.

(BLOOMSBURY SQUARE, W.C.)

The following persons who have passed the College of Preceptors Examinations for Diplomas are requested to communicate with the Secretary of the College:—

Licentiates:—Miss M. R. B. Allnutt, Messrs C. E. Beer, W. E. Bond, W. Cormack, H. W. H. Dobbins, C. G. J. Hill, F. Simmons.

Associates:—Messrs. J. F. Alder, J. H. Armitage, E. W. Ash, G. T. Aston, A. H. Baker, J. Benbow, T. A. W. Blower, A. F. Bryan, J. Buckley, L. J. Calway, C. E. Carpenter, R. D. Chalke, A. H. Cook, A. J. Coy, J. Deacon, A. Eady, B. E. Elderkin, S. C. Evans, H. T. Farmer, G. W. Gentleman, J. George, W. H. Goble, T. Gordon, B. Greaves, J. Griffiths, H. Hansford, G. H. Haslam, W. G. Haughton, W. D. Henderson, S. A. Hildage, J. Holford, D. C. James, G. H. Job, G. H. Johnson, C. W. C. Jupe, D. Lindow, J. A. Ludlow, J. Marley, G. Matthews, D. L. Norris, G. Newburn, A. J. Pascoe, J. C. Poole, F. E. Poulton, W. H. Pye, R. Rage, G. W. Raper, A. B. Riley, J. Robinson, H. T. Saturley, J. B. Seward, T. F. Shearer, G. F. Smith, G. H. Southern, A. W. Stace, J. H. Thornhill, H. Tilbury, J. B. Tomlinson, T. H. Turner, E. Webster, J. J. Willetts, J. W. Wood; Misses A. S. Booth, A. B. Collingwood, I. M. Gaylard, E. Gray, A. Greentree, A. G. Hansford, E. Hebblethwaite, A. Hotham, F. E. Hubbard, L. Littlewood, S. Mare, E. B. Nowell, H. N. Rees, A. E. Rickaby, H. Smith, A. B. Ugalde.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL PROBLEMS IN CLASS TEACHING.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Principal of the University of London Training College.

The Second Course of Lectures (Thirty-third Annual Series) will commence on Thursday, September 28th, at 7 p.m.

The purpose of the Course is to present the theory of teaching in the way most suited for application to the ordinary work of a class. In the ultimate resort, every teacher must apply for himself the theory of his profession, but he may be greatly helped by observing how others have dealt with the problems that he must face. To this end the lectures will be very copiously illustrated throughout by references to the teaching of all the subjects of the ordinary school course, while particular attention will be given to those subjects that must be taught by all teachers who are not specialists. The Lecturer will base his suggestions on the state of things actually existing in schools.

SYLLABUS.

I.—*Class Management.* Nature of a class. Difference from a group of individuals. Sympathy of numbers. Fallacy of "the average." Common and peculiar qualities. The class as unit. Class leaders. Laws of interaction of the elements of the class. Troublesome elements and their treatment.

II.—*Class Teaching.* Contrasted function of private coach and class teacher. Class must be taught as a whole: yet may be taught through individuals. Advantages and disadvantages of teaching by types. The intellectual lowest common denominator of a class. Teacher's duty to brilliant and to dull pupils. Different class-standing of pupils according to subject. The average boy.

III.—*Art of Exposition.* Nature and function of exposition. Often regarded as the whole of teaching. Distinction from "telling." Essentially a process of analysis followed by synthesis. Relation between content of pupil mind and teacher mind. Law of consecutive clearness. Stages in the process. Rhythm of concentration and diffusion of attention. Place of integration and re-integration.

IV.—*Lecturing.* Unipolar form of exposition. Cause of its popularity. Where successful it is bipolar. Suitable where material has been gathered, but not arranged. Room for it all through school course, but size of lecture-unit should increase directly as the stage of advancement of the pupils. University rank. Note-taking in school work, and its relation to the lecture and the text-book.

V.—*Socratic and Heuristic Teaching.*—Both essentially dialectic. Applicable to all subjects, though perhaps specially to science. They differ in aim and in process. The *Zielangabe*. Difference of application of *interest* in the two methods. The Socratic irony and the torpedo shock. Heuristic stimulus. Limitations of the methods, and illustrations from common school subjects.

VI.—*Concentric Method and Correlation.* The concentric method in relation to the "rapid impressionists." Illustration from geography teaching. The test of a good "concentric" text-book. In ultimate analysis all teaching is concentric. Correlation is the complement of the concentric method. Selection of "core" subjects. Extravagances of correlation. Illustrations from American school syllabuses. Results of actual experiments in the application of correlation.

VII.—*Art of Illustration.* Nature and function. Psychological bases. Analogy. Kinds: (a) Verbal, as figures of speech, exemplification, types, the attendant circumstance; (b) Material, as actual objects, models, pictures, diagrams. The point of view. Appeal to the preferred sense. Dangers of illustration.

VIII.—*The Use of the Blackboard.*—Appeal to sense. Writing as important as drawing in connexion with form. Distinction between rough and slovenly drawing and writing. Blackboard pictures *v.* diagrams. Mechanical aids. Coloured chalks. The optics of the blackboard. Eye-strain, and how to prevent it. Excessive use.

IX.—*The Mother Tongue.*—The art of intercourse. The three vocabularies of the individual. Analysis *v.* synthesis of sentences as educational processes. Place and function of grammar. The fundamental principle in teaching composition. The elimination of self-consciousness. Forms of composition exercise—narration, description, letter, paraphrasing, essay. Suggested subjects.

X.—*The Mechanism of Reading.* Purpose for which art of reading is acquired. Visual and audible elements in reading. The place of reading aloud and silent reading. Various methods of teaching to read. The resulting powers of reading as an acquirement. Various degrees of "block" reading.

XI.—*Spelling and Dictation.* Different purposes of spelling and dictation as school exercises. Static and dynamic elements. Oral spelling easier for audiles, written spelling for visuals. Dangers of the "awful example." Classification of errors in dictation—graphic, phonetic, psychic—causes and treatment of each.

XII.—*Arithmetic.*—Counting and calculating. Cornical arithmetic. Essential distinction between arithmetic and algebra. Importance of the imagination and clearly imaged ends. Elimination of the units in calculation means the turning of fact into faculty. Disturbing power of consciousness. Formulae, as in simple interest. Donaldson's reduction of all arithmetic to the equation.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.
C. R. HODGSON, B.A., Secretary.

TO BE SOLD.—A quantity of good SECONDARY-SCHOOL FURNITURE: Desks, Blackboards, Stationery, Drawing Requisites and Books, Gymnastic Appliances, Laboratory Bench and Requisites, Pianos. Apply Box 89, "Educational Times" Office, 89 Farringdon Street, London, E.C.

MR. EDWARD ARNOLD'S LIST.

GEORGE GILL & SONS, Ltd.

Arnold's English Texts.

With a view to meeting the requirements of Teachers who, with an Examination in prospect, prefer to place a plain text in the hands of their Pupils, Mr. EDWARD ARNOLD has now in preparation a series of texts of English Classics to which nothing has been added but a small Glossary of Archaic or Unusual Words. The first three Volumes, from **Arnold's School Shakespeare**, will be issued at once. In paper covers, 6d. each; or cloth, 8d.

I. **MACBETH.** II. **HENRY V.** III. **THE TEMPEST.**

The Arnold Prose Books.

A Series of Representative Selections from leading Prose Writers, each Book confined to one Author. 24 Books. Each 48 pp., paper, 2d.; cloth, 4d.

Kindly send for detailed circular.

The Laureate Poetry Books.

A Series of Representative Selections from leading Poets. In 34 Books, the first seven of which contain graduated miscellaneous selections, the remainder being devoted to individual poets. Each 48 pp., paper, 2d.; cloth, 4d.

Kindly send for detailed circular.

Steps to Literature.

A Graduated Series of School Reading Books for Preparatory Schools and Lower Form Pupils.

Book I.—**Tales of the Homeland.** 112 pp., price 10d.

Book II.—**Tales of Many Lands.** 144 pp., price 1s.

Book III.—**Stories from English and Welsh Literature.** 192 pp., price 1s. 3d.

Book III.A.—**Stories from the Literature of the British Isles.** 224 pp., price 1s. 6d.

Book IV.—**Literary Readings relating to the Empire.** 224 pp., price 1s. 6d.

Book V.—**Literary Readings relating to Europe.** 224 pp., price 1s. 6d.

Book VI.—**Glimpses of World Literature.** 256 pp., price 1s. 6d.

PROF. OMAN'S ENGLISH HISTORIES.

A History of England. By C. W. OMAN, M.A., Deputy Professor of Modern History in the University of Oxford. Fully furnished with Maps, Plans of the Principal Battlefields, and Genealogical Tables. 760 pages. Ninth and Enlarged Edition (to end of South African War). Crown 8vo, cloth, 5s.

Special Editions, each volume containing a separate Index.

In Two Parts, 3s. each: Part I., from the Earliest Times to 1603; Part II., from 1603 to 1902.

In Three Divisions: Division I., to 1307, 2s.; Division II., 1307 to 1688, 2s.; Division III., 1688 to 1902, 2s. 6d.

*** In ordering please state the period required, to avoid confusion.*

England in the Nineteenth Century. By C. W. OMAN, M.A., Author of "A History of England," &c. With Maps and Appendices. Revised and Enlarged Edition. One volume, crown 8vo, 3s. 6d.

A Junior History of England. From the Earliest Times to the Death of Queen Victoria. By C. W. OMAN, M.A., and MARY OMAN. With Maps. Cloth, 2s.

Questions on Oman's History of England. By R. H. BOOKEY, M.A. Crown 8vo, cloth, 1s.

A Synopsis of English History. By C. H. EASTWOOD, Head Master of Redheugh Board School, Gateshead. 2s.

English History for Boys and Girls. By E. S. SYMES, Author of "The Story of Lancashire," "The Story of London," &c. With numerous Illustrations. 2s. 6d.

Men and Movements in European History. Fully Illustrated. 256 pages. 1s. 6d.

CATALOGUES ON APPLICATION.

London: EDWARD ARNOLD, 41 and 43 Maddox Street, W.

COLLEGE OF PRECEPTORS' EXAMINATIONS, 1905.

FIRST BOOK OF KINGS. By the Rev. F. MARSHALL, M.A. Full s. d.
Account of Solomon's Reign, the Schism, the Two Kingdoms. Special Maps, Diagrams of the Temple ... 1 6

SECOND BOOK OF KINGS. By the Rev. F. MARSHALL, M.A. 1 6

The Educational Times.

Registration, Past, Present, and Future.

THE Report of the Teachers’ Registration Council for 1904 is a belated document. As it was signed by the Chairman of the Council on February 10, why it should not have been communicated to the press till June 16 is one of those mysteries of officialism that we cannot hope to fathom. The statistics are already out of date; there is no balance-sheet, and we have nothing but a rough calculation of the probable balance on March 31 of the current year. Those who have a taste for figures may consult the original document and discover for themselves the exact number of men and women who have been respectively admitted and rejected under each head and sub-head of the Regulations, and the number of attendances at Council meetings and Committees that each member of the Council has put in. We prefer to call attention to some of the broader considerations that the Report suggests—to discuss how far the scheme framed by the Consultative Committee and approved by the Board of Education has fulfilled the professed objects of its authors and what defects have been revealed in the working, reserving for the present the question what modifications or changes in the Orders in Council would seem advisable—a question already tackled in another column by an esteemed correspondent.

The history of the movement that led to the registration of teachers has been repeatedly told in these pages and elsewhere, though some historians have omitted to give due credit to the College of Preceptors for suggesting and initiating the reform. We are here concerned only with the last chapter of the narrative, to which we must briefly refer, as it explains the present state of affairs and accounts for anomalies that would otherwise be unintelligible.

The Board of Education Act of 1899 conferred on the Board powers for constituting by Order in Council a Consultative Committee for the purpose, primarily, of framing, with the approval of the Board, Regulations for a Register of Teachers. The Committee was constituted in the following year, and the recommendations submitted by them to

the Board were, after amendments by the Board, incorporated in the Order in Council of March 6, 1902.

Such are the bare facts, and the inner history was, we believe, somewhat as follows. The profession itself was ranged in two opposite camps—those who held that a Register should be inclusive, comprehending competent teachers of all ranks, and those who, like the College of Preceptors, advocated an exclusive Register of Secondary Teachers, on the ground that primary teachers were already to all intents and purposes registered by the Certificates of the Board. So long as this divergence of professional opinion existed it was felt that either party, with the help of independents and reactionaries who were certain to oppose any measure, would be strong enough to wreck a Bill, however reasonable, in the House of Commons. Hence the ingenious device of transferring action from the Executive to the Administrative. Hence, too, the compromise adopted by the Board of Education, who sought to hold the balance even between the two parties. Elementary teachers were entered on the Register *en bloc*, whether they desired it or no; but they were penned off in a fold by themselves, from which there was no escaping. As a set-off, they were excused fees, and were to be printed in a common alphabetical list together with their superior brethren. As might have been predicted, this compromise has satisfied no one. So far from cutting the knot, it has produced a tangled skein that neither the administrative ability of Mr. Morant nor the legal ingenuity of Sir William Anson can unravel. The elementary teachers, through their National Union, have to a man repudiated the Register as a farce and an insult. The Board have not even attempted to keep Column A up to date, and the Report states that until the Board takes action “the Card-Register of Column A must necessarily remain in the same incomplete state as at the date of last year’s [1903] Report.”

But the evil does not end here: it affects also the secondary teachers. The inclusion of some 70,000 teachers who are thus registered against their will has proved a fatal impediment to the publication of the Register, and at the end of three years we are left with an out-of-date list of Column A and a list of Column B published by the enterprise of a private firm. It has taken three years for the Board to discover that its original proposal was absolutely

unworkable, and financially spelt ruin. Yet Sir John Gorst assured the House that the Register would be self-supporting and that he anticipated no financial difficulties.

On the face of it Column B has succeeded beyond expectations, and proves that at any rate secondary teachers appreciate the benefits of registration. We reckon that at the present date there must be well over 8,000 names entered. This cannot be taken to mean that there are 8,000 fully qualified teachers. Some 2,500 have been admitted as heads or joint heads of schools, and of these no qualification either academic or professional is required, except that the school over which they preside has satisfied the Board's Inspectors. Over 1,500 are "ten-year" men and women, to borrow a Cambridge phrase, but these, though untrained and presumably without degree or diploma, have all produced evidence of ability to teach. It is only when we examine the number of fully qualified teachers as defined by the permanent Regulations that we see how temporary and illusive is this apparent prosperity. Up to December 31, 1904, there were registered under Regulation 3 four men and 149 women. The full significance of these figures is pointed out in the Report: "The stultification of the Register, which a continuation of this state of affairs must surely bring about, is a contingency which the Council cannot but view with grave apprehension." It means, in short, that, unless a new Order in Council is issued, the Register will in the course of the next year die of inanition. In March, 1906, the temporary provisions of the Register will cease to be operative, and after that date the annual entries, at the present rate, will be not much over fifty. Nor are there at present many signs of increase. From inquiries made by the Council it appears that only sixty-six men are at present undergoing a training course for secondary teaching, and only three small schools for boys have so far laid themselves out to provide the alternative course for student-teachers admitted by the present Order.

There is no need to labour the point or to show, as it would be easy to do, how in other ways the Order of 1902 has proved unworkable. We may, however, note in passing that kindergarten teachers fall between the two Columns, and that the Supplemental Registers are postponed *sine die*.

The Consultative Committee are at the present moment employed in what appears to us the hopeless task of mending and refurbishing their handiwork. In our opinion, no piecing or botching will preserve the old garment, and we need a new scheme framed with different objects and on different principles. What these objects and principles should be—that is another story.

NOTES.

THE University of Liverpool may be taken to have seen its way through the difficulties of granting degrees to evening students. The same rooms may be used; but will the same staff serve for both day and evening turns? If not, there is the necessity of duplication, more or less. Will the evening classes deplete the day classes? Experience points to a fair probability that they will. "In justice to the day student," says the *Birmingham Evening Despatch*,

—the Liverpool idea has been for some time in Birmingham minds—"the evening degree would have to be specially marked off in some way." But, if it is not, where does the injustice to the day student come in? Presumably both classes of students will pass the same degree examination, or, at any rate, a practically equal examination; and, if so, what does the difference of day and evening study matter? If the degree of the evening student is not the same, or of the same value, as the degree of the day student, it had better never be called into existence. Why it should not be the same, and on the same examinations, we do not in the least understand.

In the *Nineteenth Century* (June) the Head Master elect of Eton concludes an important article on the training of teachers with these words:

It is little short of gross unreasonableness for any one who knows the difficulties of class teaching to deride the attempt the Government is now making to give men a better initial equipment for their task; and that this is still done seems to be a symptom of the remarkable disbelief in thoroughness of preparation which still characterizes the English people.

"An Old Etonian" of recent date, writing to the *Morning Post*, sensibly agrees with Mr. Lyttelton's conclusion, and points out the wide scope for good teaching at Eton. "The education now given and received at Eton," he says roundly, "is inadequate and obsolete."

I once watched a class in a gymnasium performing exercises with a Sandow elastic exerciser: one youth seemed to be performing the exercises in the same manner as the rest of the class, but in reality, as the drill sergeant pointed out in forcible terms, saying, "I wish I'd got you in the barrack-yard; I'd make you sick," he was not exerting his muscles in the least; he was going through the form of the exercise, but it was the elastic which was doing the work. That is exactly what happens at Eton to the vast majority of boys. The classics are taught, but they do not reach the average boy; he goes through the form of the thing with the sole effort of achieving the minimum of exertion with the maximum pretence at industry. The net result of his classical education is that he can neither read nor write in Greek and Latin, and that he is imbued with a profound indifference and contempt for letters in general. This is, surely, not necessary.

The writer goes through the other subjects, with like comments. He points to the test of examinations for any branch of the public service; "even to pass into the universities—to pass Smalls or the Little-go—boys who have left Eton are sometimes obliged to spend several months at a crammer's." All this is beyond the need of criticism. One can only "hope that Mr. Lyttelton, who is so eminent a representative of the true and old Eton athletic spirit, will, by the influence of his vigorous personality, be able to modify to a certain extent this melancholy state of things. It will be the earnest hope of all who love Eton."

WHEN the *Manchester Guardian's* "candid critic" is finished with the Manchester School of Technology he had better proceed on a tour of inspection of institutions more or less similar in character. The School, he thinks, made "the initial mistake of starting work with too low a standard," and, in spite of the best intentions, "the quality of students improves far too slowly." "The School is practically full now—a very few more students would cram the place inconveniently; but my argument," he says, "is that it is filled with material of poor character instead of material that is select, and the best men are kept back by the worst."

The scholarship students are "not nearly so good as they ought to be." "An Old Student" also writes to point out why everybody—the Committee, the staff, the day scholars, the ratepayers—is dissatisfied; and his remarks vividly show how awkward a situation may be created by insufficient forethought, and how difficult it may be to remedy. The criticisms have every appearance of fairness and considerateness, as well as competence. Taken in conjunction with other indications, they suggest that the system of technical education would be none the worse for overhauling in detail. Initial mistakes may be indulgently treated; but they should be discovered and remedied as promptly as possible, and that can be done only by vigilant observation and skilled revision.

If the Faculties of Commerce in our modern universities have "fallen far short of what might have been reasonably expected of them"—and this by reason of the apathy of "the class for whose use and benefit they were specially designed"—it is a great pity. The Liverpool, Manchester, and Birmingham Commercial Faculties are fully organized and equipped; yet, says Mr. W. R. Lawson in the *Financial Times*, "not one of them is working up to 20 per cent., or even 10 per cent., of its teaching capacity." The comparison with a 50-stamp mill or mine yielding only five tons of ore per day, or with a factory engine working up to only a fourth of its power, is rather halting and delusive; and perhaps, after all, expectations have not been quite "reasonable." The expected students that have not come forward need to feel the pressure of academic competitors; and many of their employers need to reach fresh convictions through like practical modes of suasion. "Fortunately, more encouraging results are to be seen in other parts of the world"—Germany and the United States; but these countries have less, or no such, inertia to overcome. It is too early to judge our Commercial Faculties. Moreover, they are not the only examples of teaching power largely under-used—though, indeed, that is no legitimate source of consolation.

WHILE every other subject of thought has been galvanized by the active spirit of inquiry, the Law, which was once upon a time a mighty theme of intellectual interest even in England, continues to lie dormant. The Inns of Court have frustrated the Attorney-General's scheme for a School of Law worthy of the Metropolis and of the Empire; and he has, we understand, amiably divided his £130,000 between the Council of Legal Education and the Law Society and washed his hands of the whole business. These bodies, rich enough already, will now be in clover over the ears. The University of London, left out in the cold, has at last braced itself up to decree and to constitute a Law Faculty. The situation is instructive: the legal bodies have money galore and practically all the students, while their instruction, though improving, falls leagues short of an academic standard; the University Law Faculty has no money at all and only a handful of students, but a very decent standard. The whole weight of the advancement of legal studies (in any substantial sense) is thus placed on the shoulders of the Faculty—eleven men more or less engaged in practice, ten

of them having not a single stiver of salary and only nominal fees. Whether adequate endowments will be found in the face of the present meagre attendance of students, whether the fag-end of the Professors' energies is considered sufficient for the work, whether it is supposed that there is no more scope for research in legal subjects—we refrain to inquire. The University, having created the body, will no doubt strive to put it in a position to bring forth the expected fruits. But the public ought at least to know how difficult and amazing the situation is, and how nearly it concerns English scholarship that the Faculty should have some chance of performing its work with credit. At present, it is not too much to say, the study of law in England, as compared with the study of law on the Continent or in America or even in Australasia, is far from satisfactory.

HARVARD shows an example that is well worth meditation. The appeal for half a million to increase the salaries of the teaching staff has brought in £360,000, and the circular asking for the rest says this:

The position of Harvard to-day among American universities is due not so much to its age, traditions, or able administration as to its noble line of teachers. That the teachers in the college should be the best in the land; that the older professors should be free from the cares of a straitened income; that the younger teachers should be able to give themselves without distraction to their work, and that the best men should not be drawn away to other colleges, but should see before them reasonable promotion in work and salary, is essential to the leadership of Harvard and the culture of her sons.

No less essential is the same principle to the University of London. The professorship should in every case be a business, in no case a by-job; and the professors "should be able to give themselves without distraction to their work." Work there is in plenty for them, in every department—even in the Faculty of Law.

WITHOUT accepting the whole of Sir George Lambert's argument in the *Nineteenth Century* upon "The Scandal of University Education in Ireland," one can readily agree that "in England the seriousness of this question of higher education for the mass of the Irish people appears never to have been grasped." "That we should shut out from the benefits of higher education three-fourths of a nation like the Irish, full of natural ability, involves a loss to the Empire, in every part of it, that can hardly be exaggerated"; and, even if it be contended that they shut themselves out, the mischief still remains the same. Whatever remedy may be applied, it does seem futile, "after the miserable series of failures in the past, to revert to the practice of forcing upon an unwilling people a system that they refuse to accept, or will accept so long only as something better cannot be exacted by renewed agitation." Sir George says the Catholics of Ireland could provide at least two thousand students for a suitable university. Will they rally to Father Finlay's scheme for an independent institution in "buildings of a cheap and temporary character," or to Dr. Conor Maguire's more solid extension of that plan? Even then, the essential difficulty would remain confronting us. For we are told that "the erection of a voluntary institution is in fact advocated not as a final solution, but as a strategic step calculated to force a final solution." After all, is there, in the circumstances, any possibility of a "final solution"?

UNIVERSITIES are 'so keen for dollars in these days that one is mildly startled to learn that the University of Mississippi, like any ordinary perverse library committee, has refused 25,000 of Mr. Carnegie's dollars for a library. Mr. Vardaman, the Governor of the State and a member of the Board of Trustees, explains the brief reason why from an elevated moral platform: "The University does not want money coined from the blood and tears of the toiling masses." Allowing something for the rhetorical energy of expression, one has some difficulty in imagining from what other source Governor Vardaman ever expects to get dollars for his University. Anyhow, it is refreshing to have such tidings of high social morality wafted from New Orleans. There are universities that do not consider such things so curiously, prudently refraining from looking gift horses in the mouth. Poverty is said to acquaint a man with strange bedfellows, and perhaps the University of Mississippi is not so poor as to make 25,000 dollars a matter of purely business consideration. Nor do the Trustees appear to have thought of redeeming "the blood and tears of the toiling masses," to some extent at least, by a wise application of the dubious dollars.

IN the good old times, when the late Prof. Legge, the distinguished missionary and Chinese scholar, was a student at the University of Aberdeen, there would appear to have been material academic fortifications of the vigour of candidates for scholarships. At the end of his course, Legge competed for the Hutton Prize in classics and philosophy under circumstances thus detailed in his recent biography:

The three candidates were left until midnight in the care of the porter and sacristan, who procured for them six bottles of good old port "for strengthening and stimulus during the competition." On the last evening, when the clock struck twelve and the porter removed the box containing their papers, he admitted three youths, friends of the three candidates, who had been invited by them to come and celebrate the close of the examination by helping them to finish off the bottles of port.

Legge proved the successful candidate, whatever the "good old port" may have had to do with it. But the examination has long since become a dry function, fulfilled in other ways, whether or not "lest one good custom should corrupt the world."

SUMMARY OF THE MONTH.

THE idea of producing a fresh breeze from the outside world into the universities has "caught on" in America. Columbia University, whose distinguished President is now on a visit to this country, announces two considerable courses by European scientists of distinction. In December this year Dr. Vilhelm Priman Bjerkner, Professor of Mechanics and Mathematical Physics in the University of Stockholm, will deliver a course of fifteen lectures on "Fields of Force," including the discussion of hydrodynamic analogies and the electrostatic and electromagnetic fields. And in March and April next year Dr. Hendrick Antoon Lorentz, Professor of Physics in the University of Leyden, will deliver a similar course on "Extensions of Maxwell's Electromagnetic Theory of Light, and the Dynamics of the Electron." It is further expected that similar courses by distinguished foreign scholars will be arranged for the winter of 1906-7.

THE following is the list of this year's "Wranglers":—

There are 17 Senior Optimes and 13 Junior Optimes. Miss E. M. Newbold (Newnham) is bracketed equal with the 26th Wrangler; ten other women attain the rank of Senior Optimes, and ten the rank of Junior Optimes.

WHERE are the "Great Public Schools"? (asks the *Evening Standard*). "One of the two Senior Wranglers received his education in the Cape Colony before going to St. Paul's and Trinity. This will be very gratifying to South Africans and to colonists generally. His partner in the premier position is a Lancashire man, educated first at a local institute, and then at the Liverpool University. The third Wrangler came from King Edward's School, Birmingham. The fourth is the son of a Welsh clergyman, and he was taught at the admirable foundation known colloquially as the Blue Coat School. The fifth came from Wakefield Grammar School, the sixth from the famous Nonconformist school at Mill Hill, and the seventh from Leeds and Owens College, Manchester. This list is noteworthy quite as much for what it does not contain as for what it does. It will be seen that it does not include a representative of any one of those highly expensive educational establishments which are distinctively known as the "great" public schools. These seven successful young mathematicians did not come up from Eton or Harrow or Winchester or Rugby or Marlborough or Charterhouse or Uppingham or Shrewsbury. In fact, in the whole catalogue of the Wranglers and the Senior and Junior Optimes, some sixty in all, there is only one candidate apiece from Eton and Harrow, and none at all from most of the other seminaries just mentioned. The honours are gained by middle-class youths from middle-class schools."

"The list," says the *Pall Mall Gazette*, "makes humiliating reading for the great public schools. There is hardly a public-school man (in the narrower sense) in the list at all; while of the two bracketed Senior Wranglers one comes from London's great middle-class day school, St. Paul's, and the other, from Liverpool, was a County Council scholar. Then, the third Wrangler was at an elementary school before he proceeded to King Edward's School, Birmingham. It is undoubtedly a notable triumph of the democratic school—if we may use an expression which does not really fit what we mean, but which may perhaps sufficiently convey the idea. Such striking proof of the openness of a career (so far as a Tripos is a career) to talent is very welcome, and should stir the classic public schools to an effort to regain their lost ground."

AT Rugby the following have been elected to Entrance Scholarships:—

G. Elton (Mr. P. Christopherson's, Lockers Park, Hemel Hempstead), Tait Scholarship; B. C. Malony (Mr. A. W. Johns, St. Olaf, Brighton), Local Examination Scholarship; G. E. Mansfield (Rugby School), Derby Scholarship; G. Dunn (Rugby School); F. K. Bliss (Rev. E. Earle, Bilton Grange); A. L. S. Cope (Rev. E. L. Browne, St. Andrew's, Eastbourne); H. W. R. Hamilton (Messrs. Miller and Hart, the Knoll, Woburn Sands); A. J. Cruickshank (Messrs. Overton and Browne, Lambrook, Bracknell), and D. Ll. Vawdry (Mr. E. W. M. Lloyd, Hartford House, Winchfield), equal; J. K. Stanford (Messrs. T. H. G. Mason, Rottingdean School, Brighton).

AT Marlborough College the scholarships examination has resulted as follows:—

Seniors: R. J. M. Lias (honorary scholar), G. C. Turner, W. M. Peacock, A. R. Marshall, R. M. Kirkpatrick (Berens scholar). Juniors: A. L. Jenkins (Mr. T. G. Bradshaw, Hockley Heath), Gilmore scholar; G. T. Ellwood (Mr. Tabor, Cheam), first house scholar; R. Leather (Mr. Rendall, Cranley), second house scholar; E. E. Meyrick (home tuition); E. A. Pam (Rev. F. J. Woodhouse, Surbiton); V. B. Rowe (Mr. Tabor, Cheam); M. Vincent-Jackson (Rev. E. Earle, Bilton Grange); J. B. Moule (Mr. Duckworth, Weston-super-Mare). Senior Modern: H. C. D. C.

Mackenzie-Kennedy. Honourable Mention, C. N. T. Perrens. Junior Modern: G. S. Leventhorpe (honorary), G. H. E. Parr, W. T. Fry. Authors: G. F. Evans.

At Malvern the following have been elected to entrance scholarships:—

Senior Scholar and Faber Exhibitioner: S. W. H. Welsby (Mr. E. W. M. Lloyd). Foundation Scholar: O. S. Cleverley (Mr. H. Frampton Stallard). House Scholars: M. A. Hepburn (Mr. Stallard); A. R. Smith (Mr. Mason, Rottingdean); E. H. Blumhard (Mr. Chippett); G. M. Hill (Mr. Basil Thompson). Minor Scholars: L. J. Southern (Mr. Waterfield, Temple Grove); M. M. Pearson (Mr. Clark, Lichey Hills); B. Hill (Mr. G. T. Worsley, Evelyns); L. Hudson (Rev. H. R. Brown, Eastbourne); G. W. T. Lindsay (Rev. E. Owen, Stancliffe); B. M. Bateman (Mr. Waterfield); B. W. Peek (Mr. Luckham, Bourne-mouth).

The result of the examination for entrance and other scholarships at Aldenham School is as follows:—

Recommended for Junior Platt Scholarships: A. C. Blyth (the school), J. S. Boulter (St. John's, Leatherhead), A. K. Fison (the school). House Scholarships are awarded to G. C. F. Mead (Kensington Preparatory School), W. G. Price (the school), C. E. Wurtzburg (Heddon Court, Hampstead).

The following have been elected to entrance scholarships at Clifton College:—

A. K. Trower, A. R. Wallace, £100; C. R. B. Murray, H. R. Russell, £50; A. B. Craddock, £25; C. E. Schwalm, C. G. Usher, P. M. Monckton, H. F. Johnson, House Exhibitions of £25.

At St. Edward's School, Oxford, awards have been made on examination:

Scholarships—J. P. Higgs (St. Edward's School), M. H. B. Nethersole (Rev. E. Owen, Stancliffe Hall, Matlock), T. E. Withington (Mr. J. R. Morgan, Connaught House, Weymouth), L. A. Strange (Mr. H. Reynolds, Cliff House School, Southbourne-on-Sea). Exhibitions—E. R. A. Biggs (Clayesmore School, Pangbourne), F. A. C. Tidmarsh (St. Edward's School). Choral Exhibition—W. Hare.

The new premises of Naish House School, Burnham, Somerset, preparatory for the public schools and the Royal Naval College, Osborne, were opened (June 1) by the Dean of Wells (Dr. Jex Blake, late Head Master of Rugby), who held a short service and gave an address in the big schoolroom.

AMONG the resolutions passed at the annual Conference of the Association of Head Mistresses, at Winchester (June 2-3), Mrs. Bryant, D.Sc., Litt.D., President, in the chair, were the following:—

That this Conference approves the action of the Executive Committee in appointing representatives on the Council of the proposed College of Secondary Teachers; and, in the event of such College being established, agrees to subscribe for the next five years £25 a year, plus a capitation fee of 5s. for each ordinary member of the Association.

That, while accepting the principle that co-education in schools has advantages in the case of children under the age of ten, and realizing that in small country places and under other circumstances of special difficulty co-education may be the best solution available, the Conference considers that after the age of ten it is in general undesirable, under present conditions in this country, for the following and other reasons:—(1) That the head of a co-educational school for pupils above the age of ten is usually a man, while the health and character of girls need the care and control of a woman with complete authority and responsibility; (2) that the curriculum adopted for boys between the ages of twelve and sixteen especially is unlikely to be the best for girls, in consideration more particularly of their health and development at that age.

Assistant Mistresses.—(1) That the minimum initial salary for a fully qualified non-resident mistress giving her whole time should be not less than £105 to £120, rising to £150. (2) That provision should be made in every secondary school for salaries on a higher scale between £180 and £200, and occasionally rising to £300.

Head Mistresses.—(1) That no non-resident head mistress should receive from the time of her appointment less than a salary of £300. (2) That the general range of salaries should be between £350 and £700; but that, in the interests of education, for the sake of the encouragement which is thereby given to all teachers and the gain in the attractiveness of the teaching profession, there should be, as at present, some prizes of substantially higher value.

THE annual Congress of Church School Managers and Teachers discussed as one of its chief subjects the future policy of the

Church with regard to primary education. The Rev. A. J. Allen (Cambridge) moved:

That, in the opinion of this Congress, no settlement of the education question will be satisfactory which does not provide that every child shall have the right to be taught the religion which its parents profess in every State-supported school by the regular school staff in school hours.

He urged, first, no compromise; secondly, sacrifice on the part of Church people to maintain what they had got. The Liberal party were resolved to modify the Education Acts. The first of these modifications would be to abolish religious tests for teachers and to alter the proportion of foundation managers to those elected by the County Council or Local Authority. If these two points were carried, the present Church system would be practically washed out. The Rev. J. O. Bevan (Dover) moved as an amendment:

That this Congress expresses its conviction that no settlement of the education question can be fair and just which does not provide that all children in provided and non-provided schools alike shall have the right to be taught the religion professed by their parents as part of the regular school curriculum, and under arrangements to that end made by Local Education Authorities, and carried out by the managers of individual schools.

After discussion the latter portion of the amendment, relating to the giving of the religious education "under arrangements made by Local Authorities, &c.," was withdrawn, and the amendment thus altered was carried.

THE Manchester Education Committee has approved the draft scheme drawn up by a joint sub-committee of the Education Committee and the University of Manchester for the institution of a Faculty of Technology. Sir John Hay said the scheme had received the sanction of the Senate of the University, and was therefore in a position to go forward to immediate completion in time for inclusion in the syllabus of the School of Technology and the calendar of the University for the commencement of the next session. The impelling idea in regard to the carrying out of the scheme was that it would enable students at the School of Technology to obtain a degree at the Manchester University. Things were different in other countries, and more especially in Germany, but only of late years had it been the custom in Germany to give schools of technology the power of granting degrees. The German universities had power to grant degrees upon their own motion without connexion with any ordinary university. They could not hope for anything of that sort for a long time, and therefore if it was desired to give the degree advantage to students at the School of Technology they must proceed by some such process as was developed in the proposed scheme.

THE Marquis of Linlithgow received two deputations (June 17) in Edinburgh on the Scotch Education Bill. One consisted of representatives of the School Boards of Edinburgh, Glasgow, Dundee, and Aberdeen; the other represented various governing bodies of endowments for secondary education in Scotland and of the Scottish universities. The latter were specially concerned for a clearer definition of the position of endowed schools. In reply, Lord Linlithgow said he could not commit himself or his colleagues to anything definite, but to the majority of the suggestions they would give their favourable consideration. Others, however, would require closer scrutiny and attention. It was the intention of the Government to use every endeavour in its power to make the Bill become law.

MR. E. A. WALTON, R.S.A., has presented a series of special reports on the instruction given in the principal schools of art in Scotland. He announces "a great improvement on the past," and thinks that, if all the classes of the schools were brought in the line with the best classes he has seen under the new system, "the art student would now be able to receive, as designer, craftsman, or artist, as complete and thorough a training as he could get anywhere at home or abroad." He recommends strongly the encouragement of a closer union and freer intercourse between the different schools, and notes with satisfaction that the Board schools are drawing nearer the art schools. He says:

There is a very distinct effort being made to bring the Board school drawing classes for children into closer touch with the system of the art schools; I made it my business when in Scotland to visit one or two of the Board schools to make myself acquainted with the system

employed. I was greatly impressed with this department of general education; I think it augurs well for the future, for every branch of handicraft and learning will be greatly aided by it, and it will materially raise the standard of the art schools. In the art schools themselves every encouragement should be given by the masters to the sketching clubs, as it helps greatly to raise the standard of the students' work and encourage their individuality.

THE annual report of His Majesty's Inspectors on Continuation Classes in Scotland shows that the number of students of all divisions during the year under review was 85,011, and that the total expenditure incurred by the managers amounted to £128,830, of which £112,017 was recognized by the Department. Sums to meet the expenditure were met from the fees, which (including the sale of books and materials) reached the total of £12,508, while the Department grants amounted to £71,790, and those from the County Councils to £12,322. The endowments were £1,508, the subscriptions £5,138, and the total received from the rates £27,714. A feature of the report is the fact that it records that attendance at the rural continuation schools shows a decline. Generally speaking, the number of pupils shows a steady, if not marked, increase, and in the large towns and more populous districts this is especially marked.

AT a meeting of the School Nature-Study Union held at the College of Preceptors (June 2) Mr. R. Lulham read a paper on the training of teachers for Nature study, insisting upon the necessity for a proper ground-work. A resolution was passed urging upon the London County Council the need of providing classes for those who have to teach Nature study, and suggesting that a wild garden for their benefit should be established in at least one of the London parks, in which the botanic gardens arranged for the students of systematic botany have already proved so useful.

THE annual Conference of the National Society (June 8) passed by a large majority a resolution proposed by the Rev. H. W. Dennis, Principal of St. John's Training College, Battersea, in favour of inviting all the religious educational bodies to a conference, and asking them to co-operate, with the object of placing results before the educational authorities and offering to co-operate with them in framing a national system. The N.U.T. "Memorandum on Examination in Religious Knowledge," which urges abolition of such examinations in the interest of true religious teaching, was condemned by the Rev. H. R. Evers, Diocesan Inspector (Exeter), and other speakers, but no resolution on the subject was put to the vote. Other subjects of discussion were the best method of securing adequate religious instruction for future elementary-school teachers and the problem of keeping in touch with pupil-teachers during the secondary-school stage.

MERIONETHSHIRE EDUCATION COMMITTEE are dissatisfied with the pupil-teacher system, and have a mind to do away altogether with their P.T.'s. According to the present system, it is said, the teachers themselves are not properly educated, and on the other hand the children are neglected. The Merionethshire Authority have already advertised in vain for two female teachers, the clerk reporting at the last meeting that not a single application had been received. It has been decided to make the best terms possible with the present teachers, who resigned because the Committee refused their application for an increase of salary.

IN his presidential address to the South Eastern Union of Scientific Societies at Reigate (June 7), Prof. Petrie, of University College, London, remarked that about half of all the energies of the nation was used up in the replacement of the present generation by its successor. This view of the balance of the economic life of the nation was of the first importance in many questions; yet, strangely, it had been hardly looked at, and certainly it had never been given its place as one of the leading features in the political economy of a civilized State. The first and most obvious bearing of this expenditure was that the more it could be reduced in quantity and increased in quality the better for all. Probably it might be said that sanitary progress had halved the death rate and doubled the average length of life. That did not imply that we spent on human replacement only half of what was spent before, but that we were able to spend

twice as much on the better quality of the life, health, and training of each generation. The unhealthy towns in the kingdom were wasting life a quarter more than London, or wasting an eighth of their whole income in needless loss. To put an extra tax on all incomes in Liverpool of 2s. 6d. per £, in order to bring its mortality down to that of London, would be true economy. Another conclusion enforced by seeing the heavy cost of replacement was that it was worth a little more to secure quality as well as quantity; that health and education were the last things to cheapen over, nationally as well as individually. Could it be credited that a subject on which half our labour was spent was absolutely untaught, save to a few professional people, and that the whole preparation of what cost so much was mainly left to chance or ignorance? Our colonies showed us the road, as in Canada there was now a regular course of education in the rearing and training of children. It was not too much to say that a half of the education of women—the parallel to the technical education of men in business—should be given to enabling them to make the best use of the moiety of the national expenditure on renewal.

MME. MARIE MADELEINE CARLIER, foundress (with Mlle. Marguerite Bodin), of La Société de l'Éducation Pacifique at Croisilles (Pas-de-Calais), in 1901, appeals to the teachers of Great Britain for co-operation in promoting the objects of the Association—"l'éducation de la jeunesse suivant les principes de paix et de fraternité internationales, sans porter aucune atteinte au sentiment sacré du patriotisme." The programme is, summarily, this:

Faire comprendre à l'enfant qu'il n'y a pas deux morales, une pour les nations et une pour les individus: le pénétrer de l'idée de justice et du sentiment de la fraternité humaine envers tous les peuples de la terre; lui inculquer le respect de la Vie; lui démontrer que la guerre n'est point un mal inévitable, et que les discordes des Gouvernements peuvent être réglées par l'arbitrage: en un mot, former des cœurs pacifiques et transformer le patriotisme de haine en patriotisme d'amour.

M. Frédéric Passy, member of the Institute, is honorary President of the Society.

IN their capacity of parents and guardians (says *Womanhood*), a petition has been made by a number of the burghers of Frankfurt-on-the-Main to the Minister of Public Education, urging the necessity of co-education as applied to their native town. Their plea is that the private institutes which prepare girls for the University have an unnecessarily long curriculum, are expensive, and are uncertain. For instance, the specified age for entrance is fifteen, and pupils must have completed their twentieth year before they can pass the final examinations; expensive, because the fees are double what is charged in the public schools; and uncertain, because, as it is a private undertaking, it can only be kept up by a stated number of pupils, and, failing these, must be discontinued. That a great deal more is done by the State for the education of the male sex is seen by the recent debates in the Prussian Diet on the subject of the Budget estimates for the education of the youth of both sexes. In order to keep up the higher boys' schools in proper form, the sum of 14,000,000 marks was forthcoming, while for the girls' schools 350,000 marks was thought sufficient. The inhabitants of Frankfurt are very earnest in their petition that girls who are thinking of going in for University study should be allowed to join the classes at the boys' public schools. In this way they would have the best advantages at the most moderate cost. The directors of the institutes in question are perfectly willing to allow girls to take part in the classes if the Prussian Ministry agree and issue a decree to that effect.

THE report of the United States Commissioner of Education for 1903 contains in its 1,327 pages an abundance of information concerning all grades of American education, and parts of the educational systems of other countries. Dr. Charles F. Thwing, President of Western Reserve University, contributes an account of the development of American universities, their organization, conduct, and relations to the life of the nation. He shows that the growth of university endowment funds has kept pace with the growth of the wealth of the country at large. For example, the productive funds of Yale College have increased from about £6,000 in 1800 to more than £1,000,000 now. The growth of libraries also has been significant in particular instances; yet Dr.

Thwing says the "libraries of most colleges are inadequately furnished and inefficiently administered." The functions of universities in American communities are considered under various aspects. First, as conserving forces in the presence of a democracy inclined to make all things new; then as inspiring with high moral ideals an age inclined to pursue mere material aims. As an agency to promote systematic research—the seeking after truth as such—the university fulfils an increasingly useful function. An account of education in France includes some interesting statistics concerning French universities. The registration in State universities has increased by about 60 per cent. since 1887, the total registration for 1901 being 29,931 students. The University of Paris has 12,289 students; Lyons, with 2,458 students, and Bordeaux, with 2,119, stand next to Paris. As for the distribution by faculties, Law leads with 10,152 students, Medicine follows with 8,627, Science comes third with 3,910 students, and is closely followed by the faculties of Letters with 3,723 students.

A "GERMAN RESIDENT" is good enough to communicate to the *National Review* (June) "Some Candid Impressions of England." He is specially struck with the indifference of Englishmen to their individual duties as citizens of a great Empire, whereas the opposite virtue is the mainspring of German success. The penalty of an extra year of military service dissuades the German youth from laziness and negligence at school: the English boy has no such definite terror before his careless eyes. Our public schools are "good in a way, so far as they form character, but bad in that they neglect intellect." Our primary education turns out surprisingly bad products: the knowledge imparted does not seem calculated to make good citizens. The majority of our workers read little but the sporting press, and care for little but betting and sport. "Made in Germany" has become a term of guarantee, not of contempt: witness Mercedes motors and scientific instruments. An honest criticism enough; but, after all, one would require to know the area of vision and the degree of instruction of the organ of inspection.

LAST year the French Ministry of Public Instruction initiated, in conjunction with the Board of Education, a scheme whereby a number of young teachers (men and women) were appointed temporary assistants for one year in French *lycées* and *collèges*. The scheme will continue in operation this year, and the French Ministry will shortly proceed to make fresh appointments. It is hoped that similar arrangements may be made with Prussia, with the exception that in this case there will be no posts open to women. The main duty of the assistant will be to conduct small conversation classes for about two hours daily. Though not taking any part in the regular instruction of pupils, he will, both in France and Germany, be considered in all other respects as the colleague of the masters. He will not receive a salary, but he will be lodged and boarded at the institution to which he is attached, subject to the provision that in Germany in certain cases a sum of about £65 (marks 1,300) may be paid to him in lieu of board and lodging. Candidates for such posts should preferably be graduates of some British University, and should forward their application, containing particulars of their course of study and qualifications, to the Director of Special Inquiries and Reports, Board of Education Library, St. Stephen's House, Cannon Row, Westminster, enclosing testimonials in duplicate as to character, capacity, and teaching experience, and a medical certificate of health. It will also be necessary for each candidate to have a personal interview with the Director at his office. All applications must be received on or before Saturday, July 8.

UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

THE next Vice-Chancellor is to be Mr. Roberts, Cambridge. of Caius, another example of a rapid promotion from the onerous post of college tutor to the high honours of the Academic chair. The Master of Caius has done most things, and done them well; he has, however, forgotten to grow old, and perhaps the secret of his popularity with "his boys," as he is wont to call them, is that the boys aforesaid feel that he is one of themselves.

We have been reasonably free from illness during the latter

part of the term; not a single case of scarlet fever arose after the primary severe outbreak, and the visitors for the May week had nothing of which to be afraid. The May races—always such a festive scene—were overclouded by the sad ferry accident at Ditton in sight of the holiday-making crowd assembled in the paddock. Many University men who attempted rescues had narrow escapes themselves, and, sad as the occurrence was, it is fortunate that more valuable lives were not lost. A still greater danger exists at the "grind" higher up the river, where there is invariably a severe congestion of river traffic after the races, and no one to control the struggling mass of boats. Doubtless people will be more cautious another year.

There has been a very pretty little discussion in the Senate about some expenditure which has been incurred by the Medical Buildings Syndicate without due authority first obtained. The Financial Board issued a minute as to this expenditure, and the two august bodies got up on their hind legs at once. It was quite a delightful performance, and much more amusing than many of the side-shows provided for the delectation of our summer visitors. The Medical Buildings Syndicate are warned to be better boys for the future and by next term it will all be forgotten. Mr. Shipley, of Christ's, made a very sensible suggestion: that there should be a permanent Syndicate to conduct all negotiations about new buildings. Under present conditions, as he rightly observed, a Syndicate taking charge of any new building wastes much time and labour in learning the details of its own work.

The "honorary degree" day, June 14, was remarkable for the cosmopolitan character of the distinguished recipients of our complimentary "free pass." Prof. Vinogradoff, Father Ehrle (of the Vatican Library), Prof. Gildersleeve (of the Johns Hopkins University), Sir Robert Finlay, Captain R. F. Scott, and Sir Francis Younghusband made up a notable list of really distinguished men. The Rede Lecture was delivered on the previous Saturday by Sir F. Younghusband: it was well attended and proved of the greatest interest. The subject was "Our True Relations to India," and the lecturer convinced an enthusiastic audience that one Englishman at least had solved the great problem.

Trinity was successful in filling the two first places in the Mathematical Tripos, Mr. Littlewood, who hails from South Africa, being bracketed with Mr. Mercer, who was educated at Liverpool. The daily press has not taken any serious notice of the fact that the number of men classed in the Mathematical Tripos is 56, whereas the Natural Science Tripos has no fewer than 119. The Cambridge Medical School, with the allied branches of Chemistry, Physics, and Botany, is making gigantic strides. Mere numbers are a fallacious test, but it is quite certain that the older Triposes are not attracting men as once they did.

The gymkhana held by the University Volunteers was a great success: this is now becoming a recognized attraction of the May term.

The Footlights Dramatic Club produced a new and original musical play. The book was the work of Mr. Hugh Brodie, and the music was composed by Mr. J. W. Ivimey; some additional numbers being provided by Mr. Paul Rubens. The affair was a great success and crowded houses resulted. The A.D.C. gave "Pilkerton's Peerage" in their own theatre, and the acting was of a high order.

Third Trinity easily retained the proud position of head of the river, with Trinity Hall second, Lady Margaret third, and Jesus fourth. The last named college is rapidly rising to its proper place at the head of the river or near it.

By the time these notes appear in print Cambridge will be a deserted town.

SIR EDWARD BUSK has been elected Vice-Chancellor London. for 1905-6.

The Lister Institute of Preventive Medicine has been admitted as a school of the University in the Faculty of Medicine for the purpose of research in hygiene and pathology.

The Senate have approved Archæology as a subject for the Honours degree of B.A. and B.Sc., and for the degree of D.Sc., for both internal and external students; also for the degree of M.A. for internal students.

The Faculty of Laws, for which provision was made in the statutes promulgated for the government of the University in 1900, but the establishment of which has hitherto been postponed, has now been constituted by the Senate. It consists, in

the first instance, of the following:—Prof. J. Cutler, Mr. H. W. Disney, Dr. W. N. Hibbert, Prof. W. S. Holdsworth, Dr. L. Macassey, Prof. Sir John Macdonell, Prof. A. F. Murison, Prof. J. W. Neill, Dr. L. F. L. Oppenheim, Prof. W. J. Whittaker, and Mr. R. A. Wright.

The following Doctorates have been conferred:—D.Sc. in Economics (Internal), Mr. Gilbert Slater, for a thesis entitled "Common Fields and Enclosures in the Eighteenth and Nineteenth Centuries." D.Sc. in Botany (External), Mr. Felix Eugene Fritsch, for a thesis entitled "Studies on Cyanophyceæ" and other papers. D.Sc. in Botany (External), Miss Marie Charlotte Carmichael Stopes, for a thesis entitled "On the Double Nature of the Cycadean Integument," to accompany "Beiträge zur Keimtnis der Fortpflanzungsorgane der Cycadeen," and other papers.

Queen's College, London. THE report of Queen's College, London, for the past year shows that the institution continues in a flourishing condition. The annual gathering (May 25) was addressed by the Bishop of London, who dwelt principally upon the religious difficulties of girls, and ways of meeting them. On leaving Queen's College they should keep with them the aroma of the college, and, whatever part of London they were in, they would be a credit to their college and a credit to the Church.

Birmingham. THE new club house for students is almost completed. The freehold site, adjoining the University buildings, was provided by the University Council, who guaranteed also a sum not exceeding £2,000. The furnishing, which is estimated to cost some £1,500, is undertaken by the students, and all interested in the University are invited to contribute to the Students' Fund.

Sheffield. THE charter granted by the King in Council (May 29) ordaining the founding of the University at Sheffield was brought from London (June 3) by Mr. George Franklin, the Pro-Chancellor, and its arrival was made the occasion of a demonstration by the students of what has hitherto been University College. They paraded at the railway station, and the procession passed to the College Hall, where the Pro-Chancellor formally handed over the charter to the Vice-Chancellor (Dr. Hicks, F.R.S.), and congratulatory speeches were made on the successful termination of an effort which has enlisted the loyal support of the whole city. Large sums have been raised for the new University buildings, which the King and Queen have consented to open in July. An endowment fund has been raised by Sheffield people of about £140,000, while the City Council and the Councils of neighbouring boroughs and counties have guaranteed annual rate aid equivalent to an even larger capital sum. The first Chancellor of the University is the Duke of Norfolk, who telegraphed to the Vice-Chancellor: "My heartiest congratulations to you and all connected with University on reception of our charter, and earnest best wishes for a glorious future of good work for Sheffield."

Wales. At a special meeting of the Court of the University held (June 9) at Shrewsbury, the Registrar announced the receipt of letters of resignation from Mr. W. Edwards, Mr. R. E. Hughes, Mr. D. E. Jones, and Mr. T. W. Phillips, four of His Majesty's Inspectors of Schools, of their seats on the Court. Dr. R. E. Roberts, Junior Deputy Chancellor, asked whether the Court knew the cause of their resignations. The Chairman (Sir Isambard Owen) said he had no information that he could lay before the Court, except that he had read in the papers that the resignations had been sent in under orders of the Board of Education. He understood that members of Parliament were prepared to ask questions on the matter. It came to his knowledge some months ago, through a channel he was not at liberty to name, that the details of the scheme of reconstruction of the joint conference were perfectly well known in the Education Department, and it was stated to him that it was believed the Board of Education contemplated in some way interfering with the liberty of the Court in dealing with the matter. On the motion of Mr. J. L. Muspratt (Flint), a resolution was passed expressing deep regret at the simultaneous loss of so many active members of the Court, and intimating that, if the resignations were due to instructions received from the Board of Education, the Court desired to express its

great surprise that the Education Board had deemed it necessary to take such a step on the eve of an important meeting of the Court, and its still greater surprise that no notice whatever had been given to the University.

The Court considered at great length two alternative schemes for the future administration of the university. The Executive Committee of the Court recommended the pensioning of the present Registrar, Mr. Ivor James, at £200, being half his salary, and the appointment of a new Registrar at £600 a year, with other minor appointments. It was also recommended that the Vice-Chancellor should still act as president of the Senate and chairman of the Examining Boards, the other routine duties performed by the Vice-Chancellor to be transferred to the Registrar.

Sir T. Marchant Williams submitted an alternative scheme, in which he suggested the appointment of a working head of the University at £1,000 a year, thus relieving the principals of the colleges from acting as Vice-Chancellor, and the appointment of a Registrar at £400 a year, with other appointments. It was agreed that, in order to admit of further consideration by the Court of the question of the appointment of a salaried head of the University, (1) the University grant the present Registrar a pension of £200; (2) that a Registrar with academic qualifications be appointed at a salary of £500 a year.

Queen's College, Belfast. At a meeting of subscribers to the fund for the better equipment of Queen's College, Belfast (June 2), there was read a report showing the progress of the past four years, and setting out the more pressing requirements of the time. The fund had risen to over £30,000. A resolution was passed: "That this meeting most earnestly desires to bring under the immediate notice of His Majesty's Government the strong and increasing claims of Queen's College, Belfast, to more generous treatment by the State." Prof. Letts said it was difficult to see now, after all this money had been subscribed, what reason the Government could have for not finishing the building and for not fulfilling their pledge. He did not know that it was any secret why the Government did not keep to their promise. It was merely an echo of a speech Mr. Balfour made many years ago at Edinburgh, when he said that nothing could be done for Queen's College until the question of a Roman Catholic university had been settled. Altogether he thought they had a very real and a very clear grievance against the Government. In the first place it was their duty to keep the college in a proper condition of equipment and efficiency. That they had not done. Then, having insisted that money should be got from the public before they would do anything further for them, they ought by this time to have kept their promise. But they had not done either, and, if they were going to wait until the Irish university question or the question of separate education for Roman Catholics was settled, they might never do it. He therefore very warmly seconded the resolution, and trusted that it would have the desired effect. He hoped that it might remind the Government of both a serious duty and of a definite but unfulfilled promise.

The *Northern Whig* comments strongly on "the illogical attitude of the Government." "The desire of all true educationalists is that learning should be free and unfettered. They do not wish to see it made the handmaid of any Church or party, and because these non-sectarian principles are strictly adhered to in the Queen's College, Belfast, the necessary funds for carrying on the work on a large scale are withheld. On no ground whatever can the action of the authorities be justified."

Reading. THE foundation-stone of the new buildings of University College, Reading, was well and truly laid (June 7) by Lord Goschen, Chancellor of the University of Oxford. The site, which is an extensive one, is freehold, the gift of the late Mr. George Palmer. Some £80,000 is required, and £35,700 has been already subscribed. Lord Goschen, speaking at a preliminary luncheon in the municipal buildings, said:

In the position of education at the present time there was some confusion, and, as for controversies, they were endless. There were controversies as to the relations between the old universities and the new universities, as to the relations between useful knowledge and mental training, and, in regard to mental training, which he hoped would not be put in the background by the advancing forces of technical educa-

tion simply, they had the controversy as to what was the best means of mental training. There were controversies in schools, and conflicts of agencies, studies, methods, and aims. Amid all these conflicts the main thing was to direct the educational passion of the nation, for he was glad to say that at present the nation was thoroughly determined to be educated. The desire for education was stronger than it had ever been, and it was for those who were charged with education to see that these aspirations were guided into the correct channels. And among these conflicts there were the dangers of fanaticism and of competition. Amid the hustling of those who championed various causes, might he at least put in a word for higher culture? Might he echo what was written by Mr. George William Palmer, that literature and science might hold their own in this country apart from useful knowledge; that the humanities should be supported, and that history and geography and all those matters that broadened the mind, as well as those that helped to a livelihood, should have their proper place in our educational system? The advocates of technical education would always have an enormous audience, and it was right for the sake of the nation that it should be so, and there would always be advocates for the exploration of the secrets of Nature and for increasing our knowledge of those forces of Nature which tended to the advantage of man. But they should take care that the humanities were not driven into a back place. This nation realized—he hoped its educated classes realized—that there was a danger that amidst specialization and technical education higher culture might suffer. Mr. Choate, the most eloquent of American ambassadors, recently said that he thought America had now become rich enough to be able to spare some time for culture. At this time, when our friends across the water were advancing in the direction of culture, let them see to it that culture did not take a back place in this country. The old universities, and, above all, the University of Oxford, ought always to be responsible to the nation so that culture should not be degraded.

CONFERENCE ON THE SALARIES OF ASSISTANT TEACHERS IN LONDON SECONDARY SCHOOLS.

SINCE the beginning of the year a Conference, called together by the London Branch of the Incorporated Association of Assistant Masters, has been considering the question of the remuneration of teachers in London secondary schools. In addition to representatives from the above branch of the I.A.A.M., the Conference is composed of delegates from the following bodies:—(1) the Association of University Women Teachers, (2) the Assistant Mistresses' Association, (3) the Teachers' Guild (Central Guild), (4) the Federation of London Teachers. Among others, resolutions have been passed:—

(a) Suggesting a minimum salary of £150 a year, rising to £300 a year, in the case of men; and £120, rising to £200, in the case of women, for teachers registered in Column B; and (b) welcoming the condition attached by the London County Council to the payments of grants to secondary schools, that the improvement of such salaries as are below the normal scale shall be made the first charge upon the maintenance grant.

A considerable body of statistics illustrating the condition of remuneration in London secondary schools has been collected, and much evidence has also been obtained which tends to show that the supply of university men and women entering the teaching profession is diminishing. The deliberations of the Conference culminated in a deputation which was received by the Teaching Staff Sub-Committee of the London County Council on Thursday, May 18. The deputation consisted of Mr. G. F. Bridge, Chairman of the Conference, representing the Assistant Masters' Association and the Teachers' Guild, Miss Macklin, of the Assistant Mistresses' Association and Association of University Women Teachers, and Mr. P. Abbott, Honorary Secretary of the Federation of London Teachers. The proceedings were held in private. The deputation presented tabulated statistics and also a diagram showing the difference in the prospects of secondary teachers and those in pupil-teacher centres and higher elementary schools, and said that their desire was that the Education Committee should define the normal scale. The Chairman expressed the interest of the Committee in the information which had been laid before them, and said that it would, no doubt, be found valuable.

The Conference has not yet been dissolved, and is at present engaged in collecting further statistics with respect to London salaries, both of men and women assistant teachers. Any information respecting the same would be very gladly received by the Secretary to the Conference, Mr. C. Hale, of the South-Western Polytechnic, Manresa Road, Chelsea, S.W.

OPEN COURT.

They haif said . . .

Quhat say thay?—Lat thame say!

PARENTS AND SCHOOLMASTERS.

[From the *Morning Post*.]

A SHORT time ago we ventured to ask the parents of boys now at school in England to consider the prospects of those of their boys who will have to make their own way in the world, and to compete, when they offer their services to those who are able to pay for work, with boys trained in America or in Germany. We pointed out that wherever in the world good work is wanted men trained in other countries compete for it with men trained in England and that even the English market cannot be closed against them. We have since then had evidence that a good many fathers and mothers think our view of the prospect fairly correct, and that some of them would like to know what they can do towards improving it. Little can be done for boys now at school by any efforts to influence the authorities who control schools—either the Board of Education, the local bodies, or the governors of public schools. All such authorities move slowly, and only as a result of a pronounced and definite public opinion. The man or woman whose son is now at school hardly wants to wait until the system has been improved. A good many parents, too, find it hard to test or check off what the school is doing for their boy. The lessons are in subjects in some of which the parents are not on their own account much interested, so that there would be a difficulty in their plunging into the actual work of the lessons to see how the boy is getting on. But any father or mother who really cares about it can give the schoolmaster a great deal of help by taking a comparatively small amount of trouble. Part of the business of the schoolmaster is evidently to help the boys to get into the way of thinking about what they see and hear and of expressing themselves clearly. It is not hard to find out whether this part of the work is being carried on with profit. The boy has been to see something that has interested him—a show, a play, or a cricket match. If his schooling is what it should be, he ought to be able to sit down and write a short letter describing what he has seen. To find out whether he is being taught to write nothing more is needed than to read the letter. It will be found that in too many schools teaching to write is supposed to mean merely practising hand-writing. But it ought to include teaching the boy how to put on paper what he has in his mind. If this is not part of the course, the parent ought certainly to let the schoolmaster know that the course has a serious defect. Perhaps this is at present the weakest point in half the schools of England: that the boys are not taught as one of the regular lessons to tell a plain tale in their mother tongue. Yet that is what ought to be meant by lessons in the English language.

We have suggested the simplest way of testing what the school is doing because, if parents would take the small amount of trouble involved in it, the schools would improve at once. The schoolmasters themselves are for the most part sensible men, and would agree that boys should be taught to express themselves easily and clearly in their own language. But, they would say, that means a good deal of time and the lesson hours are already filled up. Then comes the parent's turn, for he will find that the other parents will agree with him, and that, provided they consent, the schoolmaster will put a regular writing lesson in the sense here explained into the time-table. The little boys ought to be made to tell their tale by word of mouth without writing it, a practice which will make the beginning of written expression, or "composition" as the schools call it, much easier. We have a practical reason for beginning with something simple. No parent who has not tried it has any idea of the influence which will be exerted on a whole school by his taking a direct interest in his boy's work, even if it goes no further than has already been suggested. The mere fact of his seriously discussing with the master the end and purpose of teaching will stimulate and help the master. We come to a further point, which to find out requires a little more trouble. There is all the difference in the world between the system in which a master who thoroughly knows a subject and is interested in it gives a lesson to his class, and the system in which the boys are set down to learn by rote a page of a school book, and are then "heard their lesson." The one process is an awakening of the mind, the other

too often a putting it to sleep. The best part of teaching is the direct intercourse between the master and his pupils, and parents would do well to be jealous of all contrivances for substituting text-books for real instruction. Even in that part of school work which is perhaps the best conducted—the teaching of Latin and Greek—there has been too much scope allowed for the tendency of the teacher to hand over to the pupil what he ought to do himself. There has been for some years a multiplication of annotated editions—many of them excellent—of the Greek and Latin classics read in schools, and of the English classics too. We suspect that these editions are the grave of true scholarship. The notes distract the attention from the text, which thus never gets consecutively read and never becomes familiar, and the attention is drawn away to matters the greater number of which are mere trifles. The accident of every language has to be learned by rote. There is no escape from that. Of the syntax a few main rules must be explained until they are thoroughly grasped, but the refinements of syntax are learned only by long observation. These elements, the accident and the leading principles of syntax, once learned, the language can be mastered, apart from conversation, which is impracticable with dead languages, only by translation and retranslation or composition in sufficient quantity, composition following at some distance behind reading or translation. We should like to see editions with notes banished altogether from schools, or at any rate kept out of reach of schoolboys, and the lessons given from the plain text. This implies, of course, that the master really knows the language he is teaching. In the case of Greek and Latin at the public schools this is the case. But there are too many instances in which a modern language is taught, at any rate in schools below the first rank, by men who can neither speak nor write it. If you want your boy to learn French at school, take the trouble to find out whether his French master speaks French.

Above all, a parent should satisfy himself that what his children are taught is kept in touch with reality; that, if they learn a language, they are learning to think and to express themselves in that language; that their geography means to them a knowledge of the world they live in; that their history is the lives of real people, whom they love or hate, admire or despise. If you find that school geography means lists of names, school history summaries of events and tables of dates, and school language mere rules and paradigms, you may be sure that the school is not giving an education that will lead into life. But, if such schools exist, the fault is only in part that of the schoolmasters. The parents who have gone to sleep while the best years of their children's lives have been wasted on the dry bones of nothing are at least equally to blame. Here is the world, full of interest of every sort and full of life; there are near us countries as remarkable as our own, full of people as much alive as our people, with their past as instructive as that of England. To this world and its meaning the school should be an introduction. English schools will perform that function so soon as English parents are determined that they shall.

CORRESPONDENCE.

We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

THE TEACHERS' REGISTER:

COLLAPSE AND RECONSTITUTION.

To the Editor of "The Educational Times."

SIR,—The Report of the Teachers' Registration Council shows patent failure of the Register at every point, and impresses the necessity for a fresh start. What is to be done? I note the pressure on your space, and therefore limit myself to suggesting a mere outline, which others may fill out or modify. To begin with, a clean sweep must be made of Column A, which serves no useful purpose, and only cumber the ground. Then the classification of the Register must proceed, not, as at present, on the class of school in which a teacher has gained his experience, but solely on his academic qualifications. All teachers must equally furnish proof that they have been trained and have profited by their

training, and they will then be distinguished as possessing a degree or some lower certificate of general knowledge. I am well aware that I am here treading on dangerous ground, and enunciating views on which the Council of the College have not yet definitely pronounced. I may be mistaken, but it seems to me that the Act of 1902 has made it impossible for the future to draw any hard and fast line between primary and secondary schools and teachers. I would further urge that it is now practically impossible, even were it desirable, to exclude elementary teachers from the Register, and to objectors who argue that the training and experience demanded of primary and secondary teachers are and must be essentially different I would answer that the information supplied under each name in the Register will enable those who hold this view to differentiate the ex-pupil-teacher from the probationer for an Eton or Harrow mastership. This by way of suggestion. The present system stands confessed a hopeless futility.—I am, Sir, &c.,

EMERITUS.

SCOTLAND AND BRITISH PATRIOTISM.

A PROTEST FROM THE NORTH.

To the Editor of "The Educational Times."

SIR,—The bearing of Japan's patriotism upon her astounding success in the present war has awakened some of our statesmen, and a number of our public journals, to the importance of developing a similarly patriotic spirit at home. To this end it is urged that in our schools the rising generation should be made better acquainted with our country's history, and with the deeds of heroism and the triumphs of genius that glorify its pages.

But, if the end desired is to be helped and not hindered by this means, the school histories from which the young are being taught will have to be purged from the errors and misrepresentations that meantime offend and alienate the smaller nationalities, and weaken instead of strengthening the Imperial bond. How, *e.g.*, is Scotland treated in the history books published by English firms? Although the very first condition of union between England and Scotland was that in all time coming the United Kingdom should be called by its united name, this provision—so vital to international fraternity—is constantly and gratuitously violated in the books referred to. While Germany is never called "Prussia," or the German army called the "Prussian" army, Britain is continually called "England," and our Army, Navy, throne, flag, and Parliament, which are all British, are called "English." In many cases the terms objected to are used as offensively as if the express purpose were to irritate the feelings of the Scottish people. Scots, of whom their country is justly proud—men like Adam Smith, James Watt, David Livingstone, Sir Ralph Abercrombie, Sir John Moore, and Sir Colin Campbell (afterwards Lord Clyde)—are all described as "Englishmen." How would English people feel if they found school histories teaching the young to call Clive a Scot or Shakespeare an Irishman? Yet Clive was as much a Scot, and Shakespeare as much an Irishman, as Abercrombie, Moore, and Lord Clyde, or Adam Smith, Watt, and Livingstone were Englishmen.

Affronts of this kind, aggravated by the sense of injustice in taking from Scotland honours that belong to her and crediting them to England, whose they are not, cannot fail to irritate national feeling, and certainly do not help to strengthen the Imperial sentiment or promote that international fraternity of feeling which we all desire to see. The invasion of Scotland by schoolbooks abounding in this offensive misuse of our national names, and in this and other ways doing grave injustice to Scotland's history and to her part in the development of the British Empire, and seeking practically to sink her name and nationality in those of England, is bound to give increasing offence. Already a number of important School Boards, including those of Glasgow and Edinburgh, have begun to take action, as has also the Convention of Royal and Parliamentary Burghs. But why should English authors, publishers, and educational authorities make such action necessary, when the practice complained of not only tends to international friction, but involves misrepresentation of historic truth and the violation of an international pledge?—I am, &c.,

DAVID MACRAE,
President Scottish Patriotic Association.

BLACKIE'S ANNOUNCEMENTS

Modern Language and English Catalogues post free on application to Blackie & Son, Ltd., 50 Old Bailey, London.

Little French Classics

"The idea is an excellent one, and admirably carried out."—*Prof. SAINTSBURY*.

"A considerable boon to teachers and taught."—*SPECTATOR*.

This New Series, which is produced under the most competent editorship, embraces all classes of French Literature—*Travels, Stories of Adventure, Scenes of Domestic Life, Essays, Letters, Poetry, and Drama*—so graduated in difficulty and so varied in matter as to be suitable for boys and girls of all ages. Many authors hitherto unobtainable in a suitable form for class reading are represented, as, for example, Bossuet, Balzac, Stendhal, Rousseau, and Pascal.

The volumes have already found their way into constant use in most of the leading Schools in this country, and Examining Bodies, both at home and in the colonies, are prescribing the books for study during the coming year. Price **4d.** each book.

Complete List on application.

German Exercises

By Prof. H. G. ATKINS, M.A.

This new volume of exercises (**1s.**) has been prepared in response to repeated demands for suitable material to accompany the well known *Skeleton German Grammar*. At the same time they are complete in themselves, and suitable for independent use.

Each page contains two passages, one in German and one in English, dealing with the same subject-matter and using the same vocabulary, and in the first twenty exercises the English is given in German order. The grammatical points are taken up in the order of the *Skeleton Grammar*, a page being given to each where it seemed advisable. In subject-matter, after the first few exercises, Germany and things German receive the chief share of attention, while the Poems included are characteristically German.

Complete German-English and English-German Vocabularies are provided.

** **French Exercises (1s.)** to correspond with the *Skeleton French Grammar* is just published.

A. Skeleton German Grammar. By Prof. ATKINS. **1s. 6d.**

A. Skeleton French Grammar. By Prof. ATKINS. **1s. 6d.**

New Series English Texts

Cloth covers, price **8d.** each.

This new and highly excellent series provides, in small compass, the works of many of the best known and most famous authors. The aim has been to include only such books as are of permanent value, and have some bearing upon the development of the national life, character, and literature. In every case the books selected are good as literature, stimulating, varied, and enlightening; books, indeed, which every well-educated person should know, and which, if once read, are sure to be valued and read again. Each volume is provided with a brief introduction dealing with the author's life and place in literature. In neat blue cloth covers, price **8d.** each.

Dickens's Christmas Carol.
Tales from the Decameron.
Macaulay's First Chapter.
Hawthorne's Inglewood Tales.
Sir Richard Hawkins's Voyages.
Napier's Great Battles of the Peninsular War.
Rip Van Winkle.
Defoe's Journal of the Plague Year.
Early Voyages to Japan (Purchas).
Stories of Antonio and Benedict Mol.
Lamb's School Days, and other Essays.
Drake's World Encompassed.
Robinson Crusoe.
Gipsy Stories from Borrow's Belle.
North's Plutarch: Alexander.
Irving's Companions of Columbus.
Erasmus's Praise of Folly.
&c., &c., &c.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, **£4,194,485.** Annual Income, **£398,982.**

Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

**IMPORTANT
NOTICE.**

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (See Prospectus.)

MACMILLAN & CO.'S LIST.

ENGLISH LITERATURE FOR SECONDARY SCHOOLS.

General Editor—**J. H. FOWLER, M.A.**, Assistant Master at Clifton College.

Now ready. Globe 8vo, limp cloth.

Ballads Old and New. Selected and Edited for School use, with Glossary, &c., by H. B. COTTRILL, M.A. In Two Parts. 1s. each.

Essays from Addison. Selected and Edited, with Introductions, Notes, Glossary, &c., by J. H. FOWLER, M.A. 1s.

Longfellow's Shorter Poems. Selected and Edited, with Notes, Glossary, &c., by H. B. COTTRILL, M.A. 1s.

The Tale of Troy. Retold in English by AUBREY STEWART, M.A. Edited for Schools, with Introduction, &c., by T. S. PEPPIN, M.A. Illustrated. 1s. 6d.

COLLEGE OF PRECEPTORS' CERTIFICATE EXAMINATIONS.

Special Subjects, 1905.

- Caesar—Gallic War, Books I., IV., V.** By A. H. ALLCROFT, M.A. Oxon., and others. 1s. 6d. each. Vocabulary, 1s. each.
- Euripides—Hecuba.** By T. T. JEFFERY, M.A. Camb. 3s. 6d.
- Euripides—Medea.** By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A. Oxon., Lecturer in Latin at University College, Dundee. 3s. 6d.
- Horace—Odes, Book III.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. 1s. 6d. Vocabulary, 1s.
- Vergil—Aeneid, Books II., III.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. each. Vocabulary, 1s. each.
- Xenophon—Anabasis, Book I.** By A. H. ALLCROFT, M.A. Oxon., and F. L. D. RICHARDSON, B.A. Lond. 1s. 6d. Vocabulary, 1s.
- Shakespeare—Julius Caesar, Twelfth Night.** By W. J. ROLFE, D.Litt. 2s. each.

BOOKS FOR MATRICULATION (London University).

- Algebra, The New Matriculation.** Containing a Section on Graphs. By RUPERT DEAKIN, M.A. Lond. and Oxon. 3s. 6d.
- Arithmetic, The Tutorial.** By W. P. WORKMAN, M.A., B.Sc. Second Edition. 4s. 6d.
- Botany, The New Matriculation.** By A. J. EWART, D.Sc., Ph.D., F.L.S. 3s. 6d.
- Chemistry, The New Matriculation.** By G. H. BAILEY, D.Sc. Lond. Edited by WM. BRIGGS, LL.D., M.A., F.C.S. Second Edition, Rewritten and Enlarged. 5s. 6d.
- English Course, Matriculation.** By W. H. LOW, M.A. Lond., and JOHN BRIGGS, M.A. Camb., F.Z.S. Second Edition. 3s. 6d.
- Euclid, Books I.—IV.** By RUPERT DEAKIN, M.A. Oxon. With a Preliminary Course of Drawing and Measurement, and Problems in Practical Geometry. Second Edition. 2s. 6d.
- French Course, The Matriculation.** By ERNEST WEEKLEY, M.A. Lond. and Camb. Second Edition. 3s. 6d.
- French Reader, The Matriculation.** Containing Prose, Verse, Notes, and Vocabulary. By J. A. PERRETT. 2s. 6d.
- Hydrostatics, The Matriculation.** By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 2s.
- Latin Authors, Matriculation Selections from.** By A. F. WATT, M.A. Oxon., and B. J. HAYES, M.A. Lond. and Camb. 2s. 6d.
- Mechanics, The Matriculation.** By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.
- Modern History, Matriculation. 1485—1901.** By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d.
- Physics, Matriculation: Heat, Light, and Sound.** By R. W. STEWART, D.Sc., and JOHN DON, M.A., B.Sc. 4s. 6d.

Complete Catalogues, and Lists of Books Classified for each of the following Examinations, may be had free on application:—

CURRENT EVENTS.

THE half-yearly General Meeting of the members of the College of Preceptors will be held at the College on Saturday, July 29, at 3 p.m.

* * *

A HOLIDAY COURSE will be held in London, July 17—August 18; a shorter Course, July 31—August 18. Practical classes in composition, conversation, and phonetics; Lectures on literary, philological, and social subjects. Apply to Director of Holiday Courses, c.o. Registrar of the University of London, South Kensington, S.W.

* * *

PRESIDENT N. MURRAY BUTLER, of Columbia University, will be entertained at dinner by educational and other admirers at the Hotel Great Central (Wharncliffe Rooms) on July 5, at 8 p.m. Dr. H. Frank Heath and Mr. P. J. Hartog (University of London, South Kensington, S.W.) are the Hon. Secretaries of the Reception Committee.

* * *

THE London Geological Field Class will make an excursion to Reading (Reading Beds) on July 2.

* * *

A CONFERENCE of head masters, head mistresses, and governesses of secondary schools will be held at Durham University on July 1 to consider how County Councils and secondary schools can best co-operate in the interests of secondary education.

* * *

MISS WALTER, H.M.I. (38 Woodberry Grove, Finsbury Park, N.), is arranging a party to Switzerland (Kandersteg and Zweisimmen) on August 1 for a fortnight. 10 guineas.

OXFORD UNIVERSITY has conferred the honorary degree of Litt.D. upon Herr Gerhart Hauptmann, the most original German dramatist of to-day, and upon M. Emile Senart, member of the Institute of France; the honorary degree of D.Sc. upon Mr. Edwin Ray Lankester, M.A., F.R.S., Hon. Fellow of Exeter College, and Director of the Natural History Museum, South Kensington; the degree of D.M. upon Prof. Osler, the new Regius Professor of Medicine; and the honorary degree of M.A. upon Mr. C. J. Holmes, Slade Professor of Fine Art, Oxford.

* * *

THE honorary degrees that we mentioned last month as proposed by Cambridge University were duly conferred, with two exceptions. M. Paul Cambon, the French Ambassador, was unable to attend; and Father Denifle, one of the archivists of the Vatican, was in the meantime seized with illness, which, unhappily, proved fatal. The honorary degree of LL.D. has also been conferred upon Lord Cromer.

THE University of Dublin has conferred the following honorary degrees:—

LL.D.—Margaret Byers; Henrietta Margaret White; Sir Thomas Drew, President Royal Hibernian Academy; the Right Hon. Sir Arthur Wilson, B.A., K.C.I.E.

M.D.—Sir Richard Douglas Powell, Bart., K.C.V.O.; Henry Rosborough Swanzy, M.B.

Sc.D.—Edward A. Schäfer, Professor of Physiology, Edinburgh; Sydney Young, Professor of Chemistry, T.C.D.

Litt.D.—William Graham, M.A., Professor of Jurisprudence and Political Economy, Queen's College, Belfast; Hon. Emily Lawless.

Mus.D.—Michele Esposito.

* * *

MR. SAMUEL H. BUTCHER, M.A., Hon. D.Litt. Oxford and Dublin, F.B.A., formerly Fellow of Trinity College, Cambridge, and of University College, Oxford, and Professor of Greek at Edinburgh University, has been elected to an honorary Fellowship at University College, Oxford.

* * *

MR. RITCHIE, M.A., B.Sc., Fellow of New College and Reader in Pathology in the University of Oxford, has been constituted Professor of Pathology so long as he holds the Readership.

* * *

DR. J. A. H. MURRAY, editor of the Oxford English Dictionary, has been nominated a corresponding member of the Imperial Academy of Sciences of Vienna.

* * *

THE French Academy has awarded a prize of 12,000 fr. (£480) to Mr. G. A. Grierson, C.I.E., for his work in connexion with the Linguistic Survey of India and the Languages of India.

◆◆◆

Endowments and Benefactions. MR. G. W. PALMER, formerly M.P. for Reading, has offered £50,000 to Reading University College, to be called (after his father) "The George Palmer Endowment Fund."

* * *

THE Goldsmiths' Company has given £5,000 towards the production of the sixth volume of the Oxford English Dictionary.

* * *

MR. VERNON J. WATNEY, M.A. New College, Oxford, has given £500 to the General Fund of the Bodleian Library.

* * *

THE Surveyors' Institution has founded three scholarships, £80 a year each, at Cambridge University, to afford facilities for the higher education of surveyors in branches of scientific knowledge cognate to their profession.

* * *

MR. YARROW has given the Institution of Civil Engineers £10,000, to be applied to the education of necessitous members of the engineering profession.

* * *

THE Northampton Institute offers three scholarships in September. They will give exemption from fees (£52) during the whole of the four years' course in Mechanical or Electrical Engineering.

◆◆◆

Scholarships and Prizes. THE Law Society offers 12 scholarships, £50 a year each, tenable for three years, in October—6 to articled clerks, 6 to men not yet articled (3 to candidates under nineteen, 3 to University graduates only). Holders will pursue a course of legal studies approved by the Council. Candidates give notice in writing to the Director of Legal Studies (at the Society's Hall, 113 Chancery Lane, W.C.) by September 15.

A GEOGRAPHICAL SCHOLARSHIP, £60, will be open to candidates that have taken Honours in one of the Final Schools of the University of Oxford. Examination, October 12. Send names to the Reader in Geography, Old Ashmolean Building, Broad Street, Oxford, by October 2.

* * *

JESUS COLLEGE, CAMBRIDGE, offers two Lady Kay Scholarships, £60 a year each, in July. Testimonials of qualifications to reach the Master by July 14.

* * *

TWELVE scholarships (8 of £50 and 4 of £25 a year each for 3 years) for Catholic students entering the Royal University of Ireland will be awarded in October on the results of the Intermediate examinations. Apply to the secretary of the Committee of the Catholic Scholarship Fund, University College, Dublin, by October 1.

◆◆◆

Appointments and Vacancies. MR. E. A. BECK, M.A., Master of Trinity Hall, has been re-elected Vice-Chancellor of Cambridge University.

* * *

SIR ARCHIBALD GEIKIE, LL.D., F.R.S., has been invited to deliver the Huxley Lecture at Birmingham University next year.

* * *

M. A. BELJAME, Professor at the Sorbonne, has been elected Clark Lecturer in English Literature at Cambridge for 1905-6.

* * *

AFTER consultation with the Senate of the University of London, the Council of University College have decided to institute a Chair of Roman Dutch Law, and will shortly proceed to make an appointment to it.

* * *

MR. E. BROWN, M.Sc., M.E. (Liv.), Lecturer on Applied Mechanics in Liverpool University, has been appointed Assistant Professor of Civil Engineering and Applied Mechanics in the McGill University at Montreal.

* * *

DR. J. E. DUERDEN, of the University of Michigan, formerly Curator of the Museum, Jamaica, has been appointed Professor of Zoology at the Rhodes University College, Grahamstown, Cape Colony.

* * *

MR. ALEXANDER OGG, M.A., B.Sc., Ph.D., Royal Naval Engineering College, Devonport, has been appointed Professor of Applied Mathematics and Physics in Rhodes University College, Grahamstown, South Africa.

* * *

DR. A. J. HERBERTSON, M.A., Ph.D., has been appointed University Reader in Geography at Oxford in place of Mr. H. J. Mackinder, M.A., resigned. Dr. Herbertson has been Lecturer in Regional Geography and Curator of the School of Geography since it was established.

* * *

MR. W. J. GOODRICH, M.A. Oxon., has been appointed junior assistant Lecturer in Classics in Manchester University.

* * *

MR. J. H. DAVIES, M.A., has been appointed Registrar of the University College of Wales, Aberystwyth.

* * *

MR. CLOUDESLEY BRERETON, M.A. Cantab., L.-ès-L., Officier d'Académie, has been appointed an Inspector in Modern Languages under the London County Council.

MR. L. A. BORRADAILE, M.A., has been appointed Assistant Secretary for Lectures under the management of the Cambridge Local Examinations and Lectures Syndicate for the year 1905-6.

* * *

MISS H. M. STEPHENS, Warden of the Victoria University Hall of Residence, Manchester, has been appointed Warden of the Alexandra Hall, Aberystwyth.

* * *

THE REV. ST. JOHN BASIL WYNNE-WILSON, M.A. Camb., assistant master at Rugby, has been elected Master of Haileybury College, in succession to Canon Lyttelton.

* * *

THE REV. ARTHUR CHILTON, M.A., Head Master of Emanuel School, has been appointed Head Master of the City of London School.

* * *

THE REV. H. W. MCKENZIE, second master at Durham School (since 1895), has been elected Head Master, in succession to the Rev. A. E. Hillard.

* * *

MR. T. W. BERRY, Assistant Director of Education to the City of Manchester, has been appointed Director of Education under the Rhondda Education Committee, Glamorgan-shire.

* * *

Literary
Items. WITH several thoughtful and agreeable literary articles, *Occasional Papers* (May) propounds "A New Philosophy," which is not philosophy at all, but a speculation as to the part played by oxygen in the mechanism of the universe; and it is superfluous enough to persist in arguing (per L. M. Irby) that Bacon wrote Shakespeare.

* * *

MR. HENRY FROWDE is adding two more volumes to his Oxford editions of standard English works—the "Tales from Shakespeare," by Charles and Mary Lamb, with illustrations from the Boydell Gallery, and the "Popular Stories," by the Brothers Grimm, reprinted from the first English edition, with the illustrations by Cruikshank so highly praised by Ruskin.

* * *

MESSRS. A. & C. BLACK are including in their series of Colour Books "London to the Nore"—sea pictures by Mr. W. L. Wyllie, A.R.A., with descriptive text by Mrs. Wyllie.

* * *

MESSRS. GEORGE PHILIP & SON have taken over "Dale's Walter Crane Reader Second Primer," and will shortly issue a new edition.

* * *

THE praise of head masters' wives—*Dominae Scholae*—is charmingly set forth in the June *Contemporary*—a rare tribute of justice.

* * *

THE *Athenæum* announces that a work of prose fiction by Mr. Swinburne—"Love's Cross-Currents"—will be published this month.

* * *

THE second number of the *University Review* (6d. net, Sherratt & Hughes) is varied and vigorous. Canon Barnett writes on "University Settlements," Mr. Ramsay Muir on "The Study of Local History"; and Sir Oliver Lodge, continuing his "Questions for Discussion," throws out provisional opinions on the kind of degrees that should be given by a university, and the kind of curriculum to be encouraged. There are portraits of the late Dr. Martineau and the late Principal Salmond, and a sketch map of the university seats in France.

The first number (May) of the *Skandinavisk Månadsrevy* (Tyska, Engelska, Franska), conducted by the German, English, and French Lektors at Lund University (1 kr.; Gleerupska Univ. Bokhandeln, Lund), gives excellent promise of interest and vitality.

* * *

A CRITICAL edition of Juvenal by Prof. A. E. Housman, LL.D., of University College, London, intended to make good some of the principal defects in existing editions, and especially to supply a better knowledge of the manuscripts, will be published shortly (says the *Athenæum*) by E. Grant Richards.

General. MRS. BYERS, LL.D., Principal of Victoria College, Belfast, has been presented with an address (and a cheque) by her old pupils and personal friends on the occasion of her educational jubilee. "It would be impossible, without a comparison of the state of female education in this country fifty years ago with that of the present day," wrote the Rev. Prof. Martin Todd, "to appreciate the greatness and value of Mrs. Byers's service to the community."

* * *

PRINCESS ALEXANDER OF TECK laid the foundation-stone of the new memorial buildings to be erected in memory of Old Etonians who fell in South Africa (June 29).

* * *

THE Privy Council Committee has assigned the Welsh National Museum to Cardiff, and the Welsh National Library to Aberystwyth, and advised that application should be made for royal charters.

* * *

"THE Littlejohn of Invercharron Challenge Vase" has been presented by Mr. Alexander Littlejohn of Invercharron to the Aberdeen University Court "for the encouragement of manly sport and good fellowship among the students attending the University of Aberdeen, and more particularly for continuing an interest in the ancient Celtic game of shinty." The vase has been placed in the Students' Union, Marischal College.

* * *

THE Regulations for the Cambridge Higher Local Examinations in December, 1905, and June, 1906, can now be obtained from the Local Secretaries, or from Dr. Keynes, Syndicate Buildings, Cambridge.

* * *

THE late Prof. Mommsen's library has been purchased entire, and presented to the University of Bonn, by an anonymous lady.

* * *

EVERY five years the students at the University at Leyden celebrate the anniversary of its foundation by the representation of some historic event. This year's subject has been "The Return of King William III. from England to the Congress of the Hague in 1691."

* * *

THE Association of Assistant Mistresses in Secondary Schools has now completed its twenty-first year. The Report of last year's work shows vigorous activity on broad lines.

* * *

A CURIOUS and interesting exhibit at the Indian and Colonial Exhibition at the Crystal Palace is an historical collection of fountain and stylographic pens, gathered by Mr. J. P. Maginnis, A.M.I.C.E., M.I.M.E., and shown by the London Pen Company.

SIR JOSHUA REYNOLDS :

SOME ACCOUNT OF HIS CONTRIBUTION TO PRINCIPLES OF METHOD.

AT the Evening Meeting of the members of the College of Preceptors on June 16, Prof. J. ADAMS, B.A., B.Sc., in the Chair, Prof. J. J. FINDLAY, M.A., Ph.D., read a paper on "Sir Joshua Reynolds: some Account of his Contribution to Principles of Method." He said:

It may appear, on the first blush, very presumptuous for a man who knows nothing of the art of painting, who cannot even make a brushwork "blob," to offer to lecture on Sir Joshua Reynolds. I shall do well, therefore, at once to explain the limits within which I propose to travel and the use which I desire to be made of the famous "Discourses." This I can best do by explaining how I myself came to be attracted to Reynolds's work and to attach importance to his exposition of principles.

I have never regarded teaching as an esoteric cult whose mysteries can only be unveiled by those who bear the name of pedagogy and speak from the rostrum of a training college. Doubtless we who labour in this special field have much to do in interpreting, in systematizing—perhaps in rediscovering—doctrine; but we soon get astray if we venture to expound our doctrine as an original invention or a special device which will enable the user to dispense with the experience and example of the master craftsman.

The student of education, therefore, must ever be on the look out for good workmanship—for examples, that is to say, of those who have, first of all, achieved great things in their craft, and, secondly, have exposed their hand—have shown us how they worked to reach their end. Socrates, for example, is a fount of wisdom for all mankind; but for teachers he has this additional value—that we can study his method. His disciples Plato and Xenophon enable us to see the craftsman and his pupils working on a settled plan for the study and exposition of the great themes they handled.

He, therefore, who wishes to extend his inquiries as to principles of method can always be learning from the study of the work of great men, in those cases where they have left on record some explanation of the secret of their power. This is, of course, not their proper business, and sometimes they are neither willing nor able to offer explanation; they do not choose to turn the workshop into a demonstration room; their apprentices have to learn simply by the master's example, and outsiders who do not follow the craft can in such instances learn nothing—we can but admire the finished product.

Fortunately, however, in some cases a great worker has also been a gifted teacher. Indeed, when one comes to think of it, there are at least two reasons why this should be so. For the truly great are commonly endowed most lavishly by Nature—and this not only with the genius which makes them master of their craft, but with those intellectual qualities which enable them to reflect upon origin and process and end. Nor do they often lack those broad and generous sympathies which make them ready, and often enthusiastic, in imparting their ideas and plans to their fellow-craftsmen. The greatest men are great all round, and, along with their specific gifts, they possess in generous measure those common qualities which touch the interests of mankind at large.

You see, therefore, how I have come to find help from Reynolds's "Discourses." Here is a master craftsman explaining principles of method—explaining them, too, in a style which shows him to be a master in two crafts: in literature as well as in painting. In such company we feel safe. We have something to work upon: if we can interpret and apply his experience and his doctrine, we shall not go far astray.

But here let me anticipate an objection. Are you right, it will be said, in taking your principles of method from the practice or precept of the man of genius? The teacher is himself a humdrum average person, and his scholars are, perhaps, on a still lower plane. Is it likely that what may be valid for the great man is valid for the little man? I answer, unhesitatingly, Yes. The executed work will, indeed, be on a lower plane; but the principles of human action are the same, whether the genius or a fool is practising the art. You may need, no doubt, to adapt the details of your practice in obedience to various special and local conditions; but the main outlines of procedure must be based on universal laws, and it is in such laws that the basis for sound method is to be sought. This is, indeed, the reply that Reynolds makes, in the "Discourses," to a similar objection:

Study, therefore, the works of the great masters forever. Study, as nearly as you can, in the manner and on the principles on which they studied. Study Nature attentively, but always with those masters in your company; consider them as models which you are to imitate, and at the same time as rivals with whom you are to contend.—(Conclusion of the "Sixth Discourse.")

Let us then review the method of Reynolds as a teacher. His function, in the narrower sense, was merely to instruct young men engaged in painting or sculpture; but he made it very clear that these special arts were merely examples of the working of principles which cover a much wider field, and he constantly illustrates his views from other departments of artistic activity, especially from literature. Let us follow his example and seek to give his precepts a universal character, applying them, with any needful qualifications, not only to students of a Royal Academy, but to students, young and old, engaging in practising any art.

The arts practised in the schoolroom are many—some, such as handwriting and spelling, are merely mechanical; others, such as manual training or modern languages, involve many mechanical exercises, but lead, in their higher stages, to work which should bear the features of fine art. All alike, however, are distinguished from the groups of studies which lead to learning, to the wisdom of science, by the fact that the end of the achievement is skill in the art, mastery in power of production, whether or no this power be accompanied by ordered scientific knowledge.

I invite you to follow with Reynolds the steps by which he desired his students to mount from the threshold to the summit, and to study his views in their universal aspect. There is one idea which pervades the whole of the "Discourses," and may well be selected as the central theme of this lecture, namely, the part played by imitation or copying in the acquirement of skill:

A painter must not only be an imitator of the works of Nature, which alone is necessary to dispel this phantom of inspiration, but he must be as necessarily an imitator of the works of other painters; this appears more humiliating, but it is equally true; and no man can be an artist, whatever he may suppose, upon any other terms. . . . For my own part, I confess, I am not only very much disposed to maintain the absolute necessity of imitation in the first stages of the art; but am persuaded that by imitation only variety and even originality of invention, is produced. I will go further; even genius, at least what is generally so called, is the child of imitation.

Now, since Reynolds's day a great deal of scientific work has been done by psychologists in studying the part played by imitation in the life of young children, and the results tend to show that all that Reynolds maintains as to the need for imitation in the training of older students is doubly important in dealing with children of school age. For we recognize not only the value of conscious voluntary imitation where a model is selected with the express intention of copying, but there is the power of suggestion to be reckoned with, the tendency, largely instinctive in the years before adolescence and displaying itself in many directions even in later years, to mould personal action on the model of those whose behaviour is witnessed about us.

This, then, is a leading general principle, and it is so obviously true that it may be asked whether it is really necessary to urge it upon the attention of the teacher. It appears to me to be very necessary, because the traditions of our profession have been fostered on other lines, on methods positively antagonistic to the principle here laid down. The teacher still bears in his ways the character of a man of learning; his concern is with ideas rather than habits, with abstract thought rather than skilled practice; and his method has necessarily been evolved from those occupations which have given him this special stamp. Every school pursuit which he handles tends to be cultivated according to this method, even if the pursuit be one which in its own nature has only a remote association with the intellectual life. Let me illustrate from a personal experience during my student days at Jena—an experience which will illustrate at the same time the doctrine with which I set out. The Jena Seminar has been to many teachers during the last twenty years a great school of method: we have gone there—in obedience to Reynolds's dictum—to sit at the feet of a great craftsman in our profession; but, at the same time, when we have passed the first stage of our pupilage, we combine criticism with imitation. Now, you are all aware of the nature of the five steps by which the Herbartian analyzes the inductive processes involved in the acquirement of knowledge: these steps applied to their proper purpose appear to me to offer a safe guide to the teacher in preparing to instruct his scholar, but their purpose needs to be limited to that object alone; and when the attempt is made to force the

teaching of an art within the five-step machinery the result is disastrous. You will find, however, in much of the Herbartian literature that such an attempt is made. I found, for example, that the lessons in singing were planned according to these formal steps, with the result that the attention of the scholar was fastened upon the theory, the ideas as to scale, tone, &c., which attach themselves to singing exercise. No one, however, who delights himself in musical expression can be content with turning this emotional art into an exercise for the intellectual powers: music from first to last is acquired by sympathy, by suggestion, by imitation, and a teacher of music who ignores these elements, who is a thinker before he is an artist, will never secure a musical response from his scholars.

I have chosen this merely as an illustration, all the more striking because it comes from a school of reformers who are, in many directions, contributing to progress. If they are still so much under the influence of scholastic tradition, we need not be surprised to find many more extreme examples in the practice of more conservative teachers.

Reynolds, however, does not limit his range to the beginnings of art acquirement: he traces this universal law of imitation from the early stages to the later stages. The keynote of the first is obedience; the keynote to the second is freedom.

What is it then that the young scholar should obey? He is to subject himself to rules—*i.e.*, to prescriptions laid down by his teachers which he may not fully apprehend, but to which he is bound to render implicit obedience; and it is in the selection of rules, in the order in which the succession of these rules is planned, that great skill may be displayed by a good teacher. A craftsman who is not a teacher has no method. He can merely say: "Do as I do; watch me, imitate me, and you will come out right." The teacher says the same (and, unless he can behave as a model, he cannot teach!); but he does more: he plans a sequence of exercises, each embodying some new rule, some new habit, and the obedience that he exacts is not merely the attention of an apprentice, but the reflection of an intelligent scholar, who compares and remembers. The one is the method—or, rather, no method—of the workshop; the other is the method of the school—the school of art.

But these rules, however implicitly to be obeyed, are not eternal in their nature like the laws which are evolved in the inductions of the Five Steps—they are stepping-stones to freedom. The steps to be followed by a student of art, whether the art be fine or mechanical, lead to the same goal—the making of a free craftsman, who, after laborious and patient study of models, after obeying, one by one, the series of rules laid down by his instructor, finally arrives at mastery, at a power which enables him decisively to express himself in the work which he creates. True, indeed, that his work will show the traces of his teaching. The rules which he obeyed in earlier years are not now to be broken simply because the artist is emancipated from his teacher; but he has now come of age, and all that he has learnt in the years of discipline is reshaped by invention—that is, by the personal impress of his own mind and taste.

It would take us beyond the limits of this hour to attempt to apply these universal principles to the daily tasks of the classroom, and yet the practical teacher—and let us hope that we all boast of that title—will rightly inquire whether he may expect to find any serviceable guidance in the preparation of lessons from any discussion of universal principles. I can only reply that my own practice in the class-room—both when I myself teach boys and girls or when I guide the teaching of others—is controlled day by day under such guidance.

There are two branches of great importance, lying very remote from the topics of Reynolds's "Discourses," in which these principles seem to me to find application at every turn. One of these is the acquirement of English—both the writing of good English and the appreciation of good literature; the other is the acquirement of a foreign language. In both of these fields I believe that our teachers would receive more help from studying the methods of reflective and thoughtful artists—I mean artists in literature as well as in painting—than from the more recognized exponents of method within the profession. Such a book, for example, as Hamerton's "Intellectual Life" or Ruskin's "Elements of Drawing," although the ideas in detail cannot be applied to our work, serve to start off the mind at a new tangent, and when, with such an impulse to start us, we turn to our strictly professional task, we find ourselves at work with a freedom and independence which is seldom attained so long as we keep along the ordinary routes.

I desire, in conclusion, with some diffidence, to suggest that not only are Reynolds's "Discourses" worthy of general attention by all classes of teachers, but also have a special claim upon teachers of art. Since the days when the Royal Academy was founded, artists as well as teachers of art have multiplied on every hand, but it may be questioned whether the prevailing conception of the artistic ideal corresponds to any serious extent with the lofty and manly claims which are exhibited in the "Discourses." I am not aware that there is any account published in this country of the history of art teaching, but it would be a theme well worthy of investigation by those who are competent for the task. Within the lifetime of many in this audience a revolution has taken place in our schools, due in part to the desire to elevate the taste of the multitude, but due quite as much to motives based on what Reynolds calls "considerations merely mercantile." And no one who devotes his life to art, whether as teacher or artist, can shut his eyes to the moral and economic forces which play in our modern world so great a part. We cannot look in the "Discourses" for any direct guidance on these problems so special to our time, so alien to the days of Reynolds; but there are two thoughts which appear to me to be full of suggestion. If I read the "Discourses" rightly, they give me an impression that, in Reynolds's mind, art is something which is related to *life as a whole*, and its value to mankind depends wholly upon the success with which the artist interprets human experience. True, the artist is a craftsman who commands special tools which only he can wield; he must qualify himself by unceasing practice, by laborious study, to acquire the mastery of these tools; but the subjects that he chooses are, or should be, of universal interest,* and the source of this interest must be found in the springs of our common life.

If, now, we seek to translate this idea into the vocabulary of our modern pedagogy, we find ourselves advocating the doctrine of correlation. We are pleading that art in the school shall be something that finds response in the experience of our scholars, touching them vitally as a part of their present experience. The teacher of art in the eighteenth century had no thought of correlation, because he did not attempt to guide the pencil of young children: he only commenced to take a pupil in hand when he had grown to years of adolescence; in these days, however, we permit the child while still an infant to express himself with brush and pencil, and the problem presented by correlation increases vastly in difficulty when we deal with scholars whose experience and outlook vary so greatly from those of the adult. For the child does not see with our eyes; he does not see a picture as we do, nor does he see the object of the external world which a picture—his own or ours—is intended to portray. Hence the adult artist, unless he becomes also a student of children's experience, is helpless in face of the problem presented by art in the school. But, whether our scholars be old or young, we cannot afford to neglect the fundamental connexion between art and life: whatever be our method for teaching art to the young, it will fail unless the subjects which are represented stand for some real experience in the life of those we teach.

And, growing out of this conception as to the direction from which the subjects of art are to be secured, a second thought appears to me to be suggested by the "Discourses." Art with Reynolds is something which achieves an end beyond the immediate product of picture or statue: it gives a tone, a colouring to the whole life:

Though a man cannot, at all times and in all places, paint or draw, yet the mind can prepare itself by laying in proper materials, at all times and in all places. Both Livy and Plutarch, in describing Philopoemen, one of the ablest generals of antiquity, have given us a striking picture of a mind always intent upon its profession. . . . I cannot help imagining that I see a promising young painter equally vigilant, whether at home or abroad, in the streets or in the fields. Every object that presents itself is to him a lesson. He regards all Nature with a view to his profession, and combines her beauties or corrects her defects. He examines the countenances of men under the influence of passion, and often catches the most pleasing hints from the subjects of deformity. . . . The artist who has his mind thus filled with ideas and his hand made expert by practice works with ease and readiness; whilst he who would have you believe that he is waiting for the inspiration of genius is in reality at a loss how to begin and is at last delivered of his monsters with difficulty and pain.†

This noble delineation of the true craftsman appears to me

* "The Fourth Discourse."

† "The Second Discourse."

to suggest a point of view beyond the immediate intention of Reynolds in writing it. We do not teach art in schools in order to create artists, but, if our teaching is to be of any real value, it must sink so deeply into the impulses and interests of our scholars that they will find art in everything. A mere facility in representation with a pencil is no doubt of value, but it is of no account in comparison with the cultivation of taste, where the feelings have become habituated to like what should be liked in the colour and form of things perceived by the eye. We have not much time in schools to give to positive art teaching, and even that scanty time tends to be wasted in effort to produce showy results for examiners and exhibitions: the real achievement is to be sought in a direction which no examination can test, but which, nevertheless, is the final goal of all worthy teaching. The method by which this end can be secured is, once more, a problem which Reynolds cannot directly help us to solve, for he only taught young men; nevertheless, the spirit of his counsels should serve as an inspiration even in the kindergarten.

A word, in conclusion, as to the writer of the "Discourses." I have commended them to students of education because they contain the reflections of a great teacher who was also a great artist; but it is worth while to remember, too, he was something more than either teacher or artist. Teachers are often pedants: artists often absorbed in narrow conceit. Reynolds offers us a fine example in the better direction. His life is the best commentary on the "Discourses": as a young student he is absorbed in reverential study of all the great men who have gone before him; and in riper years he is a man among men—always an artist, but always a man of the world. He loves letters and associates with literary men: his own art is the greatest pleasure and the supreme occupation of his life; but he knows that he can only foster painting by finding pleasure also in literature, in politics, in society—and hence we find him, at all periods of his life a citizen of the world. And, finally, the diligence and industry that marked his whole career are a fine commentary upon these exhortations to his pupils. When at the close of his life he concluded the series of "Discourses" by a panegyric upon the labours of Michael Angelo, all who heard him knew that he himself had never spared effort and toil in the pursuit of his profession.

I have sought to show how these "Discourses" may help the teacher in studying principles of method, and in thinking upon the relations of art to the life of school. May I venture to urge, in conclusion, that the example of Reynolds's life, as well as the doctrines of his book, is worthy of our imitation?

Mr. TIBBEY thought that there was less danger in schools of the neglect of the faculty of imitation than of an undue insistence on its use, and naturally so, because this faculty offered an obvious and ready means of instruction. But teachers who attached too much importance to imitation would lose many opportunities of training their pupils, for it often happened that deviations from a model set for imitation afforded useful indications of the contents of a child's mind. It was important to discriminate between the parts of a subject in which imitation might legitimately have play and those in which it would be harmful. For instance, in reading, so far as the mechanical parts, enunciation and articulation, were concerned, it was necessary that the child should imitate as nearly as possible the best model the teacher could provide. But, with regard to expression, if the child were allowed to reproduce exactly the modulation and emphasis of the teacher, it was clear that the object of the lesson might be defeated, for such reproduction might be merely a mechanical imitation of the sounds, and expression should be the result of the child's understanding of the passage he was reading. There were other school subjects in which it was difficult to know how long the pupil should be bound down to follow closely the model, and when he should be allowed freedom.

Mr. ORCHARD was of opinion that imitation and self-expression should proceed *pari passu*. The fact that children imitated their teachers threw a great responsibility on the teachers.

The CHAIRMAN said the relation of the art of painting to the science of teaching was of the highest importance because the one illustrated the other in the relation of the concrete to the abstract. The French school of impressionist painting was really an exemplification of this. The clean palette that these painters claimed was of considerable interest for teachers. The principle was that the combination of colours should be made within the mind of the observer instead of on the painter's palette. In teaching the same was true to a certain extent. Teachers were too apt to combine the materials for the benefit of the pupil, whereas the really skilful teacher offered first one item then another, and left them to join themselves within the region of the child's mental activity. Many teachers—particularly those of the Froebelian school—were a little afraid of imitation: They were afraid

imitation would interfere with the wonderful power of initiative—of self-activity. There did not seem to be any real conflict between originality on the one hand and imitation on the other. Imitation was the power by which one became possessed of the external world and by which at the same time one was incorporated by the external world. The work of imitation was to supply that great fund of correlated activities that were relegated to the lower brain, while it was the privilege of the upper brain to select from this store those activities that could be combined for certain useful purposes in a way that was relatively original. There were degrees of originality, and what was original to the individual concerned might not be original from the point of view of the race. The amount of originality in the individual was strikingly small in proportion to the amount of imitation: yet the two elements were equally important in the development of the individual.

Prof. FINDLAY having replied to the various speakers, a vote of thanks to the lecturer concluded the proceedings.

THE RETIREMENT OF MISS CARPENTER.

(From the *Cambrian News*.)

THE retirement of Miss Carpenter, who for the past eighteen years has been at the head of the Women's Hostel of the University College of Wales, Aberystwyth, is a fitting occasion on which to point out the conspicuous success of a remarkable woman in a most difficult administrative position. When the college was opened in 1873 very few people, in or out of the Principality, believed that it would ever be attended by as many as a hundred students, and, later, when it was urged that women also should be admitted, all sorts of reasonable and unreasonable objections were raised to that radical proposal. After a prolonged struggle, women were admitted to the college in 1884 on the same terms as men, except that women students who were not living at home in the town had to be provided for in a hostel managed under college authority. Before the end of 1884 there were ten women students. Miss Carpenter, on her appointment, found the number of women students to be about twenty in number. Now, at the time of her retirement, the number is two hundred and fifteen, and we do not think the fact can be questioned for a moment that this remarkable success is mainly due to the skill and insight and courage of Miss Carpenter, who has often had to fight, almost single-handed, against the reactionaries for what she wisely deemed to be essential conditions of success. . . . We need not on this occasion set forth in detail the nature and number and gravity of the difficulties to be encountered in managing an institution containing more than two hundred women students. Miss Carpenter has faced those difficulties and has dealt with them so skilfully that to the duller sort they have not even seemed to exist. This is the highest possible tribute that could be paid to her. She has been able to exercise control without coercion, and to concede freedom without licence. She has known—rare gift—when to see and when to be discreetly blind. She has been the indisputable head of the institution with unquestionable authority if needs be, and has never failed as the mother-heart of the community in which she moved compassionately strong among her peers.

Not the least among Miss Carpenter's difficulties has been the steady increase in the number of women students, and the consequent need for increased accommodation. Time after time fact has outgrown anticipation, and at the present moment the hostel is too small for the number of students, some of whom have to be accommodated elsewhere. This continued growth in itself would have overtaxed the powers of any ordinary woman, but Miss Carpenter is not an ordinary woman, and has always been found more than equal to the ever-pressing occasion. When the Queen's Hotel was taken, the timid shook their heads ominously. When the hostel was built, they dismally asked what next. And now it is clear even to them that the hostel is not anything like large enough, and they admit that another hostel will certainly have to be built, if the growth of the work of the college is not to be restricted.

Of course Miss Carpenter has been enthusiastically helped and supported in her position and her aims by the more far-seeing members of the governing bodies of the college. Lord Rendel, Principal Roberts, and others have stood by her, and have made that bearable which else would have broken the spirit, however valiant. . . . She has not waited until sickness or failing powers necessitated retirement, but is seeking that personal freedom to which she feels herself to be entitled after many years of hard work.

We presume that Miss Carpenter's connexion with the college will not be wholly severed. We are quite sure of one thing, namely, that she will do all that is in her power to make her own retirement as little fraught with calamity as possible. . . . Miss Carpenter's successor, we are sure, will be helped by her in ways that mean the crown of self-effacement to a period of worthy activity which, we trust, is to be followed by many years of leisure and repose.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on June 17. Present: Dr. Wormell, President, in the Chair; Prof. Adams, Mr. Baumann, Mr. E. A. Butler, Mr. Chettle, Miss Crookshank, Miss Dawes, Mr. Eve, Prof. Findlay, Mr. Hawe, Dr. Lawrence, Bishop Mitchinson, Dr. Moody, Mr. Morgan, Mr. Starbuck, and Mr. Storr.

The minutes of the last meeting were read and confirmed.

Prof. J. Adams was appointed to deliver the Autumn Course of Lectures to Teachers on the Practice of Education.

Saturday, July 29, was fixed as the date of the next Ordinary General Meeting of the members of the College.

The Draft Report of the Council to the General Meeting was considered, and referred to the President, Vice-Presidents, and Dean for final revision.

Mr. R. Ferguson, L.C.P., 5 Courtney Road, Croydon, was elected a member of the College.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—Rule's Graduated Lessons on the Old Testament, 3 vols.

By the BUREAU OF EDUCATION, WASHINGTON.—Report of the Commissioner of Education for the Year 1903, Vol. I.

By the STATE EDUCATION DEPARTMENT, NEW YORK.—Taylor's Teaching in the United States.

By A. & C. BLACK.—Kirkman and Morgan's First French Song Book; Lees's Biographical History Reader.

By the CAMBRIDGE UNIVERSITY PRESS.—Graves's Aristophanes' Acharnians; Kirkpatrick's Galdós' Trafalgar; Spratt's Thucydides, Book VI.

By GINN & Co.—Blaisdell's Our Bodies, and How to Keep Well; Carruth's German Reader; Chance's Little Folks of Many Lands; Fossler's Practical German Conversation; Hardy's Sea Stories for Wonder Eyes; Lee's Selected Poems of Mrs. Browning; Minckwitz and Wilder's Lessing's Minna von Barnhelm; Stickney's Earth and Sky: a Third Reader; Wauchope's Essays of Charles Lamb.

By MACMILLAN & Co.—Cotterill's Ballads Old and New, Parts I. and II.; Hall's Easy Graphs.

By METHUEN & Co.—Horth's Repoussé Metal-work; Shipley's English Church History for Children, A.D. 597-1066; Snowden's Brief Survey of British History.

By J. MURRAY.—Consterdine and Barnes's Practical Mathematics.

By the OXFORD UNIVERSITY PRESS.—Buchheim's Short German Plays (Second Series).

By the NATIONAL UNION OF TEACHERS.—N.U.T. Report, 1905.

Calendar of Edinburgh University, 1905-6.

COLLEGE OF PRECEPTORS.

PRACTICAL EXAMINATIONS FOR CERTIFICATES OF ABILITY TO TEACH.

The following is a list of successful candidates at the Examinations held in February and May, 1905:—

FEBRUARY.

Class I.

Craddock, W. H. A.
Gandy, Miss E. S.
Oates, Miss E. M.
Richardson, H. E.

Class II.

Bird, R. T.
Blanchard, W. J.
Bodger, Miss E. V.
Evans, E. O.
Teakle, S. G.
Voy, Miss H.
Wyatt, H. G.

MAY.

Class I.

McDermott, Miss M. J.
White, Miss F. A.

Class II.

Harrison, W. E.
King, C. F. W.
Pass, G. J.
Peirce, Miss M. E.
Wertheim, P.

REVIEWS.

TUSCULANAE DISPUTATIONES.

M. Tulli Ciceronis Tusculanarum Disputationum Libri Quinque: A revised Text, with Introduction and Commentary, and a Collation of numerous MSS. By Thomas Wilson Dougan, M.A., Professor of Latin in Queen's College, Belfast, and Fellow of the Royal University of Ireland. Volume I., containing Books I. and II. (10s. net. Cambridge University Press.)

A very fine example of patient, capable, and thorough scholarly work. The distinction lies mainly in the incredible labour on the critical examination of the text. Prof. Dougan's story of textual experience is sufficiently startling at this time of day. He was lecturing on the Tusculan Disputations (if one must follow the slack translation of the title), and regarding the critical notes as a very secondary matter, supposing he had no more to do but to select these from existing editions, "especially from those of Orelli, Kühner, and Moser." So completely are even good scholars lulled into comfortable reliance on the Germans, particularly when the Germans show excellent results on some aspect of the subject. Prof. Dougan acknowledges, for example, that he "has the highest admiration" for Kühner's edition, and "there is, perhaps, no work from which I have learned more Latin." Very good, in one aspect; but what of the text? "It was therefore [but why "therefore"?] surprising to me to find readings constantly attributed by him to G 2, G II., or Aug., which are not contained in those MSS.; he even confuses G II. with Aug. in his preliminary notice of these MSS. When a scholar so eminent deals so inaccurately with the readings of MSS. contained in a town not fifty miles distant from his own . . ." Just so: but the difficulty is to get a scholar to be equally alive to all aspects of his author, and to be resolute enough to verify everything with his own eyes. A striking example of the futility of reliance on other's men's eyes is connected with a passage to which we shall recur. "Being in Berne," says Prof. Dougan, "I consulted the Berne MS. to see how the whole passage I., § 88, stands in it. I was surprised to find that, instead of reading *carere in malo* as stated by Orelli on the authority of Usteri, a Berne Professor, who supplied him with an account of its readings, this MS. very plainly and clearly reads *morte*." Prof. Dougan ought not to have been surprised; only it was well that such experiences at last wakened him out of his "dogmatic slumber," aroused his scepticism, and led him on to criticism on his own account. Accordingly, he has "looked into upwards of eighty MSS. and examined several test passages with a view of ascertaining the value of each," and "thirty of these MSS. I have carefully read through and collated in detail"—a veritable labour of Hercules. The consequence is that the critical apparatus he furnishes renders his edition unique—an honour to himself and his college, and to the Cambridge University Press. The publication of two such critical editions as Mr. Wyse's "Isaëus" and the present work practically together is a very notable fact both for British scholarship and for the enterprise of the publishers.

The Introduction deals concisely with Cicero's philosophical works generally, and with the date, dedication, sources, MSS., and argument of the Tusculan Disputations. The classification and description of the MSS., and the analysis of their errors, are extremely interesting and instructive. The MS. readings are placed under the text, and under them runs a tolerably full and adequate commentary, which has been read through by Prof. J. S. Reid and enriched by a considerable number of his comments. Two subjects, rather extensive for notes, are dealt with in excursions annexed. On I., § 88 (*carere in malo . . . est malum*), perhaps the most adventurous of all Prof. Dougan's independent emendations, we cannot agree with him. We have considered his note *ad loc.* and his elaborate exposition in the Introduction (following his previous discussion of the point in the *Classical Review* for February, 1902), and we are entirely unconvinced. Not only, in our opinion, is his transposition wrong, doing plain violence to the literary connexion and in no way relieving any difficulty in the argument, but the sense, as well as the immense weight of the manuscript authority, seems plainly to require *morte*, and not *malo*. "All emendations hitherto put forward have been unsatisfactory," and "to all these I object that the context fails not only to carry on the argument, but even to yield any definite sense." The passage is too long for detailed treatment here, but we would recommend Prof. Dougan

to tackle the MS. text again without any emendation at all and without prejudice. There does not seem to us to be any need either for emendation or for transposition. The volume is beautifully printed and chastely got up. The printing of the critical notes, which has involved niceties and difficulties, deserves a word of special commendation.

POLITICAL AND SOCIAL SCIENCE.

- (1) *Modern Constitutions in Outline*. By Leonard Alston, M.A., Deputy Professor of History, Elphinstone College, Bombay. (2s. 6d. net. Longmans.) (2) *The Life of the State*. By Geraldine Hodgson. (2s. 6d. Horace Marshall.) (3) *A Short History of Citizenship and Introduction to Sociology*. By H. Osman Newland. (2s. 6d. net. Elliot Stock.)

(1) In four introductory chapters, filling a good half of his book, Mr. Alston explains "General Principles"—difficulties of classification, federalism and the bicameral system, the party system (with Cabinet or Committee), and the demarcation of powers. Then follow in summary "the Separate Constitutions" of more instructive character. The author has aimed merely at producing "a brief readable introduction to a complex subject"; "while seeking to present something more than a bare skeleton of dry facts, he has aimed, first and last, at the merit of brevity." But is brevity a merit in a case like this? It may be so for adults of some experience, but scarcely for school or college students. These want a clear and full exposition of such points as are selected for treatment: and they need particular illustrations of general propositions. Mr. Alston does very well within his limits, but his mania for brevity makes these limits too narrow: his book would have been a simpler and safer guide if it had been twice or thrice as long as it is. "There is considerable jealousy in Norway of the preponderating influence of Sweden in the joint policy of the two countries." Such a statement, without elucidation, is either unmeaning or misleading. "When matters affecting Norway are discussed in the Swedish Council, a Norwegian member shall be present"—not only so, but "the Norwegian Minister of State, as well as the two Norwegian Councillors of State in attendance upon the King at Stockholm, shall have seats and a deliberative vote in the Swedish Council of State, when affairs that affect both kingdoms are transacted there" (*Grundlov*, sect. 38). "A measure twice rejected by the Lagthing is determined in joint session" of Lagthing and Odelsting: yes, but "by a majority of two-thirds" (*Grundlov*, sect. 76). And so constitutional alterations require the votes of "two-thirds of the Storting" (*Grundlov*, sect. 112). Similar comments might be made on the introductory chapters. Thus, the bicameral system "serves one important purpose in tending to check over-hasty action," affording "time for reconsideration" by "a different body" of legislators "less liable to hasty action" and "less afraid of popular passion": the passage bristles with matters that need elucidation, if the impression is not to be fallacious or nugatory. Again, English "judges have not scrupled on occasion to give decisions contrary not only to the letter, but even to the spirit, of the law, on the ground that a particular statute has conflicted with the underlying principle of all law (as has happened in recent trade union disputes); but such cases are most exceptional, and should almost certainly be counted unconstitutional." Such a statement, standing by itself, is thoroughly unsatisfactory, not only containing very disputable matter, but probably based on misapprehensions of fact; and, in any case, it throws an intolerable burden upon the teacher. The idea of the volume is excellent, and it is useful as it stands, but we hope it will be rewritten from a standpoint closer to that of teacher and of pupil, with fuller and more precise statement of essential facts and with self-contained explanation, and not necessarily without "brevity."

(2) Miss Hodgson's book, originally delivered as lectures to school-girls, very rightly seeks a wider audience. She sketches first the life of the City-States of Greece and Rome, next the growth of the English State, and then the working of the English Parliament, judicature, and executive, concluding with a chapter on national liberty. She disclaims originality, and acknowledges considerable debts to Mr. Warde Fowler and Sidgwick: she could not have done better than to run into debt in such quarters. The book is opportune and valuable, inasmuch as it brings together in handy form much important information that lies outside the ordinary school histories, and sets it out in simple and attractive language. She stumbles occasionally on unfamiliar ground, as in the incomplete description of the legal organization; but generally the volume is accurate, well balanced,

and instructive. It is collateral and supplementary to the school history, and should be available in all school libraries.

(3) Mr. Osman Newland's slim volume is also the outcome of lectures, which were delivered under the auspices of the late London School Board. Referring to other works of the "citizen" class, he remarks that "in none of them is citizenship conceived as other than the offspring of our own national institutions"; and he aims at putting forward a cosmopolitan and universal conception on scientific principles. The treatment is mainly historical; human society without cities, cities without citizenship, the beginnings of citizenship in Greece, the universal citizenship of Rome, citizenship and commerce in the Middle Ages, the dawn of citizenship in England, modern citizenship—these are the principal heads of the exposition, which is really "a concise history of the origin and evolution of citizen ideas and institutions throughout the ancient and modern world." Both the subject and the handling are interesting, and the volume is timely and attractive. It would be all the better for revision here and there, in order to give more fullness and precision of statement, to modify doubtful expressions, and to smooth down opinions on which there is warm contradiction. But, even as it stands, it should prove instructive and stimulating.

SCHOOLMASTER AS POET.

- (1) *Carthusian Memories*. By W. Haig Brown, LL.D. (5s. net. Longmans.) (2) *Arachnia*. By the late James Robertson. Macmillan.)

Among the advantages of verse-making as a part of classical education is the cultivation of poetry by head masters, even though they are (or were) proverbially below par in English prose.

Dr. Haig Brown, Master of the Charterhouse, and formerly Head Master of Charterhouse School, has commissioned his daughter to put together some of his occasional verses in several languages with the modest motto

Non recito quidquam nisi amicis, idque coactus.

They cover a long space of time. Some go back to his courtship and to the days when he was at the head of Kensington School. In a prologue written for that school we find an antidote to "flannell'd fools":

Scorn not such triumphs. He who deftly wields
The bat may conquer yet on other fields.
The boy who guards his wicket well may show
A good defence against his country's foe,
Or hence may learn, whate'er in life his part,
To play it with a brave and constant heart.

There are many similar prologues for Charterhouse theatricals. A school song for Christ's Hospital, of which the distinguished author was an *alumnus*, is accompanied by Greek, French, and German versions. The line:

Et le cœur se retrempe aux combats de la vie

contains a pretty reminiscence of Victor Hugo's "Lui." Among the lighter verses is a farewell to tobacco, with a Latin translation. It dates from 1855, and as we read:

But, since my breath may noisome prove
To my late blossomed flower of Love,

we cannot help thinking "tempora mutantur." One nonsense rhyme may conclude our quotation. It is marked "Anon," but may be by the Doctor himself:

There once was a new motor car
Which Papa gave to dearest Mamma.
In spite of our groan,
They went out alone:
You ask if we're orphans?—We are!

A French version is appended.

Mr. James Robertson, associated successively with Rugby, Harrow, and Haileybury, was known to his friends not only as a poet, but also as an accomplished essayist and preacher. His lyre is of widest range, passing from merry trifling to wisdom and pathos. There are some spirited denunciations of the opponents of Dr. Temple's appointment to the See of Exeter. One begins:

Brekekekex kekex!
Come let us harry and vex
This heretic Bishop of Exe:—
Down with your intellect, down with the lex,
Brekekekex kekex!

The best of the Harrow poems is a song which has obtained a wider circulation—

Heroes angelic on Haemus or Helicon
All, all are dead;
Where shall our mountain, where shall our fountain,
Be now instead?
How it confuses—sang the nine Muses—
Our poor dear head!—

After rhyming "Teneriffe" with "any leaf," "Dhawalagiri" with "dreary," and "Apennine" with "happy mind," the poem ends with their migration to Harrow on the Hill.

Some of the best poems in the volume are memorial verses on Dean Stanley, on Mr. Gladstone, on W. G. W., and on a Rugby colleague, W. K. Wilson, who was killed on the Riffelhorn. Of Mr. Gladstone he says:

No tongue so peerless,
No toil so long;
What heart so fearless?
What head so strong?
Whose faith more fervent?
More calm whose end?
We bless God's servant;
We mourn man's friend.

The volume concludes with a number of translations, mostly from German *Volklieder*, written to be sung, with others from Victor Hugo and Béranger.

GENERAL NOTICES.

MATHEMATICS.

A New Trigonometry for Schools. By W. G. Borchardt, M.A., B.Sc., and the Rev. A. D. Perrott, M.A. (4s. 6d. G. Bell.)

One of the primary objects of the work is to give prominence to the practical parts of trigonometry and to the great value of the subject in its various applications. For this purpose the book is well arranged. The present volume forms the complete text-book, but Part I. has also been issued separately. Part II. is excellent; Part I., though good in many respects, is open to severe criticism from the point of view that trigonometry, in common with other branches of mathematics, is classed among the *exact* sciences and that the study of it should be a means of mental discipline. The confusion in the text of positive and negative quantities is complete; for the authors, after defining the same, are either unaware or, more probably, are oblivious of the fact that a line or an angle is positive or negative by virtue of the *direction in which it is measured*, and that—to give but one example—the position of a vertical line in the first quadrant does not make it positive if it is named as being measured *towards* the x axis instead of *from* it. The disregard of direction is unwise even when a preliminary discussion of acute angles and triangles in the first quadrant is undertaken, and or this reason—that the pupil is allowed to use expressions which must of necessity be contradicted later; but in the more general treatment of the subject the failure to recognize and to maintain rigid accuracy in respect of direction admits of no excuse. Broadly speaking, Part I. ought to be rewritten; after being subjected to this process, it would probably be as satisfactory as the second section of the treatise. There the authors are almost, if not quite, free from the necessity of treading on dangerous ground, with the result that their real mastery over the general theory of the subject can be fully appreciated. The discussion of *limits* in trigonometry and of De Moivre's theorem and its applications may be cited as examples of really good work. In the body of the text four-figure logarithms are employed as being best adapted for practical calculations. Seven-figure logarithms, however, form the subject of one appendix, while a second is devoted to a description of the slide rule and its uses.

Elementary Practical Mathematics. By the Author of "Commercial Arithmetic," &c. (1s. 6d. Oliver & Boyd; Simpkin, Marshall, & Co.)

The student of technical subjects will meet here with a considerable store of useful information and with a varied collection of practical rules bearing on the portions of arithmetic, algebra, and mensuration with which he is principally concerned. Though written with special reference to the wants of pupils attending continuation classes (Division II.), the author anticipates that his small manual will prove serviceable to a wider circle of students during the earlier period of training. In many cases the working formulae which are recommended are sufficiently explained; in others they appear as mere statements—a matter for regret, seeing that a forgotten formula cannot be readily recovered unless its mode of construction has been rendered familiar to the student in the first instance. One of the least satisfactory parts of the work is that which treats of the contracted methods of multiplication and division of decimals.

SCIENCE.

A Text-Book of Physics. By J. H. Poynting, Sc.D., F.R.S., Mason Professor of Physics in the University of Birmingham; and J. J. Thomson, M.A., F.R.S., Sc.D., LL.D., &c., Cavendish Professor of Experimental Physics in the University of Cambridge. Vol. III.: *Heat.* (15s. Griffin.)

The two previous volumes expounded the properties of Matter and Sound; there are two to follow, on Magnetism and Electricity, and on Light. In accordance with the general plan, the treatment appeals only to very elementary mathematical methods, though more advanced mathematical students will find it most useful to condescend to follow the exposition. As Prof. Poynting justly remarks, the elementary methods "bring before us more evidently the points at which various assumptions are made, and they render more prominent the conditions under which the theory holds good." The Text-Book is chiefly intended for such students as lay most stress on the study of the experimental part of physics; and reasons of space impose a limitation to such phenomena as are of special importance, or as throw light on other branches of physics. The implication is that students of physics show a disinclination to go far into mathematical studies—an unfortunate fact that receives confirmation in many other quarters. The exposition is thoroughly clear, carefully graduated, and up to date at every point. There are 193 illustrations, and print and binding are excellent.

A Primer of Biology and Nature Study. By Randal Mundy, B.A., B.Sc. Lond., Lecturer at the Ashton-under-Lyne Technical School. (2s. 6d. Ralph, Holland, & Co.)

The work falls into three parts—general biology, plant life, and animal life; and the handling keeps steadily in view the fundamental connexion of the plant and animal worlds and the gradual development of existing types of life on evolution principles. It is a simple, clear, and sound book for beginners. "It is especially planned to arouse the interest of the young teachers in our elementary schools, and to enable them to group the scattered facts of their experience of the living world into a methodical and logical system of biological knowledge"; and the plan is efficiently carried out. There are 131 figures, besides a frontispiece showing the anatomy of a bean-plant.

An enlarged edition of *Notes on Volumetric Analysis*, by J. B. Russell, B.Sc. Lond., assisted by A. H. Bell, B.Sc. Vict. (2s., Murray), is very welcome. It provides most useful laboratory instructions for students at secondary or technical schools, with a considerable number of worked examples and a large number of exercises and numerical examples. Calculations and methods are very distinctly set forth. A valuable practical manual.

Some Difficulties in getting on is a reprint from the *Electrician* (November 18, 1904) of an instructive and suggestive address by James Swinburne, past President of the Institution of Electrical Engineers.

ENGLISH LITERATURE.

The Masters of English Literature. By Stephen Gwynn. (3s. 6d. Macmillan.)

Mr. Gwynn divides English authors into two classes—the obligatory and the unessential—those that one is expected to know about, and those that ordinary readers have neither time nor inclination to study at first hand; and his main criterion of selection is public fame. Neglecting the latter class, he deals with the former by way of biographical narrative and literary criticism, addressing himself to young readers or to such as have made no exhaustive study of literature. There need be no serious quarrel with him either on the point of selection or on the method of treatment. He furnishes a very interesting general view of the authors and their work, and his style is fluent, if occasionally loose and unpolished. The volume will be a welcome companion to the publishers' series of "English Classics," awakening and quickening a love for English literature. Differences of critical opinion here and there need not interfere with a general appreciation of the design and the execution. Let the pupils have access to the book for collateral reading on their own account, and they will read it through and through. It will be stimulating as well as instructive.

New volumes of "Methuen's Standard Library" are (1) *Poems and Plays of Oliver Goldsmith*, (2) Thomas à Kempis's *Of the Imitation of Christ*, a practically new translation by the Rev. Canon Bigg—both in tasteful binding (1s. net each); (3) *The Poems of John Milton*, Vol. I.: *Paradise Lost* (6d. net.); (4) *The Works of William Shakespeare*, Vol. II.: five plays (6d. net.); and (5) *The History of the Decline and Fall of the Roman Empire* (Gibbon), Vol. II.—chapters xv.–xxiv. (Death of Julian; double volume, 1s. net). All except (5) have brief introductions by Sidney Lee. They are wonderfully well produced at the price, and will no doubt prove very widely popular.

Messrs. Blackie include in their charming "Red Letter Library" a dainty volume of selections from Whittier's *Poems*—a fair representation of the poet in all his moods and at different periods of his life. The selection has been made by the Bishop of Ripon, who furnishes an appreciative introduction.

ENGLISH READERS.

The *Landseer Object Readers* (Philip) give lessons on the large Coloured Wall Maps published by Messrs. George Philip & Son, reduced facsimiles of the wall pictures forming the subjects of the lessons being inserted in the volumes. Nos. 1, 2, and 3 for the corresponding standards (128, 160, and 192 pages; 9d., 1s., 1s. 3d.) supply interesting reading within the scope of matter indicated—mostly about animals, partly about plants, trees, &c.; and they will be favourite supplementary books. The *Landseer Conversational Object Reader for Infants* (96 pages, 8d.) is a simple introductory volume, but why “conversational” any more than the others? There is a “Teacher’s Book” for each of the foregoing volumes; we have one specimen—*The Landseer Object Lesson Handbook and Reader, Book 3*—which shows blackboard sketches and teaching notes interleaved with the text. The volumes are capably printed, illustrated, and got up, and are sure to be favourites.

The *Arnold Prose Books*, beautifully printed and got up, constitute an admirable series of representative selections from the best writers in English. The subjects are most varied, and the explanatory foot-notes are judiciously few. Each of the twenty-four “books” is limited to 48 pages (paper, 2d.; cloth, 4d. Edward Arnold). The series will prove a strong inducement to pupils to read more widely.

MODERN LANGUAGES.

Trafalgar. By Benito Pérez Galdós. Edited by F. A. Kirkpatrick, M.A. (4s. Cambridge University Press. Pitt Press Series.)

This tale, the first of the series of thirty “Episodios Nacionales,” which Señor Galdós began to publish in 1873, makes an excellent reading book of modern Spanish (186 pages). In his introduction Mr. Kirkpatrick gives an historical summary, which will be very serviceable in view of the many historical references in the text; but, as is carefully pointed out, the text is romance and the history is not to be pressed. The notes (110 pages) are in the main judiciously helpful; some of the grammatical ones, indeed, may seem superfluous, except for weak beginners. The print and the get-up are admirable, and the work is attractive in every way. English students of Spanish are to be congratulated on the literary provision that is being rapidly made for their wants.

International Modern Language Series.—(1) *La Mère de la Marquise, et La Fille du Chanoine* (Edmond About), edited by O. B. Super, Ph.D., Professor of Romance Languages in Dickinson College. (2s. 6d.)—(2) *In St. Jürgen* (Theodor Storm), edited by J. H. Beckmann, B.A., Teacher of German, Lincoln (Neb.) High School. (1s. 6d.)—(3) *Der zerbrochene Krug* (Zschokke), edited by Herbert Charles Sanborn, A.M., Bancroft School, Worcester, Mass. (1s.)—(4) *Der Schusz von der Kanzel* (Conrad F. Meyer), edited by Martin H. Haertel, University of Wisconsin.—(5) *Die Journalisten* (Freytag), edited by Leigh R. Gregor, B.A., Ph.D., Lecturer on Modern Languages in McGill University. (2s.)—(6) *Hermann und Dorothea* (Goethe), edited by Philip Schuyler Allen, Assistant Professor of German Literature in the University of Chicago. (3s.) (Ginn.)

All these volumes offer capital material for reading, suitable to different stages, with brief but serviceable notes. Each has a vocabulary, and each, except (3) and (4), provides some judicious exercises for re-translation, while (6) gives a series of “Fragen” on the contents of the poem, to be used for conversation and composition. The introductions are mainly biographical and slight; that of (6) is literary also, dealing at some length with various aspects of the poem. The series is handy, well printed, and agreeably got up.

HISTORY.

The World of To-Day. By A. R. Hope Moncrieff. Vol. I. (8s. net. Gresham Publishing Company.)

The complete work will consist of six volumes, presenting “a survey of the lands and peoples of the globe as seen in travel and commerce”—“a panorama of the World of our day.” The first volume deals with the Chinese Empire and dependencies, Korea, Japan, and Russian and British Asia. It comes most opportunely, and in a form that is very attractive and sure to secure popularity. For the author has the gift of selection and presentation, so that the reader will gain an excellent general idea of the various countries and peoples in an impressive and pleasant way. The style is uniformly buoyant, vivid, and agreeable. The formal statistics of geography and commerce are gathered together in a final section, and exhibited partly in tabular form, partly by means of diagrams and other devices appealing to the eye—a section representing an enormous labour of collection and condensation, and most useful for reference. There are 4 coloured plates, 14 maps (several of them coloured), and about 120 good and pertinent illustrations in the text. The printing and the get-up are liberal, and the volume is handsome.

Norway and the Union with Sweden. By Fridtjof Nansen. (2s. net. Macmillan.)

Dr. Nansen sketches the earlier history of the two peoples, the circumstances under which the Union came to be established, the provisions of the Act of Union (*Rigsakten*), episodes illustrating the

working of the Union, the two chief bones of recent contention (the conduct of foreign affairs and a separate consular service), and the political situation up to the eve of severance. The *brochure* should be read in conjunction with Mr. H. L. Brækstad’s very careful translation of the Constitution and the Act of Union, which we noticed last month. Dr. Nansen’s narrative justly claims to be “a neutral and reliable statement of what has happened and of what is the opinion of the Norwegian people.” It is clearly and forcibly written, and the tone is unimpeachable. Mr. Brækstad gives the fundamental documents. There remains no further excuse for ignorance or misunderstanding of the difficulties between the two countries.

SCRIPTURE.

- (1) *The Story of Our Lord’s Life*. By Maud Montgomery. (2s. 6d. net. Longmans. Simple Guides to Christian Knowledge.) (2) *The Life of Our Lord and Saviour Jesus Christ, simply told to Children*. By Mrs. Paul Chapman. (2s. net. Frowde.)

Miss Montgomery’s volume is simple enough for children that have only begun to read with some facility. It adheres very closely to the New Testament narratives, the very words of them being frequently quoted; and there is no attempt at critical examination. There are eight illustrations in colour from water-colour drawings after the frescoes of Gaudenzio Ferrari in the Chapel of Mont de Varallo, Piedmont. The form is handy.

Mrs. Chapman’s book is suitable to older children. It is very well written, and, if there is no critical element worth mentioning, there is a good deal of collateral information, which helps the reader to a more vivid realization of the conditions of the episodes. The twenty illustrations, including a map of Palestine, are judiciously chosen, and tend to the same desirable result. The frontispiece is after Carlo Dolce’s picture of “The Infant Christ and His Mother.” Even grown-up readers will find the volume instructive.

- (1) *The Gospel of St. Matthew*. (2) *The Gospel of St. Mark*. Edited by the Rev. F. Marshall, M.A. (1s. each. Gill. Oxon. and Cantab. Edition of the Books of the Bible.)

Mr. Marshall furnishes concisely detailed introductions of general explanatory matter, and notes both on the margin and at the foot of the page, which should make the text very clear to young readers, and will be specially helpful to students preparing for the Oxford and Cambridge Local (Preliminary and Pass Junior) and similar examinations. The text is broken up into episodes; the maps and plans are good and serviceable; and the get-up is tasteful and attractive.

FIRST GLANCES.

MATHEMATICS.

Graphs for Beginners. By Walter Jamieson, A.M.I.E.E. 1s. 6d. Blackie.

Interest, Compound: as exemplified in the calculation of Annuities, immediate and deferred, Present Values and Amounts, Insurance Premiums, Repayment of Loans, Capitalization of Rentals and Incomes, &c., with Annuity Tables. By A. Skene Smith. 1s. net. Effingham Wilson.

Logarithmic and Trigonometric Tables. By John Borthwick Dale, M.A., Assistant Professor of Mathematics, King’s College, London. 2s. net. E. Arnold.

[To five places of decimals.]

Mathematics, Introductory. By R. B. Morgan, B.Litt., L.C.P. 2s. Answers, separately. Blackie.

SCIENCE.

Statics, Graphic. By T. Alexander, C.E., M.Inst.C.E.I., &c., Professor of Engineering, Trinity College, Dublin, and A. W. Thomson, D.Sc., C.E., &c., Professor of Engineering, College of Science, Poona. 2s. Macmillan.

[“A graduated series of (16) problems and (17) practical examples, with numerous diagrams (33 figures), all drawn to scale.” Well thought out and extremely useful.]

Steam, First Stage. By J. W. Hayward, M.Sc. (Vict.). 2s. Clive (Organized Science Series).

[Lucid and practical; exercises to each chapter, with answers; Board of Education Examination papers, 1901–4; 130 figures. Very helpful.]

Technological and Scientific Dictionary. Several parts. 1s. net each. Newnes.

[Full and careful; very handy and useful.]

MODERN LANGUAGES.

Correspondence (Social and Personal), French, for the use of English People. By Béatrice von Holthoim. 1s. Nutt.

[Sensible and useful. No translations, “that people may not compose their letters in English whilst they write in French.”]

(Continued on page 306.)

MATHEMATICS.

15621. (The late R. TUCKER, M.A.)—ABC is a triangle. Ω (or Ω') is a B-point, and $\omega_1, \omega_2, \omega_3$ are the B-angles of the triangles $\Omega BC, \Omega CA, \Omega AB$: prove that

$$\sum (\cot \omega_r) = \frac{1 + \cot A \cot B \cot C \cot \omega + \cot^2 \omega + \cot^4 \omega}{\cot \omega - \cot A \cot B \cot C}$$

Solution by the PROPOSER and K. S. PATRACHAN.

$$\cot \omega_1 = \cot \omega + \cot(C - \omega) - \cot C = \frac{(\cot \omega - \cot C)^2 + \cot C \cot \omega + 1}{\cot \omega - \cot C}$$

$$= \frac{1 + \cot^2 \omega}{\cot \omega - \cot C} - \cot C;$$

therefore $\sum \cot \omega_r = \frac{(1 + \cot^2 \omega)(3 \cot^2 \omega - 2 \cot^2 \omega + 1) - \cot \omega}{\cot \omega - \cot A}$

$$= \frac{(1 + \cot^2 \omega)^2 - \cot^2 \omega + \cot A \cot \omega}{\cot \omega - \cot A}$$

$$= \frac{1 + \cot^2 \omega + \cot^4 \omega + \cot A \cot \omega}{\cot \omega - \cot A}$$

15751. (Communicated by J. A. H. JOHNSTON, M.A.)—Two light rods OA, OB, of equal length l , are hinged at a fixed point O, and carry heavy rings of equal mass m at the ends A and B. A third light smooth rod runs through the two rings and is hinged at a point P, vertically above O, at a distance l' from it ($l' > l$). The whole is started from the configuration in which A and B are vertically above and below O respectively, by impressing an angular velocity ω upon the rod PAB. Show that when the angle AOB between the rods is 2θ the reaction at P is

$$[2ml(\omega^2 - g/l')(l'^4 - l^4) \cos \theta] / [l'^2 - l^2 \cos 2\theta]^2.$$

Solution by C. W. O'HARA.

At time t let C be the mid-point of AB, and let $\angle OPC = \phi$. Then, from the Question,

$$\angle COA = \angle COB = \theta; \quad OA = OB = l; \quad OP = l'.$$

Also we obviously have the relation

$$l' \sin \phi = OC = l \cos \theta \dots \dots \dots (1).$$

This determines ϕ in terms of θ .

Now, from the figure, the rod OA makes an angle $\frac{1}{2}\pi - (\theta + \phi)$ with OP, and the rod OB an angle $\frac{1}{2}\pi - (\theta - \phi)$ with PO produced. Hence the angular velocity and acceleration of ring A are $-(\dot{\theta} + \dot{\phi})$ and $(\ddot{\theta} + \ddot{\phi})$; and of ring B $-(\dot{\theta} - \dot{\phi})$ and $-(\ddot{\theta} - \ddot{\phi})$; whence the kinetic reactions for rings A and B are as shown in the diagrams.

Ring A.

Ring B.

And the forces acting on the rings A and B are as shown in the diagrams:—

Ring A.

Ring B.

Hence, from the diagrams, resolving at right angles to OA, for ring A

we have $-ml(\ddot{\theta} + \ddot{\phi}) = P_A \sin \theta + mg \cos(\theta + \phi)$, and, resolving at right angles to OB, for ring B, we have

$$-ml(\ddot{\theta} - \ddot{\phi}) = P_B \sin \theta - mg \cos(\theta - \phi);$$

and therefore, by addition,

$$-2ml\ddot{\theta} = (P_A + P_B) \sin \theta + mg [\cos(\theta + \phi) - \cos(\theta - \phi)],$$

i.e.,

$$-2ml\ddot{\theta} = R \sin \theta - 2mg \sin \theta \sin \phi,$$

R evidently being the reaction we are required to determine.

Now $\dot{\theta} = (d/d\theta)(\frac{1}{2}\dot{\theta}^2)$, and, from (1), $l' \sin \phi = l \cos \theta$. Hence the above equation becomes

$$R \sin \theta = -ml(d/d\theta)(\dot{\theta}^2) + 2mg(l/l') \cos \theta \sin \theta \dots \dots \dots (2).$$

To find $(d/d\theta)(\dot{\theta}^2)$, we first form the energy equation for the rings. At time t the velocities of the rings A, B are respectively $-(\dot{\theta} + \dot{\phi})l$ and $-(\dot{\theta} - \dot{\phi})l$, and therefore their kinetic energy is

$$\frac{1}{2}m[l^2(\dot{\theta} + \dot{\phi})^2 + l^2(\dot{\theta} - \dot{\phi})^2],$$

i.e., $m l^2 (\dot{\theta}^2 + \dot{\phi}^2)$. Now, by differentiating, with respect to t ,

$$l' \sin \phi = l \cos \theta,$$

we get

$$l' \cos \phi \dot{\phi} = -l \sin \theta \dot{\theta} \dots \dots \dots (3).$$

Hence we find

$$\dot{\phi}^2 = [l^2 \sin^2 \theta / (l'^2 - l^2 \cos^2 \theta)] \dot{\theta}^2.$$

Hence kinetic energy

$$= m l^2 \dot{\theta}^2 [1 + l^2 \sin^2 \theta / (l'^2 - l^2 \cos^2 \theta)] = m l^2 \dot{\theta}^2 [(l'^2 - l^2 \cos 2\theta) / (l'^2 - l^2 \cos^2 \theta)].$$

Initially, $\dot{\phi} = \omega$, $\phi = 0$, $\theta = \frac{1}{2}\pi$. Hence, from (3), $l'\omega = -l\dot{\theta}_0$, where $\dot{\theta}_0$ is the initial value of $\dot{\theta}$, and therefore the initial kinetic energy is $m\omega^2(l^2 + l'^2)$. Also the height of C, the centroid of the rings A, B above O, is $l'(1 - \cos^2 \phi) = l' \sin^2 \phi = (l^2/l') \cos^2 \theta$, and therefore the potential energy of the system, the initial configuration being standard configuration, is $2mg(l^2/l') \cos^2 \theta$. Hence the energy equation is

$$m\omega^2(l^2 + l'^2) - m l^2 \dot{\theta}^2 [(l'^2 - l^2 \cos 2\theta) / (l'^2 - l^2 \cos^2 \theta)] = 2mg(l^2/l') \cos^2 \theta.$$

This equation determines $\dot{\theta}^2$ in terms of θ , and, differentiating with respect to θ , we easily find $(d/d\theta)(\dot{\theta}^2)$. Substituting the value of $(d/d\theta)(\dot{\theta}^2)$ thus found in (2), we can find R in terms of θ . The result is

$$R = 2ml \cos \theta \{ [(l'^4 - l^4)(\omega^2 - g/l') / (l'^2 - l^2 \cos 2\theta)^2] \}.$$

Cubic Equations: a direct method of solving them (when irreducible by Cardan's method) to any required degree of approximation.

By D. BIDDLE.

Reduce the equation to the form

$$x^3 + qx + r = 0 \dots \dots \dots (a).$$

Let

$$x = (r/q)u \quad \text{and} \quad q^3/r^2 = -c \dots \dots \dots (b).$$

Then we obtain the following equalization of known quantities:—

$$u^3 - cu - c = 0 \dots \dots \dots (1),$$

(a) belongs to a group, infinite in extent, of which the standard is of form

$$X^3 + QX + R = 0 \dots \dots \dots (2),$$

and each individual equation resembles

$$x^3 + Qm^2x + Rm^3 = 0 \dots \dots \dots (3),$$

where m may be either integral or fractional and $x = mX$. For the whole group under the particular standard, the quantities in (1), both known and unknown, are identical. Therefore when (1) is solved for any particular standard the whole group belonging to that standard is practically solved also: adjustment of values, according to (b), is then alone necessary. Thus, if we are able to solve $X^3 - 7X - 6 = 0$, it is easy to solve $x^3 - 28x - 48 = 0$, because $28 = 7 \cdot 2^2$ and $48 = 6 \cdot 2^3$, whence we have $x = 2X$. Now, by (1),

$$c = u^3/(u+1) = u^2 - u + 1 - \Delta \dots \dots \dots (4, 5),$$

where $\Delta = 1/(u+1)$. By (5),

$$u = \frac{1}{2} [1 \pm (4c - 3 + 4\Delta)^{\frac{1}{2}}] \dots \dots \dots (6).$$

For our present purpose, the sign preceding the quantity under the radical sign may be regarded as always positive, because it is only in cases in which c exceeds $6\frac{3}{4}$ that Cardan's method is inoperative. At that value of c , the values of u are $3, -\frac{3}{2}, -\frac{3}{2}$; the positive value of u increases with c , and the positive value of u is the only one we need seek, as this will enable us to find the corresponding value of x , the two remaining values of which can then easily be found from the quadratic equation to which the cubic (a) becomes reducible.

Taking (6) as our formula, we can carry out the following process, until the required degree of approximation is reached. It is neither laborious nor prolonged, and, though expedited by the use of logarithms and reciprocals, is in reality independent of all tables.

Let $u_1 = \frac{1}{2} [1 + (4c - 3)^{\frac{1}{2}}]$, $u_2 = \frac{1}{2} \{ 1 + [4c - 3 + 4/(u_1 + 1)]^{\frac{1}{2}} \} \dots (7, 8),$

$$u_3 = \frac{1}{2} \{ 1 + [4c - 3 + 4/(u_2 + 1)]^{\frac{1}{2}} \} \dots \dots \dots (9),$$

and so on. The convergence is very rapid, but some oscillation, by way of alternate increase and decrease in results, occurs.

Example.—Solve $x^3 - 17x - 20 = 0$, giving results correct (say) to five places of decimals. Here $c = 17^2/20^2 = 12\frac{113}{400}$; and the stages are as follows:—

n	$4c - 3 + 4/(u_{n-1} + 1)$	$[4c - 3 + 4/(u_{n-1} + 1)]^2$	u_n	$4/(u_n + 1)$
1	46.130000	6.791906	3.895953	0.817012
2	46.947012	6.851789	3.925895	0.812050
3	46.942050	6.851426	3.925713	0.812065
4	46.942065	6.851428	3.925714	

Therefore we are justified in regarding $u = 3.9257135$ as its positive value; and, corresponding to this, $x = \frac{2}{3}u = 4.618486$. For the two remaining roots of x , we are able to form the following quadratic equation, by reduction of the cubic: $-x^2 + 4.618486x + 4.330423 = 0$, whence we obtain $x + 2.309243 = \pm 1.001090$. Thus, the three roots of x are 4.618486, -1.308153, -3.310333. Their products taken two at a time sum to -16.999995 instead of -17, and the product of all three is defined by the logarithm 1.3010309, instead of 1.3010300, which is the logarithm of 20.

N.B.—It is sometimes possible to see that the convergence is towards an exact value, on assuming which an absolute result is obtained.

15495. (The late Rev. Prebendary WHITWORTH.)—Show geometrically that, if ABCD be a quadrilateral inscribed in a circle, and if AP, AQ, AR be perpendiculars from A on BC, CD, BD respectively, then

$$BC/AP + CD/AQ = BD/AR.$$

[It is impossible to publish more than a few typical solutions out of the large number sent in.—ED.]

Solutions (I.) by J. H. CARSON, B.A., Rev. T. WIGGINS, B.A., and others; *(II.)* by W. SCRIMGEOUR, M.A., B.Sc., and S. C. BAGCHI, B.A.; *(III.)* by C. M. ROSS; *(IV.)* by T. B. RAMACHANDRAN, B.A., and others.

(I.) P, Q, R are collinear (Simson's line). The triangles ABR and ACQ are similar; therefore

$$BR/RA = CQ/AQ \dots\dots(1).$$

The triangles ARD and APC are similar; therefore

$$RD/RA = PC/AP \dots\dots(2).$$

The triangles BAP and DAQ are similar; therefore

$$BP/AP = DQ/AQ \dots\dots(3).$$

Therefore, adding (1) and (2), and subtracting (3),

$$BD/AR = BC/AP + CD/AQ.$$

(II.) [For figure see Solution (I.)] RQ is the Simson line of the point A with respect to the triangle BCD; RAQD, PBAR, PCQA are cyclic quadrilaterals.

$$\begin{aligned} BC \cdot AQ \cdot AR + CD \cdot AP \cdot AR &= \frac{BC \cdot 2\Delta QAR}{\sin QAR} + \frac{CD \cdot 2\Delta PAR}{\sin PAR} \\ &= \frac{BC \cdot 2\Delta QAR}{\sin BDC} + \frac{CD \cdot 2\Delta PAR}{\sin DBC} \\ &= \frac{BD (2\Delta QAR + 2\Delta PAR)}{\sin BCD} \\ &= \frac{BD}{\sin BCD} (2\Delta PAQ) = \frac{BD \cdot 2\Delta PAQ}{\sin PAQ}, \end{aligned}$$

therefore $BC \cdot AQ \cdot AR + CD \cdot AP \cdot AR = BD \cdot AP \cdot AQ$;

therefore $BC/AP + CD/AQ = BD/AR$

[since $\angle QAR = \angle BDC$, $\angle PAR = \angle DBC$.] [Rest in Reprint.]

15713. (Professor LAUVERNAY.)—Dans un triangle rectangle ABC, α, β, γ sont les points de contact de cercles ex-inscrits respectivement avec les côtés BC, CA, AB. Démontrer que, si les droites $A\alpha, B\beta, C\gamma$ sont concourantes sur la circonférence inscrite à ce triangle, les côtés de ce triangle sont proportionnels aux nombres 3, 4, 5.

Solutions (I.) by Prof. SANJANA, M.A.; *(II.)* by the late R. TUCKER, M.A.; *(III.)* by C. M. ROSS.

(I.) The equations of the lines $A\alpha, B\beta, C\gamma$ are

$$\beta\gamma = (s-b) \sin C / [(s-c) \sin B], \dots, \dots;$$

hence their point of concurrence is

$$\beta b / (s-b) = \gamma c / (s-c) = a a / (s-a).$$

For this to be on the in-circle, we must have $\sum \cos A \sqrt{a} = 0$; thus

$$\begin{aligned} \sqrt{[(s-a)/a]} \sqrt{[s(s-a)]/bc} \pm \sqrt{[(s-b)/b]} \sqrt{[s(s-b)]/ca} \\ \pm \sqrt{[(s-c)/c]} \sqrt{[s(s-c)]/ab} = 0; \end{aligned}$$

so that $(s-a) \pm (s-b) \pm (s-c) = 0$. Taking $s-a + s-b - (s-c) = 0$, we get $3c = a + b$. If A be the right angle, we have also $a^2 = b^2 + c^2$; whence we obtain $a = \frac{5}{3}c, b = \frac{4}{3}c, i.e., a : b : c = 5 : 4 : 3$.

(II.) The in-circle is

$$x^2 + y^2 - 2(s-a)(x+y) + (s-a)^2 = 0 \dots\dots(i).$$

The line BC is

$$bx + cy - bc = 0 \dots\dots(ii),$$

and the intersection (P) of B $\beta, C\gamma$ is

$$x/c + y/(s-c) = 1, \quad x/(s-b) + y/b = 1,$$

i.e.,

$$x = [c(s-b)]/s, \quad y = [b(s-c)]/s \dots\dots(iii).$$

Now (iii.) is on (i.); therefore

$$c^2(s-b)^2 + b^2(s-c)^2 - 2(s-a)s[(b+c)s - 2bc] + s^2(s-a)^2 = 0 \dots(iv).$$

Also, equating two expressions for the radius, we get

$$bc = 2s(s-a) \dots\dots(v).$$

Hence (iv.) gives $4a^2s^2 - 12bc(b+c)s + 17b^2c^2 = 0$,

$$i.e., \quad a^2(a+b+c)^2 - 6abc(a+b+c) + 5b^2c^2 = 0,$$

$$i.e., \quad [a(a+b+c) - 5bc][a(a+b+c) - bc] = 0.$$

Hence $2sa = 5bc = 10s(s-a)$ by (v.); therefore $a = 5(s-a)$ or $6a = 5s$, and this, with $b^2 + c^2 = a^2$, gives $a : b : c = 5 : 4 : 3$.

(III.) It is known that $Ca = s-b$ and $C\beta = s-a$. Hence the equations of $A\alpha, B\beta, C\gamma$ are $x/(s-b) + y/b = 1, x/a + y/(s-a) = 1$, and $x/[a(s-b)] = y/[b(s-a)]$ (axes AC and CB). These lines intersect in the point $\delta [a(s-b)/s, b(s-a)/s]$. It is easily proved that $C\gamma$ passes through this point since the determinant

$$\begin{vmatrix} b, & s-b, & b(s-b) \\ s-a, & a, & a(s-a) \\ b(s-a), & a(s-b), & 0 \end{vmatrix}$$

vanishes.

Again the equation of the in-circle is

$$(x-s+c)^2 + (y-s+c)^2 = (s-c)^2 \dots\dots(1).$$

Also the co-ordinates of the point δ may be written

$$[\sqrt{(a^2+b^2)}-b, \sqrt{(a^2+b^2)}-a],$$

since $c^2 = a^2 + b^2$; therefore, substituting these values for x and y in (1), it becomes $13a^2 + 5ab + 13b^2 - 11(a+b)(a^2 + b^2)^{\frac{1}{2}} = 0$. Squaring and rearranging, $48(a^2 + b^2)^2 - 112ab(a^2 + b^2) + 25a^2b^2 = 0, i.e.,$

$$[12(a^2 + b^2) - 25ab][4(a^2 + b^2) - ab] = 0.$$

From this equation $4a - 3b = 0$; therefore $a : b = 3 : 4$; therefore the lines $A\alpha, B\beta, C\gamma$ will intersect on the in-circle if $a : b : c = 3 : 4 : 5$.

15753. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Solve in integers

$$\frac{1}{2}(q^2 + 1) = p^4.$$

Solutions (I.) by R. W. D. CHRISTIE, R. F. DAVIS, M.A., and A. H. BELL; *(II.)* by the PROPOSER.

(I.) We have infinite solutions of the equation $2q^2 - p^2 = 1$. If any one of them $q = t^2$, then $2t^4 - p^2 = 1$, and the equation required is solved. Let $t = 2y^2 + 2yz + z^2$. We have generally

$$2(2y^2 + 2yz + z^2)^4 = (4y^4 + 16y^3z + 12y^2z^2 - z^4)^2 + (4y^4 - 12y^2z^2 - 8yz^3 - z^4)^2 \dots\dots(1).$$

If $y = 1$ and $z = 1$, this becomes

$$2(2y^2 + 2y + 1)^4 = (4y^4 + 16y^3 + 12y^2 - 1)^2 + (4y^4 - 12y^2 - 8y - 1)^2 \dots(2),$$

$$2(2 + 2z + z^2)^4 = (4 + 16z + 12z^2 - z^4)^2 + (4 - 12z^2 - 8z^3 - z^4)^2 \dots\dots(3).$$

Now, if we can make $4y^4 - 12y^2 - 8y - 1 = \pm 1$, the problem is solved; *e.g.*, $4y^4 = 12y^2 + 8y$ or $y^3 = 3y + 2$ ($y = 2$) and $2(13)^4 = 239^2 + (-1)^2$ by (2), and similarly with the equation $4 - 12z^2 - 8z^3 - z^4 = \pm 1$, or indeed any of the six dexter squares. The solution involves that of a biquadratic, but probably the work of securing integers would be laborious. The theorem is deeply interesting and in this connexion one may use the oscillating equation of the convergents given in Vol. III.

(II.) Here $q^2 - 2(p^2) = -1$, and the solutions of $\tau - 2.v^2 = -1$ must be picked out which have $v = \square$. The only solution (until $q > 1,600,000$) is $239^2 - 2.13^4 = -1$.

[For a table of such solutions, see the PROPOSER'S new *Tables of Quadratic Partitions*, p. 261.]

15721. (Professor M. W. CROFTON, F.R.S.)—Two players A., B., whose chances of winning a game are p, q ($p + q = 1$), put down each a stake, and play on the condition that whoever wins two games running shall receive the whole. Show that in fairness their stakes ought to be in the proportion

$$p^2(1+q) : q^2(1+p).$$

Solution by F. N. MAYERS.

The game will terminate at the $2n$ -th game unless there is an alternation of wins by each player in succession, the probability of which is

$2p^nq^n$, or p^nq^n if the alternation is to begin with a win by an assigned player.

If A. is to win precisely at the $2n$ -th game, there must be an alternation for the previous $2n-2$ games in which A. loses the last game, followed by two wins by A.; the probability of this is $p^{n-1}q^{n-1} \times p^2 = p^{n+1}q^{n-1}$. If A. is to win at the $(2n-1)$ -th game precisely, there must be alternation in the previous $2n-2$ games, in which A. must win the last game, followed by a win by A.; the probability of this is $p^{n-1}q^{n-1} \times p = p^nq^{n-1}$. The probability that he wins at or before the $2n$ -th game is the sum of the probabilities that he wins at the $2n$ -th, $(2n-1)$ -th, ..., 2nd game precisely.

Hence we get for the required probability the sums of the two following series:—

$$p^{n+1}q^{n-1} + p^{n-1}q^{n-1} + \dots + p^2 = p^2 [1 + \dots + (pq)^{n-1}] \dots\dots\dots (1),$$

and $p^nq^{n-1} + \dots + p^2q$ (the first game being excluded)
 $= p^2q [1 + pq + \dots + (pq)^{n-2}] \dots\dots\dots (2).$

The sum of (1) is $p^2 \{ [1 - (pq)^n] / (1 - pq) \}$, and that of (2) is

$$p^2q \{ [1 - (pq)^{n-1}] / (1 - pq) \}.$$

Making n infinite, the sum of (1) and (2) is $[p^2(1+q)] / (1-pq)$. Similarly probability of B. winning is $[q^2(1+p)] / (1-pq)$; hence the required result.

If we make the number of games odd instead of even, i.e., $2n+1$ instead of $2n$, it will only add the infinitesimal term $p^{n+1}q^n$ to series (2).

15677. (ROBT. W. D. CHRISTIE.)—Let p be any prime and the letters all different integers. Prove that

$$pqr = l^3 + l^2s + lt + u = (LMN)^{\frac{1}{2}}, \dots;$$

e.g., $103.18.35 = 25^3 + 25^2.53 + 25.635 + 265 = (630.3605.1854)^{\frac{1}{2}}$.

[N.B.—The original form of the Question has been slightly modified by the Proposer so as to ensure clearness —ED.]

Solution by the PROPOSER.

$$pqr = l^3 + l^2s + lt + u = (LMN)^{\frac{1}{2}} \dots\dots\dots (A).$$

This theorem depends on the two fundamental theorems

$$r^{2m} + 1 = 0 \pmod p \quad \text{and} \quad ab - (a+b)[ab-r]/(a+b) = r,$$

a root, where in the case of $p = 4m+1$ we may put $r = 1$ always. Thus theorem (A) in this case simplifies considerably. Let

$$\begin{aligned} l &= (ab-r)/p &&= 25 \text{ in the given case, } L = l^2 + r = 630, \\ s &= (a^2 + b^2 + 2r)/p &&= 53 \quad \text{,,} \quad \text{,,} \quad M = a^2 + r = 3605, \\ t &= qr + R &&= 635 \quad \text{,,} \quad \text{,,} \quad N = b^2 + r = 1854, \\ u &= R[a^2 + b^2 + 2R]/(a+b) = 265 &&\quad \text{,,} \quad \text{,,} \\ q &= \text{residue of } [(r^{2m+1})^2 + r]/p \text{ and } r = \text{any root of } p, \\ r &= \text{residue of } [(r^{3m+2})^2 + r]/p. \end{aligned}$$

In the example given take $r = 5$, the smallest root of 103. Then

$$\left. \begin{aligned} a &= \text{residue of } 5^{26} \pmod p = 60 \\ b &= \text{residue of } 5^{77} \pmod p = 43 \end{aligned} \right\} = 103.$$

Then the equation $ab - (a+b)[ab-r]/(a+b) = r$ becomes

$$60.43 - 103.25 = 5;$$

thus $l = 25$. Again $q = (60^2 + 5)/p = 35$, $r = (43^2 + 5)/p = 18$. Consequently in the given equation we have

$$103.18.35 = 25^3 + 25^2.53 + 25.635 + 265 = (630.3605.1854)^{\frac{1}{2}}.$$

Similarly for root 6 the figures would be

$$103.10.49 = 22^3 + 22^2.59 + 22.496 + 354 = (490.1030.5047)^{\frac{1}{2}},$$

and we may have as many forms as there are roots, i.e., 32 sets for the prime 103. In this connexion the theorems by the Solver in former volumes may be consulted with advantage.

The theorems may also be written

$$(A) \quad pqr = \left[\left(\frac{ab-r}{a+b} \right)^3 + \left(\frac{ab-r}{a+b} \right)^2 \left(\frac{a^2 + b^2 + 2r}{a+b} \right) + \left(\frac{ab-r}{a+b} \right) (qr + R) \right] + \left[\left(\frac{a^2 + b^2 + 2r}{a+b} \right) (R) \right] = (LMN)^{\frac{1}{2}} \dots$$

for primes of form $4m-1$, and

$$(B) \quad pqr = \left[\left(\frac{ab-1}{a+b} \right)^3 + \left(\frac{ab-1}{a+b} \right)^2 \left(\frac{a^2 + b^2 + 2}{a+b} \right) + \left(\frac{ab-1}{a+b} \right) (qr + 1) \right] + \left[\left(\frac{a^2 + b^2 + 2}{a+b} \right) \right] = (LMN)^{\frac{1}{2}} \dots,$$

for primes of form $(4m+1)$.

The theorem leads indirectly to one or two other theorems, one of which is

$$a^2 + b^2 + a^2 + b^2 + (ab+1)^2 = (a+b)^2 + 1^2 + a^2 + b^2 + (ab)^2,$$

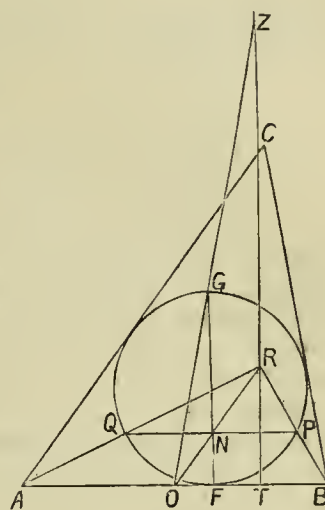

where it will be noticed, the sum of the roots being equal, we may add n to the root of each square, &c.

15748. (A. M. NESBITT, M.A.)—A, B, K are three fixed points on a tangent to a conic, and the other tangents from A and B meet in C. Any straight line through K cuts the conic in P and Q, and AQ, BP

meet in R. Prove that the locus of R is a conic inscribed in the triangle ABC.

Solutions (I.) by R. F. DAVIS, M.A.; (II.) by J. A. H. JOHNSTON, M.A., and Professor SANJANA, M.A.

(I.) This theorem is the generalization by conical projection of the following particular case:—If PQ be a variable chord of the inscribed circle of the triangle ABC drawn parallel to AB, then the locus of the point of intersection R of AQ, BP is a conic inscribed in ABC.

Let O be the middle point of AB and FG the diameter of the inscribed circle through the point of contact F with AB. Draw RT perpendicular to AB and let it meet OG produced in Z. Then

$$ZR.RT : GN.NF = OR^2 : ON^2$$

and $PN^2 (= GN.NF) : OB^2 = RN^2 : OR^2$; therefore

$$ZR.RT : OB^2 = RN^2 : ON^2 = TF^2 : OF^2,$$

or $ZR.RT$ varies as TF^2 . Hence the locus of R is a conic having OF, OG for tangents and FG for the corresponding chord of contact. It is, moreover, evident by an examination of the figure that, since P, Q always lie within ABC, the locus of R reaches both CA, CB, but does not cross these lines. Therefore CA, CB are tangents to the locus. [Rest in Reprint.]

10790. (Corrected. H. W. SEGAR, B.A.)—Show that

$$\frac{1}{4}\pi \int_0^{\frac{1}{2}\pi} \log(1 + \cos \theta \cos x) \frac{dx}{\cos x} = \frac{\cos \theta}{1^3} - \frac{\cos 3\theta}{3^3} + \frac{\cos 5\theta}{5^3} - \dots$$

Solution by Professor SANJANA, M.A.

The left side is known to be $\frac{1}{4}\pi \frac{1}{2}(\frac{1}{4}\pi^2 - \theta^2) = \frac{1}{8}\pi^3 - \frac{1}{8}\pi\theta^2$. Calling the right side $\phi(\theta)$, we have $\phi'(\theta) = -\sin \theta/1^2 + \sin 3\theta/3^2 - \sin 5\theta/5^2 + \dots$ $\phi''(\theta) = -\cos \theta/1 + \cos 3\theta/3 - \cos 5\theta/5 + \dots$. Let $2 \cos \theta = x + x^{-1}$; then

$$2\phi''(\theta) = -x/1 + x^3/3 - x^5/5 \dots - x^{-1}/1 + x^{-3}/3 - x^{-5}/5 + \dots$$

= $-(\tan^{-1} x) - (\tan^{-1} 1/x)$ (by Gregory's series)

$$= -\tan^{-1} \infty = -\frac{1}{2}\pi.$$

Thus, $\phi''(\theta) = -\frac{1}{4}\pi$. Integrating, $\phi'(\theta) = A - \frac{1}{4}\pi\theta$; and putting $\theta = 0$, we get $A = 0$. Thus $\phi'(\theta) = -\frac{1}{4}\pi\theta$; hence

$$\phi(\theta) = B - \frac{1}{8}\pi\theta^2.$$

Putting $\theta = 0$, we get $B = 1/1^3 - 1/3^3 + 1/5^3 - \dots = \pi^3/2^5$. Thus

$$\phi(\theta) = \frac{1}{8}\pi^3 - \frac{1}{8}\pi\theta^2;$$

hence the result.

QUESTIONS FOR SOLUTION.

15804. (ROBERT W. D. CHRISTIE.)—Let $p = m^4 - m^3 + m^2 - m + 1$. Prove $[(m^2 + 1)(m - 1)]^{n+1} + m^{4n-1} = 0 \pmod p$ and generalize.

15805. (A. H. BELL.)—Is 9462853 a prime number?

15806. (Rev. F. H. JACKSON.)—Given

$$P_n(x) = \frac{[2n]!}{(2)_n [n]! [n]!} \left\{ x^n - p^3 \frac{[n][n-1]}{[2][2n-1]} x^{n-2} + \dots \right\},$$

in which the p prefixes of the terms of the series form the sequence

$$(p^3, p^8, p^{15}, \dots, p^{r(r+2)}, \dots),$$

and $[n] = (p^n - 1)/(p - 1)$, $(2)_n = (1 + p^n)(2)_{n-1}$, $[n]! = [n][n-1]!$,

show that $\frac{[n]}{[2n-1]} \frac{P_n}{P_{n-1}}$ may be expressed as a continued fraction

$$\frac{\frac{[n]^2}{[2n+1][2n-1]} p^{n+2}}{x - \frac{[n+1]^2}{[2n+3][2n+1]} p^{n+3}} \dots$$

15807. (A. M. NESBITT, M.A.) [Suggested by Question 15738.]—If there are $2n$ quantities a_1, a_2, \dots, a_n ; c_1, c_2, \dots, c_n , and if p_r = the sum of the products of the c 's taken r together, then will

$$p_{n-1}x_0 - p_{n-2}x_1 + \dots + (-1)^{n-1}x_{n-1} = p_n x^{-1}$$

where

$$x_s = a_1 c_1^s + a_2 c_2^s + \dots + a_n c_n^s.$$

15808. (Professor NANSON.)—If $(b+c)x + (c+a)y + (a+b)z = 0$ and $ayz + bzx + cxy = 0$, then $ay^2z^2 + bz^2x^2 + cx^2y^2 = 0$.

15809. (Professor SANJANA, M.A.)—Resolve into factors the following and two other similar expressions:—

$$4abc(b+c-a)(c+a-b) - (b+c-a)(c^2+a^2-b^2)(a^2+b^2-c^2) - (c+a-b)(b^2+c^2-a^2)(a^2+b^2-c^2) + (a+b-c)(b^2+c^2-a^2)(c^2+a^2-b^2).$$

15810. (J. J. BARNVILLE, B.A., I.C.S.)—Having

$$u_n + u_{n+1} + u_{n+2} = u_{n+3},$$

prove that

$$\frac{1.1.5}{1.1.2.3} + \frac{2.3.9}{1.2.4.5} + \frac{3.5.17}{3.4.7.9} + \frac{6.9.31}{5.7.13.17} + \dots = 3,$$

$$\frac{1.1.4}{1.2.2.3} + \frac{2.3.7}{1.3.4.6} + \frac{4.5.13}{2.6.7.11} + \frac{7.9.24}{4.11.13.20} + \dots = \frac{3}{2}.$$

$$\frac{1.2.6}{1.3.3.5} + \frac{2.3.11}{2.5.6.9} + \frac{4.6.20}{3.9.11.17} + \frac{7.11.37}{6.17.20.31} + \dots = \frac{7}{12},$$

$$\frac{1}{1.6} - \frac{2}{3.11} + \frac{3}{2.19} - \frac{6}{6.36} + \frac{11}{11.66} - \dots = \frac{1}{6}.$$

15811. (R. CHARTRES.)—From a variable point within a triangle perpendiculars are drawn to the sides. Find (1) the maximum value, (2) the mean value of the product of the perpendiculars, and (3) the mean value of the area of the triangle formed by joining the feet of the perpendiculars. [Elementary proof.]

15812. (S. C. BAGCHI, B.A.)—If $f(x)$ is a rational and algebraic function of degree n of a single variable x which vanishes for n values only of x , viz., a_1, a_2, \dots, a_n , show that the plane area bounded by $(xy+n)f(x) - xf'(x) = 0$, $x-1 = 0$, and $x-\kappa = 0$, where κ is infinite, is given by $S_1 + 2S_2 + 3S_3 + \dots$ where $S_p = \sum a^p$ and $f'(x)$ is the first derivative of $f(x)$.

15813. (Professor NANSON.)—Determine the point and plane equations of the quadric on which lie the lines common to three given linear complexes.

15814. (Professor COCHEZ.)—Constructions des courbes

(i.) $y = x \sin 1/x$, (ii.) $y = 2 \sin x - x$.

15815. (The late R. TUCKER, M.A.)—OA, OB are at right angles, and a semicircle APB is described on AB. Prove that the "S" point locus of the triangle APB has for its equation

$$(a^2 + 3k^2)x^2 + (a^2 + 3h^2)y^2 + 6hkxy - hx(a^2 + 6k^2) - ky(a^2 + 6h^2) + 3h^2k^2 = 0.$$

15816. (C. E. YOUNGMAN, M.A.)—From a fixed point A on a rectangular hyperbola chords AP, AP' are drawn, making with a given direction angles whose sum is constant, so that P coincides with P' at two places B and C. Prove that PP' turns on a fixed point, namely, the inverse, with respect to the circle ABC, of the centre of the hyperbola.

15817. (A. W. T.)—Prove by pure geometry that, if three points of a conic be concyclic with the centre, the poles of the joins of their conjugates are also concyclic with the centre.

15818. (R. F. DAVIS, M.A.)—A triangle circumscribes a given circle (centre I, radius r) and has its orthocentre at a given point H. Prove that the angular points lie on a fixed conic whose focus is at H, and whose directrix KK' is found by producing IH to X, so that IH.IX = $2r^2$, and drawing KXK' perpendicular to IHX. [Amplification of No. 1,114 of Wolstenholme's Problems.]

15819. (Professor NEUBERG.)— a, b, c, R désignant les côtés d'un triangle ABC, et le rayon du cercle circonscrit, trouver le maximum ou le minimum du rapport $(a^2 + b^2 + c^2) : R^2$.

15820. (Professor NEUBERG.)—Sur les côtés du triangle ABC on construit extérieurement les triangles équilatéraux BCA', CAB', ABC'. Trouver les coordonnées du centre de gravité de l'aire de l'hexagone AC'BA'CB'A et celles du centre de gravité du périmètre de ce polygone.

15821. (W. J. DOBBS, M.A.)—A given force P is in equilibrium with three others Q, R, and X, all in one plane. The forces Q and R are of known magnitudes, and act respectively through given points; the force X acts along a given straight line. Show how to determine, by geometrical construction or otherwise, the magnitude of X and the directions of Q and R.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

8962. The solution of a linear equation of differences can always be made to depend upon that of a linear differential equation of the same order, and *vice versa*.

9019. (ASPARAGUS.)—In a given ellipse is inscribed a triangle ABC of maximum perimeter (2s): prove that, if ρ_1, ρ_2, ρ_3 be the radii of curvature of the ellipse at A, B, C,

$$\rho_1 \cos^3 \frac{1}{2}A = \rho_2 \cos^3 \frac{1}{2}B = \rho_3 \cos^3 \frac{1}{2}C = s, \quad \rho_1 \rho_2 \rho_3 = 8r^3,$$

r being the radius of the circle inscribed in the triangle ABC.

9269. (Professor SCHOUTE.)—Given a plane curve C_m of the m -th class and a line l in its plane. What is the result, if every tangent t of the curve undergoes a rotation through a given angle α about its point of intersection with l ? And what if every tangent t of the curve is replaced by the two bisectors of the angle (t, l) ?

9552. (D. EDWARDES.)—Integrate the equation

$$\frac{dy}{(y-a)(1-y^2)^{\frac{1}{2}}} + \frac{2.2^{\frac{1}{2}} dx}{[x^2 + 2ax^2 + 1]^{\frac{1}{2}}} = 0.$$

10693. (Professor LAMPE, LL.D.)—Find all the values of x that satisfy the equation $64 \sin^2 x \sin^2 2x \sin^2 3x = 7$.

10720. (Professor ORCHARD.)—A small negatively electrified proof-plane is introduced through a small aperture in a spherical shell; the surface-area of the shell is 16π , and it has a positive charge of 200. If when the proof-plane is 1 foot from the centre of the sphere the potential there is zero, find the charge on the proof-plane.

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. VII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, June 8th, 1905.—Prof. A. R. Forsyth, President, and, temporarily, Prof. W. Burnside, Vice-President, in the Chair.

Mr. V. Ramaswami Aiyar was elected a member.

The President announced that the De Morgan Medal for 1905 had been awarded to Dr. H. F. Baker for his researches in pure mathematics.

The following papers were communicated:—

"On the Conditions of Reducibility of any Group of Linear Substitutions," Prof. W. Burnside.

"On Criteria for the Finiteness of the Order of a Group of Linear Substitutions," Prof. W. Burnside.

"On a Class of Many-valued Functions defined by a Definite Integral," Mr. G. H. Hardy.

Informal communications were made as follows:—

"The First Principles of Cauchy's Theory of Functions," Mr. G. H. Hardy.

"Differential Equations whose Integrals are expressible by Partial Quadratures," Prof. A. R. Forsyth.

Best in every Way.

Many firms have tried to make a better pencil than L. & C. Hardtmuth's. Years and years they have tried. But it hasn't been done yet. Ask the artist. Ask the student. Ask the photographer. Ask any one who uses a pencil. "Best"—the laconic unanimous answer, meaning

HARDTMUTH'S.

IN SEVENTEEN DEGREES for all Pencil Purposes.

IS YOUR PENCIL A KOH-I-NOOR, OR IS IT AN IMITATION?

Every Description of
SCHOOL FURNITURE,

MADE ENTIRELY IN ENGLAND,

AT THE

Educational Supply Association's Steam Factory,
 Stevenage, Herts,

The Largest School Furniture Factory in the Kingdom.

The best display of School Furniture in the Kingdom can be seen at
 the Showrooms of the Association,

42 HOLBORN VIADUCT, LONDON, E.C.

This show comprises—

SCHOLARS' DESKS in great variety,
MASTERS' DESKS of various kinds,
SCHOOL CUPBOARDS, EASELS,
GENERAL APPARATUS.

CHEMICAL AND PHYSICAL LABORATORIES
 COMPLETELY EQUIPPED.

*The most complete and fully illustrated Catalogue will be forwarded
 gratis on application.*

The Educational Supply Association, Ltd.,

42 HOLBORN VIADUCT, LONDON, E.C.

READY JULY 15. Crown 8vo, 1s. 6d.; or, with
 Answers, 2s.

WRITTEN ON MODERN LINES.

A

FIRST ALGEBRA.

BY

W. M. BAKER, M.A.,

AND

A. A. BOURNE, M.A.

The range of this book, which includes Quadratic Equations
 and Fractional and Negative Indices, will be found specially
 suitable for the Local Examinations.

*Specimen Copies will be sent to Head Masters on application,
 with a view to introduction.*

LONDON: GEORGE BELL & SONS, PORTUGAL STREET,
 LINCOLN'S INN, W.C.

PRIZE DISTRIBUTION

MIDSUMMER, 1905.

The Educational Supply Association

HAS NOW IN STOCK

AN IMMENSE ASSORTMENT OF
REWARD BOOKS,

for the selection of which its greatly enlarged showrooms afford every facility

P Bound to Customers' own order.
R Bound in Morocco.
I Bound in Calf.
Z Bound in Paste Grain.
E Bound in Cloth.
S

The Association, having purchased at remainder prices a great number
 of suitable books, is offering these at special reductions.

MEDALS—Gold, Silver, Bronze,

TO SUIT ALL PURPOSES,

AND AT VARIOUS PRICES.

Mathematical Prizes, Instruments, &c.

CATALOGUE OF CLOTH BOUND BOOKS.

CATALOGUE OF LEATHER BOUND BOOKS,

NOW READY, both of which will be sent post free on application.

THE

School World.

A MONTHLY MAGAZINE OF EDUCATIONAL
 WORK AND PROGRESS.

EACH NUMBER CONTAINS EIGHTY COLUMNS
 OF READING MATTER.

PRICE 6D. VOLUME VI., 1904, 7s. 6D. NET.

The aim of THE SCHOOL WORLD is to provide
 information of **practical and permanent value** to School-
 masters and Schoolmistresses. To this end all important
 changes and developments affecting any branch of the work
 of teachers in secondary and other schools are dealt with by
leading authorities and experienced teachers.

The Magazine has become indispensable to all who
 desire to keep in touch with modern and effectual methods
 of education.

MACMILLAN & CO., Ltd., LONDON.

MACMILLAN & CO.'S List of Books suitable for Prizes.

ANTIQUITIES.

- A GRAMMAR OF GREEK ART.** By PERCY GARDNER, Litt.D. With Illustrations. Extra crown 8vo, gilt top, 7s. 6d.
- A HANDBOOK OF GREEK SCULPTURE.** By ERNEST A. GARDNER, M.A. Extra crown 8vo. Parts I. and II., 5s. each. Complete in One Vol., 10s.
- ANCIENT ATHENS.** By ERNEST A. GARDNER. With numerous Illustrations, Plans, and Maps. 8vo, gilt top, 21s. net.
- CHRISTIAN ART AND ARCHÆOLOGY.** By W. LOWRIE. Extra crown 8vo, 10s. 6d.
- POMEII: ITS LIFE AND ART.** By AUGUST MAU. Translated into English by FRANCIS W. KELSEY. With numerous Illustrations from original Drawings and Photographs. New Edition, Revised and Corrected. Extra crown 8vo, 10s. 6d. net.
- ROMAN PUBLIC LIFE.** By A. J. GREENIDGE. Extra crown 8vo, 10s. 6d.
- ATLAS OF CLASSICAL ANTIQUITIES.** By TH. SCHREIBER. Edited by Prof. W. C. F. ANDERSON. 4to, 21s. net.
- A COMPANION TO SCHOOL CLASSICS.** By JAMES GOW, M.A., Litt.D. Illustrated. Third Edition. Crown 8vo, 6s.
- RAMBLES AND STUDIES IN GREECE.** By Rev. J. P. MAHAFFY, D.D. With Illustrations. New Edition, with a Map. Crown 8vo, 10s. 6d.

ART.

- THOUGHTS ABOUT ART.** By P. G. HAMERTON. Crown 8vo, 8s. 6d.
- SKETCHING FROM NATURE.** A Handbook for Students and Amateurs. By TRISTRAM J. ELLIS. With a Frontispiece and 10 Illustrations by the late H. STACY MARKS, R.A., and 38 Sketches by the Author. An Entirely New Edition, with added Matter and Illustrations. Crown 8vo, 3s. 6d.
- SOME HINTS ON LEARNING TO DRAW.** Containing Examples from Leighton, Watts, Poynter, &c. By G. W. C. HUTCHINSON, Art Master at Clifton College. Super royal 8vo, 8s. 6d.

COLLECTED WORKS. ESSAYS. MISCELLANEOUS WORKS.

- ENGLISH PROSE SELECTIONS.** With Critical Introductions by various Writers, and General Introductions to each Period. Edited by Sir HENRY CRAIK, K.C.B., LL.D. In Five Vols. Crown 8vo. Vol. I.—14th to 16th Century. 7s. 6d. Vol. II.—16th Century to Restoration, 7s. 6d. Vol. III.—17th Century, 7s. 6d. Vol. IV.—18th Century, 7s. 6d. Vol. V.—19th Century, 8s. 6d.
- A SHORT HISTORY OF ENGLISH LITERATURE.** By Prof. G. SAINTSBURY. Crown 8vo, 8s. 6d.
- THE MASTERS OF ENGLISH LITERATURE.** By STEPHEN GWYNN. Globe 8vo, 3s. 6d.
- ESSAYS OF RICHARD STEELE.** Selected and Edited by L. E. STEELE, M.A. Pott 8vo, 2s. 6d. net.
- THE LETTERS OF CHARLES LAMB.** Newly arranged with Additions. Edited, with Introduction and Notes, by the late ALFRED AINGER. Two Vols. Globe 8vo, 8s. net.
- THE ESSAYS OF ELIA.** By CHARLES LAMB. Edited by Canon AINGER. Globe 8vo, 4s. net.
- THE AUTOCRAT OF THE BREAKFAST-TABLE.** By OLIVER WENDELL HOLMES. With an Introduction by LESLIE STEPHEN. Pott 8vo, 2s. 6d. net.
- THE CHOICE OF BOOKS.** By FREDERIC HARRISON. Globe 8vo, 4s. net.
- THE PLEASURES OF LIFE.** By Lord AVEBURY. Globe 8vo, 2s. 6d.
- THE USE OF LIFE.** By Lord AVEBURY. Globe 8vo, 3s. 6d.
- GREEK STUDIES.** By WALTER PATER, M.A. 8vo, 10s. 6d.
- ESSAYS IN CRITICISM.** By MATTHEW ARNOLD. Globe 8vo, 4s. net.
- ESSAYS IN CRITICISM. Second Series.** By MATTHEW ARNOLD. Globe 8vo, 4s. net.
- MISCELLANIES.** By JOHN MORLEY. Three Vols. Globe 8vo, 4s. net each.
- ESSAYS IN HISTORICAL CHEMISTRY.** By T. E. THORPE. 8vo, 12s. net.
- Contains Lives of R. Boyle, J. Priestley, C. W. Scheele, H. Cavendish, J. Watt, A. L. Lavoisier, M. Faraday, T. Graham, F. Wöhler, J. B. A. Dumas, H. Kopp, V. Meyer, D. I. Mendeléeff, and S. Cannizzaro.
- THE SCENERY OF ENGLAND AND THE CAUSES TO WHICH IT IS DUE.** By the Right Hon. Lord AVEBURY. With numerous Illustrations and Diagrams. Third and Cheaper Edition. Crown 8vo, 6s.

HISTORY.

- A SHORT HISTORY OF THE ENGLISH PEOPLE.** By JOHN RICHARD GREEN, LL.D. With Maps and Tables. Crown 8vo, 8s. 6d. Illustrated Edition in Four Vols. Super royal 8vo, 10s. net each.
- THE EXPANSION OF ENGLAND.** Two Courses of Lectures. By Sir J. R. SEELEY, M.A. Globe 8vo, 4s. net.
- HISTORY OF ROME.** By Dr. MOMMSEN. Abridged. Crown 8vo, 7s. 6d.
- A HISTORY OF ROME TO THE BATTLE OF ACTIUM.** By E. S. SHUCKBURGH, M.A. Crown 8vo, 8s. 6d.
- AVE ROMA IMMORTALIS!** Studies from the Chronicles of Rome. By FRANCIS MARION CRAWFORD. With Illustrations drawn by PERCY WADHAM and others. Extra crown 8vo, 8s. 6d. net.
- A HISTORY OF GREECE.** By J. B. BURY. Crown 8vo, 8s. 6d.
- HISTORY OF GREECE FOR BEGINNERS.** By J. B. BURY, M.A. Globe 8vo, 3s. 6d.
- FAMOUS FIGHTERS OF THE FLEET.** Glimpses through the Cannon Smoke in the Days of the Old Navy. By EDWARD FRASER. With Illustrations. Crown 8vo, 6s.
- OLD QUEBEC: THE FORTRESS OF NEW FRANCE.** By Sir GILBERT PARKER, M.P., and CLAUDE G. BRYAN. Illustrated. 8vo, 15s. net.

HISTORY—(continued).

- FORTY-ONE YEARS IN INDIA.** By Lord ROBERTS. Extra crown 8vo, 10s. net.
- A HISTORY OF THE INDIAN MUTINY.** By T. RICE HOLMES, M.A. Second Edition. Extra crown 8vo, 12s. 6d.
- CAWNPORE.** By Sir GEO. OTTO TREVELYAN. Crown 8vo, 6s.
- THE CHRONICLES OF FROISSART.** Translated by Lord BERNERS. Edited by G. C. MACAULAY, M.A. In extra gilt binding, crown 8vo, 3s. 6d.
- A HISTORY OF THE UNIVERSITY OF OXFORD FROM THE EARLIEST TIMES TO THE YEAR 1530.** By Sir H. C. MAXWELL LYTE, M.A., F.S.A. Medium 8vo, 16s.
- A HISTORY OF ETON COLLEGE, 1440-1875.** By Sir H. C. MAXWELL LYTE, M.A. With Illustrations. Medium 8vo, 21s. net.

NATURAL HISTORY.

- CURIOSITIES OF NATURAL HISTORY.** By FRANCIS T. BUCKLAND. In Four Vols. Crown 8vo, 2s. 6d. each; cloth gilt, 3s. 6d. each.
- NATURAL HISTORY AND ANTIQUITIES OF SELBORNE.** By GILBERT WHITE. Edited by FRANK BUCKLAND. Crown 8vo, 6s.
- LIFE AND HER CHILDREN. Glimpses of Animal Life from the Amœba to the Insects.** By ARABELLA B. BUCKLEY. With upwards of 100 Illustrations. 18th Thousand. Crown 8vo, 6s.
- A YEAR WITH THE BIRDS.** By W. WARDE FOWLER. Illustrated. Crown 8vo, 3s. 6d.
- TALES OF THE BIRDS.** By W. WARDE FOWLER. Crown 8vo, Prize Edition, 2s. 6d.; cloth gilt, 3s. 6d.
- MORE TALES OF THE BIRDS.** By W. WARDE FOWLER. Crown 8vo, 3s. 6d.
- SUMMER STUDIES OF BIRDS AND BOOKS.** By W. WARDE FOWLER, M.A. Crown 8vo, 3s. 6d.
- INSECT LIFE.** By J.-H. FABRE. Translated. With Illustrations. Crown 8vo, 6s.
- THE NATURAL HISTORY OF AQUATIC INSECTS.** By L. C. MIALL, F.R.S. Crown 8vo, 3s. 6d.
- ROUND THE YEAR: Short Nature Studies.** By Prof. L. C. MIALL. Crown 8vo, 3s. 6d.

SELECTIONS from the GLOBE LIBRARY.

PRESENTATION EDITION.

- Bound in green leather limp, full gilt backs, and gilt edges. Crown 8vo, 5s. net each.
- BOSWELL'S LIFE OF JOHNSON.** Edited, with an Introduction, by MOWBRAY MORRIS.
- BURNS'S POEMS, SONGS, AND LETTERS.** Being the Complete Works of Robert Burns. Edited from the best printed and Manuscript Authorities, with Glossarial Index and Biographical Memoir, by ALEXANDER SMITH.
- THE WORKS OF GEOFFREY CHAUCER.** Edited by ALFRED W. POLLARD, H. FRANK HEATH, MARK H. LIDDELL, and W. S. MCCORMICK.
- THE POETICAL WORKS OF WILLIAM COWPER.** Edited, with Notes and Biographical Introduction, by W. BENJAM, B.D.
- THE POETICAL WORKS OF JOHN DRYDEN.** Edited, with a Memoir, Revised Texts, and Notes, by W. D. CHRISTIE, M.A.
- THE MISCELLANEOUS WORKS OF OLIVER GOLDSMITH.** With Biographical Introduction by Prof. MASSON.
- THE POETICAL WORKS OF JOHN MILTON.** With Introductions by Prof. MASSON.
- THE POETICAL WORKS OF ALEXANDER POPE.** Edited with Notes and Introductory Memoir, by Dr. A. W. WARD.
- POETICAL WORKS OF SIR WALTER SCOTT.** With a Biographical and Critical Memoir by F. T. PALGRAVE.
- THE WORKS OF WILLIAM SHAKESPEARE.** Edited by W. G. CLARK, M.A., and W. ALDIS WRIGHT, M.A.
- THE COMPLETE WORKS OF EDMUND SPENSER.** Edited, from the Original Editions and Manuscripts by R. MORRIS. With a Memoir by J. W. HALES, M.A.
- TENNYSON'S POETICAL WORKS.** Also in extra cloth, gilt edges, 4s. 6d.

THE GOLDEN TREASURY SERIES.

BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON),

YORK PLACE, BAKER STREET, W.

The Session 1905-6 will open on Thursday, October 5th. Students are requested to enter their names on Wednesday, October 4th. Lectures are given in all branches of General and Higher Education. Taken systematically, they form a connected and progressive course, but a single course in any subject may be attended.

Courses are held in preparation for all Examinations of the University of London in Arts and Science, for the Teachers' Diploma (London), and for the Teacher's Certificate (Cambridge), and also a Special Course of Scientific Instruction in Hygiene.

Six Laboratories are open to Students for Practical Work.

Two Entrance Scholarships will be offered for competition in June, 1906. The Early English Text Society's Prize will be awarded in June, 1906.

Students can reside in the College.

TRAINING DEPARTMENT FOR SECONDARY TEACHERS.

A Scholarship of the value of £20 for one year is offered for the Course of Secondary Training, beginning in October, 1905.

The Scholarship will be awarded to the best candidate holding a degree or equivalent in Arts or Science.

Applications should reach the HEAD OF THE TRAINING DEPARTMENT not later than September 18th.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss H. L. POWELL,

late Scholar of Newnham College (Hist. Tripos, Class I.), late Head Mistress of the Leeds Girls' High School.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge.

DATCHELOR TRAINING COLLEGE FOR TEACHERS,

CAMBERWELL GROVE, S.E.

Principal—Miss RIGG.

Mistress of Method—Miss CARPENTER.

Other Teachers and Lecturers.

Provides a practical course of Professional Training for Teachers in Secondary Schools, with abundant opportunity for class teaching in the DATCHELOR (420 pupils) and other Schools.

STUDENTS PREPARED FOR THE CAMBRIDGE TEACHERS' CERTIFICATE AND LONDON TEACHING DIPLOMA.

FREE STUDENTSHIP awarded annually to a University Graduate. Also

A KINDERGARTEN DIVISION preparing for the EXAMINATIONS OF THE NATIONAL FROEBEL UNION.

Also
A PREPARATORY DIVISION preparing for LONDON B.A. or CAMBRIDGE HIGHER LOCAL HONOURS.

Fees: £15 to £20 a year for Non-residents. A comfortable HALL OF RESIDENCE. Terms moderate.

Also Special Courses of Training for Teachers of Piano and Class Singing.

THE ANSTEY PHYSICAL TRAINING COLLEGE,

Near HALESOWEN, WORCESTERSHIRE.

For the Training of Women Teachers in Ling's Swedish System of Educational and Medical Gymnastics; also Hockey, Cricket, Net Ball, Lacrosse, Swimming, and Dancing.

This is the most complete course of Physical Training offered for women, combining, as it does, country life with the advantages of proximity to a large city, attendance at University for Physiology and Hygiene Lectures, and Practical Anatomy; excellent teaching practice, matches, &c. The College stands in its own very beautiful grounds, 16 acres in extent. Special attention is given to aesthetic gymnastics and relaxing movements. The training is adequate in all its branches, and is adapted to women's physique, so avoiding both mental and physical strain. Women of good birth and education are ensured an attractive vocation. The College has been established eight years. Non-professional students received for shorter periods. Full particulars from the PRINCIPAL.

S. T. MARY'S COLLEGE,

PADDINGTON, W.

TRAINING COLLEGE

(attached to High School and Kindergarten).

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

Rector: The Right Hon. Sir ROBERT BANNATYNE FINLAY, K.C., M.P., LL.D., M.D., &c.

Principal and Vice-Chancellor: Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.

Secretary of Senatus: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Winter Session** begins about the middle of October, and closes about the end of March; the **Summer Session** extends from the beginning of May to the end of July.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and degrees are conferred. There are many different avenues to the **Arts Degrees**, the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The widening of the Arts curriculum permits to a greater extent than formerly the combination of Arts, Science, Medical, Legal, or special studies; and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. **A Schoolmaster's Diploma** of two Grades is conferred, viz.: **A Secondary-School Diploma** for Masters of Arts with Honours, and for Graduates in Pure Science, and a **General Diploma** for those who have taken the Ordinary Degree of M.A., or the Degree of B.Sc. The Secondary-School Diploma is recognized by the English Board of Education as qualifying for Registration as a Secondary-School Teacher; the General Diploma is recognized by the English Board of Education and the Scotch Education Department as qualifying for employment in State-aided Schools. Education in Military subjects is given in connection with the Scheme of allotment of Army Commissions to graduates of the University. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering**, and in **Public Health**, and the Degree of B.Sc. in **Agriculture**. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in theological subjects, and in Hebrew, Arabic, and Syriac. The Degree of Bachelor of Divinity (B.D.) is conferred. The **Law** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and History, Roman Law, and Political Economy, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.), and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A Diploma in Tropical Medicine and Hygiene is conferred on Graduates in Medicine of the University. A University Certificate in **Tropical Diseases** is also conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 41 Professors, 49 Lecturers, and over 50 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £18,270. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, and Music, and they are admitted to graduation in Arts, Science, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped Extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 6d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.: Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers—Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each.

By authority of the Senatus,

L. J. GRANT, Secretary of Senatus.

EXAMINATION PAPERS

set at the Certificate, Lower Forms, Professional Preliminary, and Diploma Examinations held in 1904.

COUNTY COUNCIL OF THE WEST RIDING OF YORKSHIRE.

HIGHER EDUCATION.

In connexion with the organization and oversight of Higher Education in the West Riding of Yorkshire, the County Council propose to appoint a SUB-INSPECTOR, at a salary of £250 per annum, rising to a maximum of £350.

He will be concerned chiefly with Technical and Evening Schools, but also with Secondary Schools and Teachers' Courses.

Preference will be given to the holder of an University Degree giving evidence of an intimate knowledge of Mathematics and Modern Languages. Experience in connexion with Commercial Education will be advantageous.

Further particulars as to duties and terms of appointment, together with Forms of Application, may be obtained from the Education Department (Technical), County Hall, Wakefield, to which they must be returned not later than Wednesday, 23rd August, 1905.

CANVASSING WILL BE A DISQUALIFICATION.

THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS offers a full Course of Professional Training to Ladies who desire to become Teachers in Secondary Schools, or in Kindergartens. For all particulars as to qualifications for Entrance, Terms, Scholarships, Hall of Residence, &c., apply to the Principal, Miss ALICE WOODS, at the College, Salusbury Road, Brondesbury, N.W.

THE TEMPLE ENGLISH LITERATURE SERIES FOR SCHOOLS.

In view of the Education Department's New Regulations for the teaching of English Literature and Language in Secondary Schools, Messrs. Dent & Co. are publishing a large proportion of the books mentioned in the scheme, and they will add a certain number of the volumes each year according to the demands and needs of teachers. This Series, each book edited by scholars who are familiar with the special subjects entrusted to them, is prepared according to the lines laid down by the Education Department; Annotation is avoided wherever possible, and Notes are only given where they are absolutely essential. To attract the pupil's interest special attention has been paid to the *format* of the volumes, which has been made as delightful as possible, and far away from the dullness generally associated with a school book. The price in almost every case will be 1s. net, but it may be found necessary to slightly increase it in the case of a few volumes of more than average length.

WHAT THE PRESS SAYS:

STORIES FROM SPENSER'S FAIRY QUEENE.

"In prose as simple and appropriate, and as free from vain archaistic touches, as that of the Lambs in their 'Tales from Shakespeare,' Miss Royde-Smith has here produced the most gracious invitation to the Spenserian banquet that one could desire. . . . Especially would I commend the selection of stanzas from Spenser's poem."—WESTMINSTER GAZETTE.

SELECTIONS FROM SHAKESPEARE.

"The selections have been tried and read with classes of children and are very suitable for school use. The little volume is pleasant to look at and to handle, and the print is clear."—SCHOOL GUARDIAN.

COLERIDGE'S "ANCIENT MARINER."—GRAY'S "ELEGY."

"These are wonderfully well done. . . . Nothing but praise can be given to the introduction and notes. . . . Both booklets are a distinct addition to the series in which they appear."—SCHOOL WORLD.

STORIES FROM THE ODYSSEY.

"This version of the story of Ulysses, told in lucid English prose, makes good reading. . . . The book is adorned with remarkably beautiful illustrations, in most of which the Greek spirit of beauty is amply displayed."—SCHOOL WORLD.

ENGLISH LYRICAL POETRY.

"This new volume of the beautiful red and green Temple English Literature Series for Schools contains a fine selection of the most musical poems in the language, from Chaucer to the present day."

The Volumes marked with an asterisk are now ready:—

ENGLISH POETRY. Selected, with an Introduction and Notes, by ARTHUR BURRELL, M.A., Principal of Borough Road Training College, Isleworth. 1s. net per vol.

*I. Lyrical. II. English Heroic Verse. *III. Selections from Shakespeare.

ENGLISH BALLADS. Selected, with Introductions and Notes, by OLIPHANT SMEATON, M.A. 1s. net.

*MACAULAY'S LAYS OF ANCIENT ROME. With Introduction and Notes by OLIPHANT SMEATON, M.A. 1s. net.

*LONGFELLOW'S HIAWATHA. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s. net.

*STORIES FROM THE ODYSSEY. By R. J. G. MAYOR, F. S. MARVIN, and F. M. STAWELL. 1s. net.

*STORIES FROM THE ILIAD. By R. J. G. MAYOR, F. S. MARVIN, and F. M. STAWELL. 1s. net.

*STORIES FROM THE MORTE D'ARTHUR AND THE MABINOGION. By MISS BEATRICE CLAY. 1s. net.

*STORIES FROM SPENSER'S FAIRY QUEENE. By Miss N. G. ROYDE-SMITH. 1s. net.

LONGFELLOW'S EVANGELINE AND OTHER POEMS. Selected, with Introduction and Notes, by W. L. CARRIE, M.A. 1s. net.

*SCOTT'S TALISMAN. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s. net.

SCOTT'S LEGEND OF MONTROSE. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s. net.

*SOUTHEY'S LIFE OF NELSON. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s. net.

*GRAY'S ELEGY IN A COUNTRY CHURCHYARD. With an Introduction and Notes by E. BOLUS. Limp cloth, 3d. net.

*GOLDSMITH'S TRAVELLER AND THE DESERTED VILLAGE. With an Introduction and Notes by W. LANGBRIDGE. Limp cloth, 3d. net.

*COLERIDGE'S ANCIENT MARINER. With an Introduction and Notes by R. MCWILLIAM. Limp cloth, 3d. net.

WORDSWORTH'S SIMPLER POEMS. Limp cloth, 3d. net.

The last four texts will be issued separately in limp cloth at 3d. net per vol., or the four bound in one vol. 1s. net.

PRESCOTT. Selections by OLIPHANT SMEATON, M.A. 1s. net.

VOYAGES AND TRAVELS. Selected by HENRY WILLIAMS, M.A. 1s. net.

BURKE'S FRENCH REVOLUTION. With Introduction and Notes by Rev. Professor SMITH, D.D., LL.D. 1s. net.

THE SPECTATOR.—A Selection.

London: J. M. DENT & CO., 29 BEDFORD STREET, W.C.

W. & A. K. JOHNSTON'S NEW ATLAS.

Will be ready immediately. Price 5s. net.
Royal 4to, strongly bound in art vellum.

AN ATLAS OF COMMERCIAL GEOGRAPHY.

EDITED BY

R. FERGUSON SAVAGE, F.R.G.S.,

Author of "A New Geography of the World."

This new Atlas contains 46 Coloured Maps, 6 pages of Notes on the Maps, and complete Index. It has been prepared with the greatest possible care, and is probably the most complete School Atlas of its kind. A quotation from the Preface says:—"Indeed, it may reasonably be claimed that all the facts shown, whether directly commercial or indirectly so, and each item of information which may be inferred from an intelligent study of the Maps, ought to form part and parcel of what may be termed the permanent geographical stock-in-trade of any educated youth."

Prospectus, with Two Specimen Maps, Two pages of Letterpress, and full details, posted to any teacher on application.

A Specimen Copy sent free to Head Teachers for 3s.

AN
ENTIRELY
NEW AND
ORIGINAL
WORK.

The World of To-Day.

By A. R. HOPE-MONCRIEFF.

This great work, dealing with the Peoples and States of every Country in the World, will be published quarterly in six volumes. In this way the total cost of the work is not felt by the purchaser, as the payments are spread over many months. "The World of To-Day" is a new work which, within comparatively narrow compass, gives the essence of a multitude of books of travel and official reports, and in fact represents a *Comprehensive Survey of all the Countries of the World*.

In order to increase its usefulness, there is given a *Geographical and Commercial Survey*. The subjects covered by the *Lists, Tables, and Diagrams* are Area and Population, Races, Religions, Towns and their Populations, Climate, Mountains, Rivers, Lakes, Agriculture, Minerals, Manufactures, Money and Currency, Weights and Measures, Finance, Commerce, Shipping, Ports, Railways and Canals, Posts and Telegraphs, Army, Navy, and Administration, and Education. The most recent available sources have been used in preparing these surveys, and they cannot fail to be of the utmost *Practical Value*.

THOUSANDS OF ILLUSTRATIONS from scenes in every part of the World. BEAUTIFUL COLOURED PLATES IN EACH VOLUME. A DESCRIPTION OF THE WORLD, A DICTIONARY OF COMMERCE, AN ATLAS and GAZETTEER.

PUBLISHED IN 6 VOLS. Vols. I. and II. (Size 11 in. by 7½ in.) Now Ready. A Sample Volume will be forwarded for inspection POST FREE.

MESSRS. BELL'S EDUCATIONAL WORKS.

JUST PUBLISHED.

UNIFORM WITH PENDLEBURY'S SHILLING ARITHMETIC.

Small crown 8vo, 192 pages, price 1s. 6d.; or, with Answers, 2s.

A FIRST ALGEBRA.

BY W. M. BAKER, M.A.,

Head Master of the Military and Civil Department at Cheltenham College,

AND

A. A. BOURNE, M.A.,

Head Mathematical Master of the Classical Side at Cheltenham College.

Encouraged by the success of Messrs. Baker and Bourne's Elementary Algebra, and by the numerous requests for an Algebra for Beginners, Messrs. Bell have great pleasure in announcing the above by the same authors.

The range of this book, which includes Quadratic Equations and Fractional and Negative Indices, will be found specially suitable for the Local Examinations.

NOW READY. Crown 8vo, 292 pp., with or without Answers, 3s.

EXAMPLES IN ARITHMETIC.

WITH SOME NOTES ON METHOD.

By C. O. TUCKEY, M.A., Assistant Master at Charterhouse.

Books suitable for the College of Preceptors' Examinations, 1906.

SHAKESPEARE'S TEMPEST. Edited, with Introduction and Notes, by T. DUFF BARNETT, B.A. 2s. (*Bell's English Classics.*)

NOTES TO ABOVE WITHOUT THE TEXT. 1s.

NOTES ON SHAKESPEARE'S HENRY V. By T. DUFF BARNETT, B.A. 1s.

THE PARAPHRASE OF POETRY. A Practical Handbook on Paraphrasing, for use in Schools. By EDMUND CANDLER. With Introduction, Specimens of Paraphrases, and numerous Examples. 1s. 6d.

CÆSAR—DE BELLO GALLICO. Books I. and II. Edited, with Introduction, Notes, Exercises, and Vocabulary, by A. C. LIDDELL, M.A., Assistant Master at Westminster School. With numerous Illustrations, Maps, and Plans. 1s. 6d. each. (*Bell's Illustrated Classics.*)
TRANSLATION. 1s. (*Bell's Classical Translations.*)

VERGIL—ÆNEID. Book I. Edited, with Introduction, Notes, and Vocabulary, by the Rev. E. H. ESCOTT, M.A., Assistant Master at Dulwich College. 1s. 6d. (*Bell's Illustrated Classics.*)
TRANSLATION. 1s. (*Bell's Classical Translations.*)

HORACE—ODES. Book I. Edited, with Introduction, Notes, and Vocabulary, by C. G. BOTTING, B.A., Assistant Master at St. Paul's School. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics.*)
TRANSLATION. 1s. (*Bell's Classical Translations.*)

EUTROPIUS. Books I. and II. Edited, with Introduction, Notes, and Vocabulary, by J. G. SPENCER, B.A., Assistant Master at St. Paul's School. With numerous Illustrations and Map. 1s. 6d. (*Bell's Illustrated Classics.*)
TRANSLATION, 5s. (*Bohn's Classical Library.*)

EURIPIDES—ALCESTIS. Edited by E. H. BLAKENEY, M.A., Head Master of the King's School, Ely. With Introduction, Notes, Appendices and Vocabulary, and numerous Illustrations. 2s. (*Bell's Illustrated Classics.*)
TRANSLATION. 1s. (*Bell's Classical Translations.*)

XENOPHON—ANABASIS. Book II. Edited, with Introduction, Notes, and Vocabulary, by E. C. MARCHANT, M.A. With Illustrations and Map. 1s. 6d. (*Bell's Illustrated Classics.*)
TRANSLATION. 1s. (*Bell's Classical Translations.*)

The Educational Times.

The London Charlottenburg. THE Preliminary Report of the Departmental Committee on the Royal College of Science (including the Royal School of Mines) invites very careful consideration, less on account of its positive contents than on account of the general educational bearings of its subject. The Committee reserve their recommendations on "the present working" of the institution—the character of the instruction given and the possibilities of attracting more advanced students; but that will not occasion any anxiety in the minds of those that know "the admirable work accomplished by the Royal College of Science not only in training teachers, but in its general method of science teaching and in the promotion of research," which the Committee recognize in general terms. The important part of their reference was "to consider in what manner the staff, together with the buildings and appliances now in occupation or in course of construction, may be utilized to the fullest extent for the promotion of higher scientific studies in connexion with the work of existing or projected institutions for instruction of the same character in the Metropolis or elsewhere." The tendency to expansion and co-ordination was already strong, when there came "certain munificent offers of aid" towards the provision of "increased facilities for advanced instruction and research in science, especially in its application to industry." These offers, unhappily vague from first to last, gave a special trend to ideals, which has embarrassed the Committee and needs to be handled with promptitude and firmness.

The Committee agree that "the moment is *prima facie* opportune for a comprehensive scheme." Undoubtedly; but what sort of scheme? The Committee outline their own ideal. "We are impressed," they say, "by the fact that the most urgent need in scientific education is the establishment of a centre in which the specialization of the various branches of study and the equipment for the most advanced training and research should be such as ultimately to make it the chief technical school of the Empire." "Ultimately": Rome itself was not built in a day. Meantime, let us make a start, with the end steadily in view. "The existence of the Royal College of Science with the

Royal School of Mines and of the Central Technical College in close proximity points to South Kensington as the best position for such a centre as we contemplate." But, with all the existing accommodation, and with all the "far greater effect and economy" that would result from possible arrangements between the Government and the City and Guilds Institute, the buildings and equipment "are quite inadequate for existing requirements and still more for the purpose in view." Yet a glint of relief is discernible—somewhat at the expense of the central importance of South Kensington—in the opinion that "it is quite compatible with an effective realization of the scheme that separate departments might be conducted in detached colleges." Then, "it is of the first importance that there should be no divorce between teaching and research in technology on the one hand and in pure science on the other," though "it may be necessary hereafter to limit the instruction to the higher branches" of both subjects. The educational and financial control should not—practically cannot—be vested entirely in the Government: the Committee look to "the hearty union and co-operation of several independent bodies in a common enterprise"—a representative Council.

The conditions of success are numerous and complicated. The following is the Committee's enumeration:—

1. The gift of a large capital sum (say not less than £100,000) for buildings and initial equipment.
2. The gift of a considerable additional site (say not less than 4 acres) at South Kensington.
3. The willingness of the Board of Education to allow their College at South Kensington to be brought into a scheme of common government and administration.
4. The similar willingness of the City and Guilds of London Institute in respect of their College at South Kensington.
5. The continuance of the Government contribution, including the necessary provision for the maintenance of the new laboratories and other buildings of the Royal College of Science, now approaching completion.
6. The continuance of the support given by the Corporation and Livery Companies of the City of London to the Central Technical College.
7. The provision (in the proposed College of Applied Science at South Kensington) of instruction in certain departments of Engineering either by new foundation or by transfer and enlargement of part of the work of some existing college or colleges (*e.g.*, University College or King's College).
8. The co-operation of the University of London.
9. The assurance of a sufficient maintenance fund.

The initial capital sum is surely forthcoming after Lord Rosebery's rousing of expectations. The Board of Education has affirmed its willingness to allow the Royal College of Science to go into the scheme, and Lord Londonderry has

broadly hinted at such an increased grant to it as the Committee desiderate. The City and Guilds Institute is understood to be favourable; the City and the Livery Companies will scarcely hang back; and the University is sure to "co-operate" as best it may. Indeed, there seems little probability that the conditions of success will fail.

But what will be the significance of their success? A grand rift in the co-ordination of the higher educational institutions, an ominous divergence from the policy of concentration, a grievous maiming of the University of London. The University is charged by statute with the higher education of London. There is no question about its competence to fulfil this duty. The unification and extension of the agencies and means of instruction is steadily proceeding: University College is, or all but is, incorporated in the University by Act of Parliament; King's College is understood to be getting ready for a like result. Is this, then, a time to choose for diverting the Royal College of Science and the Central Technical College to another alliance? That is to say, is it statesmanlike to institute a new all-embracing Technical College under circumstances that will inevitably assure it of a monopoly of the higher technical teaching, and the controlling influence upon the lower technical teaching, in the Metropolis, and so maim the University in one of its most important members? Elsewhere, too, the trend is in the opposite direction: the Manchester School of Technology is working into the closest relations with the University, the Massachusetts Institute of Technology has declared for affiliation with Harvard University, and Germany itself is beginning to see that much is lost by the dissociation of technical from academic training. In plain terms, the scheme is retrograde. The University must remain the head and centre of all the institutions of higher learning, and all purposes of expansion should be moulded to consonance with the amplest natural development of the University. Any such large scheme as this under an independent control cannot, except nominally, have the "co-operation" of the University: its essential effect must be to paralyze the University on one side. Moreover, if all the expected results were operated through the agency of the University, there would certainly be a very considerable saving of expenditure.

NOTES.

"WHAT is needed," says Sir William Collins, in reference to the report of the Departmental Committee on the proposed new College of Science—"what is wanted is some presiding genius, some master mind, who will do for London what Humboldt did in the case of Berlin University." But Humboldt was not asked to make bricks without straw: he was provided with a capacious building ready made and funds enough for the scheme, which, by the way, was a vastly simpler affair than the co-ordination of London institutions of the higher learning. Moreover, the Charlottenburg College of Applied Science did not start with a small and dubious fraction of the necessary funds: it was provided with an initial expenditure of £500,000, and a yearly sum of £55,000. The co-ordination of technological teaching within its own sphere and in relation to the University

of London would prove no very difficult task were the "presiding genius" furnished with the wherewithal to do his work. But, if our wealthy citizens, notwithstanding the shaming liberality of American college benefactors as well as of the German States, fail to respond to their obvious duty, and if the Government cannot be approached without fear of an official scare, then we must judge our "presiding genius" with great leniency.

WE have already recorded Mr. Carnegie's provision of £2,000,000 for teachers of advanced age or reduced energy in non-State institutions of the higher learning in America, and the splendid and successful effort—if, indeed, it was so much as an effort—of Harvard to raise £500,000 merely "to increase" the existing salaries of her professorate. Yet Mr. Chamberlain, with all his Birmingham University achievement and aspirations, and with his conviction that "the highest education has been seriously neglected in this country," has just expressed a fear that, if the National Physical Laboratory were to ask a special grant, and if the Universities were to come forward one after another with a like request, the Treasury would get scared; and so he modestly suggests a joint application for a lump sum, say a modest £100,000. Why, only a couple of months ago we recorded that the Ontario Government, which scarcely ranks with the Government of the British Empire, had granted £100,000 towards the proposed new buildings of the University of Toronto, and that Mr. Carnegie had offered £100,000 to the University of Virginia on the occasion of the installation of Dr. Alderman, the new President. We are, of course, very well aware of the abnormal difficulties of the Chancellor of the Exchequer; but "some presiding genius" of policy, which determines his expenditure, should not find much difficulty in bringing him relief enough to satisfy all the reasonable needs of all our educational institutions. We commend to attention a timely article on "The American Professor and his Salary" by Mr. Herbert W. Horwill, in the July number of the enterprising *University Review*.

MR. JOHN D. ROCKEFELLER'S munificent gift of 10,000,000 dollars (£2,000,000) to the General Educational Board of the United States is not his first contribution to that important body. His first gift—1,000,000 dollars (£200,000)—was devoted exclusively to the furtherance of education in the Southern States. The present gift is confined to no particular locality in the States, but is restricted to higher education, being designed especially for colleges as distinguished from the great universities, although these are eligible to share. There is to be no denominational or sectarian discrimination; no part of the income, however, can be devoted to specifically theological instruction. The fund may be used for endowment, or building, or satisfaction of debts, or payment of current expenses; but the objects must always give promise of permanent utility. It is understood that Mr. Rockefeller's further beneficence will depend upon the results that may be achieved. We agree with the *Daily Express* that here is another "shining example for our British millionaires."

THE reception of President Murray Butler, of Columbia University, by our educationists has been of the most grati-

fyng character. Academically, Oxford and Manchester have honoured themselves by inscribing his name on their graduate rolls under their doctor's degrees. Socially, he has been fêted by distinguished companies of educationists: he was entertained at dinner by the pick of our active educational workers, the Lord President of the Board of Education in the chair; and he was the centre of attraction at Mr. and Mrs. Alfred Mosely's garden party at the Botanical Gardens. His brief speeches both in London and in Manchester have impressed the distinctive characteristics of the man, and touched the most generous chords of educational aspiration. His visit has not only soldered personal acquaintanceships, but also stirred international interest, and knitted more firmly the educational bond—and perhaps deeper bonds—between this country and America.

THE Report of the City and Guilds of London Institute for the past year exhibits a remarkable development. The number of students during 1904 was 409, as against 304 in the year preceding; and the Institute obtained eight out of the eleven degrees in Engineering conferred at the last degree examination of internal students of the University. The increase of students has necessitated an increase of the teaching staff, and an extension of buildings at Finsbury is already going forward. The Technological Department is rising in importance under the pressure of demand for instruction in the application of science and art to specific trades and industries. The Council specify two directions in which improvements might be effected in the technical education of artisans—first, in the preparation of students before entering upon their courses of evening technical instruction; and, second, in the standard of qualifications of the teachers nominated by Local Authorities to give such instruction. This opinion lends strong emphasis to what may be regarded as a general complaint. It was only last month that we called attention to a similar weakness at another important technical institution. We trust, with Sir John Wolfe Barry, that the scheme of “confederation or co-ordination” of the Institute with other institutions, now in preparation, will, “when it is completely developed, result in the establishment of an educational system at South Kensington second to none in the world.”

WRITING in *Indian Education* (June), Prof. Sadler reports that “both in England and in Wales, not to speak of Ireland, the educational barometer points to storm.” “There are now in England and Wales six separate and potent causes of our educational unrest.” First, “the social movement”; for “economic prosperity has produced an upper artisan class,” which “requires a type of education on a level far superior to that provided in the old-fashioned public elementary school,” and “the clerk population will join hands with them in their demand.” Second, “the vehemence of religious conviction”—Roman Catholic, Anglican, and anti-theological. Third, “the conflict of political ideas”—commercial Imperialism *v.* humanitarian cosmopolitan Liberalism, Church *v.* State, Conservative farmers *v.* Progressive reformers. Fourth, “the growing discontent with the duller forms of the old tradition of higher secondary education”: “huge masses of new know-

ledge have come into the world during the past fifty years, and no Vittorino da Feltre has forged a new educational instrument out of these intractable materials.” Fifth, “the slow growth of a ‘national’ ideal of public education.” Sixth, “economic” conditions: “good education is necessarily a very costly thing,” and, for all the talk of its being “free,” “somebody must pay for it”—but few like to pay, and many can't. Each of the points offers substantial food for diligent mastication.

THE Public Health Congress, held in London (July 19 to 25) under the auspices of the Royal Institute of Public Health, devoted two of its eight sections to questions more particularly concerning the school life and physique of children, and perhaps no sections attracted more vivid interest. In Section B, under the presidency of Mr. J. H. Yoxall, M.P., considerable prominence was given to the municipal side of the questions: for example, to the municipal administration of the Education Acts, defective children, underfed children, and the provision and application of physical exercises in various forms. Section C was devoted to Child Study and School Hygiene, with a presidential address from Lord Stanley of Alderley, sixteen papers, and three discussions, to say nothing of practical illustrations. The stress laid upon these subjects shows the efficiency of the labours of those that have been long urging them upon public and professional attention. In other departments were discussed important matters throughout the whole range of sanitary and hygienic interests. The garden party in the delightful gardens of Russell Square was remarkable for the interest taken in the exhibition of physical exercises by the children of the Bellenden Road School, and in the demonstrations of movement by members of the physical training classes, Northfield, Stamford Hill. The report of the proceedings will form a comprehensive manual—a basis for further progress. The Congress will have no doubt given an immense impetus to the popular appreciation of the subjects and methods discussed, and strengthened the hands of the promoters of reform.

WE do not interfere between Prof. Henry Jones and Sir Marchant Williams on the questions of immediate policy as to government and administration of the University of Wales, and we leave the Bangor people to tackle the realization of Prof. Jones's hope that their University College will one day be elevated to university rank. But we cordially agree with his contention that the local colleges should grow great “according to their own ideals,” and should set “an adequate ideal” before them. The same principle, indeed, is applicable throughout the whole of our educational system; and, however much we may gather from the experience and the ideals of other nations and foreign thinkers, we must transmute and transfuse it all into harmony with our own processes of development. The object is natural growth, not mere increase by agglomeration, or the transformation of the native plant into the semblance of an exotic. Prof. Jones also did good service in telling his hearers with some emphasis that “they would never have a great university unless they got great teachers and gave them full freedom of teaching and research.”

SUMMARY OF THE MONTH.

THE Scottish Education Bill, says the *Educational News*, was "done to death at the threshold of the Committee stage on July 14. It is probably impossible for a journal which speaks for teachers to express in adequate terms the thoughts which possess teachers at this wanton destruction of their fondest hopes." The destroyer was Mr. Caldwell's amendment, to maintain the existing system of Parish and Burgh School Boards.

To a question by Mr. McKenna, in reference to the East Ham education difficulty, Mr. Balfour replied (July 18):

As I informed the honourable gentleman on June 5, I have no promise of legislation. I duly received the deputation of which I spoke in my answer of that date. The deputation laid before me a very elaborate scheme of relief, and that scheme, in accordance with my promise to the deputation, is being carefully considered by the Departments concerned. I am very anxious to find some means of meeting the difficulty; but great care is required for so delicate and difficult a problem, and time must be allowed before a detailed or final answer can be given.

SIR WILLIAM ANSON, in reply to a question put by Mr. Brynmor Jones, M.P., in the House of Commons, on the subject of the resignation by certain of H.M. Inspectors of their membership of the Court of the University of Wales, said:

The resignations referred to were effected in consequence of instructions from the Board given during the first week in June. The Board are of opinion that it is undesirable that His Majesty's Inspectors should take part in public meetings or as members of local bodies in matters of local controversy. I am aware of the circumstances referred to by the hon. member, and regret any inconvenience which may have been occasioned to the bodies who were represented by the Inspectors in question. But, having regard to the contentious character of the matters which were coming up for discussion at the Court, the Board consider that the instructions given were necessary. No correspondence on the subject passed between the Board and any other member of the Court.

A NATIONAL LEAGUE FOR PHYSICAL EDUCATION AND IMPROVEMENT was constituted at a meeting at the Mansion House (June 28) under the presidency of the Lord Mayor. A resolution was passed recommending that all the agencies at present engaged in isolated work for physical improvement should have the opportunity of combining. The new League thus proposes in no way to supplant existing agencies, but to federate them. The Bishop of Ripon, the Lord Chief Justice, and Sir William Broadbent were the chief speakers.

A CONGRESS of British University Students met at University College, London, at the end of last month. The delegates were received by Lord Reay, President of University College, Principal Sir A. W. Rücker, and Principal Gregory Foster. Sir Arthur Rücker, in his speech of welcome, regretted that neither Oxford nor Cambridge was represented. Lord Reay expressed pleasure that the University Conferences were about to issue a "British Students' Song Book." He was also at one with the delegates on the matter of the State support of universities being good for education. To succeed properly the universities must become international. Mr. A. C. Ward (Leeds) presented the report of a Sub-Committee appointed to consider the question of residential halls, both at home and abroad. The report was adopted, and another Committee was formed for the purpose of ascertaining what could be done to better the existing circumstances. The constitution, after discussion, was altered so as to include the universities of Ireland, which had for the first time sent delegates, with a view to the Congress becoming an annual British gathering.

ON the occasion of the triennial *conversazione* of University College, London (June 28), the whole of the laboratories and rooms were thrown open to the visitors. In the same room as the botanical exhibits were specimens of the tsetse fly, which imparts sleeping sickness, together with specimens of blood from lower animals inoculated with the disease. In the Physics Lecture Theatre the structure of atoms was illustrated by floating magnets moving under the action of magnetic forces. In the Chemical Department Sir William Ramsay gave demonstrations of luminescence produced by the emanations of radio-

active substances and of spectra of rare gases. One of the most interesting sections was that of Applied Mathematics, where Prof. Karl Pearson showed a collection of calculators and other instruments of precision, and the astronomical equipment recently purchased by the Drapers' Company. Also under a grant from the Drapers' Company is the Biometric Laboratory, where the Professor and his assistants make research in variation among lower animals and in heredity.

THE London County Council has adopted (July 4) the following scale of salaries for teachers in elementary schools, provided and non-provided alike, the first figure showing the commencing salary, the second that to which the teacher will rise by annual increments:—

	£	£
Trained certificated (men) teachers	100	200
Trained certificated (women) teachers ...	90	150
Untrained certificated men	80	200
Untrained certificated women	75	150
Head assistant teachers (men)		230
Head assistant teachers (women)		170
Head masters (schools under 200)		210
Head masters (schools under 400)	200	300
Head masters (schools over 400)	300	400
Head mistresses (under 200)		160
Head mistresses (under 400)	150	225
Head mistresses (over 400)	225	300

There will be a promotion list of teachers qualified to be head and assistant head teachers, and, in case managers of the old voluntary schools refuse to nominate from this list, a lower salary will be paid. The new scale will increase the cost of salaries, and, when it takes full effect in 1909-10, the extra annual amount paid in salaries will be £215,000—a yearly increase of £69,000 in non-provided schools and £146,000 in Council schools.

The following recommendation of the Education Committee was adopted by a majority of four to one:—

That, at each of the secondary schools directly administered by the Council, Scriptural instruction be given on strictly undenominational lines; that no teacher be required to take part in such instruction; and that the parent of any child be allowed to withdraw that child from this instruction on request in writing.

ADDRESSING the Executive of the National Union of Teachers (July 22), President Murray Butler, of Columbia University, drew attention to the importance of co-ordinating all grades of education, so that the various sections should work together as an integer. He deprecated the practice of fixing and determining the conditions of the lower-grade schools by arbitrary requirements for admission to higher schools, and emphasized the opinion that the primary school should be set free to do the best it could for children under its care. A thing which touched the heart of every American visitor to our shores was our intense nationalism, a spirit which could only be maintained by bringing every boy and girl into touch with those moving ideals which are the essence of our national life. The educationist, so far from being a faddist concerning himself with unrealities, was dealing with the only things which were both real and lasting. In illustration, he pointed out that, among the ancients, we honoured the memory of men of ideas, not men of wealth. He sketched the work being done in America by the National Education Association, and said the importance of education was demonstrated and a public opinion in favour of education created by calling together great gatherings of thousands of teachers from elementary and secondary schools, colleges, and universities.

A MEETING was held at the House of Commons (July 4), Mr. R. B. Haldane, K.C., M.P., in the chair, to advocate an additional State grant to the National Physical Laboratory, Teddington. Dr. Glazebrook said £30,000 was required to put the equipment on a satisfactory basis. Towards that the Treasury had given £5,000 and raised the annual grant from £4,000 to £6,000, but that assistance was quite insufficient.

Mr. Chamberlain said he was convinced that, if they looked on the whole matter as an investment, it was from the highest education that they would get the largest return. He observed that those interested in the National Physical Laboratory put forward two methods by which science could be helped. The first was by educating young people so that they might apply most readily the latest results of scientific discovery to their work. The second was by testing in a scientific manner the products of industry and by carrying out experi-

ments and undertaking inquiries designed to obtain accurate standards, to elucidate difficult points of manufacture, or to develop new processes. This institution claimed to be concerned with the second method, and that was the differentiation which they made between such a university as that in which he was chiefly interested and the National Physical Laboratory. But he would like to ask one or two questions. Were not all the modern universities doing the same work as this particular institution? In what way was this institution really distinct? He did not know the exact amount received by other institutions, but certainly Birmingham did not obtain £6,000 a year from the State, and it had not had a single farthing from the Government in aid of buildings. He did not think the Universities of Manchester, Liverpool, Leeds, and Sheffield had had such aid either. Birmingham was spending nearly £450,000, collected privately, on buildings which, when completed, would be very large and efficient, and would meet all modern requirements. In consequence of that, Birmingham, with others, was going to the Government for more money. The question was whether they were each to apply separately, and thereby frighten the Chancellor of the Exchequer, or whether they were to put their forces together and ask as a whole for a largely increased grant, and leave for consideration afterwards how that grant should be divided among different institutions. Was it wise, he asked, to operate alone? Could they not do much more if they all went to the Government together? He readily agreed that the State was giving too little to the highest form of education, and he thought it was quite right that while the universities were willing to do everything possible for themselves they should have some further assistance from the State.

THE programme of the Oxford University Extension meeting (August 4-28) is designed to illustrate the history, literature, fine art, and architecture of the period of the Renaissance and the Reformation, and there will also be a special section devoted to natural science and social economics, and special classes in the theory and practice of teaching, and in the English language; the last designed primarily for foreigners. The meeting will be divided into two parts for the convenience of such as cannot stay the whole time. The inaugural meeting is to be held under the presidency of the Vice-Chancellor, and an address is to be given by Prof. James Stuart, of Cambridge, the real pioneer of University Extension. Among the lecturers are the Dean of Christ Church, the Warden of Keble, the President of Corpus, the Earl of Crewe, the Earl of Lytton, Mr. George Wyndham, M.P., Father Gasquet, Dr. Horton, Dr. Barry, Sir Richard Temple, Prof. Walter Raleigh, Churton Collins, Flinders Petrie, W. J. Courthope, F. S. Boas, W. F. R. Weldon, Francis Gotch, Sherrington, and many more. Full particulars can be obtained from the Secretary to the University Extension Delegacy, Oxford.

At an Extraordinary General Meeting of the Incorporated Association of Assistant Mistresses, held at the College of Preceptors (July 1), the President, Miss Lewis, Wycombe Abbey School, in the chair, the proposals for a College of Secondary Teachers were discussed, and the following resolutions were passed:—

1. That the A.A.M. approves in principle of a Federation of Associations of Secondary Teachers.
2. That the A.A.M. is willing to join the proposed College of Secondary Teachers, or such other Federal Union of Secondary Teachers as may be established in lieu of the proposed College, always provided that conditions satisfactory to the A.A.M. Committee are obtained.
3. That the A.A.M. would accept, as academic qualification for future members of the College of Secondary Teachers, examinations of the standard of those which now admit to membership of the College of Preceptors.

The Secretary briefly reported the proceedings of the Conference on Salaries in London Secondary Schools, held on the initiative of the London Branch of the Assistant Masters' Association between delegates of five associations representing secondary assistant teachers. The Conference had sent a deputation to the Higher Education Sub-Committee of the London County Council, and had recommended that a qualified woman teacher in a secondary school should receive an initial salary of not less than £120, rising to at least £200. This maximum was slightly higher than that asked for in the A.A.M. Salary Scheme. But the cost of living in London made it necessary that salaries there should be higher than the average for the whole country.

THE Code of Regulations for Public Elementary Schools for 1905, issued as a Blue Book (Cd. 2579), contains a number of important changes. The age up to which attendance at school may count for grant has been extended in accordance with the

provisions of the Act of 1902. The new Regulations as to higher elementary schools recognize instruction of two kinds—a development of the work of the elementary school, and an introduction of work of a special and practical character; and the Board of Education say that it would seem undesirable to remove the scholar from the general teaching of the elementary school to the more specialized teaching of the higher elementary school before the age of twelve; and the course should not, except in special cases, be longer than three years. The new Regulations, therefore, provide accordingly, and admit of attendance for a fourth year in special cases. The arrangements permit the development of a system of higher elementary education of various types, and, as the curriculum of such a school as it is now desired to encourage will be, on the whole, less specialized than that hitherto imposed on higher elementary schools, it is hoped that the buildings, equipment, and teaching staff required will not be on the expensive scale rendered inevitable by the old Regulations. Thus the grant, which is reduced as compared with that hitherto provided, will, the Board of Education say, probably bear much the same proportion as before to the requisite scale of expenditure. The determination of the curricula for the new schools will be left to local consideration in the first instance, but in each case the curriculum must be approved by the Board of Education as a condition of the recognition of the school as a higher elementary school. In the first Schedule a new paragraph has been added which will bring in other teachers than those now recognized as certificated teachers. It refers to those that “have qualifications and previous experience which, in the opinion of the Board, are substantially equivalent, for the purpose of teaching in public elementary schools, to those represented by the Board's Certificate.”

A CURIOUS history of this last-mentioned change is given by a correspondent of the *Times*, who says that “it is consideration for Imperial unity which has been chiefly responsible for bringing the new rule into existence.” He writes:

Some months ago application was made on behalf of a Canadian teacher for employment under the Education Authority for London, the County Council. This lady had been trained in McGill Normal School, the training college connected with McGill University, Montreal, which supplies the teaching staffs of the Protestant schools in the Province of Quebec. She had passed her examinations with high honours, and won diplomas entitling her to teach in high as well as elementary schools. When, after teaching for some time in Canada, she went with her family to the United States, the value of her diplomas was immediately recognized. The Education Department of the State of New Jersey issued a certificate enabling her to teach on exactly the same footing as if she had been trained in that State. When, however—again owing to family reasons—she had returned to British soil and wished to practise her profession in the chief city of the Empire to which she belonged, she was at once faced with apparently insuperable difficulties. The London County Council declines to give an appointment on its staff to any teacher who cannot produce a Certificate from the Board of Education; and the Board of Education could not, under the Code hitherto in force, grant a Certificate to a teacher whose qualifications, no matter how high they might be, were derived from a training college in another part of the Empire. The best she could do, it appeared, was to take a situation as an “uncertificated teacher” in some school where the managers were less particular in such matters than the County Council, and, after serving a full year in that inferior capacity, to come up and sit for the Board of Education's Certificate Examination as if she were a novice. As a matter of fact, she obtained casual work in Council schools in the humble position of a “supply” teacher. The absurdity of the situation was obvious, and, happily, the Board of Education recognized the injustice of the Code's operation in such a case. The new subsection of Schedule I. has been provided as the remedy. Every such case will now be considered on its merits, and, if the applicant proves to have qualifications equal to those represented by diplomas obtained in this country, a Certificate will no doubt be granted.

THE Regulations for Evening Schools, Technical Institutions, and Schools of Art and Art Classes for the period from August 1, 1905, to July 31, 1906, have also been issued by the Board of Education (Cd. 2574). Section 33 has been extended so as to afford direct encouragement to the establishment of organized courses for commercial, as well as for technical, studies. Section 42, by which provision was made last year for aid to detached technical classes that had previously received grants as science and art day classes recognized under other regulations of the Board, has now been extended so as to include with such classes others eligible for grants under these regula-

tions intended for such as may still be devoting a large part of their time to preparation for their work in life. The change which has been made in Section 51, relating to grants to schools of art, will facilitate in certain places the co-ordination of art instruction. Physical training has now been included in the field for which aid is given under the Regulations.

THE Education Committee of the London Chamber of Commerce has awarded its second "Higher Commercial Education Certificate" to Mr. B. C. Wallis for eleven examination successes, seven of these with distinction. Mr. Wallis, who is the Head Master of the Civil Service and Commercial Department at the Cusack Institute, Moorfields, E.C., was one of the first "Graduates in Commerce" of London University last year, and has also gained the London Chamber of Commerce Teacher's Diploma in Banking and Currency, Machinery, English, Drawing, Political Economy, and Mathematics—four of these "with distinction."

UNIVERSITIES AND COLLEGES.

THE 400th anniversary of the foundation of Cambridge. Christ's College was celebrated (July 4) by over 300 members. The college was founded by the Lady Margaret, Countess of Richmond and Derby, mother of King Henry VII., in 1505, when there was merged in it an earlier college founded by Henry VI. under the name of God's House; but this is the first time that any anniversary has been kept. The Westminster choir, which took part in the commemoration service, also sang during dinner all the songs of "Comus" set by Lawes for the masque in 1634; Sir Frederick Bridge, who recently discovered Lawes's manuscript, giving for the first time the true version. The Dean of Westminster made a gift of a bust of the foundress, modelled on the bust in Westminster Abbey; and some letters of the foundress, lent by the Dean of Westminster, were shown in the library. A fund has been started for some permanent improvement or enlargement of the buildings.

UNDER the benefaction made by Mr. Martin White London. for the promotion of the study of sociology, three special courses have been arranged for next year—forty lectures and twenty seminar classes by Dr. E. A. Westermarck, Ph.D., on "The Comparative Study of Institutions"; a short course of ten lectures introductory to the study of Institutions; and a course of twenty lectures and seminar classes on Comparative Psychology, by Mr. L. T. Hobhouse, M.A.; and a systematic course of thirty lectures and seminar classes on Ethnology, by Dr. A. C. Haddon, Sc.D., M.A., F.R.S. Mr. Martin White has placed in the hands of the Senate a special donation of £200 for the establishment of two bursaries and a studentship in Sociology. The bursaries will be of the value of £25 each for two years, and will be awarded during the present year respectively to a student who has passed the Internal Examination in Science (Economics) and to a student who has passed the Intermediate Examination in Arts, with the intention of taking the sociological course for the degree. The studentship will be of the value of £100, and will be open in November of next year to students who have taken sociology at either the B.Sc. (Economics) Examination or the B.A. Honours Examination, and who intend to pursue a course of study in this subject. A complete scheme of lectures in Sociology and cognate subjects will be published at a later date, when it is hoped to include a special course of lectures on a non-European civilization.

COMMISSIONS having now been definitely assigned Manchester. to the University, the Court, in the face of some opposition, decided (July 11) to establish at once a scheme for providing instruction in military history and strategy, military tactics, and military topography.

President Murray Butler, expressing his appreciation of the honour of enrolment as a member of the vigorous and progressive Manchester University, remarked that the urban university of the type to which Manchester University belonged was a new creation. It came into existence with the growth of modern city populations. Nowhere was a university more necessary or valuable than in the centre of a vastly populated area, and he conceived that such a university should have chiefly two great aims to serve. The first was to keep alive the fires of scholarship, and to make plain that this vast material expansion added to the value of the old truths and the controlling ideals

which had lifted mankind out of his barbarism to the civilization of which we were so justly proud. Next it seemed to him to be the function of an urban university to show the urban community and those who were dependent upon it how their interests, their health, their growth, their education, and their prosperity might best be increased and furthered by the application of scientific truth and method to the needs of the moment.

LEEDS. HUDDERSFIELD TECHNICAL COLLEGE has been affiliated with the University of Leeds, as from October 1 next, "for the purpose of having attendance upon classes in the College recognized as exempting from attendance upon classes in the University in the first year of the courses required for the degrees of B.A., B.Sc. (including Engineering), M.B., and B.S."

A congregation of the University assembled (June 27) at the Town Hall for the conferment of degrees—the first occasion of the kind since the establishment of the University. The Vice-Chancellor (Dr. N. Bodington) presided, and was accompanied by the Pro-Chancellor (Mr. A. G. Lupton). Dr. Bodington said the charter and statutes of the University enabled them to incorporate in the University old associates in the Yorkshire College and also other students who, after a course of study, had qualified for degrees in the Victoria and other universities. The congregation, therefore, welcomed a large number of old students of the Yorkshire College, who were showing their loyalty to the University by qualifying for membership of Convocation.

SHEFFIELD. AT the first meeting of the Court (June 26), 15 members were elected to the Council, and several representatives of educational institutions of the city and district were elected on the Court, namely, the Head Master of King Edward VII. School, the Principal of the Central Secondary School, the Head Mistress of Sheffield High School for Girls, the Head Masters of Rotherham Grammar School, King Edward's School, East Retford Grammar School, Chesterfield, and St. Cuthbert's College, Worksop; and the Principal of Sheffield Training College. It is hoped that by-and-by other head masters and head mistresses will be elected on the Court, so as to bring the schools into close touch with the University.

The University was opened (July 12) by the King. Its immediate parent was the University College of Sheffield, which has stood in the same relation to the University as Mason's College, Birmingham, stood to the University of Birmingham, and Owens College, Manchester, to the Victoria University of Manchester. The University College of Sheffield was created by a Royal Charter in 1897, and was the result of the fusion of the Sheffield School of Medicine, the Firth College, and the Sheffield Technical School. The Sheffield School of Medicine was founded in 1828. Firth College was founded in 1879 by Mr. Mark Firth at a cost of nearly £30,000. The Sheffield Technical School was opened as a branch of Firth College in 1884. University College has had throughout its career as its President the Duke of Norfolk, who is the present Chancellor of the new University. The Principal of the College during the whole time of its existence was the retiring Vice-Chancellor of the University, Dr. W. M. Hicks.

BANGOR. THE twenty-first anniversary of the North Wales University College was celebrated on June 27. A movement is now in progress for providing the College with new buildings at an estimated cost of £175,000, of which £30,000 has been already promised. The site has been given by the Corporation, who now presented the deed of gift to Lord Kenyon, President of the College. Lord Kenyon expressed the hope that the rest of Wales would follow the liberality shown at Bangor, and that there would be no more need for the best professors of the College to leave for more lucrative positions in other parts of the United Kingdom. Mr. Lloyd-George, M.P., dwelt upon the greater amount of interest taken in education by the Welsh working classes than by the same classes in England. Speeches were also delivered by Sir Isambard Owen, Principal Reichel, and Prof. Henry Jones (Glasgow).

CARDIFF. THE PRINCE OF WALES, as Chancellor of the University of Wales, laid the foundation stone of the new buildings of the University College.

The *Welsh Leader* says: The Cardiff gift of £40,000 to the South Wales University College appears an enormous sum

when compared with the modest £15,000 gift of Bangor. And yet, as Principal Reichel very properly observed, the Bangor gift is, after all, incomparably greater than that of Cardiff. The value of the present made by the Bangor City Council is equal to a subscription of 30s. from every inhabitant—man, woman, and child—in the borough. If Cardiff had but given in proportion to its rateable value on a scale corresponding to that of Bangor, its gift would have been, not £40,000, but £300,000. In other words, were the generosity of Cardiff on a par with that of Bangor, it would have presented the South Wales University College not merely with a site, but with a complete pile of buildings.

At an agricultural conference held in the end of June Mr. Ailwyn Fellowes, President of the Board of Agriculture, promised £800 a year to the College, and £200 a year towards the College Farm (200 acres), which was then "opened"; and he expressed a hope that an increase would be eventually made in better times. It was decided to ask the County Councils to appoint representatives to consider the details of a scheme of organization for the Agricultural Department at a conference to be held in October. The following resolution was passed:—"That this Conference desires to record its warm gratitude to the Board of Agriculture for the invaluable aid it has rendered to agricultural education in the counties affiliated to the University College of Wales at Aberystwyth. The Conference is of opinion that the results already attained, and the response to the help and guidance received from the Board by the Local Authorities out of their limited resources, constitute a strong claim for largely increased grants from the central Government towards agricultural education, which is a matter of the highest importance in the interests of the kingdom and the Empire at large."

At the summer graduation ceremony Principal Aberdeen Lang commented on the fact that the number of matriculated students did not increase in the ratio that was desirable in view of the increase of population. While he expressed cordial approval of the movement that had led so many women to enter the universities, he deplored the fact that the number of male students was decreasing. He urged that the area of university service was wider than that covered by the professions; that its area was, or ought to be, co-extensive with the life of the nation. It would be an immense benefit to the whole morale of citizenship, and certainly no loss to the commerce and industry of the nation, if more direct encouragement were given to young men to complete the instruction of the public school by a higher university discipline before entrance into a special business career.

THE EDUCATIONAL LADDER.

At King's School, Canterbury, the following elections have been made:—

To junior foundation scholarships: C. B. Simeon, P. G. E. Chave, D. L. Robertson, E. A. Graty (for modern subjects), all of King's School. To probationer foundation scholarships: J. W. M. Maynard (Mr. Meakin, Southbourne), H. D. Townend (Mr. Irving, Camberley), C. B. Jerram (Mr. Robinson, Godalming), J. M. Courtney (Mr. Taylor, Broadstairs), R. E. Martin (Mr. Pearce, Ripley), P. L. Bathurst (Mr. Mallam, Sydenham), T. Barry (Mr. Hinxman, Worthing), B. S. Rea (Mr. Counsell, Sevenoaks). To entrance scholarships: C. J. Galpin (Junior King's School), P. L. Bathurst (Mr. Mallam, Sydenham), H. D. Townend (Mr. Irving, Camberley), B. S. Rea (Mr. Counsell, Sevenoaks), R. E. Martin (Mr. Pearce, Ripley), D. O. Fardell (Junior King's School). To house scholarships: C. B. Jerram (Mr. Robinson, Godalming), J. B. Sidebotham (Mr. Malden, Brighton), J. W. M. Maynard (Mr. Meakin, Southbourne), T. Barry (Mr. Hinxman, Worthing).

At Bath College the following scholarships and exhibitions have been awarded:—

Entrance scholarships (a) for boarders: J. O'G. Delmege (Mr. Rowley, Avondale, Clifton), £60; T. V. A. Grebbie (Mr. Trask, St. Christopher's, Bath), £40. Exhibitions have also been awarded to E. Biddle (Miss Lucas, Albert Villas, Clifton), £25; G. T. Symons and L. C. Borthwick (Mr. Walker, Upcott House, Okchampton), £25. (b) For day boys: E. S. White, £15. Scholarships for members of the school: (a) for boarders, T. Williams, £60; L. H. D. Acland and W. H. C. Ramsden, £30. An exhibition of £25 is also awarded to F. H. Silcock; (b) for day boys—C. C. Harrison, £30; W. B. Chopc, £20; E. Lewis, R. C. Knox, F. J. A. Eland, and L. S. White, £15. The £90 scholarships were not awarded, but in lieu thereof an extra number of smaller scholarships and exhibitions were granted as stated above.

At King Edward's School, Birmingham, the following have been recommended for election to foundation scholarships at the High School for Boys:—

S. Barrowclough (Miss H. C. Lucas, Moseley); W. G. Booth (King Edward's Grammar School, Camp Hill); R. A. Brown (King Edward's Grammar School, Aston); J. D. Crichton (Mr. W. J. P. Ridgway, the Edgbaston Proprietary School); G. S. Davison (the Misses Ewen, Cambridge House School); L. B. Gardner (Day Technical School, West Bromwich); D. H. S. Mould (Handsworth Grammar School); E. D. Price (Messrs. McCroben and Fawcett, Inkberrow); W. H. Rayner (Mr. W. J. P. Ridgway, Edgbaston); E. H. Stansbie (Miss Lloyd, Aston Park School); E. B. Young (Mr. W. J. P. Ridgway, Edgbaston); C. L. Wiseman (Mr. W. J. P. Ridgway, Edgbaston). Recommended for election to Swinburn Scholarship—E. C. Bagnall.

At Westminster School the result of the recent scholarship and exhibition examinations is as follows:—

Resident scholarships to—E. W. Williamson (Llandaff Cathedral School), A. C. Edgar (Mr. Row, Richmond), H. J. Davis (Westminster School), M. Hammond (Mr. Waterfield, East Sheen), C. G. Usher (Miss Lucas, Clifton), P. H. Malden (Mr. Snell, Brighton), K. D. Murray (Streatham School), H. N. Wood Bigshotte (Rayles, Wokingham), W. F. Lutyens (South Kensington Preparatory School), E. B. Shaw (Grammar School, Thame). Non-resident scholarships to—C. C. Gover (Westminster School), J. E. D. Manlove (Westminster School), F. F. C. Marriott (Quernmore School, Bromley), E. H. Gray (Dulwich College Preparatory School), S. A. H. Codd (Kenmore School, West Hampstead), P. S. Ham (Mr. Olive, Wimbledon). Exhibitions to—G. P. Antrobus and H. F. R. Rawson (both of Westminster School).

At Bradfield the following elections have been made:—

To foundation scholarships—A. G. Garrod (Mr. S. C. Newton, Loudoun House School, N.W.); K. L. Armitage (Mr. C. C. Lynam, Oxford Preparatory School, Oxford); W. F. C. Claxton (Mr. E. W. M. Lloyd, Hartford House, Winchfield). To a Warden's exhibition—J. S. Eytton (Bradfield College). To general exhibitions—E. E. Calthrop (the Rev. E. Earle, Bilton Grange, Rugby); A. B. Bond (Mr. A. M. Kilby, Lindisfarne, Blackheath); A. C. N. Spicer (Bradfield College), W. G. Holmes (Junior School, Bradfield College); D. A. Wilkinson (Bradfield College); R. T. B. Pope (Mr. T. H. Mason, Rottingdean, Brighton).

At Blundell's School the following have been recommended for election to scholarships:—

To scholarships—C. J. Hamilton (Mr. Mills, Highfield, Southampton). To foundation scholarships—Pyemont (Blundell's School), Sandys (Blundell's School). To Pinchard scholarship—J. B. Windle (Mr. Thring, The Wick, Brighton). To scholarships—G. P. Statham (Mr. Prideaux, Ayshford School, Uffculme), A. G. West (the Rev. A. E. Alcock, Highgate School), C. E. H. Druitt (the Rev. H. J. Graham, Danecourt, Parkstone), H. Burrowes (Mr. Steinhardt, Nevill House, 29 York Place, London). To exhibitions—B. B. Silcock (Mr. Bull (Fritherne House, 29 York Place, London); C. Hopegood (Mr. Steinhardt), A. A. Bouter (Mr. Trollope, Tyttenhanger Lodge, St. Albans), and J. A. Fisher (Mr. Southeby, Hazledon, Tavistock).

The following awards have been made on the recent examination for Glenalmond scholarships:—

McQueen Bursary (for sons of officers): G. C. D. Hill (Mr. J. M. Stuart-Edwards, Elleray Park, Wallasey). Open scholarships of £40: L. E. J. Maude (home tuition) and G. C. M. Miller (Mr. Marillier Miller, Abbey School, North Berwick). Warden's nomination: J. P. C. Done (Mr. A. Howard Linford, Finchley Road). Fil. Cler. scholarships: H. M. Ash (Mr. Pearse, St. Ninian's, Moffat) and R. A. Shepherd (home tuition and Morrison's Academy, Crieff). Fil. Cler. exhibition: E. O. Black (Merchiston Junior School).

INTERMEDIATE EDUCATION IN IRELAND.

COMMISSIONERS' REPORT.

Messrs. F. H. Dale and T. A. Stephens, H.M.I., the Commissioners appointed to inquire into and to report upon schools receiving grants from the Intermediate Education Board in Ireland, have just issued their report. The terms of reference were these:

To inquire into and report upon the system of intermediate and technical education in Ireland—the latter so far as it is connected with the former—with a view to ascertaining whether any organic or other changes in the system are desirable. The inquiry and report should, in particular, deal with the following points:—(1) the co-ordination of intermediate education with primary, technical, and university education; (2) staffing, equipment, sanitary condition of schools receiving grants from the Intermediate Board; (3) (a) allocation of the funds of the Intermediate Board, (b) possibility of allocating the school grant in the form of grants to selected schools, (c) to what extent, if any, inspection might take the place of the examination conducted by the Intermediate

Board; (4) possibility of establishing a profession of intermediate teachers analogous to that of elementary teachers, (a) training of intermediate teachers, (b) salaries, (c) proper staffing of schools, (d) registration of schools.

The Commissioners explain that the subjects they were directed to investigate are primarily questions of administration and organization, and involve a consideration rather of the preliminary conditions affecting the success of the system of intermediate education as a whole in Ireland than of the educational work done by individual schools or scholars. Many important questions concerning the details of the curriculum or the aims and methods of instruction in the various subjects of intermediate education are therefore either excluded from the report or are treated only in so far as they have a bearing upon the main objects of the inquiry; nor has it come within their province to pronounce upon the relative merits or defects of the teaching given in each of the institutions visited by them. The Commissioners visited nearly eighty intermediate schools of all types and denominations in different parts of the country, including schools in each of the six county boroughs. They sum up their conclusion and recommendations in the following terms:—

As regards the existing relation of intermediate to primary education, the following specific defects have been noticed:—1. Although many children pass from the national to the intermediate schools, no steps are taken to secure that such passing shall be made at the most suitable point in the child's school life; overlapping in the form of undue retention of the scholars in primary schools is so common as to be practically universal.

2. There is a great deficiency in the provision of scholarships or bursaries for the transference of poor children of ability from the national to the intermediate schools. Such provision is in particular entirely absent as regards children living in most of the rural districts, especially as regards the poorer Roman Catholic boys intended for secular pursuits.

3. There is a considerable deficiency of schools, especially in the North of Ireland, for supplying a systematic course of intermediate education in its lower grades to children attending the national schools, whose parents, though possessing limited means, could afford to give them such education. The primary cause of this want of co-ordination between the system of intermediate and that of primary education is the non-existence in Ireland of any department with power to survey the two systems. As a whole co-ordination could only be effectively secured by means of legislation. The existing system of scholarships awarded by the Intermediate Board should be reconstructed. In particular there should be two distinct classes of junior scholarships tenable at intermediate schools: first class for scholars from the primary schools, the second open to all children within the limits of age. Apparently, a sum of £4,050 per annum would be available for these junior scholarships.

4. A Central Authority might undertake various measures to remedy the deficiency of good local schools for children up to sixteen—namely (after a detailed survey of each district), by making local loans to managers for new buildings, by encouraging local technical committees to assist schools in their areas by establishing in certain districts advanced departments in national schools, by regularizing the position of the model schools, and by arranging for the instruction of monitors in the lower-grade intermediate schools.

5. The Department of Agriculture and Technical Instruction has assisted in the erection and equipment of laboratories in intermediate schools, and has reformed the teaching in experimental science. This result has been secured by the co-operation of the Intermediate Education Board, and marks a distinct advance in the efficiency of Irish intermediate education.

6. Serious defects, however, in organization arise from the fact that the intermediate schools have to deal with two Authorities. Grants are made on two principles inconsistent with each other. The rules of the two Boards relating to the management of schools are at variance. A school subsidized by the one Board may be refused recognition by the other. In some cases laboratories have been added to unsuitable school buildings, and a premium is put on the teaching of science, which should not be treated as a subject detached from the rest of the curriculum.

7. The remedy for these defects would appear to be to transfer the administration of the funds devoted to the promotion of science and art in the intermediate schools from the Department to the Central Authority. Such a change would not impair the proper co-ordination of intermediate and technical education.

8. The connexion of the universities with intermediate education is at present very imperfect. The Intermediate Board does not necessarily include representatives of the universities. There is a lack of substantial identity between the Intermediate Board's courses of study and those required for the University Entrance Examinations. There is an overlapping of examinations; the Intermediate Board's methods of awarding exhibitions prevent proper preparation for subsequent honours courses at the university.

9. These defects can only be removed by the equalization of the final

school examinations held by the State with the entrance examination to the universities. For this purpose, and in order that the universities may exercise a preponderant influence on the higher classes of the first-grade schools, we recommend the formation, by the Central Authority, of a small Consultative Committee, which should include representatives of the universities.

10. As regards premises and equipment, the larger schools, chiefly boarding schools—in number about 63 boys' and 52 girls' schools—are well provided. There are some 50 day schools with about 50 scholars each, and the condition of these institutions is, as a rule, also not unsatisfactory; but of the 110 schools with fewer than 50 scholars each, at least 40 fall below a proper standard as regards school-rooms, cloak-rooms, play-grounds, lighting, ventilation, and sanitary arrangements.

CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

THE TEACHERS' REGISTER.

AN APPEAL TO THE COLLEGE.

To the Editor of "The Educational Times."

SIR,—“Emeritus” declares, in your last issue, that “the Report of the Teachers’ Registration Council shows patent failure of the Register at every point, and impresses the necessity for a fresh start.” Could any other issue have been expected? There were many who prophesied failure as soon as they had read the Regulations, and the present writer advocated the boycotting of the Register by secondary teachers from the very first. Had that been done, a fresh start would have been necessitated long ago, and now we should have been so much nearer the goal.

No doubt has ever existed in the minds of many friends as to the rôle to be taken up by the College, and I am amazed at the supineness of the general body of members in this particular.

One of its ambitions is the organization of secondary education. If, and when, the scheme of federation is accomplished, its responsibility in this direction will be even more clearly indicated. An important element of this organization is the registration of schools and teachers. The College, therefore, should claim that a liberal scheme be elaborated whereby *bona fide* and accredited teachers in secondary schools should be stimulated and encouraged to have their names placed on a Register without delay.

There is no reason why elementary teachers should not be independently registered, if they so desired; but the fact is they are already virtually placed on a Government list, and the need for their further registration under the auspices of a Registration Council is not felt either by themselves or the public, so that any effort in this direction has not only been a waste of energy and of money, but has rendered the solution of the problem more difficult by the creation of a kind of vested right.

With secondary teachers registration should be a necessity; in the case of elementary teachers it is a superfluity—the term having a different signification and application. In respect of the latter class, their “gratuitous” inclusion *en masse* with a body of persons admitted to the profession and to the Register under different conditions of preparation, qualification, and service has overweighted the present Register, obscured its usefulness, diminished its acceptability, and prevented its official publication and dissemination.

It remains, as I believe, with the College to take up the question at this juncture, and to combine with all other bodies of secondary teachers in bringing forward a simple and comprehensive scheme calculated to popularize the Register in the eyes of those who (in their own interest and in the interest of the public) may be expected to take advantage of it.

Furthermore, the present Register has failed in another sense. The desire to insist upon a high qualification has only defeated its object. Initially, the great thing is to get a Register of some sort—an inclusive Register as far as may be, taking in as many, not as few, as possible. The purgation of that Register might well be left to time. Five-and-twenty years would be an interval none too long for the perfecting of that process. It should be insisted upon that the present condition of things places no limit upon the number of unqualified or unregistered teachers. It postpones, rather than hastens, the time when the analogy of all other professional registers should be followed, and no one

allowed to teach or to preach unless he had been both trained and tested.

I differ, *toto coelo*, from the conclusions "Emeritus" sets out at the close of his communication. Indeed, they are quite illogical. It would appear that the statements he himself adduces furnish a drastic condemnation of his reasoning, and point to the only way of salvation—viz., that—for many reasons, educational and financial alike—the Register must be simplified, and confined to those engaged in the different varieties of secondary schools. EIGGINS

I am leaving England for some months, and am therefore precluded from continuing the correspondence, but I hope some member of the Council will initiate a discussion at an early date, and that the College will take the matter up in some such sense as that I have indicated.—I am, Sir, &c.,

Chillenden Rectory, Dover,

J. O. BEVAN.

July 12, 1905.

THE PREDICAMENT OF THE SPECIALIST.

To the Editor of "The Educational Times."

SIR,—Writing in your leader of July 1 on the subject of Registration in Column B, you state that "kindergarten teachers fall between the two columns." May I be allowed to remark that there are many other teachers, who certainly cannot be classed as illiterate or incapable, who are in precisely the same predicament? Take the case of the art master who is engaged on the staff of a secondary school and is responsible for the whole of the art and a portion of the other work. The head master of the school would not have offered him the post if he had not been satisfied that he had received a good secondary education and a training in school method, and the master would not retain his position if he were proved to be unfit. Surely, a training in a school of art, extending over four or five years, including literary subjects such as architecture, anatomy, history of ornament, &c., and qualifying the student to become the head master of a school of art, is a sufficient proof of the possession of a fair education. It will only be dealing fairly with specialists, whether in art, science, manual instruction, or any other subject, if their names are placed on Column B, provided that they are able to produce evidence of having either (1) been educated at a secondary school, or (2) passed an examination of, say, the standard of London Matriculation. In the event of the framing by the County Education Committees of scales of salaries, preference will most likely be given to "Col. B" teachers, with the result that it will be possible for a "ten-year man" to be more highly paid than a well qualified specialist.—I am, Sir, &c.,

PHILIP CASSÉ.

Wright's School, Faversham, July 3, 1905.

THE TEACHING OF THE PRINCIPLES OF EVOLUTION IN THE SCHOOLS.

To the Editor of "The Educational Times."

SIR,—I think the time has arrived when all educationists should consider the desirability of teaching children the principles of evolution. I believe that all the sects accept the evolution theory, and that it would not be difficult to present the facts in such a way that children could understand them.

This subject is dealt with very interestingly by the late Prof. W. K. Clifford, F.R.S., in an essay, entitled "Virchow on the Teaching of Science" (*Nineteenth Century*, 1878), reprinted in "Collected Essays." At a meeting of German naturalists and physicians at Munich, 1877, the late Prof. Virchow delivered an address "On the Liberty of Science in the Modern State," in the course of which he said: "If the theory of descent is as certain as Prof. Haeckel thinks it is, then we must demand its admission into the school, and this demand is a necessary one." He considered it desirable to make certain reservations, and that they ought to say: "Do not take this for established truth; be prepared to find that it is otherwise; only for the moment we are of opinion that it may be true." That was over a quarter of a century ago. There is no dispute about it now.

Prof. Clifford, in the course of his article, asks: "In what form shall we have the doctrine of evolution taught to our children? Certainly not as a dogma to be accepted on the authority of the teacher, evidence for which may be forthcoming afterwards. Certainly not at all until our children are competent to understand the nature of the evidence for it. Certainly not, therefore, first in its most general form, and afterwards in special

applications, but first in those special cases where the evidence is of the simplest kind, most closely related to the facts; and then, as a consequence of the comparison of these cases, the general doctrine may suggest itself. Nevertheless, the teacher, knowing what is to come in the end, may so select the portions of various subjects which he teaches at an earlier stage that they shall supply in a later stage a means of understanding and estimating the evidence on some question of evolution.

At present various beliefs are taught in the schools as if they were matters of fact, but which are really highly controversial. Prof. Clifford shows how desirable it is that in such cases we ought to say: "Do not take this for established truth; be prepared to find that it is otherwise. Only for the moment we are of opinion that it may possibly be so." I think all fair-minded people will agree that Prof. Clifford's views are eminently reasonable.—I am, Sir, &c.,

J. A. R.

Bedford, July 10, 1905.

[Are not the pertinent subjects already taught so as to indicate probability of evolution, at proper stages? And is not the timetable already pretty full with matters of "established truth"?—ED. E.T.]

PRIVATE SCHOOLS AND LOCAL AUTHORITIES.

To the Editor of "The Educational Times."

SIR,—Can any of your readers inform me whether there is any means of redress against the action of Local Education Authorities in setting up a technical day school (run on private-school lines) and a higher-grade school in a borough town? Also, by what means the Sub-section 2 of Section II. of the Act of 1902 can be put into effective force? Also, again, whether, if it can be put into force, any of your readers feel disposed to help in the matter? I shall be glad to receive suggestions and advice in the matter, as we despair of assistance from private-school associations.—I am, Sir, &c.

E. J. SINGLETON SMITH.

St. Margaret's College, Lowestoft, July 15, 1905.

THE RELIGIOUS DIFFICULTY IN SCHOOLS.

COMPROMISE AT MANCHESTER.

AFTER several informal attempts at some compromise that would meet the views of Churchmen, Nonconformists, and others, on the vexed question of religious teaching in schools, the following series of resolutions have been adopted at a conference of Churchmen and Nonconformists at Manchester:—

1. The law for all schools and all denominations should be the same, and not be affected by any trust deed.
2. All schools should be managed by the Authority. Existing voluntary schools should be rented from their owners, or reasonable compensation should be given.
3. No religious test should be imposed upon any teacher, but, subject to this condition, regard should be had to the religious requirements of the schools in allocating the teachers.
4. Bible teaching should be given at least three days in each week, but no religious teaching should be included in the time-table except such as has been, or shall be, ruled to be lawful under the Cowper-Temple clause.
5. The Authority should invite representative members of the religious bodies to constitute a visiting or advisory committee to manage the ordinary Bible teaching in each school, and should, in doing so, as far as possible, have regard (a) to the religious conditions obtaining in the district served by the school, and (b) to the qualification of experience of religious work among children.
6. All religious instruction should be given by qualified teachers, *i.e.*, by teachers who can give satisfactory proof of competent knowledge in their subjects, and who are willing to declare that they do not dissent from the teaching which they will have to give.
7. Subject to due safeguards, it should be enacted that, if any parent declares that he has reason to fear that a teacher is likely to exercise an influence hostile to his own convictions on matters of religion, the attendance of his child at that school shall cease to be compulsory.
8. When practicable, and subject to the condition that no religious teaching should be included in the time-table except such as is referred to in paragraph 4, denominational teaching should be permitted for the children whose parents demand it, and at the same time as the undenominational teaching, but it should be given (a) at the charges of the denomination, (b) by a teacher competent to keep good order, who (c) in giving the teaching should not reflect in any way on the tenets or status of any religious body. (d) It should be under the management of a denominational board, which should be constituted under a scheme prepared by the religious body in consultation with the Board of Education.

9. There should be no prizes nor inducements of any kind in connexion with religious teaching.

10. In any case of dispute between the Authority and the religious body about the giving of religious instruction in the school, or as to the arrangements made for it, there should be an appeal to the Board of Education, which should act in consultation with a permanent advisory committee upon which the religious bodies should be represented.

11. In the interest both of the teachers and of the children the religious teaching should be given as much as possible by the teachers of the school.

12. The above guarantees should apply to the religious instruction of the pupil-teachers and scholars in secondary schools.

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL PROBLEMS IN CLASS TEACHING.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Principal of the University of London Training College.

The Second Course of Lectures (Thirty-third Annual Series) will commence on Thursday, September 28th, at 7 p.m.

The purpose of the Course is to present the theory of teaching in the way most suited for application to the ordinary work of a class. In the ultimate resort, every teacher must apply for himself the theory of his profession, but he may be greatly helped by observing how others have dealt with the problems that he must face. To this end the lectures will be very copiously illustrated throughout by references to the teaching of all the subjects of the ordinary school course, while particular attention will be given to those subjects that must be taught by all teachers who are not specialists. The Lecturer will base his suggestions on the state of things actually existing in schools.

SYLLABUS.

I.—*Class Management.* Nature of a class. Difference from a group of individuals. Sympathy of numbers. Fallacy of "the average." Common and peculiar qualities. The class as unit. Class leaders. Laws of interaction of the elements of the class. Troublesome elements and their treatment.

II.—*Class Teaching.* Contrasted function of private coach and class teacher. Class must be taught as a whole: yet may be taught through individuals. Advantages and disadvantages of teaching by types. The intellectual lowest common denominator of a class. Teacher's duty to brilliant and to dull pupils. Different class-standing of pupils according to subject. The average boy.

III.—*Art of Exposition.* Nature and function of exposition. Often regarded as the whole of teaching. Distinction from "telling." Essentially a process of analysis followed by synthesis. Relation between content of pupil mind and teacher mind. Law of consecutive clearness. Stages in the process. Rhythm of concentration and diffusion of attention. Place of integration and re-integration.

IV.—*Lecturing.* Unipolar form of exposition. Cause of its popularity. Where successful it is bipolar. Suitable where material has been gathered, but not arranged. Room for it all through school course, but size of lecture-unit should increase directly as the stage of advancement of the pupils. University rank. Note-taking in school work, and its relation to the lecture and the text-book.

V.—*Socratic and Heuristic Teaching.*—Both essentially dialectic. Applicable to all subjects, though perhaps specially to science. They differ in aim and in process. The *Zielangabe*. Difference of application of *interest* in the two methods. The Socratic irony and the torpedo shock. Heuristic stimulus. Limitations of the methods, and illustrations from common school subjects.

VI.—*Concentric Method and Correlation.* The concentric method in relation to the "rapid impressionists." Illustration from geography teaching. The test of a good "concentric" text-book. In ultimate analysis all teaching is concentric. Correlation is the complement of the concentric method. Selection of "core" subjects. Extravagances of correlation. Illustrations from American school syllabuses. Results of actual experiments in the application of correlation.

VII.—*Art of Illustration.* Nature and function. Psychological bases. Analogy. Kinds: (a) Verbal, as figures of speech, exemplification, types, the attendant circumstance; (b) Material, as actual objects, models, pictures, diagrams. The point of view. Appeal to the preferred sense. Dangers of illustration.

VIII.—*The Use of the Blackboard.*—Appeal to sense. Writing as important as drawing in connexion with form. Distinction between rough and slovenly drawing and writing. Blackboard pictures *v.* diagrams. Mechanical aids. Coloured chalks. The optics of the blackboard. Eye-strain, and how to prevent it. Excessive use.

IX.—*The Mother Tongue.*—The art of intercourse. The three vocabularies of the individual. Analysis *v.* synthesis of sentences as educational processes. Place and function of grammar. The fundamental principle in teaching composition. The elimination of self-consciousness. Forms of composition exercise—narration, description, letter, paraphrasing, essay. Suggested subjects.

X.—*The Mechanism of Reading.* Purpose for which art of reading is acquired. Visual and audible elements in reading. The place of reading aloud and silent reading. Various methods of teaching to read. The resulting powers of reading as an acquirement. Various degrees of "block" reading.

XI.—*Spelling and Dictation.* Different purposes of spelling and dictation as school exercises. Static and dynamic elements. Oral spelling easier for audiles. Written spelling for visuals. Dangers of the "awful example." Classification of errors in dictation—graphic, phonetic, psychic—causes and treatment of each.

XII.—*Arithmetic.*—Counting and calculating. Cornical arithmetic. Essential distinction between arithmetic and algebra. Importance of the imagination and clearly imaged ends. Elimination of the units in calculation means the turning of fact into faculty. Disturbing power of consciousness. Formulæ, as in simple interest. Donaldson's reduction of all arithmetic to the equation.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

* * * The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.
C. R. HODGSON, B.A., Secretary.

Mr. MURRAY'S LIST

FOR THE

COLLEGE OF PRECEPTORS' EXAMS., 1906.

Catalogues free on application.

ENGLISH GRAMMAR AND LITERATURE.

A SCHOOL MANUAL OF ENGLISH GRAMMAR. By T. D. HALL, M.A. New Edition. 2s. 6d.

This manual has been thoroughly revised and brought up to date. The chapters on the Classification of Languages, Sound Shifting, and the Historical Development of English have been entirely re-written, and follow closely the Syllabus recommended by the Board of Education. The book also contains an excellent series of Exercises and Examination Questions.

ESSAY WRITING FOR SCHOOLS. A Practical Exposition of the principles of this form of Composition, illustrated by Models, and by examples drawn from the English Classics, and designed to meet the requirements of the Public Examinations. By L. COPE CORNFORD. Second Impression. 4s. 6d.

ENGLISH COMPOSITION AND ESSAY WRITING. By JOHN KEEFE. 2s. 6d.

STUDENT'S MANUAL OF ENGLISH LITERATURE. By A. HAMILTON THOMPSON, B.A. With Notes, &c. 7s. 6d.

SMALLER HISTORY OF ENGLISH LITERATURE. By J. ROWLEY. Fourteenth Impression. 3s. 6d.

ENGLISH HISTORY.

MURRAY'S SCHOOL HISTORY OF ENGLAND. An Outline History for Middle Forms. By M. A. TUCKER, History Mistress at St. Felix School, Southwold. 3s.

This book is intended for students in the Middle Forms of Schools, from twelve to sixteen years of age; and, while it contains all that is necessary from the point of view of Junior Examinations, it is hoped that it will succeed in stimulating the pupil to still further efforts in historical study. Special care has been taken in the production of the volume. The type used is particularly legible, and the binding is both serviceable and attractive, while the many excellent Maps, Plans, Genealogical Tables, &c., add to the practical utility of the work.

New Edition.

4s. 6d.

THE GROWTH OF THE EMPIRE. A Handbook to the History of Greater Britain. By A. W. JOSE. With many coloured and other Maps and Diagrams. [For Second Class.]

FRENCH.

INTERMEDIATE FRENCH GRAMMAR AND OUTLINES OF SYNTAX. By G. H. CLARKE, M.A., and L. R. TANQUERAY, B.ès-L. 3s. 6d.

THE INTERMEDIATE FRENCH READER. Edited, with Historical, Biographical, and Grammatical Notes, by MAURICE A. GEROTH-WOHL, B.Phil., L.ès-L., F.R.S.L. 2s. 6d.

GRAMMAIRE FRANÇAISE. A New French Grammar, with Exercises on the "Direct Method"—written entirely in French. By W. M. POOLE, M.A., and M. BECKER. Second Edition. 2s. 6d.

SCIENCE AND MATHEMATICS.

A FIRST COURSE OF PRACTICAL SCIENCE. By J. H. LEONARD, B.Sc. Lond. Third Impression. Fcap. 8vo, 1s. 6d.

A FURTHER COURSE OF PRACTICAL SCIENCE. Mechanics, Hydrostatics, and Heat. By J. H. LEONARD, B.Sc. Lond., and W. H. SALMON, B.Sc. Lond. Fcap. 8vo, 2s.

A FIRST COURSE OF CHEMISTRY (HEURISTIC). By J. H. LEONARD, B.Sc. Lond. Fcap. 8vo, 2s.

THE REALM OF NATURE. A Manual of Physiography. By Dr. H. R. MILL, Director of British Rainfall Organization. 5s.

ALGEBRA. In Two Parts. By E. M. LANGLEY, M.A., and S. R. N. BRADLY, M.A., Mathematical Masters at the Modern School, Bedford. Fcap. 8vo. Part I., 1s. 6d.; Part II., 2s.

GEOMETRY. An Elementary Treatise on the Theory and Practice of Euclid. By S. O. ANDREW, M.A. Third Impression. Fcap. 8vo, 2s.

JOHN MURRAY, Albemarle Street, W.

COLLEGE OF PRECEPTORS' CERTIFICATE EXAMINATIONS.

Special Subjects, 1906.

Caesar—Gallic War, Book I. By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

Caesar—Gallic War, Book II. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

Euripides—Alcestis. By J. H. HAYDON, M.A. Camb. and Lond. 2s. 6d. Vocabulary, 1s.

Horace—Odes, Book I. By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

Vergil—Aeneid, Book I. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

Shakespeare. Edited, with Introduction and Notes, by W. J. ROLFE, D.Litt. *Tempest*, 2s. *Henry V.*, 2s. 6d.

Matriculation Modern History. Being the History of England 1485–1901, with some reference to the Contemporary History of Europe and Colonial Developments. By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d.

English History, The Intermediate Text-Book of 1603–1714. By C. S. FEARENSIDE, M.A. Oxon., and A. JOHNSON EVANS, M.A. Camb. 4s. 6d.

CURRENT EVENTS.

Fixtures. THE Oxford University Extension summer meeting will be held August 4–28.

* * *

THE Psychology course at King's College, London, next session will include General Psychology, by Prof. Caldecott (1st and 2nd terms); Structure of the Nervous System, by Prof. Halliburton (1st term); and Experimental Psychology (2nd and 3rd terms) and Modern Research on the Psychology of Memory (2nd term), by Dr. C. S. Myers. Dr. Myers's Lectures on Memory are free to teachers and to internal students of London University.

* * *

THE first International Congress on Esperanto will meet at Boulogne on August 5. Dr. Zamenhof, the inventor of Esperanto, will preside. The session will last a fortnight.

Honours. AMONG the Birthday Honours are the following:—

O.M.—Field-Marshal Sir George Stewart White, G.C.B., G.C.S.I., &c.; Admiral Sir John A. Fisher, G.C.B.; Sir Richard C. Jebb, M.P.; Sir Laurence Alma-Tadema, R.A.; George Meredith; and W. Holman Hunt.

BARONET.—Mr. Charles Holcroft, M.P., who has taken a prominent part in the establishment and development of the University of Birmingham.

KNIGHTS.—Dr. Thomas M. Anderson, M.D. Glas., Regius Professor of Medicine, Glasgow University; Dr. William Bousfield, LL.D. Leeds, Chairman of the Girls' Public Day Schools Company; Dr. A. B. W. Kennedy, LL.D., F.R.S., M.Inst.C.E., Emeritus Professor of Engineering in University College, London; and Dr. W. J. Smyly, M.D., F.R.C.P.I., Gynæcologist, Adelaide Hospital, Dublin.

C.B.—The Hon. W. N. Bruce, Principal Assistant Secretary (Secondary Schools), Board of Education; Col. D. Bruce, F.R.S., R.A.M.C., Advisory Board, Army Medical Services; and the Rev. Edmund Warre, D.D.

I.S.O.—C. E. Stronge, M.A., Senior Inspector of Schools, Ireland; and Napoleone Tagliaferro, late Director of Education, Malta.

* * *

THE University of Oxford has conferred the following honorary degrees:—

D.C.L.—Major-General Sir F. R. Wingate, K.C.B., K.C.M.G., D.S.O., Sirdar of the Egyptian Army and Governor-General of the Sudan; Mr. W. Holman Hunt, the eminent painter; and Dr. Charles Stewart Loeh, B.A. Oxon., LL.D. St. Andr., Professor of Economics, King's College, London.

D.Sc.—Dr. George H. Darwin, M.A., F.R.S., D.Se., LL.D., Plumian Professor of Astronomy, Cambridge.

D.LITT.—M. Paul Sabatier, Paris; Dr. Basil L. Gildersleeve, LL.D. Camb., Professor of Greek, Johns Hopkins University, Baltimore; Dr. Barelly Vincent Head, D.C.L. Durh., Ph.D. Heid., Lauréat de l'Institut de France, Keeper of the Department of Coins and Medals, British Museum; Dom German Morin, O.S.B., of Maredsous; and Dr. N. Murray Butler, President of Columbia University.

* * *

DURHAM UNIVERSITY has conferred the honorary degree of D.C.L. upon the Very Rev. John H. Bernard, Dean of St. Patrick's Cathedral, Dublin, Mr. Andrew Lang, and Dr. Donald McAlister.

* * *

On the occasion of the fourth centenary of the Royal College of Surgeons, the University of Edinburgh has con-

ferred the honorary degree of LL.D. upon M. Paul Cambon, the French Ambassador; Prof. Ernst von Bergmann, Berlin; Prof. Cameron, Toronto; Prof. J. Lucas Championnière, Paris; Prof. Francisco Durante, Rome; Dr. Anton Freiherr von Eiselsberg, Vienna; Prof. Halsted, Baltimore; Prof. Keen, Philadelphia; Prof. Carl Gustaf Lennander, Upsala; Prof. Saxtorph, Copenhagen; Prof. Shepherd, Montreal; Prof. Subbotin, St. Petersburg.

* * *

THE Royal College of Surgeons of Edinburgh, on the celebration of the fourth centenary of its foundation, has conferred honorary Fellowships upon 35 eminent surgeons of various nationality.

* * *

THE Royal Victorian Order of the Fourth Class (M.V.O.) has been conferred upon the Rev. Dr. Wood, Head Master of Harrow School.

Official Degrees. THE following members of the staff of Leeds University and members of the Faculty of the Leeds Infirmary have been admitted to degrees in Science of the University:

M.Sc.—Prof. Wright, Prof. Beaumont, Prof. Goodman, Prof. Proctor, Prof. Green, Prof. Kendall, Mr. Bevan Lewis, Mr. Walter H. Brown, Mr. Harry Littlewood, Mr. Secker Walker, Mr. G. D. A. Parr, Mr. A. R. Dwerryhouse, and Mr. C. E. Whiteley.

B.Sc.—Dr. Dawson, Mr. Lowson, and Mr. Unwin.

* * *

PROF. CHURTON COLLINS has received the degree of M.A., and Prof. Arthur Robinson the degree of M.D., in the University of Birmingham.

Endowments and Benefactions. OXFORD UNIVERSITY, according to a statement prepared by a body of the professors, requires for its proper equipment a capital of £546,250, and an annual expenditure of £93,880.

* * *

THE Cambridge University Benefaction Fund now amounts to £81,877. Among the donors to the last £6,700 are: Lord Rayleigh, £5,000; Lord Iveagh, a further donation of £1,000; Mr. C. J. Heywood, £100; Mr. J. Lumb, £100; Messrs. J. Shires & Sons, £60; the British Association (a contribution from the surplus resulting from the Cambridge meeting), £50; Mrs. W. Foster, £50; Mr. J. Tennant, £50; Mr. George Weston, £25; Sir W. Broadbent, Mr. B. Broadbent, and Mr. R. Hirst, £20 each. A sum of over £6,000 has also been promised for the University Library.

* * *

MR. MARTIN WHITE has made a special donation of £200 to London University for two bursaries (£25 each for two years) and a studentship of Sociology (£100).

* * *

THE Liverpool City Council has agreed to grant a further sum of £10,000 to Liverpool University during the current year, not less than £1,000 of the sum to be devoted to Liverpool scholarships, including assistance to undergraduates and post-graduates, and payment and remission of fees.

* * *

SIR ALFRED JONES has promised £1,000 for four years towards the expenses of the proposed School of Research in connexion with the University of Liverpool. The school is to inquire into the natural resources of the tropical possessions of the Empire. Lord Mountmorres is to be the first Director.

* * *

GLASGOW UNIVERSITY has received a bequest of £500 under the will of the late Mr. McIntyre, Greenock, for founding a

bursary in Arts. Mr. R. W. Seton-Watson has founded a (probably biennial) Watson Historical Prize—"it shall never be of the value of less than £50"—to encourage the study of history and foreign languages.

* * *

ABERDEEN UNIVERSITY has received £200 from Mrs. Anne D. Beaton to found a prize in Zoology in memory of her father, the late Prof. Macgillivray, and £100 from the Rev. Dr. Miller, Buckie, towards the funds of the Caithness Prize in history.

* * *

BLACKROCK COLLEGE UNION has given the College a scholarship of £50, and an anonymous past student has offered one of £15.

* * *

MR. ROCKEFELLER has presented £2,000,000 to the General Educational Board of the United States, and £200,000 to Yale University.

Scholarships and Prizes. CHRIST CHURCH, Oxford, offers two scholarships of £50, tenable for one year, to selected candidates for the India Civil Service. Candidates to send their names (with three testimonials as to character and three references) to the Dean before the end of the Government Examination. Election without further examination.

* * *

MAGDALEN COLLEGE, Oxford, offers one or more demys in Natural Science (£80 a year) to candidates under nineteen on December 20. Exhibitions (£25 to £60 a year) may be given to candidates under twenty-one. Examination, December 12, in combination with University and Lincoln Colleges. Candidates call on the President (with birth certificate and testimonial to character), December 11, 9-10 p.m.

Also similar demys and exhibitions in History. Candidates send to the President, any time in December before December 10, application forms duly filled up, birth certificate, and testimonial to character. Examination December 12.

* * *

MR. J. E. CROMBIE, Lord Rector's Assessor, has given £1,000 towards the cost of the Aberdeen University Quatercentenary celebration, primarily to guarantee any deficiency in the Publication Committee's expenses. Probably at least three volumes of academic contributions, besides a formal record of the proceedings, will be presented to delegates and other guests.

* * *

AT Bedford College, London, the Reid Scholarship in Arts has been awarded to Miss K. M. Curtis, of the North London Collegiate School, and the Arnott Scholarship in Science to Miss E. M. Stokes, of Dame Alice Owen's Girls' School.

The Council offers a scholarship of £20 for one year to candidates holding a degree or its equivalent in Arts or Science for the course of secondary training. Apply to the Head of the Training Department by September 18.

* * *

MR. S. ERNEST PALMER has given £1,000 for 3 scholarships at the Guildhall School of Music.

* * *

THE Carnegie Trust's awards for 1905-6 include 16 research fellowships, 28 research scholarships, and 40 research grants, amounting to close upon £7,000.

* * *

THE Society of American Women in London proposes to raise funds to support 96 scholarships for American lady graduates, tenable two years at Oxford, Cambridge, or

London. The scheme originated with the Hon. Mrs. Bertrand Russell. It requires some £2,000,000.

* * *

THE subjects for the Empire Day Essays (see May number, page 214) for 1906 are: (1) for secondary schools, "The Ideas expressed by the word 'Empire'"; (2) for primary schools, "The Chief Stages in the Growth of Greater Britain." These subjects have been chosen by Sir Richard Jebb.

Appointments and Vacancies.

DR. WILLIAM M. HICKS, M.A., Sc.D., F.R.S., Principal and Professor of Physics in Sheffield University, has resigned the post of Vice-Chancellor, and is succeeded by Sir Charles Norton Edgecumbe Eliot, M.A. Oxon., LL.D. Edin., K.C.M.G., C.B., lately H.M. Commissioner and Commander-in-chief for the British East Africa Protectorate.

* * *

AT Manchester University, Mr. J. H. Hopkinson, M.A., a late Craven Travelling Fellow of Oxford University, has been appointed Lecturer in Classical Archæology; and Dr. Cyril Atkinson, Lecturer in Jurisprudence and Roman Law.

* * *

AT Birmingham University, Mr. Stephen M. Dixon, M.A., M.I.C.E., Professor of Civil Engineering in Dalhousie University, Nova Scotia, has been appointed Professor of Civil Engineering; Miss Rose Sidgwick, Tutor at Somerville College, Oxford, Assistant Lecturer in History; and Mr. M. O. B. Caspari, Lecturer in Greek Language, Literature, and Archæology.

* * *

DR. C. E. PURSLOW has been appointed Ingleby Lecturer in Birmingham University for 1906.

* * *

DR. CHARLES BONNIER, Lecturer in French in Liverpool University, has been appointed to the James Barrow Chair of French Language and Literature.

* * *

MR. W. H. WATKINSON, Professor of Engineering in the Glasgow and West of Scotland Technical College, and formerly Lecturer in Engineering at the Central Science School, Sheffield, has been appointed to the Chair of Engineering in Liverpool University, in succession to Prof. Hele-Shaw.

* * *

DR. T. G. PINCHES has been invited to join the staff of the Institute of Archæology in association with the University of Liverpool as Assyriologist.

* * *

THE REV. DR. IVERACH succeeds the late Dr. Salmond as Principal of the United Free Church College, Aberdeen.

* * *

PROF. JOHN DEWEY has resigned the Deanship of the College of Education, University of Chicago, to accept the Chair of Philosophy in Columbia University. He is succeeded by Mr. George H. Locke.

* * *

MR. WILLIAM PHILLIPS, M.A., Lecturer in the Normal Department for Men, Cardiff University College, has been promoted to be Professor of Education, in succession to Prof. Raymont.

* * *

MR. ALEXANDER S. HARVEY, Barrister-at-Law, formerly of H.M. Consular Service in China, has been appointed Professor of English and International Law in the University of Pekin.

* * *

MR. W. BLACK ODGERS, LL.D., K.C., has been appointed

Director of Legal Education under the Council of Legal Education (Inns of Court).

* * *

MISS PHILIPPA GARRETT FAWCETT, who fifteen years ago was placed "above the Senior Wrangler," has been appointed principal assistant in the Education Executive Officer's Department of the London County Council.

* * *

MR. A. C. BENSON has been appointed a member of the Consultative Committee of the Board of Education, in room of Canon Lyttelton, resigned.

* * *

MR. T. P. BLACK has been appointed Demonstrator in Physics in Armstrong College, Newcastle-upon-Tyne.

* * *

MISS O. C. M. ILES, Assistant Mistress of Method, Winchester High School, has been appointed Lecturer on Education in Liverpool University.

* * *

THE REV. FRANCIS AIDAN HIBBERT, M.A., Head Master of Worksop College, Notts, has been appointed Head Master of Denstone College.

* * *

MR. SHELDON ROBERT HART, M.A. Camb., Head Master of Handsworth Grammar School, has been appointed Head Master of Rugby Lower School.

* * *

MR. ARTHUR CLENDON, M.A. Camb. and Lond., Head Master of the County School, Dolgelly, has been appointed Head Master of Handsworth Grammar School.

* * *

THE Head Mastership of Andover Grammar School is vacant by the death of the Rev. J. C. Witton, B.A., B.Sc., who had held the post for 25 years.

* * *

MR. IVOR B. JOHN, Assistant Lecturer in English, Cardiff University College, has been appointed to the Goldsmiths' Training College, New Cross.

* * *

MR. G. AIMER RUSSELL, M.A., B.Sc., F.R.A.S., First Science Master, Kilmarnock Academy, has been appointed Rector of Peterhead Academy, in succession to Mr. John Don, M.A., who has become Head Master of Maybole Grammar School.

* * *

MR. W. A. DAVIE, M.A., B.Sc. (Agr.) Aberd., Assistant Lecturer in Agricultural Chemistry, Aberdeen University, has been appointed a Deputy-Inspector in the Agriculture and Lands Department under the Soudan Government.

* * *

MR. HANS S. DENNLER, B.L. (Berne), Modern Language Master, Arbroath High School, has been appointed head of the Modern Languages Department, Dundee High School.

Literary Items. THE Braille Printing and Publishing Company, Edinburgh, are commencing to issue a penny weekly newspaper in Braille type. We hope it will be adequately supported.

THE Clarendon Press is adding to its series of translations the works of Lucian, "the last great master of Attic

eloquence and Attic wit," by H. W. Fowler and F. G. Fowler, in four volumes.

* * *

MESSRS. SAMPSON LOW, MARSTON, & Co. promise, in October, a new work by Captain A. T. Mahan on "Sea Power in its relations to the War of 1812," in two volumes, with photographic illustrations, maps, and plans.

* * *

MESSRS. W. & A. K. JOHNSTON announce the early publication of "An Atlas of Commercial Geography," edited by R. Ferguson Savage, F.R.G.S. There will be thirty-six maps, royal quarto size.

* * *

Occasional Papers for July is varied and vigorous. Mr. W. J. Locke concludes that Zola was not only a great man of letters, but a great and steadfast man, and "one of the greatest and purest ethical teachers of the nineteenth century."

* * *

Child Life for July contains Mr. J. H. Badley's able and suggestive Presidential Address to the Froebel Society (March 24) on "The Teacher's Part in the New Education," together with several useful Froebelian articles of a practical nature.

* * *

MRS. ADA S. BALLIN describes in *Womanhood* (with illustrations) "An Educational Home for Girls"—Clovelly, St. John's Road, Eastbourne—recently opened by Mrs. F. H. Browne, whose late husband was Head Master of Ipswich School, 1883-94.

* * *

THE publishing business of the Cambridge University Press has just been removed from Ave Maria Lane to Nos. 133-137 Fetter Lane (St. Dunstan's House), E.C.

THE BISHOP OF HEREFORD unveiled the medallion portrait of the late Archbishop Temple in Rugby School chapel (June 20). The medallion is in alabaster and white Carrara marble, and is fixed in the right side of the nave, close to the pulpit. The work was executed by Mr. Brock, R.A.

* * *

THE KING opened the new University of Sheffield; and the Prince of Wales laid the foundation stone of the new buildings of University College, Cardiff.

* * *

THE Electrotechnics Laboratories at Liverpool University were formally opened on Degree Day (July 9). They have cost some £10,000, which was provided by a bequest of the late Mr. David Jardine. Sir Joseph W. Swan delivered an address on the importance of electrical training and research.

* * *

PROF. SHOZO Aso, Dean of the Japan Women's University, after a year's research work in the United States, has come to England, "charged with a joint mission from his University and from the Education Department," to study especially technical education for women. The Women's University has over 1,100 students, 700 of them resident.

* * *

THE Robert Browning Settlement appeals for the honorary assistance of teachers, play-leaders, story-tellers, accompanists, and guides for the annual Walworth Holiday School during the next four weeks. Sandford Row School, 10-12 a.m.; Tooting Common, afternoon. Communicate with Miss Ethel Lancaster, Browning Hall, Walworth, S.E.

COLLEGE OF PRECEPTORS.

HALF-YEARLY GENERAL MEETING.

THE ordinary half-yearly General Meeting of the Members of the Corporation was held at the College on Saturday, July 29.

The SECRETARY having read the advertisement convening the meeting, Dr. WORMELL was appointed Chairman.

The Report of the Council was laid before the meeting, and was taken as read, a copy having previously been sent to every member. It was as follows:—

REPORT OF THE COUNCIL.

The Council beg to lay before the members of the College the following Report of their proceedings during the past half-year:—

1. They have to report that the number of candidates entered for the Midsummer Certificate and Lower Forms Examinations is about 5,560, showing a falling off of about 4 per cent. as compared with the number of entries for the corresponding Examinations last year. This diminution is to be ascribed partly to the clashing of the date of the Examination with that of the Board of Education Science and Art Day Examinations, and partly to the effect of the new Regulations for Secondary Schools aided by the Board, which prohibit the entry of pupils for external examinations until they are in the third year of the prescribed school course. The Council have under their consideration the question of making a representation to the Board of Education on this subject.

2. The Professional Preliminary Examination for Certificates recognized by the Board of Education and a number of professional bodies was held as usual in the first week in March, and was attended by 379 candidates, an increase of 27 as compared with the previous March Examination.

3. The Christmas Examination of Teachers for the College Diplomas was held in the first week in January, and was attended by 541 candidates, as compared with 552 who presented themselves at the corresponding Examination last year. During the past half-year the Diploma of Licentiate has been conferred on 32 candidates, and that of Associate on 145, who had passed the required Examinations.

4. The Council have conducted during the past half-year the inspection and examination of five schools by Visiting Examiners.

5. The Thirty-third Annual Series of Lectures to Teachers on "The Science and Art of Education" commenced on February 9 with a Course of Twelve Lectures on "The Psychological and Logical Foundations of Intellectual Education," by Mr. W. E. Johnson, M.A.; and a Course of Twelve Lectures on "Practical Problems in Class Teaching" will be given in the autumn by Prof. J. Adams, M.A.

6. At the Members' Meetings held during the past half-year the following Lectures have been given:—"The Sunny Side of Egotism: an examination of the educational applications of self-reference," by Prof. J. Adams, M.A.; "On the Teaching of Geography to Higher Classes," by Prof. L. W. Lyde, M.A.; "On Chaos and Contradiction in present-day Educational Thought," by F. H. Hayward, D.Lit.; "Sir Joshua Reynolds: some account of his contribution to Principles of Method," by Prof. J. J. Findlay, M.A. At another Meeting (in conjunction with the Assistant Masters' Association) Mr. T. Percy Nunn, M.A., B.Sc., delivered a Lecture on "Science Teaching and the Theory of Science." Reports of the Lectures and Discussions have been published, as usual, in *The Educational Times*.

7. The movement for the federation of Associations of Teachers concerned with secondary education, referred to in the last two reports of the Council, has not made such progress as was expected, and the Council are not in a position to submit definite proposals for the consideration of the members of the College at the half-yearly General Meeting. The Council desire, however, to lay before the members a short account of the history of the movement. Recent developments in the organization of secondary education forced on the attention of teachers the desirability of forming a general Association which should represent secondary teachers as a whole, and be qualified to speak authoritatively on their behalf. It was considered that the views of such a body would be of service to Education Authorities when details of organization and administration came to be discussed; and it was also felt that the special interests of the different sections of teachers would more readily secure attention if supported by the authority of the whole body of secondary teachers. Certain prominent members of existing Associations formed themselves into a Committee with the object of promoting federation. They considered that the movement would be greatly helped if the reputation and resources of the College of Preceptors could be enlisted in its support. Accordingly, they invited the Council of the College to co-operate in the work. The Council, while conscious that the work of the College was essentially different in character from that of the sectional Associations, nevertheless welcomed the idea of federation, believing that a comprehensive union of secondary teachers would benefit the cause of education. They also hoped that such a union might assist in developing the work of the College, and they were of opinion that it would be of advantage to the public that the claims of sectional Associations should

be discussed by a generally representative body of teachers before being submitted to Education Authorities. They therefore appointed three of their number to confer with an equal number of the Federation Committee. After prolonged deliberations a statement was drawn up of the terms which the representatives of the College were prepared to submit for the consideration of the Council, provided that the Federation Committee should first ascertain that such terms were acceptable to the other Associations. These terms provided for the direct representation of the several Associations on the Council of the federated body; for the payment of monetary contributions by the various Associations to the central body, and for the granting of certain privileges in return for such payments. Each of the constituent bodies (federating bodies other than the College of Preceptors) was to undertake to form part of the federated body for an agreed period, after which the constitution of the federated body would be revised, and each of the constituent bodies would be free to secede from the Union. It was further proposed that the Charter of the College of Preceptors, with such modifications as might be necessary, should be utilized to give authority to the scheme, and it was therefore suggested that the College should apply to the Privy Council for an amending Charter. As the obtaining of an amending Charter would involve a large expenditure of money on the part of the College of Preceptors, as well as some risk of interference with the present work of the College, the Right Hon. R. H. Haldane, K.C., and another eminent Counsel, Mr. T. T. Methold, were requested to advise the Council as to the legality of the suggested application, and also as to the likelihood of its being favourably entertained by the Privy Council. Their opinion was as follows:—"The tendency of the times and the disposition to regard the qualification of teachers from a changed point of view appears to us to render it probable that the Lord President of the Council would not advise the grant of the proposed Charter, and we do not see that any amendment germane to the purposes of the present application could be introduced with the prospect of making success more likely. If, however, the applicants determined to proceed, we see no legal difficulties which stand in the way of success. Such cases as the *King v. Passmore*, 3 Term. Rep. 199, show that, if the majority of the Corporation desire a change, it is within the competency of the Crown to grant a new or further Charter effecting it." Since this opinion was expressed the Federation Committee have been engaged in efforts to convince the various Associations of the advantages of federation, but these bodies have not all yet seen their way to undertake the financial burden or to acquiesce in the conditions necessarily involved in carrying out such a scheme. Under these circumstances it might perhaps be advisable to be content at present with the formation of a voluntary joint Committee of representatives of the various Associations to deal with matters of common interest, the College supplying a local habitation and other aid. Such a plan would not involve great expense to any of the bodies concerned, and would leave each body free to carry on its own special work. It would also enable the different bodies to ascertain by experience how far it might be possible to work together, and it might eventually pave the way for a more complete union.

8. During the past half-year 20 new members have been elected, notice has been received of the withdrawal of 2, and the names of 12 members have been removed on account of non-payment of their subscriptions. In the case of 41 persons who had been admitted to the privileges of membership under Sect. II. cl. 5 of the By-laws, the privileges have been withdrawn. The Council regret to have to report the deaths of the following members of the College:—The Rev. Dr. Hiron (for many years a Member of the Council and of the Examining Board), Dr. R. Biggs, Mr. E. C. Clark, A.C.P., and Mr. R. Tucker, F.C.P.

Mr. GUTTERIDGE, in reference to paragraph 3, remarked that, while there was a considerable number of examinees to whom the diplomas of Associate and Licentiate respectively had been awarded, no candidate appeared to have obtained the Fellowship. He thought that this was to be ascribed to the want of elasticity in the requirements for this grade, and suggested that more options should be allowed, as was now the case in the Degree Examinations of the University of London.

Mr. RADFORD referred to the falling off in the number of entries for the Certificate Examinations, and recommended the Council to consider the advisability of instituting examinations in single subjects on a plan similar to that of the Society of Arts and of the London Chamber of Commerce.

Mr. ORCHARD, in reference to the subjects of the lectures given at the members' meetings, suggested that it might be useful to arrange for a conference to consider the whole question of educational chaos and contradiction, and the means that might be adopted to remedy the evils arising therefrom.

In reference to the subject of paragraph 7, Canon BELL, by permission of the meeting, read a statement on the present position of the federation question. The CHAIRMAN, however, ruled that, as no notice had been given, it would not be in order to discuss this statement.

The CHAIRMAN pointed out that for the purposes of discussion the paragraph might conveniently be divided into sections. The

first section stated that the Council had no proposals to lay before the members. The second explained the reasons for federation. The third described the steps taken by the Council to consider the proposals made to them by the Federation Committee. The fourth section gave an outline of the conditions of union drawn up by the representatives of the Council and of the Federation Committee; and in the fifth section the Council made a suggestion which was different from the proposals for federation that had been submitted to them.

Dr. J. BELL insisted that a special meeting ought to be called to consider this matter, which involved the very existence of the College.

Mr. JAS. WILSON said he had been inclined to regard the paragraph as an obituary notice of the federation scheme. Any one who at all appreciated the tangle of difficulties that beset the initiation of such a scheme could feel no surprise at what had happened. Even if the legal and financial obstacles were out of the way, it seemed to him that federation would not effect the objects of its promoters. Federalism spelt weakness, not strength; its machinery was cumbrous and slow-working when it worked at all. No Education Authority would be in the least likely to seek the guidance of a federal council or be influenced by its remonstrances. In short, each of the federating associations acting on its own initiative for its own interests, and uniting with the others in common action as occasion arose, would afford far better guarantees for the promotion of the interests of secondary teachers than could be reasonably expected under federation. However, it was from the point of view of a member of the College that he desired to look at what had been done and what it was proposed to do in reference to the obtaining of a new Charter. The College had been at work under the existing Charter over fifty years. Owing to its success, due to the goodness of its work and largely to the administrative ability of its executive, considerable property and funds had been accumulated. In these funds each member of the corporation was individually interested, and in certain contingencies they might become productive of individual benefit. The significance of those vested interests constituted by the existing Charter seemed to be ignored by the promoters of federation. They proposed to change the name of the corporation, as if such change were a trivial matter, to divert its surplus funds to uses not warranted by its Charter, and yet they appeared to be unaware of the fact that such fundamental changes could only be effected by the surrender by *all* the corporators of the existing Charter as a preliminary step. There was high legal authority for the proposition that a corporation circumstanced as the College would be "restrained from surrendering their Charter for the purpose of getting a new one altering the constitution of the body on the ground that the Charter did not contemplate at all, nor did the common law admit, except by consent of *all* the corporators, of an interest constituted by the Charter being destroyed." The late Lord Selborne, in deciding a case between an individual objector and a society seeking a supplemental Charter, stated that objection to the grant to be successful should be in one of three forms—either that the proposed Charter was contrary to the general law, or that no proper authority to apply for the Charter had been given, or that some personal or individual right of the objector had been wrongly interfered with. The proposals of the Federation Committee could be objected to under all three heads. They had stated publicly that one of their objects was to form a body to resist the encroachments of the State and the Local Education Authorities. How intelligent men could persuade themselves that a Royal Charter would be granted for such a plainly illegal object passed his comprehension. Then these promoters of federation had never taken the means open to them of explaining to their fellow corporators what exactly they wanted and how they proposed to get it, or asked for any authority to pursue their scheme. It was unnecessary to specify the various ways in which existing rights would be interfered with. In short, the project looked to him quite hopeless, and he trusted that the Council would not play any longer with it. They were drifting into a false position and giving countenance to aims that could not be realized except by the dissolution of the College. He earnestly hoped that all concerned would see the wisdom of allowing the matter to drop.

The DEAN said he wished to make clear the position that the Council took up in this matter. They had not yet been in a position to bring anything formally before a General Meeting. When the question was first mooted by certain individuals for whom he had the highest respect, the members of Council first

approached felt that it was a proposal that could not lightly be put aside. The matter was brought formally before the Council, and a Committee was appointed to examine it. The Council subsequently came to the conclusion that it deserved their favourable consideration, provided it could be carried out so as to be a development of the work of the College. It was their declared intention to submit these proposals to a Special General Meeting when they had been worked out in detail; but at present nothing had been done, especially in view of the very strong legal opinion that had been given against the scheme. He himself had felt all along that the object they desired would, if it could be carried out, be of advantage to the College and to secondary education; but he thought it might be possible to attain it without a paper constitution by gradually getting members of different associations to join the College and make it a centre, so to speak, for all secondary teachers, without going through the formality of amending the Charter. He hoped it was on these lines that the suggested joint Committee would proceed, not merely as a temporary committee but as a standing one. Such action might be the beginning of a great development of the College. The paragraph in the Report was mainly historical, and did not commit the Council or the members to anything. The Council had not been guilty of discourtesy towards the general body in not laying any definite proposition before the members at that meeting, as they had not yet received in due form such a proposition from the Federation Committee. So far as he had been able to gather it, the opinion of the meeting was rather adverse to the completion of the negotiations that had been carried on, and the Council must of course take account of that feeling. He would be sorry if any scheme which was supported by such an educational authority and loyal member of the College as Canon Bell should entirely fall through, as it had been taken up in the interests alike of the College and of the teaching profession. Although he did not feel very sanguine as to any propositions being made which would be acceptable to the members, he did not wish to put a stop to negotiations. He trusted that the paragraph in the Report would not be rejected by the meeting, as, whatever opinions members might hold, there would be no advantage in doing so. The question must in any case come before a Special General Meeting before the Council could take any formal steps with regard to it.

Paragraph 7 was put to the meeting and adopted, and the Report as a whole was then adopted.

The DEAN then presented his Report, which had been printed and circulated among the members present. It was as follows:—

THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Midsummer Examination of candidates for Certificates took place on the 27th June to the 1st July at 165 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Abingdon, Anerley, Arnside, Attleborough, Aylesbury, Bamford (Derbyshire), Banagher, Bath, Belfast, Birmingham, Blackburn, Blackpool, Bognor, Boston Spa, Brecon, Brewood, Brighton, Bristol, Bruff, Buttevant, Camelford, Cardiff, Carlisle, Carnarvon, Cheltenham, Coleraine, Cork, Croydon, Darlington, Dublin, Dumfries, Durham, Ealing, East Grinstead, Eccles, Edinburgh, Epsom, Erith, Exeter, Eye (Suffolk), Falmouth, Farnworth (Lanes), Felixstowe, Forest Hill, Fraserburgh, Goudhurst, Greenwich, Grimsargh Grove Ferry, Hastings, Hawkhurst, Hexham, Hornsea, Horsmonden, Huddersfield, Hulme, Hunstanton, Hutton (Preston), Hythe, Inverurie, Iron Bridge, Jersey, Kington, Kirkby Stephen, Launceston, Leamington Spa, Leeds, Leek, Lisburn, Liskeard, Liverpool, London, Long Sutton, Lostock Gralam, Maidstone, Manchester, Margate, Market Bosworth, Market Harborough, Mayfield, Merthyr Tydfil, Middlesbrough, Midhurst, Middleton, Mountmellick, Muswell Hill, Newcastle-on-Tyne, Newton Abbot, Newtownards, Nottingham, Old Colwyn, Oswestry, Paisley, Penarth, Plymouth, Porth, Portsea, Portsmouth, Richmond (Surrey), Richmond (Yorks), Ripley (Surrey), Rivington, Rochester, Rugeley, Ruthin, Rye, St. David's (Pem.), St. Leonards-on-Sea, Scorton, Seaford, Shebbear, Sheffield, Southampton, Southend, South Molton, Southport, Southwell, Stamford Hill, Streatham Hill, Stroud, Sunderland, Taplow, Taunton, Tavistock, Tettenhall, Thorne, Towcester, Uckfield, Walsall, Waterford, Wellington, Wells (Som.), Westcliff-on-Sea, West Hartlepool, West Norwood, Weston-super-Mare, Weybridge, Wimbledon, Winslow, Woodstock, York, Youghal. The Examination was also held at Gibraltar, Constantinople, Free Town (Sierra Leone), Lagos (West Africa), Johannesburg and Uitenhage (S. Africa), Colombo (Ceylon), Rangoon (Burma), and Wei-hai-wei (N. China).

The total number of candidates examined (not including 119 examined at Colonial and Foreign Centres) was 3,876—2,501 boys and 1,375 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined during the year ending Midsummer, 1905 (not including those who attended the supplementary examinations in March and September), has been 10,284.

The following table shows the proportion of the candidates at the recent Midsummer Examination who passed in the class for which they were entered:—

	Examined.	Passed.	Percentage.
First Class [or Senior].....	445	206	46
Second Class [or Junior]...	1,848	860	47
Third Class	1,583	1,203	76

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (277 in number) who entered for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination (not including 43 examined at Colonial and Foreign Centres) was 1,152—644 boys and 508 girls. Of these 910 passed, or 79 per cent.

At the Professional Preliminary Examination for First and Second Class Certificates, which was held on the 7th to 9th of March, in London and at seven Provincial Centres, viz., Birmingham, Bristol, Cardiff, Inverness, Leeds, Liverpool, and Manchester, 366 candidates presented themselves.

Practical Examinations for Certificates of Ability to Teach were held in February, May, and June. At these Examinations 48 candidates presented themselves. Of these 20 obtained Certificates, and 19 satisfied the conditions prescribed by the Teachers' Registration Council for candidates applying under Reg. 5 (2) (b).

The Report was adopted.

A vote of thanks to the Chairman concluded the proceedings.

ADJOURNED MEETING OF THE COUNCIL.

AN adjourned meeting of the Council was held on July 29. Present: Mr. E. A. Butler, Vice-President, in the Chair; Rev. Canon Bell, Rev. J. B. Blomfield, Rev. A. W. Boulden, Mr. Charles, Mr. Eve, Mr. Holland, Rev. R. Lee, Rev. G. E. Mackie, Dr. Moody, and Mr. Vincent.

The diploma of Licentiate was granted to Mr. Ernest Rigby, who had fulfilled all the required conditions.

OPEN COURT.

Thay haif said . . .

Quhat say thay?—Lat thame say!

PARENTS AND SCHOOLMASTERS.

THE ACTUAL STATE OF AFFAIRS.

By GILBERT J. PASS,

Assistant Master, Craufurd College, Maidenhead.

THE interesting views expressed by the writer of "Parents and Schoolmasters" in last month's issue of *The Educational Times* must awaken in the hearts of many schoolmasters a yearning that is very rarely satisfied; for who amongst the pilgrims ever reaches the educational Mecca so vividly pictured?

The "parent" difficulty is most felt in the schools of lesser importance, which, however, educate as many, if not more, pupils than the greater schools. The authorities in the larger schools have maintained complete independence by pointing out to parents that, if they do not approve of the existing state of affairs, they had better remove their children; whereas the lesser schools, relying much more upon the good will of parents, are unable to take up such a sturdy independent attitude, and, in consequence, often have to brook interference from those who are the least qualified to speak on educational matters.

Instead of co-operation, the average teacher has often to educate the pupil in spite of the parents, and sometimes in spite of the child himself. The parents frequently desire a special curriculum for their children, and when the schoolmaster ventures to remonstrate he is told that he is autocratic and impatient of criticism. Yet surely no teacher worthy of his salt is intolerant of fair criticism: what he does resent, and rightly, is

interference with his methods. Parents come to him and say: "My boy must not learn Greek; it will be no good to him when he goes into business." Or: "I want my boy to pay special attention to shorthand and book-keeping, and not to devote time to such useless subjects as Latin or Euclid"; and so on, through the whole catalogue of such requests.

It is difficult to convince parents of the wrongness of the position they take up in this matter. They go to their physician for some bodily ailment, and follow his advice implicitly, and yet when they consult an educational specialist they are unwilling for their children to follow out his "course of treatment," though it may be the result of many years' careful study and successful experiment. To ask a schoolmaster to omit portions of his curriculum for individual pupils is just as absurd as to request a doctor to omit this or that drug from his prescription because no immediate effect is seen to result from it. We wish to be judged and fairly criticized upon the sum total of the work accomplished, and not by patchwork performed at the request of some amateur.

True, many of the subjects we teach—and, indeed, even those to which we devote the most time—are not employed by our pupils when they have finished our course. It is certain that a very large percentage of children who learn at school Algebra and Geometry, or Latin and Greek, do not employ these subjects again once their schooldays are ended; and it is not always easy to impress parents with the fact that such branches have not been taught *per se*, but rather to exercise the power of accurate and careful thinking—a habit which, if acquired at school, will help their children inestimably when they have to fight the battle of life.

"Oh!" they will say impatiently, "we did not learn these things at school, and yet we have been able to get on all right. Drop teaching Latin and Greek, Geometry and Algebra, and devote all your time to such useful subjects as Arithmetic, Modern Languages, and the like." They grumble if their children make progress in Classics or Mathematics, and yet cannot learn to speak French or German. They forget that environment, so absolutely essential for true progress in modern languages, is of necessity absent from the large proportion of our schools. Yet the schoolmaster should be satisfied if a good grounding is imparted in this branch, so that, should his pupil later on go abroad, he may quickly obtain a mastery over conversational French or German.

Parents wrongly imagine that, if their children do not make progress in subjects they will be able to employ when they grow up, they are not in reality advancing at all; yet, if they leave school with a half-assimilated knowledge of commercial subjects, and a superficial acquaintance with a few everyday phrases in French and German, they consider that they have had an eminently satisfactory schooling. They lose sight of the fact that it is not the schoolmaster's highest aim to turn out pupils crammed with undigested facts, but rather to send into the world individuals capable of thinking clearly, having high aspirations, and a proper knowledge of their duties as citizens. Let parents give us a free hand in our curriculum, and let them judge our work synthetically rather than analytically, and then we shall look forward with confidence to their criticism.

They can do much to help us by awakening the dormant intelligence of their children and by urging them to work industriously and make the most of their opportunities. In the holidays they can take them to places of instructive amusement, and, by the "powder-in-the-jam" method, enable them to acquire useful and interesting facts.

How often it is the lot of schoolmasters, and especially of those in boarding schools, to find pupils much deteriorated after a vacation!—the spoiling they receive at home, the late and irregular hours, and the absence of anything definite to do, so upset them that they frequently take some weeks to settle down to anything like regular work.

We live in an age of educational conferences, but there has not as yet been a conference between parents and teachers. If such a conference could be brought about, and if there were a complete interchange of views, much might be done to promote an *entente cordiale*, and far better results might be obtained.

How then can this much-needed co-operation be brought about? Only by pointing out clearly to parents what our aims are, how we are working for the distant future rather than for the immediate present, and how they can best assist us. If we can but do this satisfactorily, we may yet see parent, schoolmaster, and pupil completely *en rapport*, and all working for the common good.

REVIEWS.

EDUCATIONAL UNITY.

The Philosophy of Education. By Herman Harrell Horne, Ph.D., Assistant Professor of Philosophy and Pedagogy in Dartmouth College. 7s. 6d. net. (Macmillan.)

Dr. Horne explores "the foundations of education in the related natural and mental sciences." He does not make war on other educationists; on the contrary, he is anxious to bring "the warring sects" to "peace through unity," for in unity lies "the educational truth to-day." "If claims can be rightly adjusted, harmony should ensue for a season, until indeed the educational life develops new contradictions to be synthesized." His volume is not another manual of practice, but an essay in interpretation: "it would give not rules, but insight." "Enough theory will be found here to illumine practice, and only so much; enough practice, too, to give weight to theory." Dr. Horne treats successively the biological, physiological, sociological, psychological, and philosophical aspects of education. His own contribution to the definition of the conception of education, he says, "will doubtless appear in a certain large and systematic unity, herein introduced into the hitherto rather unshapen notion of what education is and means in human experience; in the analysis of the spiritual environment of the pupil, together with the attempt to vindicate on sociological and psychological grounds the equal right of æsthetic with physical, intellectual, and moral education; and in the induction of the Kantian ideas of God, Freedom, and Immortality from educational rather than ethical facts."

On the biological aspect, Dr. Horne expounds the theoretical and the practical educational significance of three main facts: (1) the increasing size of the cerebrum, or hemispheres of the brain, both absolutely and relatively to the size of the body, in the ascending scale of mammals; (2) the prolonged period of human infancy in comparison with lower animals; and (3) the brain as the organ of the mind. Following Spencer, he is led to lay special stress on adjustment to environment. Perhaps the most important single point is the suggestion that "the temptation is strong upon educators, particularly upon those who have not duly considered the physical limitations of mental development, to extend unwarrantably the possibilities of education." The physiological aspect raises three questions as to the education of the body: (1) How does the body influence the mind? (2) What consequent attention should it receive? and (3) What attention is it receiving in our educational system to-day? The points to be practically considered in the physical nature of children are, with the exception of fatigue, indicated but generally; others of them might have been very usefully enlarged upon. The points falling under the third head—manual training, play, gymnastics, and athletics—are treated at some length. It may be, as President Butler affirms, that "the soundest educational philosophy the world over teaches that the individual alone is nothing, but that the individual as a member of society and of a race is everything"; but Dr. Horne's seventy-two pages on the sociological aspect seem to us to contain a great deal that is considerably remote from his specific purpose, however true and interesting in itself. The psychological aspect is still more fully depicted: one chapter is occupied mainly with imitation, interest, and effort—"those three chosen ways whereby man's complete self-realization is attained"; another inquires into "the nature of that self-development which is the consequence of self-activity." The philosophical aspect reveals education as "a world-process in time," with implications grouped about three main concepts—the origin, nature, and destiny of man. Dr. Horne's psychology "is the kind familiar since Kant, that considers the unity of mind in its threefold diversity of knowing, feeling, and willing," though he indicates the need of a new classification and points to Prof. Royce's proposals, not to others. His philosophical system he terms "Idealistic Theism"—"the necessary implication of the educational process"; and here also he looks up to Prof. Royce. As the result of his whole inquiry, he evolves the definition of education as "the eternal process of superior adjustment of the physically and mentally developed, free, conscious human being to God, as manifested in the intellectual, emotional, and volitional environment of man."

These very brief indications of the drift of the book will scarcely give ground for any serious anticipation that Dr. Horne will be accepted as the educational unifier. His mental science does not seem strong enough for the task: Prof. Royce is indeed a

charming popularizer, but hardly a name to conjure with in the region of pure thought. When Dr. Horne sticks to facts, and keeps out of the mists of metaphysics, he shows himself, not indeed originally suggestive, but orderly, lucid, and industrious. His volume has the high merit of regarding the whole subject, of treating its different aspects seriously, of marshalling the points of discussion on clear system, and of setting out the matter in simple and easy exposition. If an advanced student will become impatient with some details and occasional digressions, perhaps these expansive portions will be instructive to more elementary students. The volume is a sincere and in many ways an able treatise, and, though we do not find in it either finality or profundity, we commend it to such educationists as are eagerly looking for educational solutions.

A COMPANION TO HOMER.

Handbook of Homeric Study. By Henry Browne, S.J., M.A. Oxon., Professor of Greek at University College, Dublin. (6s. net. Longmans.)

Notwithstanding Sir Richard Jebb's "Introduction," which indeed is now falling out of date in some respects, there is ample room for Prof. Browne's more comprehensive and fresher volume, which will certainly contribute materially "towards lessening the difficulties of Homeric study and making it more intelligent." Though Prof. Browne has his own conclusions, he is constantly concerned "to lay before the reader the elements out of which he can form a judgment of his own"—a candid and unselfish attitude of good practical consequence. He does not wish to supersede the ordinary Homeric grammars, text-books, or lexicons: his object is to marshal compendiously the materials of the various Homeric questions, to sift the divergent views of scholars upon them, and to penetrate through the surface differences to points of real and practical unanimity. The attempt is beset with difficulties for any single scholar; but, though Prof. Browne may fail to satisfy the experts on some branches of his subject, there can be no doubt that his volume will prove most instructive and stimulating to young students and to general readers.

The first chapter presents a broad view of "the Homeric Poems." Prof. Browne sketches the scope and spirit of the "Iliad" and the "Odyssey," remarks on the "Hymns," and, having described briefly the so-called Cyclic poems, discusses at some length the relation of Homer to the Trojan Cycle. He then traces the history of their acceptance and their influence among the Greeks, and gives a concise account of the Alexandrian textual criticism. The fourth and sixth sections—on dialect, grammar, style, and metre—inevitably furnish evidence of the difficulty of compendious handling: there is inadequate space for the really necessary detail. The other sections of this chapter, however, are among the best in the book. The second chapter—on "the Homeric Bards"—consists of a series of half-a-dozen sections investigating the authorship, composition, and local origin of the poems: and the third chapter outlines historically the Homeric controversy. On a final comparison of the various theories, Prof. Browne is somewhat bewilderingly eclectic, accepting something and rejecting something of nearly all the prominent views. He is quite clear that the poems could not possibly have been the work of a single bard; and, much as he agrees with the late Sir William Geddes, he "refuses to follow him in postulating one single author for all the Odyssean work (that is, the *Odyssey* and the non-Achillean books of the *Iliad*), still more in giving this author the name of Homer."

The fourth chapter is concerned with the matter of the poems as furnishing an account of the various aspects of "Homeric Life"—geography and commerce, religion and ethics, social organization, and material civilization. On all these heads, Prof. Browne sets forth in orderly disposition a large amount of very interesting and instructive matter, which will be very helpful to the beginner in Homeric study. The fifth chapter deals with the question: "Who were the Homeric people?" This plunges us in the excavations, and in the question of the connexion of Homeric and Mycenaean culture. The statement of the difficulties of the Mycenaean theory, brought to a head by the cumulative blows of Prof. Ridgeway, appears sufficiently formidable; yet Prof. Browne endeavours, as usual, "to construct a *via media*" between the opposing theories, and to find "a working hypothesis which will explain all the facts equally." He is more ingenious than convincing; and, while his handling of archaeological matters is scarcely of expert quality, the immense detail of Prof. Ridgeway's work precludes a satisfactory appreciation of his

results within the space available in Prof. Browne's book. Still, the exposition will be very serviceable to young students. The final chapter is a tentative criticism of "the Epic Art of Homer," brief and suggestive, but by no means satisfying; perhaps it is enough, for the occasion, that the points taken are suggestive. Generally, it may be remarked that Prof. Browne does not distinguish with the desirable decisiveness between the different degrees of value of the authorities he adduces. After all deductions, however, the volume shows an immense amount of careful and thoughtful labour, and it will be cordially welcomed as a valuable companion to Homer in the schools. There are twenty-two plates and some inset illustrations, all of them interesting and serviceable.

The Coming of Parliament. By L. Cecil Jane. (5s. T. Fisher Unwin. The Story of the Nations.)

We do not quite agree with Mr. Jane that "the general scheme of this volume is indicated by its title": a better indication is the statement that "it is an attempt to trace the steps by which Parliament attained to a permanently important share in the government of England." But, "while special stress is laid upon this theme, other sides of the national life have not been ignored"; indeed, not only is there "some allusion" to such other matters as are necessarily or advantageously referred to in illustration of the progress of Parliament, but there is even "an outline of the general history of the period, that the reader's memory may be refreshed as to the principal events." We cannot help thinking that Mr. Jane might fairly have assumed the reader's knowledge of the general history, and so have obviated the danger of swamping by its details his specific account of the Parliament.

The volume presents in substance a sketch of the history of England from 1350 to 1660—a somewhat flaccid and colourless narrative of outstanding events, with brief summary and simple comment at the end of the chapters. Inevitably there is much information of varied interest for readers that are but little acquainted with the history of the period; but Mr. Jane does not present it with narrative power or with dramatic force. The Parliamentary development may, for the most part—better in the earlier than in the latter times, for Mr. Jane has not seen far into the quarrel of Charles I. with the Parliament—be gathered satisfactorily from the containing mass of the general history. But the volume is lacking in consistent definiteness of purpose and in vigour of execution. It will be more useful to the general reader than to the student. There are some fifty illustrations, largely portraits, and a map (from Camden's "Britannia"), showing the means of communication in England in the seventeenth century.

GENERAL NOTICES.

CLASSICS.

Thucydides. Book VI. Edited by A. W. Spratt, M.A. (6s. Cambridge University Press—Pitt Press Series.)

The introduction (pages ix-xliii) is partly historical, partly philological. The historical part does not supersede Dr. Holden's fuller essay introductory to his edition of Book VII. in the same series, but it makes a good and sufficient summary. The section on the order of words in Thucydides is suggestively illustrated by well chosen examples. Below the text runs a considerable array of critical notes, and critical points are frequently discussed in the general notes or commentary. After all, though "attention has been directed to all the more important variants," yet "a complete 'apparatus criticus' has been rendered impossible by limitations of space." Indeed, Mr. Spratt would have done better, we think, to have reserved his laborious critical notes (except in a few passages where they are for one reason or another specially important) for an edition addressed to scholars; for it is only scholars that will take interest in them, and other readers likely to use this edition will find them in the way. The commentary (pages 108-378) is a careful and scholarly piece of work; but it is distracted between the claims of "the younger student" and "the mature scholar." Mr. Spratt should have decided once for all which horse he was to ride. However, there can be but one opinion as to his scholarship and industry, and as to the value of the work.

Messrs. George Bell & Sons issue a very charming edition of *Horace*, the Latin text and Conington's translation on opposite pages (5s. net). The text follows closely Dr. Gow's recension in the last edition of the "Corpus Poetarum Latinorum," with certain deviations on special grounds. The volume is beautifully printed, handy in form, and very tastefully and substantially got up. All lovers of Horace will give it a cordial welcome.

An excellent addition to "Murray's Handy Classical Maps" is *Mare*

Aegeum, &c. (1s. net). The sheet exhibits the Aegean Sea, the Propontis, the Nile from 22°, and various plans of Rome and Athens at different periods or in different degrees and points of detail. It will be exceedingly useful in class-room and in study.

The Clarendon Press has issued a second edition of Prof. Percy Gardner's suggestive brochure, *Classical Archaeology in Schools* (1s. net).

MATHEMATICS.

Plane Geometry. By John Sturgeon Mackay, M.A., LL.D., F.R.S.E. (Chambers.)

The manner in which the author places before his readers the substance of the first four books of Euclid is marked by a pleasing freshness and originality; and, amongst other points, it may be noted that the young student is very frequently brought into close relation with the train of thought which led the writer to attack a problem or a theorem in a particular way. The text-book takes its place amongst those of the newer type: it rejects at pleasure (not always happily) the sequence of theorems adopted by Euclid, and it keeps problems and theorems in separate groups. The constructions might, as usual, be greatly improved in some cases by the exercise of more care to reproduce exactly in words what is undoubtedly implied. The practice of placing allied propositions in juxtaposition is very good. A short chapter on the nature and object of geometrography is both novel and interesting. The work contains a very large and varied supply of exercises. Some misprints occur, but are, perhaps, for the most part, of minor importance.

Preliminary Geometry. By Rawdon Roberts, B.Sc. (1s. Blackie.)

The work contains a lengthy series of exercises in practical geometry, arranged so as to form suitable material for a preliminary course. The correct mode of working a particular exercise is often sufficiently obvious and may be supposed to suggest itself to the pupil. In many cases, on the contrary, the steps must be indicated by the teacher. Interest in the subject is stimulated by the practice afforded in the construction of attractive geometrical patterns.

The "Council" Arithmetic for Schools, Parts I., II., III., and IV. Scheme B. By T. B. Ellery, F.R.G.S. (2d., 3d., 3d., 4d. (paper); 3d., 4d., 4d., 6d. (limp cloth). Answers to each part, 4d., limp cloth. Black.)

A series of bright, ably compiled little books, adapted for use in primary and secondary schools, and written with special reference to the conditions subsisting under the new Education Authorities. The series will be complete in eight parts, and is to provide for a course of instruction fulfilling the requirements of pupils working for various scholarship examinations, for the Oxford and Cambridge Locals, and for other examinations of a similar standard. It is likely to become popular owing to the constant appeal which the exercises make to the circumstances of daily life; and the younger pupils will be attracted, too, by the many illustrations that accompany the examples in the earlier parts. It may even be anticipated that they will feel a certain regret when they arrive at the stage at which these cease to form a feature of the text.

SCIENCE.

Trees: a Handbook of Forest-Botany for the Woodlands and the Laboratory. By H. Marshall Ward, Sc.D., F.R.S., Professor of Botany in the University of Cambridge. Vol. I.: *Buds and Twigs*. Vol. II.: *Leaves*. Vol. III.: *Flowers and Inflorescences*. (4s. 6d. net each. Cambridge University Press, Cambridge Biological Series.)

Prof. Marshall Ward takes the point of view of the outdoor naturalist and shows how he should go about the study of trees and shrubs. With every proper respect for laboratory processes, he wants to encourage a first-hand acquaintance with the plant in its own home, and the practice of thorough observation of peculiarities of structure and adaptation. In fact, he applies to "woody" plants the expository method he formerly exhibited with marked success in his book on the Grasses. The work, appealing to the amateur, avoids all unnecessary (but no necessary) technicalities, and may be taken as an introduction to Nature study (in a serious practical sense); it grounds the student in the methods of systematic botany and morphology, and in the expert study of Forest-Botany; and it incidentally deals with matters of Histology and Physiology. In short, it is "an attempt to teach the fundamental principles of Botany by means of examples selected from trees and other woody plants." There are to be six volumes in all. The present three volumes are each divided into a "general" and a "special" part of nearly equal extent. The exposition is lucid, and the arrangement exceedingly helpful; the whole treatment is thoroughly judicious and instructive. The first volume has 136, the second 124, the third 142, admirable illustrations. The work will be very cordially welcomed by layman and expert alike.

A Further Course of Practical Science. By J. H. Leonard, B.Sc. Lond., and W. H. Salmon, B.A. Camb., B.Sc. Lond. (2s. Murray.)

The volume assumes only an elementary knowledge of algebra and geometry, and, though naturally a continuation of the "First Course of Practical Science," may readily be followed by pupils that have worked through some similar course. The subjects—Mechanics, Hydro-

statics, and Heat—are treated, as far as practicable, on graphical and experimental methods. The opening chapter, on Physical Arithmetic, showing the pupil how to calculate the degree of accuracy of his observations, is very useful. In several of the chapters new departures have been taken and fresh methods have been applied, partly on the basis of independent experiments. A series of varied and carefully devised exercises is appended to each chapter, and the answers to the numerical examples are given at the end of the book. There are fifty-nine figures. The explanations are direct, lucid, and interesting. A very thoughtful, careful, and serviceable book.

MODERN LANGUAGES.

La Clef de la Conversation française. Par Louis Lagarde. Third edition. (Berlin: Weidmann.)

The preface raises the question whether, when persons having already a grammatical knowledge of French apply to a teacher for lessons in conversation, he should proceed without a book. Much depends on the teacher, but the talk is not unlikely to run into narrow grooves, and there is usually need for some systematic process. The present little work, which rightly claims to be a "method," not a "manual," takes up the facts of daily life: the human body, clothing, food, a house, family, politics, industry, commerce, recreations, &c. On each reading passage there is a "questionnaire"; some dialogues and social letters are also given; and at the end come vocabularies to the respective lessons. It is an admirable book, and seems to have found many friends on the Continent.

Deutsch-Russische Handelskorrespondenz. Von Dr. Th. von Kawraysky. (3s. Leipzig: Göschen.)

This is the most recent volume of an excellent series of handbooks for students of the chief European languages on the commercial side, prepared by teachers with business experience. There is still complaint made of the inertness of British traders in forming Russian trade relations; visitors to St. Petersburg comment on the absence of anything like an adequate supply of British goods to establishments in the Nevsky Prospect. Doubtless the difficulty of the language accounts partly for this, but Germans profit by our negligence; and if, indeed, there are few good aids to the acquirement of commercial Russian, this, at any rate, is one of them. The arrangement is systematic; the forms of documents those most needed; the exercises businesslike.

Lecciones Castellanas. By Prof. H. Runge. (2s. 6d. Leipzig: Teubner.)

An introduction to the Spanish language by a skilled teacher—one of the publisher's series of short language books prepared on modern lines. Each lesson begins with reading matter, to which a special vocabulary is attached; then come grammatical notes, to be mastered before the exercise of connected matter for translation into Spanish is attempted; and, finally, a conversation, for which some reference to the alphabetical vocabulary at the end may be required. The materials are throughout drawn from everyday life—the streets, society, business, and recreations. The book is intended for travellers, journalists, merchants, and students alike. It embodies much information about the country and the people. It seems excellently adapted to fulfil its purpose.

HISTORY.

The World of To-day. By A. R. Hope Moncrieff. Vol. II. (8s. net. Gresham Publishing Company.)

The second instalment of Mr. Hope Moncrieff's vivid and instructive "survey of the lands and peoples of the globe as seen in travel and commerce" takes us through the Eastern Peninsula (Burma, Indo-China, the Malay Promontory), the Eastern Archipelago, Afghanistan and Beloochistan, Persia, Asia Minor and its Borderlands, and Arabia. There are 4 coloured plates, 10 maps (3 of them coloured), and some 80 text illustrations. Between the text and the illustrations one obtains an excellent general impression of the physical and social characteristics of the countries. The author seizes the main features with the skill of experience, and depicts them in a forcible and popularly impressive manner. The description of Afghanistan, Beloochistan, and Persia will be specially attractive and informative at the present time. The Geographical and Commercial Survey appended will prove an exceedingly handy and serviceable repertory of statistics. The type is most readable, and the illustrations are very skilfully reproduced.

Messrs. Ginn publish a revised edition of *Mediæval and Modern History*, by Philip Van Ness Myers (7s. 6d.)—a companion volume to the author's revised "Ancient History," which we announced very recently. It is an abridgment of "The Middle Ages" and "The Modern Age," both of which we have noticed very favourably. A handsome and most serviceable volume, showing great care and judgment and immense diligence. There are 8 plates, 30 coloured maps, 9 sketch maps, and 113 illustrations.

COMMERCE.

The Romance and Realm of Commerce. By Alfred Morris, Member of the London Chamber of Commerce. (1s. 6d. Nelson.)

A most sensible, practical, and engaging little book, which ought to be placed in the hands of every boy that means to go into business. It is intended "to set before parents and sons in a brief way the

advantages and prospects of a commercial career." Mr. Morris vindicates the dignity of commerce, sketches its history and possibilities, remarks on education, on choosing a trade, and on the grounds of success and failure, passes to colonization and emigration, and finishes with personal habits, commercial economy, and business morality. The fundamental maxim is "spend less than you earn," but there are many more. The book is based on experience and on high principle; and it is written in a plain, straightforward, vigorous style. There are a good many illustrations, and the get-up is substantial and tasteful.

A Commercial Geography of the British Empire. By Ernest Protheroe, Lecturer in Commercial Geography at the Wolverhampton Municipal Science and Technical School. (1s. 6d. Nelson. School and College Series.)

Mr. Protheroe presents a vast quantity of information in lucid arrangement and statement, with numerous maps, diagrams, and other illustrations. In Part I. he surveys the field generally, enumerating and remarking on the various productions, vegetable, animal, and mineral, the methods of transport, the distribution of trade among the nations, and a number of other pertinent matters. Part II. deals with the trade of the United Kingdom: one of the chapters, on "Where the Trade lies," might perhaps have been extended with advantage. Part III. describes the trade of Greater Britain, in five chapters. We observe that he says (page 143) that "trade follows the price-list rather than the flag," which is true on the whole. Yet there is a remarkable particular exception (page 18) in the case of Madagascar, which may, however, be temporary if our manufacturers exert their wits. An appendix contains a variety of useful tabular information. A thoroughly good text-book.

PRACTICAL MANUALS.

Forestry. By Dr. Adam Schwappach. (1s. net. Dent. Temple Cyclopædic Primers.)

This is a translation and adaptation of Dr. Schwappach's esteemed *Forstwissenschaft*, some parts being abridged and others somewhat extended. The subject is treated throughout in its economic aspects, anything peculiar to any particular country being specifically noted as such. It is an excellent compend of the essential matters, and it is popular in form. There are thirty illustrative figures.

Cutting Out, for Student Teachers. By Amy K. Smith. (4s. net. City of London Book Depôt.)

The descriptions are detailed, clear, and precise, so that there need be no difficulty in following them without the aid of a teacher; and the garments are sufficiently miscellaneous. Surely we have here the whole art and mystery of the subject. There are twenty-eight figures and an appendix of examination tests.

Messrs. Percival Marshall & Co. publish *Educational Woodwork*, by A. C. Horth. (3s. 6d. net.) The more distinctively practical part of the work is also issued in three sections, intended for three successive years' courses. (4d. net each.) The complete work contains, in addition to the matter of the three separate sections, chapters on fittings and furnishing, discipline and organization and method, and instruction of the physically and mentally deficient and the blind, together with object lessons. It seems to be judiciously graduated, and, being based on the author's school experience, will no doubt be useful to other teachers and pupils. There are 163 figures.

Messrs. Dawbarn & Ward have added to their excellent "The Home Worker's" series of practical handbooks, edited by H. Snowden Ward, (1) *How to build a Petrol Motor*, suitable for driving a bicycle, by James F. Gill, B.Sc.; (2) *How a Steam Engine works*, by W. E. M. Curnoek; (3) *How to read a Workshop Drawing*, by W. Longland; and (4) *How to build a Lathe*, by A. W. Burford, A.M.I.C.E. (6d. net each)—all simply and clearly written and liberally illustrated.

A very attractive addition (No. 29) to their "Useful Arts and Handicrafts" Series (also edited by H. Snowden Ward) is a booklet on china: *Decorating and Repairing China and Earthenware*, by the Rev. F. C. Lambert, M.A. (6d. net). The instruction and hints are practical and simple, and ought to be very useful to careful housewives as well as to students of these matters. There are six full-page plates of designs, besides diagrams in the text.

Messrs. Cassell issue a "fourth series" of their *Cyclopædia of Mechanics*, edited by Paul N. Hasluck (7s. 6d.). The work is complete in itself, and offers many thousands of receipts, processes, and memoranda for workshop use, based on the personal experience of many experts in the various subjects; and a very full index enables one to put one's finger at once upon the article required. It is a most comprehensive and practically valuable collection. There are some twelve hundred illustrations.

PHYSICAL TRAINING AND HEALTH.

A Boy's Control and Self-expression. By Eustace Miles, M.A. (6s. Author: 10 St. Paul's Road, Cambridge.)

Mr. Miles tells us that this book usually keeps within sight of the idea expressed in the following sentence:—"Fairly considering all I know now, what training of body and mind should I choose if I were allowed to become a boy again, and if I wanted to prevent the most

serious mistakes as easily as possible and with as little attention to them as possible, so as to avoid morbidness or crankiness or priggishness?" He speaks from his own point of view—what suits himself; but he has more sense than to attempt to restrict other people absolutely to his own lines. He deals with pertinent matters of physiology, hygiene, exercise in many forms, mental influences on the body, and a miscellany of general considerations, addressing himself to elder boys, parents, and teachers. A great deal of practical information and good sense is mixed up with special notions, of which we have no experience. There are some two hundred illustrations.

Health at School, considered in its Mental, Moral, and Physical Aspects. By Clement Dukes, M.D., B.S. Lond., F.R.C.P. (10s. 6d. net. Rivingtons.)

This is a fourth edition of a standard book, revised, enlarged, partially rearranged, and largely rewritten in the light of the latest knowledge. Dr. Dukes has inserted a new chapter upon those sudden emergencies of school life where immediate treatment by master or schoolfellow may be required before the doctor can be on the spot. There are forty-four illustrations and fifty-two tables and charts. A most judicious and valuable work, based on technical knowledge and special experience.

Messrs. Ginn publish a revised edition of *Our Bodies, and How we Live, an Elementary Text-book of Physiology and Hygiene for use in Schools*, by Albert F. Blaisdell, M.D. (3s.). The book has been rewritten, rearranged, and illustrated in accordance with the latest teachings of science. Questions on the text are appended to each chapter. The glossary of technical terms will be useful. There are some two hundred good illustrations and nearly a hundred experiments. Paper and type are excellent; and the matter is effectively disposed.

Messrs. Gale & Polden issue revised editions of *The Theory of Physical Education in Elementary Schools* and *The Manual of Drill and Physical Exercises* (with or without dumb-bells or music), both by Thomas Chesterton, Organizing Teacher of Physical Education to the London School Board (3s. net each). They have fifty-five and seventy-nine figures respectively. Both works appear to deserve their popularity.

Mr. J. Theodore Dodd, M.A., Barrister-at-Law and Councillor and Guardian of the City of Oxford, has addressed a letter to the Local Government Board on "The Health of the Nation," showing "what the Government may do for it without an Act of Parliament"; and the letter is now published, with a preface by Sir John Gorst (6d. net, Alden; Simpkin, Marshall, & Co.). A very opportune and suggestive pamphlet.

MAPS.

Messrs. G. W. Bacon & Co. issue a "20th Century Edition" of their 'Excelsior' *Memory-Map Atlas and Text-Book combined*, by G. W. Bacon, F.R.G.S., revised under the direction of the Rev. E. F. M. MacCarthy, M.A., Head Master of King Edward's Grammar School, Birmingham (3s. 6d.). There are 74 maps, faced by a judicious selection of geographical facts pertinent to each, and preceded by directions for drawing, and by a glossary of geographical terms. An excellent work, devised and executed with marked care and judgment.

Messrs. A. & C. Black add to their "School Geography" series four more *Synthetical Maps*, by W. R. Taylor (1d. each): (1) The Indian Empire, (2) Australia and New Zealand, (3) British South Africa, and (4) Minor British Possessions. Brief historical notes are printed on the back of the maps. A practical and serviceable series.

Messrs. Blackie & Son publish a fourth edition of *How to draw a Map from Memory*, by P. E. Swinstead, B.A. (1s.) The plan is good and "no art training is required."

Messrs. George Philip & Son issue a revised and enlarged edition of their excellent *Handy-Volume Atlas of the World*, by E. G. Ravenstein, F.R.G.S., embodying all the latest political and territorial changes (3s. 6d.). It contains 72 new and specially engraved plates, with statistical notes to each map, and a complete index of 12,000 names.

An Atlas of the World's Chief Industries, prepared under the direction of our enterprising contemporary *Commercial Intelligence*, is extremely opportune. The leading facts connected with 12 great industries are summarily stated and then diagrammatically represented. It ought to be most useful (2s., Philips).

MISCELLANEOUS.

Mrs. C. S. Peel, who has already written usefully for the instruction of housewives, now offers "more recipes"—442 of them—together with a special chapter on the trying business of "the management of the oven," in *The Single-handed Cook* (3s. 6d., Constable). "It is merely a collection of proven receipts inexpensive enough to be included in the menu of the ten shillings a head housekeeper, and simple enough to be within the powers of a single-handed cook." "Ten shillings a head" means 10s. a week, the family being "six or more persons," and the provision being "nice catering of a wholesome description." A most useful compilation, lucid and businesslike.

A welcome addition to "Bell's Cathedral Series" is *The Cathedral Church of Saint Asaph*—a lucid and popular description of the building

and a concise history of the see—by Pearce B. Ironside Bax (1s. 6d. net). If this is our smallest cathedral, at any rate there is plenty of interest about it. There are some thirty good illustrations.

Mr. Fisher Unwin publishes in pamphlet form an instructive paper on *Protection and Employment* read by Mr. Harold Cox at Liverpool in January last.

NEW EDITIONS AND REPRINTS—GENERAL.

Mr. Fisher Unwin has published a popular edition (1) of *The Man who was afraid* (Foma Gordyéef), translated by Herman Bernstein (1s. net)—vivid sketches of a crude and unsound social order, with gropings after better things; and (2) of *Robert Orange*, by John Oliver Hobbes—a distinctive work of the author (6d. net.).

Messrs. Seeley issue an agreeable sixpenny edition of *Life's Aftermath*, by Emma Marshall—a very pleasant and enjoyable story.

Messrs. Watts publish for the Rationalist Press Association (1) a new translation of Renan's *The Apostles* by W. G. Hutchison; (2) Ingersoll's *Lectures and Essays*, second series; and (3) the late Mr. Samuel Laing's *Problems of the Future*, revised and brought up to date by Joseph MacCabe (6d. each). The type is large and agreeable. In the "Extra Series" appears *The Religion of Woman*, by Joseph MacCabe, with an introduction by Lady Florence Dixie (6d.).

Messrs. Macmillan have added to their delightful "Prize Library" Dickens's *Barnaby Rudge* (2s. 6d.)—a reprint of the first edition, with the illustrations and an introduction, biographical and bibliographical, by Charles Dickens the Younger.

Messrs. Cassell issue a new edition of their well known *Guide to Employment in the Civil Service* (including also clerkships under the London County Council), revised and corrected by A. J. Lawford Jones. The information is full, and in essentials it is based on official papers. A very serviceable and compact handbook.

Mr. H. R. Allenson publishes in his Sixpenny Series Mrs. Browning's *Aurora Leigh*, which will thus become accessible to a very wide circle of readers.

FIRST GLANCES.

CLASSICS.

Longmans' Latin Course: Elementary Unseens. 1s. 6d.
[112 short passages, including snatches of verse. Hints on construing; brief notes; full vocabulary. Carefully compiled; very serviceable.]

Lysias' ausgewählten Reden, Schülerkommentar zu. Von Prof. Dr. Paul Vogel, Rektor des Königin Carola-Gymnasiums zu Leipzig. 50 pf. (steif geh.). Williams & Norgate.
[Elementary; judiciously helpful.]

Xenophon. Anabasis, Book III. Edited by A. C. Liddell, M.A. 2s. Blackie (Illustrated Greek Series).
[Biographical and historical introduction; text in paragraphs, with brief indication of subject in headlines; short useful notes; exercises for retranslation; vocabulary; 12 good illustrations, coloured frontispiece, and map. Excellent.]

MATHEMATICS.

Algebra, An Elementary for Junior Students. By J. Lightfoot, D.Sc., M.A. 2s. 6d. Ralph, Holland, & Co.
[With exercises and answers.]

Algebra, Elementary, Key to. Part II. By W. M. Baker, M.A., and A. A. Bourne, M.A. 5s. George Bell (Cambridge Mathematical Series).
[Very judicious and suggestive.]

Algebra, The Three Term. By C. W. Crook and W. H. Weston. Book I.: The First Four Rules. Book II.: Factors, G.C.M., L.C.M., Fractions, Simple Equations and Problems involving the same. 4d. each. Book III.: Simultaneous and Quadratic Equations (with Problems) and Square Root. 6d. Jack (Mathematical Series).

Arithmetic and Geometry: A Scheme for Teachers and a Plea for Educational Reform. By C. T. Millis, M.I.Mech.E. 9d. net. Educational Supply Association.

Arithmetic, Intermediate. By G. H. Bradford, B.A. Lond. 10d. Jack (Mathematical Series).
[“With numerous exercises for higher elementary and secondary schools, for Leaving Certificate classes, P.-T. centres, and King's Scholarship classes.”]

Arithmetic for Schools, The "Council." Scheme B. Part VI. By T. B. Ellery, F.R.G.S. 4d. Black (School Arithmetic).

Arithmetic, Scheme B, Pitman's. Standard I. By T. W. Trought B.A. 2d.

Conics, Geometrical. By G. W. Caunt, M.A., Lecturer in Mathematics, and C. M. Jessop, M.A., Professor of Mathematics, in the Armstrong College, Newcastle-upon-Tyne. 2s. 6d. Edward Arnold.

Geometry, Analytic, Introduction to. By Percy F. Smith, Ph.D., Professor of Mathematics in the Sheffield Scientific School, Yale University, and Arthur Sullivan Gale, Ph.D., Instructor in Mathematics in Yale College. 5s. 6d. Ginn.

Graphs, Easy. By H. S. Hall, M.A. 1s. Macmillan.
[“The essentials of elementary graphical work.”]

Mathematics, Experimental, A Note-Book of. By C. Godfrey and G. M. Bell. 2s. Edward Arnold.

Mathematics, Practical Elementary. By H. A. Stern, M.A., and W. H. Topham. George Bell (Cambridge Mathematical Series).

Mathematics, Practical, The Rudiments of. By A. Consterdine, M.A., and A. Barnes, M.A. 2s. 6d. Murray (School Library).

Quaternions, A Manual of. By Charles Jasper Joly, M.A., D.Sc., F.R.S., Sec.R.I.A., Andrews Professor of Astronomy in the University of Dublin and Astronomer Royal of Ireland. 10s. net. Macmillan.

MODERN LANGUAGES.

Blackie's Little French Classics.—(1) *L'Avare* (Molière). Edited by G. H. Clarke, M.A., Officier d'Académie. 10d. (2) *Jacomo, ou le Brigand* (Alexandre Dumas). Edited by Norman Frazer, M.A. 6d. (3) *Mateo Falcone, La Découverte de la Statue, and La Partie de Paume* (Mérimée). Edited by J. E. Michell, M.A. 6d.
[(1) has a considerable appendix on Molière's grammar. (2) and (3) have vocabulary as well as brief notes. Very useful editions.]

Blackie's Little German Classics.—*Sintram* (De la Motte-Fouqué). Edited by Medina Pittis. 6d.
[Brief and very slight notes.]

Dent's Modern Language Series.—(1) *Second French Book*. By S. Alge and Walter Rippmann. 1s. 6d. net. (2) and (3) *Features of French Life*. By Frank R. Robert. In two Parts, 10d. each.
[(1) Revised and enlarged edition; typical of the best features of the Reform Method. (2) and (3) Subjects well selected and presented; questions and answers, &c., in French. Instructive in matter and in language.]

French Authors, Modern, Half-Hours with. Second Part. Edited by Jules Lazare, B.-ès-L. 2s. Hachette.
[Varied and attractive selection—63 passages in prose, 15 in verse; brief notes (in French); vocabulary.]

German Exercises. By H. G. Atkins, M.A. Lond., B.A. Cantab., Professor of German in King's College, London. 1s. Blackie.
[Specially arranged to accompany the Skeleton German Grammar. “Germany and German things receive the chief share of attention.” Vocabulary. Under the German passages, English (at first in German order) for retranslation. Very good.]

International Modern Language Series.—(1) *Le Malade Imaginaire* (Molière). Edited by Everett Ward Olmsted, Ph.D., Assistant Professor of Romance Languages in Cornell University. 2s. 6d. (2) *Selections from Standard French Authors*. By O. G. Guerlac, Assistant Professor of French in Cornell University. 2s. 6d. (3) *Der Schusz von der Kanzel* (C. F. Meyer). Edited by Martin H. Haertel, University of Wisconsin. 1s. 6d. Ginn.
[(1) Biographical and literary introduction, footnotes, and vocabulary. Account of Molière's relations to the medical profession specially serviceable. (2) “A reader for first and second year students.” Good selections, notes, and vocabulary. (3) Brief notes, exercises in composition (retranslation), and vocabulary.]

Nutt's Short French Readers.—(5) *Contes Historiques* (Alphouse Daudet). Edited by W. Rolleston, M.A. 6d.
[Capital reading matter; brief suggestive notes.]

Oxford Modern French Series.—(1) *Histoire de la Révolution Française* (Mignet). Edited by A. Dupuis, B.A. 3s. (2) *Mémoires d'un Touriste* (Stendhal). Edited by H. J. Chaytor, M.A. 2s.
[(1) Period from opening of the States General (May, 1789) to Death of Louis XVI. (January 21, 1793). Notes historical, biographical, geographical. (2) One of Beyle's “most striking and representative works”; five illustrations.]

Siepmann's Elementary French Series.—(1) *Monsieur Pinson* (Lucien Biart). Adapted and edited by Otto Siepmann. 2s. Word- and Phrase-Book. 6d. Key to Appendices, 2s. 6d. net. (2) *Les Aventures de Jean-Paul Choppart* (Louis Desnoyers). Edited by L. von Glehn, M.A. 2s. Word- and Phrase-Book, 6d. Key to Appendices, 2s. 6d. net.
[Good and attractive matter. Usual thoroughgoing apparatus.]

EDUCATION.

Board of Education. (1) Regulations and Syllabus for the King's Scholarship Examination for 1906. (2) Regulations for Secondary Schools, 1905-06. 3d. (3) The Building Regulations (Public Elementary Schools). 2d. (4) Code of Regulations for Public Elementary Schools (Cd. 2,579). 3d. (5) Special Reports on Educational Subjects. Vol. 15: School Training for the Home Duties of Women—Part I., The Teaching of “Domestic Science”

- in the United States of America (Cd. 2,498). 1s. 9d. (6) Regulations for Training of Teachers, &c. 4½d. (7) Regulations and Syllabus for the Preliminary Examination for the Certificate (taking the place of the King's Scholarship Examination), 1907 (issued as Appendix to the Regulations for the Instruction and Training of Pupil Teachers, 1905); with relative Circular (No. 530) to Local Education Authorities, Training Colleges, and Pupil-Teacher Centres. Wymans.
- City and Guilds of London Institute. (1) Programme of Department of Technology for 1905-6. 9d. Murray. (2) Report of the Council. Gresham College, E.C.

[Brief, pointed, and nicely put.]

Libraries, Free: (1) Finsbury—Quarterly Guide for Readers, July. 1d. (2) Dundee—Report for 1904.

S.A.O.N.A.: Report of Twentieth Annual Conference, held at Bradford, Easter, 1905. Published by E. A. Cook (General Secretary), 115 St. John's Road, St. John's, London, S.E.

TOO LATE FOR CLASSIFICATION.

KING'S COLLEGE, LONDON.
(UNIVERSITY OF LONDON.)

Full Courses for Matriculated Students in Arts, Laws, Science, Engineering, Architecture, Medicine, and Theology at Composition Fees; or Students may attend the separate Classes.

Preparation for all Examinations of the London University.

Michaelmas Term commences October 3.

For Prospectuses and all information apply to the SECRETARY, King's College, Strand, W.C.

WOMEN'S DEPARTMENT, KENSINGTON.

Michaelmas Term commences October 9.

Apply to the VICE-PRINCIPAL, 13 Kensington Square.

KING'S COLLEGE, LONDON.
(UNIVERSITY OF LONDON.)

DEPARTMENT FOR TRAINING TEACHERS FOR SECONDARY SCHOOLS.

The Course, which is intended to meet the requirements of the Teachers' Registration Council, is both practical (including properly directed work in a Secondary School) and theoretical (preparing for the London Teachers' Diploma and the Certificate of the Teachers' Training Syndicate).

The Course occupies a year, beginning in October or January.

For further particulars apply to the SECRETARY, King's College, Strand, W.C.

KING'S COLLEGE, LONDON.
(UNIVERSITY OF LONDON.)

CLASSES FOR THE LONDON UNIVERSITY MATRICULATION AND PROFESSIONAL PRELIMINARY EXAMINATION.

Individual Tuition in all subjects required for the Examination. Fee for Half-yearly Course £3. 3s. Students may join at any time at proportional fees.

Apply to the SECRETARY, King's College, Strand, W.C.

KING'S COLLEGE, LONDON.
(UNIVERSITY OF LONDON.)

Prof. SPIERS, M.A., will deliver a Course of Four Free Lectures on the Teaching of French by means of the Phonetic Symbols, from 10 to 11 a.m. on alternate Saturdays during the Michaelmas Term, beginning on Saturday, October 14, and ending on November 25.

EXAMINATION PAPER

AS USED BY THE

COLLEGE OF PRECEPTORS.

In strict accordance with the College requirements, and each Sheet bears their Watermark.

Packed in Reams of 480 Sheets per Ream, 2s. 6d.

" " 960 " " 5s. 0d.

Bookkeeping Paper, ruled for Ledger, Cash Book, and Journal, 1s. per 100 Sheets.

Music Paper, 1s. per 100 Sheets.

Remittance should accompany Order.

F. W. SHELBORNE & CO., Wholesale and Retail Stationers,
63 HIGH HOLBORN, LONDON, W.C.

Grateful to the Palate—Comforting to the System.

EPPS'S COCOA

Is just the Cocoa that Teachers each day require.

MOST NUTRITIOUS AND ECONOMICAL.

Early in the day, to fortify for its Mental strain. Later on, after day's work is over, to secure due repose.

Of Grocers, ¼-lb. Packet, 3½d.

NEAR THE BRITISH MUSEUM.

KINGSLEY HOTEL

HART STREET, BLOOMSBURY SQUARE, LONDON.

OPPOSITE THE BRITISH MUSUEM.

THACKERAY HOTEL

GREAT RUSSELL STREET, LONDON.

These well-appointed and commodious **TEMPERANCE HOTELS** will, it is believed, meet the requirements, at moderate charges, of those who desire all the conveniences and advantages of the larger modern Licensed Hotels. These Hotels have

PASSENGER LIFTS, ELECTRIC LIGHT THROUGHOUT, HEATED THROUGHOUT, BATHROOMS ON EVERY FLOOR, SPACIOUS DINING, DRAWING, WRITING, READING, BILLIARD, AND SMOKING ROOMS.

Fireproof Floors.

Perfect Sanitation.

Telephone.

Night Porter.

Bedrooms from 2/6 to 5/6.

Full Tariff and Testimonials on application.

Inclusive Charge for Bedroom, Attendance, Table d'Hôte Breakfast and Dinner, from 8s. 6d. to 10s. 6d. per day.

ALSO UNDER THE SAME MANAGEMENT.

ESMOND HOTEL

1 MONTAGUE STREET, RUSSELL SQUARE, LONDON.

This **Temperance Hotel** adjoins the British Museum, and is exceptionally quiet and economical. Night Porter.

Bedrooms from 2s. to 3s. 6d. per night.

Full Tariff and Testimonials on application.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS** of **MUTUAL LIFE ASSURANCE** on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,194,485.

Annual Income, £398,982.

Bonuses Distributed, £3,723,720.

The **ANNUAL PREMIUMS** are **LOWER THAN THOSE USUALLY CHARGED.**

Under the "**REDUCED PREMIUM**" system—applicable to Whole-Life and Endowment Assurances—only **FOUR-FIFTHS** of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the **LOWNESS** of the Premiums charged, the **BONUSES** are on an **EXCEEDINGLY HIGH SCALE.** For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The **CONDITIONS OF ASSURANCE** are most favourable, and **SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES** are all on an exceedingly liberal scale.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

MATHEMATICS.

15773. (Rev. F. H. JACKSON.)—Show that

$$\left(1 - \frac{x}{1^3} + \frac{x^2}{1^3 \cdot 2^3} - \frac{x^3}{1^3 \cdot 2^3 \cdot 3^3} + \dots\right) \left(1 + \frac{x}{1^3} + \frac{x^2}{1^3 \cdot 2^3 \cdot 3^3} + \dots\right) = 1 - \frac{3!}{1^3 \cdot 2^3 \cdot 1^3} x^2 + \frac{6!}{1^3 \cdot 2^3 \cdot 3^3 \cdot 4^3 \cdot 1^3 \cdot 2^3} x^4 - \dots$$

Solution by the PROPOSER.

Taking the product of the series, coefficient of x^n (n odd) $\equiv 0$,

$$\begin{aligned} \text{coefficient of } x^n \text{ (} n \text{ even)} &\equiv \left[\binom{1}{n!}^3 - \left(\frac{1}{(n-1)! 1!} \right)^3 + \dots + \binom{1}{n!}^3 \right] \\ &\equiv \frac{1}{(n!)^3} \left[1 - \binom{n}{1}^3 + \binom{n(n-1)}{2!}^3 - \dots \right] \\ &\equiv \frac{1}{(n!)^3} (-1)^{3n} \frac{(\frac{3}{2}n)!}{[(\frac{1}{2}n)!]^3} = (-1)^{3n} \frac{(\frac{3}{2}n)!}{[n! (\frac{1}{2}n)!]^3} \end{aligned}$$

The sum of the series of cubes is well known, having been discussed by many writers—Morley, MacMahon, Richmond, Dixon—for general values of n as well as integral values. The series of cubes is due originally to Prof. F. Morley.

15781. (Professor GENESE.)—Prove that there always exists one point which has the same tetrahedral co-ordinates with respect to any two given tetrahedra.

Solution by J. A. H. JOHNSTON, M.A.

Let s_1, s_2, s_3, s_4 and s'_1, s'_2, s'_3, s'_4 be the faces of the two tetrahedra and V, V' their volumes. Then, if p and p' be perpendiculars from a point on s_1 and s'_1 , the x co-ordinates of this point are $\frac{1}{3}ps_1/V$ and $\frac{1}{3}p's'_1/V'$ with reference to the two tetrahedra. If these be the same, $p/p' = Vs'_1/Vs_1$, and this restricts the position of the point to a determinate plane through the intersection of s_1 and s'_1 . If the x, y , and z co-ordinates are the same, the point is therefore determined as the point intersection of three definite planes. Finally, since $x+y+z+u=1$ for both systems, the four co-ordinates are the same for this point of intersection.

15770. (C. E. YOUNGMAN, M.A.)—A sum of money is made up of ordinary coins of the realm, each of as large value and as little frequency

as may be consistent with the money being shared as follows by A., B., and C.:—first A. takes a penny and one-third of the rest, then B. a penny and one-third of the rest, then C. likewise, and the remainder they share equally. Then one of them discovers that his coins are worth a shilling each on the average. Find (without algebra) who this is.

Solutions (I.) by B. C. WALLIS, F.C.P., B.Sc. (Econ.); (II.) by the PROPOSER.

(I.) C. has a total of 8s. in 8 coins out of a total of 32s. 5½d. Since each takes a third after taking a penny, what he takes is half of what he leaves. For convenience of nomenclature call the amount each received at the final division x . Then C. receives 1d., 1½ times x , and x ; B. receives 1d., 2¼ times x plus ½d., and x ; A. receives 1d., 3⅓ times x plus ¼d., and x . That is, the second amounts taken in each case involve for A. 1¼d., for B. ½d., and for C. no odd fractions of a penny. Each man must take a penny, and the one who has an average value of a shilling must also have n coins to the value of $ns.$ and 11d., i.e., he must have the original penny, two half-crowns, one florin, a sixpence, a three-penny piece, and two pennies: a total of eight coins to the value of 8s.

Consider the case of A.: if he had 8s., 4⅔ times $x = 8s.$ less 2¼d., which yields a value for x of 87⅕ farthings, an impossible value. If B. had 8s., then 3¼ times $x = 8s.$ less 1½d., from which $x = 116⅔$ farthings. In the case of C., 2½ times $x = 8s.$ less 1d., whence $x = 38$ pence. Therefore the total is 32s. 5½d. A. receives 1d., 10s. 9½d., and 3s. 2d.; in all 14s. 0½d. B. receives 1d., 7s. 2d., and 3s. 2d., in all 10s. 5d. C. receives 1d., 4s. 9d., and 3s. 2d.; in all 8s.

(II.) Add 2d. to the money; then let A. take ⅓, leaving ⅔; B. ⅔, leaving ⅓; C. ⅓, leaving ⅔; and give each in addition ⅓. Thus A. gets ⅓⅓, B. ⅓⅓, and C. ⅓⅓; and the result is the same as in the Question, except that each has ⅓d. too much. One or other, then, of these shares is worth certain exact shillings, + ⅓d.; in other words, it is ⅓ of 3s. 2d., or 6s. 2d., or 9s. 2d., ... But the smallest possible number of coins (averaging 1s. each) in any share is 6, viz., three pennies, a 3d., a 6d., and a 5s.; and even this will not do—the 5s. is too much all at once, because no one gets more than about ⅔ of his total at one taking. Hence in the series above we need not consider terms less than 21s. 2d.; so that in farthings the series will be 1016, 1160, 1304, ...; in which we have to find a term divisible by 35 or 26 or 20. Plainly the 1160 (= 24s. 2d.) is divisible by 20; indicating 8s. as C.'s share, and ⅓⅓ of ⅓ of 24s. 2d., or 32s. 7½d., as the original sum (with the added 2d.). This tested by sharing it according to the Question, turns out right; so that it is perhaps unnecessary to seek terms divisible by 35 or 26, or again by 20. They are easily found, but result in shares so large that the coins composing them would average more than a shilling each.

Propositions connected with the Equi-conjugate Diameters of an Ellipse.

By W. F. BEARD, M.A.

PROP. 1.—If CP, CD are two conjugate semi-diameters and PV, DR are the ordinates to one of the equi-conjugate diameters, then PV = CR and CV = DR.

Let ECE', FCF' be the equi-conjugates. Let the tangents at P, D meet ECE' at T, t. Then

$$\begin{aligned} VT/CR &= PT/CD \\ &\text{(from similar triangles)} \\ &= CT/Ct \\ &\text{(from similar triangles)} \\ &= CR/CV, \end{aligned}$$

for CV.CT = CE² = CR.Ct.

Thus CR² = CV.VT = CV.CT - CV² = CE² - CV² = PV², because PV² + CV² = CE², as CE is an equi-conjugate; therefore CR = PV, and similarly DR = CV.

PROP. 2.—If PV, PV' be the ordinates to the equi-conjugates and CD the semi-diameter conjugate to CP, and if PV produced meet the ellipse at p, then VV' = Cp = CD.

$$\begin{aligned} CV &= DR \\ CV' &= PV = CR \end{aligned} \left. \begin{array}{l} \\ \end{array} \right\} \text{from Prop. 1,}$$

and $\angle VCV' = \angle CRD$;

therefore VV' = CD.

Also $pV = PV = CV'$;

therefore Cp = VV',

and is parallel to VV' = CD.

PROP. 3.—To prove the sum of the squares on two semi-conjugate diameters is constant.

In the figure of Prop. 2,

$$CP^2 + CD^2 = CP^2 + Cp^2 = 2(PV^2 + CV^2) = 2CE^2 = \text{const.} = CA^2 + CB^2,$$

by making P coincide with A.

PROP. 4.—To prove that the area of the conjugate parallelogram is constant.

Let PCP', DCD' be two conjugate diameters. Let the tangent at P meet ECE' at T. Draw DR, DR', the ordinates of D. Join D'T. The area of the conjugate parallelogram, i.e., the parallelogram formed by the tangents at P, D, P', D',

$$= 8\Delta PCD = 8\Delta DCT$$

(because PT is parallel to CD)

$$= 8\Delta R'CT \text{ (because DR' is parallel to CT).}$$

But the area of the triangle R'CT : CR' . CT in constant ratio, and

$$CR' . CT = DR . CT = CV . CT \text{ (because DR = CV) (Prop. 1)}$$

$$= CE^2 = \text{constant};$$

therefore the triangle R'CT, and consequently the conjugate parallelogram, is of constant area.

PROP. 5.—If PV, PV' are the ordinates to the equi-conjugates, the circle round PVV' touches the ellipse at P, and if it cuts the equi-conjugates at K, K', then PK = PK' = CD.

Let the tangent at P to the ellipse meet CE at T. Then

$$(1) PV^2 = CE^2 - CV^2$$

$$= CV . CT - CV^2$$

$$= CV . VT$$

$$= PV' . VT;$$

therefore

$$PV' : PV = PV : VT$$

and $\angle PVT = \angle VPV'$;

therefore the triangles VPV', TVP are similar;

therefore

$$\angle VPT = \angle PV'V,$$

and therefore PT touches the circle at P, i.e., the circle VPV' touches the ellipse at P.

(2) PV', VK are parallel chords of the circle; therefore

$$PK = VV' = CD \text{ (Prop. 2) = similarly PK'}$$

COR.—If PV produced meets the ellipse at p, then the circle round the triangle CPT passes through p and K'; for $pV = PV$; therefore $PV . Vp = CV . VT$; therefore the circle round CPT goes through p. Also $\angle PK'V' = \angle PVV'$ (angles in same segment) = $\angle PTV$, because the triangles PVV', VTP are similar; therefore the circle round CPT goes through K'. [Rest in Reprint.]

15729. (R. TUCKER, M.A.)—The circle $dd'k$ touches AB, AC, and the arc BC of the circle ABC (internally); the circle $ee'k'$ touches BC, BA, and the arc CA; and the circle $ff'k''$ touches CA, CB, and the arc AB. Prove (i.) ed', fe', df' are parallel to AB, BC, CA respectively; (ii.) $Cd' . Ae' . Bf' = Af' . Bd' . Ce$; (iii.) r_1 (radius of circle $dd'k$) = $r \sec^2 \frac{1}{2}A$; (iv.) Ak, Bk', Ck'' intersect in a point.

Another Solution by H. W. WEBSTER, M.D.

Let ABC be any triangle. Bisectors of A, B, and C meet the circum-circle in Q, H, L. The diameter QSJ is perpendicular to BC. The in-radius DI is continued to P, making IP = QJ. Then JQIP is a parallelogram. JI meets the circum-circle in k. The radius Sk cuts AI in m, and md' is perpendicular to AC, and therefore parallel to SH and to IE, the in-radius. md' is perpendicular to AB.

(i.) Because

$$2Rr = AI . IQ = JI . Ik = IP . ID,$$

the points J, P, D, k are cyclic; therefore the angles DkI, JPI, JQI, IkA, SAQ are equal. Also mkI, SJk, mAk, DIk are equal; therefore $IDk, AIk; Amk, kmI; md'A, IEA$ are three pairs of similar triangles. By multiplying the ratios

$$\frac{ID}{Ik} \frac{Am}{Ak} \frac{md'}{mA} = \frac{AI}{Ak} \frac{km}{kI} \frac{IE}{IA}$$

or $md' = mk$; therefore d, d', k are points touched by the circle, with centre m.

Because $km/md' = kS/SH$ the points k, d', H

are collinear: and similarly the points k, d, L; therefore the points B, A, C, L, k, H form a Pascal's hexagon, and the intersections d', I, d are collinear; and obviously AI bisects dd' at right angles. Similarly it is shown that I bisects ee' and ff' ; therefore ee' and ff' form a parallelogram, and $d'f$ is parallel to BC. So with others.

(ii.) Because $Ae'f, ABC$ are similar, $Ae'/AB = Af/AC$. By multiplying these and the corresponding ratios from B and C, the required result is obtained.

$$(iii.) md'/IE = mA/IA = \Delta md'A / \Delta d'IA = mA^2/d'A^2 = \sec^2 \frac{1}{2}A.$$

(iv.) The triangle $SI m$ and the transversal AkX will give, by theorem of Menelaus, $(SX . IA . mk)/(Sk . IX . mA) = 1$; therefore

$$SX/IX = Sk/mk . mA/IA = Sk/mk . md'/IE = R/r,$$

similarly Bk' and Ck'' can be shown to cut SI in ratio $R : r$. Therefore they meet in a point.

15791. (A. H. BELL.)—When is a triangular number a pentagonal number? Required, a general solution with examples.

Solution by J. BLAIKIE, M.A., and F. N. MAYERS, M.A.

The general expression for a triangular number is $N = \frac{1}{2}n(n+1)$ and for a pentagonal number $N = \frac{1}{2}m(3m-1)$. We have therefore to find positive integral solutions of the equation

$$n^2 + n = 3m^2 - m \dots\dots\dots(1).$$

This may be written in the form

$$3y^2 - x^2 = 2 \dots\dots\dots(2),$$

where

$$x = 6m - 1, \quad y = 2n + 1.$$

If p and q be values of x and y which satisfy the equation

$$x^2 - 3y^2 = 1 \dots\dots\dots(3),$$

then the values $x = 143q \pm 71p, y = 41p \pm pq$ satisfy (2). For

$$3y^2 - x^2 = 3(41p \pm 71q)^2 - (143q \pm 71p)^2$$

$$= (3 \cdot 41^2 - 71^2)(p^2 - 3q^2) = 2 \cdot 1 = 2.$$

The values of p and q which satisfy (3) are the alternate convergents to $\sqrt{3}$, viz., 1, 0; 2, 1; 7, 4; 26, 15; 97, 56; ...; but these only give integral values of m and n when $x+1$ is divisible by 6 and $y-1$ by 2. These conditions are satisfied in the 1st, 3rd, and 5th cases taking the positive sign, when we get the values given in the adjoining table.

p	q	x	y	m	n	N
1	0	71	41	12	20	210
7	4	989	571	165	285	40755
97	56	13775	7953	2296	3976	7906276

15784. (R. F. DAVIS, M.A. Suggested by Question 15748.)—If ABCD be a quadrilateral whose opposite sides BA, CD meet in E, and any variable transversal EPQ meet AD, BC in P, Q respectively, then $AP . PD/EP^2 : BQ . QC/EQ^2$ is constant.

Solutions (I.) by W. AUSTIN SLEIGH, B.A., and H. W. WEBSTER, M.D.; (II.) by W. J. DOBBS, M.A.; (III.) by J. BLAIKIE, M.A.

(I.) Let AD, BC meet in F. Because the sides of the triangle FPQ are cut by the transversals EDC, EAB respectively, we have (Todhunter's Euclid, Appendix 57) $PE . QC . FD = EQ . CF . DP$, i.e.,

$$(PE . QC)/(EQ . DP) = CF/FD \dots\dots\dots(1),$$

and $PE . QB . FA = EQ . BF . AP$, i.e.,

$$(PE . QB)/(EQ . AP) = BF/FA \dots\dots\dots(2).$$

Combining (1) with (2), we have

$$(AP . PD/PE^2)/(BQ . QC/EQ^2) = (AF . FD)/(BF . FC).$$

The right-hand side is a constant for all positions of EPQ.

(II.)

$$(AP/EP)(PD/EP)$$

$$= (\sin \theta / \sin A)(\sin \phi / \sin D).$$

Also $(BQ/EQ)(QC/EQ)$

$$= (\sin \theta / \sin B)(\sin \phi / \sin C);$$

therefore

$$AP . PD/EP^2 : BQ . QC/EQ^2$$

$$= \sin B \sin C : \sin A \sin D.$$

(III.) Draw PM, QN perpendicular to EB.

$$AP \sin A/BQ \sin B = PM/QN = EP/EQ;$$

therefore

$$AP/EP : BQ/EQ = \text{cosec } A : \text{cosec } B.$$

Similarly

$$DP/EP : CQ/EQ = \text{cosec } D : \text{cosec } C;$$

therefore $AP . DP/EP^2 : BQ . CQ/EQ^2 = \text{cosec } A \text{ cosec } D : \text{cosec } B \text{ cosec } C = \text{a constant ratio.}$

11039. (Professor SYLVESTER.)—Let x_1, x_2, \dots, x_n represent $x + a_1, x + a_2, \dots, x + a_n$, where a_1, a_2, \dots, a_n are any real quantities. Also let b_1, b_2, \dots, b_n be any positive quantities. Prove that the continued

fraction
$$x_1 - \frac{b_1}{x_2 - \frac{b_2}{x_3 - \dots - \frac{b_{n-1}}{x_n}}}$$

changes sign exactly $2n - 1$ times as x passes from one end of infinity to the other.

Solution by Professor NANSON.

Let y_n denote the continued fraction, and let

$$z_{n-1} = x_2 - \frac{b_2}{x_3 - \frac{b_3}{x_4 - \dots - \frac{b_{n-1}}{x_n}}}$$

so that $y_n = x_1 - b_1/z_{n-1}$. Now assume that as x increases from $-\infty$ to $+\infty$ dy_n/dx is positive, and y_n passes n times from $-\infty$ to $+\infty$ and therefore vanishes n times, viz., once in each interval, and consequently changes sign $2n - 1$ times, viz., once in each of the n intervals and once at each of the $n - 1$ boundaries between two intervals. The like properties therefore hold for z_n . But we have

$$y_{n+1} = x_1 - b_1/z_n, \quad dy_{n+1}/dx = 1 + (b_1/z_n^2) dz_n/dx.$$

Hence dy_{n+1}/dx is positive; so that y_{n+1} increases with x . Also y_{n+1} changes from $+\infty$ to $-\infty$ as x increases through each of the n values which make z_n vanish. Further, y_{n+1} is $-\infty$ when $x = -\infty$ and is $+\infty$ when $x = +\infty$. Hence as x passes from $-\infty$ to $+\infty$ y_{n+1} passes $n + 1$ times from $-\infty$ to $+\infty$ and increases throughout each interval. It follows that y_{n+1} vanishes $n + 1$ times, viz., once in each interval, and consequently changes sign $2n + 1$ times, viz., once in each of the $n + 1$ intervals and once at each of the n boundaries between two intervals. Thus, if the theorem be true for y_n , it is true for y_{n+1} . But inspection of the graph of y_2 shows that the theorem is true for y_2 . Therefore, &c.

15769. (R. CHARTRES.)—A random point being taken in each side of the triangle ABC, find the mean value of $p^h q^k r^l, x^n$, and $\log x$. Elementary proof required.

Solution by R. CHARTRES.

Let $\Delta = 1$.

$$\begin{aligned} M(p^h q^k r^l) &= M[(c_1 b_2)^h (c_2 a_1)^k (a_2 b_1)^l] / (bc)^h (ca)^k (ab)^l \\ &= M(a_1^h a_2^k b_1^l b_2^h c_1^k c_2^l) / a^{h+k+l} b^{h+l} c^{h+k} \\ &= \frac{(h! k! l!)^2}{(h+k+l)! (k+l+1)! (l+h+1)!} \dots (A), \end{aligned}$$

since $a^{h+k+l} = (a_1 + a_2)^{h+k+l}$, having $(h+k+l)$ terms of equal mean value.

If, $y = p + q + r$, then, from (A),

$$M(y) = \frac{3}{4}, \quad M(y^2) = M(3p^2 + 6pq) = \frac{3}{4} + \frac{1}{4} = \frac{7}{12},$$

$$M(y^3) = M(3p^3 + 18p^2q + 6pqr) = \frac{67}{144}, \dots;$$

$$\text{therefore } M(x^n) = M(1-y)^n = 1 - \frac{3}{4}C_1 + \frac{7}{12}C_2 - \frac{67}{144}C_3 + \frac{227}{864}C_4 - \dots,$$

$$M(\log x) = -\left(\frac{3}{4} + \frac{1}{2} \cdot \frac{7}{12} + \frac{1}{3} \cdot \frac{67}{144} + \dots\right),$$

putting C_r for C_r^n .

If we express (A) in gamma functions, the result will hold for all values: thus, if $h = -\frac{1}{2} = k = l$, $M(p^{-\frac{1}{2}} q^{-\frac{1}{2}} r^{-\frac{1}{2}}) = \pi^3$.

15776. (Professor HUDSON, M.A.)—Prove that the cusps of the evolute of the focus-roulette of a hyperbola on a straight line are at the same distance from that line.

Solution by the PROPOSER.

The cusps of the evolute are the centres of maximum and minimum curvature of the roulette; from symmetry, these occur when the vertices are in contact with the straight line. If $2a$ be the transverse axis, e the eccentricity, ρ the radius of curvature at the vertex of the hyperbola, R, R' the radii of curvature of the roulette when the nearer and further vertices are in contact, we have (Besant's *Roulettes and Glissettes*, Art. 30) $R = r^2/(r-\rho)$, $R' = r'^2/(r'-\rho')$, where $r = a(c-1)$, $r' = a(e+1)$, $\rho = -\rho' = a(e^2-1)$. The distances of the centres of curvature from the straight line are $r-R, r'-R'$, and each of these is $a(e-1/e)$. If r, R be any focal distance and the corresponding radius of curvature of the roulette, the relation $1/R + 1/r = \text{constant}$ (Art. 31) shows that the evolute has no other cusps.

QUESTIONS FOR SOLUTION.

15822. (G. H. HARDY, M.A.)—If

$$F_a(x) = \sum_0^\infty \frac{x^n}{\Gamma(an+1)} \quad (0 < a < 2),$$

then (i.)
$$\frac{1}{2\pi i} \int F_a(-u)(-u)^{s-1} du = -\frac{1}{\Gamma(1-as)},$$

(ii.)
$$\int_0^\infty F_a(-\sigma u^s) F_a(-\tau u^s) du = -\frac{\sin a\pi}{a \sin \pi/a} \frac{\sigma\tau(\sigma^{-(1/a)} + \tau^{-(1/a)})}{\sigma^2 - 2\sigma\tau \cos a\pi + \tau^2},$$

where $s < 1, \sigma > 0, \tau > 0$, and the contour of integration in (i.) is a loop enclosing the real axis.

15823. (J. J. BARNIVILLE, B.A., I.C.S.)—Having $u_n = u_{n-1} + u_{n-3}$, prove that

$$\begin{aligned} \frac{1}{1.4} + \frac{1}{2.5} + \frac{1}{4.7} + \frac{2}{5.11} + \frac{3}{7.16} + \dots &= \frac{1}{2}, \\ \frac{1}{1.2} - \frac{2}{2.4} + \frac{3}{4.5} - \frac{4}{5.7} + \frac{6}{7.11} - \dots &= \frac{1}{3}, \\ \frac{2}{1.5} - \frac{3}{2.7} + \frac{5}{4.11} - \frac{7}{5.16} + \frac{10}{7.23} - \dots &= \frac{1}{4}. \end{aligned}$$

15824. (D. BIDDLE.)—Give instances of quintets of integers in arithmetical progression, four being perfect squares placed in the following order:—(1) the first three and the last, (2) the last three and the first, (3) the first two and the last two, (4) all four together. Example of $1-7^2, 13^2, 17^2, 409, 23^2$. [An incomplete answer will be considered better than none at all.]

15825. (B. C. WALLIS, F.C.P., B.Sc.Econ.)—What are the general formulæ to express the relationship between the lengths of the sides of a right-angled triangle in terms of one number n ? *E.g.*, when the smallest side is an even number of units long the formula $(n+1)^2 = (n-1)^2 + 4n$ holds when n is a perfect square; also when the smallest side is an odd number of units long the formula $n^2 = (n-1)^2 + (2n-1)$ holds when n is such that $2n-1$ is a perfect square. These two formulæ enable us to write down a table showing the lengths of the sides when the short sides are the consecutive numbers beginning with 3.

15826. (J. A. C., M.A.)—Solve, in integers, $x^2 + y^2 = 5z^2$; and generally solve $x^2 + y^2 = Az^2$, where A is not a square number.

15827. (ROBERT W. D. CHRISTIE.)—Factorise 9,702,044,791, and show the principle is general for a certain class of numbers.

15828. (Communicated by K. DEVA RAO, B.A.)—A square board is divided into 16 equal squares by vertical and horizontal lines. In how many ways can 4 of these squares be painted white, 4 black, 4 red, and 4 green, without repeating the same colour in the same vertical or horizontal row?

[This familiar question is solved in a variety of ways. But the answer (576) may not be right.]

15829. (S. C. BAGCHI, B.A.)—A correspondence is established between the points (θ, y) and (ξ, η) of a graph of tangents and a parabola respectively, such that, for a given θ , $\xi = ay^2$ and $\eta = 2ay$. If a chord AB of the parabola describe a given diameter, show that $f(\varpi_A, \varpi_B)$, which expresses the linear relation between the parameters of A and B, is an ellipse, in bifocal co-ordinates, of which the major axis is $\varpi_A + \varpi_B$; and, further, if AB is invariable in length, but moves in any manner, the relation between the inclination of AB with the y -axis and the parameter of A or B is expressed by one or other of two sextics passing through the origin which are so related that one is the image of the other in the y -axis (the origin being the vertex of the parabola and the vectorial distance = ϖ the parameter).

15830. (R. CHARTRES.)—A point P is taken within a square and joined to A, the extremity of the diagonal AC. Find the mean value (1) of the angle PAC, and (2) of its square.

15831. (Professor NANSON.)—Given any number of conics a, b, c, \dots , lying on the same conicoid and passing through the same point, any two a, b determine a meet ab , and the three meets bc, ca, ab determine a plane abc . Show that the four planes bcd, acd, abd, abc meet in a point (a, b, c, d) . Show also that the five points $(b, c, d, e), (a, c, d, e), (a, b, d, e), (a, b, c, e), (a, b, c, d)$ lie on a plane $abcde$, and generally that $2n$ conics determine $2n$ concurrent planes, and that for $2n+1$ conics the $2n+1$ points of concurrence so found are coplanar, and that all the points of concurrence are on the conicoid.

15832. (Professor NEUBERG.)—Le centre A d'un sphère de rayon constant R parcourt une droite donnée d . Trouver (1) l'enveloppe du plan polaire π d'un point fixe P par rapport à la sphère mobile A, (2) la surface engendrée par la circonférence suivant laquelle le plan π coupe la sphère.

15833. (Professor COCHEZ.)—Trouver le lieu des foyers d'une hyperbole dont on connaît un sommet et une asymptote.

15834. (A. M. NESBITT, M.A.)—Two conics S, S' circumscribe a triangle ABC, and a common tangent cuts BC in O, while OA meets the two conics in F and G. If the conic through ABCDE cut OA in H,

then the range (OFGH) is harmonic. Further, if K be the harmonic conjugate of A with respect to F and G, and if L be the fourth intersection of S and S', then, if conics through ABCKL and ABCDE cut in M, the pencil A (LBMC) is harmonic.

15835. (The late R. TUCKER, M.A.)—Given A, a, b in a triangle (the "ambiguous" case), if ω, ω' arc the "B" angles of the triangle, prove $\cot \omega + \cot \omega' = 2b^2 \cot A / (cc')$.

15836. (C. E. YOUNGMAN, M.A.)—Two similar triangles, one inscribed in the other, are in perspective but not homothetic. Show that their double point lies on their circum- and nine-point- circles.

15837. (Professor SANJANA, M.A.)—Points P, Q, R are taken in the sides BC, CA, AB of a triangle such that the areas AQR, BRP, CPQ are each equal to a given area T. Show how to construct for the points, and prove that the distances of any two from the side not containing them are together equal to the corresponding altitude of the triangle.

15838. (W. F. BEARD, M.A.)—The inscribed circle of a triangle ABC touches BC, CA, AB respectively at D, E, F; I is the in-centre; L, M, N are the orthocentres of the triangles IBC, ICA, IAB. Prove that (1) DL, EM, FN are equal to the radii of the three escribed circles; (2) MN, NL, LM pass through D, E, F; (3) the triangles LMN, ABC are equal in area; (4) if the escribed circles opposite to A, B, C touch BC, CA, AB respectively in D_1, E_1, F_1 , MN, NL, LM are at right angles to AD_1, BE_1, CF_1 respectively; (5) MN, NL, LM meet AD_1, BE_1, CF_1 respectively on the circumference of the inscribed circle.

15839. (N. PARAMESWARA MENON.)—ABC is any triangle. Through B, BS is drawn parallel to AC and equal to $\sqrt{a} [\sqrt{(2a) - \sqrt{b}}] / \sqrt{2}$. Any line RSPQ inclined to AB at an angle $\frac{1}{2}(B-A)$ is drawn cutting AB, BC, CA in R, P, and Q respectively. Prove that PQ is the minimum line which bisects the given triangle.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10599. (Professor GRAM.)—Résoudre l'équation $[abx(x-a-b)]^{\frac{1}{2}} + [bcx(x-b-c)]^{\frac{1}{2}} + [cax(x-a-c)]^{\frac{1}{2}} = [abc(a+b+c)]^{\frac{1}{2}}$.

10680. (H. J. WOODALL.)—A plane has points scattered on it in an arbitrary fashion, the average being a per square inch, but the maximum in any square inch is b , the minimum is c . A plane figure (area A) is thrown on the plane; what is the probability that the number of points covered is p ? Also the special case of the most probable value of p ?

10756. (Professor HUDSON, M.A.)—In a communistic society in which every one is equally frugal and industrious and devotes an amount (X) of his wealth to production, the wealth produced by each man's labour per unit of time is x times the capital with which he works. If the population increase at the rate of $100p$ per cent. per unit of time, prove that each man's wealth will continually increase so long as X bears a greater ratio to his whole wealth than $p : x$; X, x, p being all supposed to vary continuously.

10882. (The late Professor CLIFFORD, F.R.S.)—A triangle ABC has its vertices A, B joined to two rods AD, BE, which can turn about the fixed points D, E. Express the co-ordinates of the point C in terms of elliptic functions of a single parameter.

10892. (Professor TARRY.)—Trois ballons se meuvent en ligne droite avec des vitesses uniformes. On donne leurs positions à deux instants différents. Construire une ligne droite qui puisse être parcourue par un ballon avec une vitesse uniforme de telle sorte que les trois premiers ballons paraissent immobiles à l'aéronaute du quatrième.

10928. (Professor MORLEY.)—In a cuspidal cubic let T be the asymptotes, c the cusp. It is well known that c lies on the maximum in-ellipse of T (SALMON, *Curves*, third edition, p. 158). Let U be this ellipse, c' the point on it opposite c , U_1 the conic inscribed in T with centre c' , t and t_1 the points of contact of the fourth common tangent of U and U_1 . Prove that (1) the point on U_1 collinear with c and t_1 is the point of inflexion; (2) the cusp-tangent and the inflexional tangent meet at t .

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. VII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

Exam. Book-Keeping, &c.

SARLL'S Text-Book Sales nearly 250,000.

SARLL'S STUDENT'S BOOK-KEEPING.

Numerous GRADUATED EXERCISES on the Theory, Practice, Trial Balances, Company Book-Keeping, Bankruptcy Procedure, Self-Balancing Ledgers, Philanthropic and Private Accounts, Mis. Difficulties, &c. With **Keys**. 320 pp., 2s. 6d. [In the press.]

SARLL'S BOOK-KEEPING FOR NEW CODE.

Stage I., Introductory; II., Practical; III., Theory or Journalising. Each 48 pages. Price 4d. **Outline Keys**. *Schoolmaster* says: "They are the best and cheapest manuals of the kind in the market." MS. Books, 2d. each.

SARLL'S PRACTICAL BOOK-KEEPING.

Fourteenth (greatly improved) Edition. *Teachers' Aid* says: "There is no cheaper and safer guide." Consists of GRADUATED EXERCISES with full, and Exam. Papers with *outline*, **Keys**. 128 pages, 1s. MS. Books, superior, 1s. Cheap, 4d.

SARLL'S DOUBLE-ENTRY BOOK-KEEPING.

Fifteenth Edition. 256 pages. 2s. Consists of GRADUATED EXERCISES with full, and Exam. Papers with *outline*, **Keys**. *Practical Teacher* says: "We heartily recommend as the best and cheapest manual we have seen." For Society of Arts Exam., Civil Service, &c. **A School Edition, without Keys**. 128 pages, 1s. Superior MS. Books, 1s. Cheap, 4d.

SARLL'S TWENTIETH CENTURY EXAM. BOOK-KEEPING.

Containing the latest Papers by the leading **Examining Boards**, with *outline Keys*. In Two Parts, 6d. each. Part I., **Junior Papers**, College of Preceptors, University Local, Scotch Leaving Certificate, &c. Part II., **Senior Papers**, Society of Arts, London Chamber of Commerce, Lancashire and Cheshire Union, West Riding, &c.

Supplementary Keys.

1. TO SARLL'S PRACTICAL.

Exercises fully worked, 2s.

2. TO SARLL'S DOUBLE-ENTRY.

Exercises fully worked, 3s.

** Specimen Copies at one-third off, or Teachers can have Parcels for inspection, post free, from A. SARLL, A.K.C. (Lecturer, People's Palace, E., Polytechnic, W., Goldsmiths' Institute, S.E., &c.), 62 Oakley Road, London, N.

Lessons by Correspondence and Exams. conducted.

THE

School World.

A MONTHLY MAGAZINE OF EDUCATIONAL WORK AND PROGRESS.

EACH NUMBER CONTAINS EIGHTY COLUMNS OF READING MATTER.

PRICE 6d. VOLUME VI., 1904, 7s. 6d. NET.

The aim of THE SCHOOL WORLD is to provide information of practical and permanent value to Schoolmasters and Schoolmistresses. To this end all important changes and developments affecting any branch of the work of teachers in secondary and other schools are dealt with by leading authorities and experienced teachers.

The Magazine has become indispensable to all who desire to keep in touch with modern and effectual methods of education.

MACMILLAN & CO., Ltd., LONDON.

OXFORD UNIVERSITY PRESS.

Books set and suitable for the College of Preceptors Examinations,
1906.

SCRIPTURE.

- Old Testament History for Schools.** By T. H. STOKOE.
PART I. (Third Edition), *From the Creation to the Settlement in Palestine.*
PART II. *From the Settlement to the Disruption.*
PART III. *From the Disruption to the Return from Captivity.*
Extra fcap. 8vo. 2s. 6d. each, with Maps.
- Manual of the Four Gospels.** By the same. Crown 8vo, cloth, with Maps, 3s. 6d. Or separately—
PART I. *The Gospel Narrative*, 2s.
PART II. *The Gospel Teaching*, 2s.
- Manual of the Acts.** By the same. Crown 8vo, cloth, 3s.
- The Life and Letters of St. Paul.** By the same. Crown 8vo, cloth, 3s. 6d. Or separately—
PART I. *The Life of St. Paul*, 2s.
PART II. *The Letters of St. Paul*, 2s.
- First Days and Early Letters of the Church.** By the same. 3s. Or—
PART I. *First Days of the Church*, 1s. 6d.
PART II. *Early Letters of the Church*, 2s.
- Graduated Lessons on the Old Testament.** By U. Z. RULE.
Edited by LL. J. M. BEBB. Selected Readings from the Old Testament, with paraphrases and connecting paragraphs. With Notes for Teachers and Pupils. For use in Lower Forms, and in Elementary and Sunday Schools. The text is that of the Revised Version, but the book may be used with the Authorized Version. In three volumes. Extra fcap. 8vo. 1s. 6d. each in paper covers; or 1s. 9d. each in cloth.
Vol. I. *Creation to Death of Moses.*
Vol. II. *Conquest of Canaan, Psalms, &c.*
Vol. III. *Israel and Judah, the Captivity, the Prophets.*
- The Teacher's Commentary on the Acts of the Apostles.** By F. N. PELOUBET. 8vo, cloth, 5s. [Published by Henry Frowde.]

ENGLISH.

- Shakespeare.** Edited by W. ALDIS WRIGHT. Extra fcap. 8vo, stiff covers.
Henry the Fifth, 2s. *The Tempest*, 1s. 6d.
- Scott.—Lay of the Last Minstrel.** Edited by W. MINTO. Second Edition. Extra fcap. 8vo, cloth, 1s. 6d. Separately—
Introduction and Canto I, paper covers, 6d.

LATIN.

- Rudimenta Latina.** By J. B. ALLEN. Comprising Accidence and Exercises of a very elementary character for the use of Beginners. Extra fcap. 8vo, cloth, 2s.
- An Elementary Latin Grammar.** By the same. New and Enlarged Edition. 208th Thousand. Extra fcap. 8vo, cloth, 2s. 6d.
- A First Latin Exercise Book.** By the same. Eighth Edition. Extra fcap. 8vo, cloth, 2s. 6d.
- A Second Latin Exercise Book.** By the same. Second Edition. Extra fcap. 8vo, cloth, 3s. 6d.
- Caesar.—The Gallic War.** Second Edition. With Maps. *Books I and II*, 2s. Extra fcap. 8vo, cloth. By C. E. MOBERLY.
- Horace.—The Odes, Book I.** Edited by E. C. WICKHAM. Extra fcap. 8vo, cloth, 2s.
- Livos from Cornelius Nepos.** Edited by J. B. ALLEN. Extra fcap. 8vo, stiff covers, 1s. 6d.
- Virgil.—Aeneid, Book I.** Edited by C. S. JERRAM. Extra fcap. 8vo, limp cloth, 1s. 6d.

GREEK.

- An Elementary Greek Grammar.** Containing Accidence and Elementary Syntax. By J. B. ALLEN. Extra fcap. 8vo, cloth, 3s.
- Euripides.—Alcestis.** Edited by C. S. JERRAM. Extra fcap. 8vo, cloth, 2s. 6d.
- Xenophon.—Anabasis, Book II.** By the same Editor, with Vocabulary by J. MARSHALL. Extra fcap. 8vo, cloth, 1s. 6d.

HISTORY.

- A School History of England, to the Death of Victoria.** With Maps, Plans, and Select Bibliographies. By O. M. EDWARDS, R. S. RAIT, and others. Crown 8vo, cloth, 3s. 6d.

GEOMETRY, &c.

- Geometry for Beginners.** An Easy Introduction to Geometry for Young Learners. By G. M. MINCHIN. Extra fcap. 8vo, stiff covers, 1s. 6d.
- Experimental and Theoretical Course of Geometry.** By A. T. WARREN. With or without Answers. Crown 8vo, cloth, 2s.
- Elementary Political Economy.** By E. CANNAN. Third Edition (1903). Extra fcap. 8vo, stiff covers, 1s.
- Book-keeping.** New and Enlarged Edition. By Sir R. G. C. HAMILTON and J. BALL. Extra fcap. 8vo, cloth, 2s.
Ruled Exercise Book, 1s. 6d.; To Preliminary Course only, 4d.

Exercises in Latin Prose.

- By G. C. RAMSAY, LL.D., Litt.D. Extra fcap. 8vo, cloth.
PART I. *Lower Grade*, 1s. 6d. PART II. *Higher Grade*, 1s. 6d.
PART III. *Syntax and Appendix*, 2s. 6d.

Greek Reader, Vol. I.

- Selected and Adapted, with English Notes, from Prof. von Wilamowitz-Moellendorf's "Griechisches Lesebuch." By E. C. MARCHANT. Crown 8vo, cloth, 2s.

Classical Archaeology in Schools.

- By PERCY GARDNER, Litt.D. With an Appendix containing Lists of Archaeological Apparatus, by Prof. P. GARDNER and J. L. MYERS, M.A. Second Edition. 8vo, paper covers, 1s. net.

Der ungebetene Gast, and other Plays in German.

- For Reading and Acting. Second Series. With Notes and Vocabulary. By EMMA S. BUCHHEIM. Extra fcap. 8vo, cloth, 2s. 6d.

Kinderfreuden.

- Von A. E. C. An Illustrated Reading Book for Children. Crown 8vo, cloth, 1s. 6d.

Ma Première Visite à Paris.

- Par A. E. C. Crown 8vo, cloth, with Illustrations. Being an Elementary French Reading Book. [Nearly ready.]

OXFORD MODERN FRENCH SERIES. Edited by LEON DELBOS M.A. Crown 8vo, stout cloth.

Une Ténébreuse Affaire.

- By BALZAC. Edited by MARIE PÉCHINET. 244 pp., 2s. 6d.

Mignet's La Révolution Française.

- Édité par A. L. DUPUIS. 240 pp., 3s.

Mémoires d'un Touriste.

- By STENDHAL. Edited by H. J. CHAYTOR. 116 pp., 3s.

Voyage aux Pyrénées.

- By TAINE. Edited by W. ROBERTSON. 226 pp., 2s. 6d.

A Class-book of Elementary Chemistry.

- By W. W. FISLER, M.A., F.C.S. Fifth Edition. Crown 8vo, cloth, Revised and Enlarged, with Fifty-nine Engravings on Wood. 4s. 6d.

CLASS LISTS

OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—MIDSUMMER, 1905.

The list of successful candidates at the Colonial and Foreign Centres will be published in the October number of "The Educational Times."

[Throughout the following Lists, bracketing of names implies equality.]

PRIZES.

Scholarship for intending Teacher.

- Jacoby, Miss E. G. Miss Cowdroy, Crouch End High School, Weston Park, N.

General Proficiency.

FIRST CLASS [OF SENIOR].

1. Spear, J. H. (Isbister Prize.) Mr. Dymond, Hoe Grammar School, Plymouth,
2. Eggington, A. T. (Pinches Prize.) Rev. L. H. Pearson, Market Bosworth Grammar School.
3. Jacques, H. Rev. L. H. Pearson, Market Bosworth Grammar School.
4. Doidge, R. M. Mr. Hardy, Dunheved College, Launceston.

SECOND CLASS [OF JUNIOR].

1. Hamilton, S. B. Mr. Groves, Polam Grange School, Darlington.
2. Schneider, Miss N. V. Miss Newton, Skinners' Company's School, Stamford Hill, N.
3. Foster, A. Mr. Blay, Technical Day School, Walsall.
4. Austin, J. E. Mr. Blay, Technical Day School, Walsall.

THIRD CLASS.

1. Garner, H. M. Rev. L. H. Pearson, Market Bosworth Grammar School.
2. Condrup, C. O. Messrs. Butler & Brown, Tollington Schools, N.
3. Pool, W. J. Mr. Hammond, Harborough Grammar School, Market Harborough.
4. Faulkner, H. Mr. Francis, People's College, Nottingham.

English Subjects.

1. Spear, J. H. Mr. Dymond, Hoe Grammar School, Plymouth.
2. Edwards, H. H. Mr. Woodhall, The Polytechnic Secondary Day School, Regent Street, W.

Mathematics.

- Mr. Hardy, Dunheved College, Launceston.
Rev. L. H. Pearson, Market Bosworth Grammar School.

Modern Foreign Languages.*

1. Spratt-Bowring, Miss I. F. Private tuition.
2. Santamaria, R. Rev. Brother Attale, St. Joseph's College, Beulah Hill, S.E.

Classics.

- Rev. W. P. Whittington, Ruthin Grammar School.

Natural Sciences.

- Messrs. Butler & Brown, Tollington Schools, N.
Mr. Hardy, Dunheved College, Launceston.
Messrs. Butler & Brown, Tollington Schools, N.

Taylor-Jones Prize for Scripture History.

- Walker, G. Mr. Hammond, Harborough Grammar School, Market Harborough.

Pitman Medals for Shorthand.

1. Earley, F. (Silver Medal.) The Xaverian Brothers, Catholic Collegiate Institute, Manchester.
2. Daw, W. E. (Bronze Medal.) Mr. Kinton Bond, Corporation Grammar School, Plymouth.

* J. H. Spear, Hoe Grammar School, Plymouth, was disqualified for the First Prize for Modern Foreign Languages in consequence of having obtained it at a previous Examination.

The following is a List of the Candidates who obtained the FIRST and SECOND PLACES in each Subject on FIRST CLASS PAPERS. (Only those who obtained Distinction are included.)

Scripture History.

1. Walker, G. Mr. Hammond, Harborough Grammar School, Market Harborough.
2. Doyle, Miss M. E. Miss Moss, The Friends' School, Mountmellick.
2. Jones, A. Rev. W. P. Whittington, Ruthin Grammar School.

English Language.

1. Jacoby, Miss E. G. Miss Cowdroy, Crouch End High School, Weston Park, N.

English History.

1. Eggington, A. T. Rev. L. H. Pearson, Market Bosworth Grammar School.
2. Bunting, H. L. Rev. L. H. Pearson, Market Bosworth Grammar School.
2. Spear, J. H. Mr. Dymond, Hoe Grammar School, Plymouth.

Geography.

1. McBryan, F. Private tuition.
2. Rhys, T. B. Private tuition.

Arithmetic.

1. Grundy, A. G. Mr. Bonnor, Rivington and Blackrod Grammar School, Rivington.
2. Doidge, R. M. Mr. Hardy, Dunheved College, Launceston.

Algebra.

1. Sandison, L. M. Mr. Sisling, Newcastle Modern School, Newcastle-on-Tyne.
2. Eggington, A. T. Rev. L. H. Pearson, Market Bosworth Grammar School.

Geometry.

1. Eggington, A. T. Rev. L. H. Pearson, Market Bosworth Grammar School.

Trigonometry.

1. Edwards, H. H. Mr. Woodhall, The Polytechnic Secondary Day School, Regent Street, W.
2. Eggington, A. T. Rev. L. H. Pearson, Market Bosworth Grammar School.
2. Hudson, R. P. Mr. Constable, Thorne Grammar School.
2. Jacques, H. Rev. L. H. Pearson, Market Bosworth Grammar School.

Mechanics.

1. Sarjeant, R. L. Mr. Marsh, The Borough Polytechnic Day School, S.E.

Book-keeping.

1. Field, E. E. Mr. Molyneux-Jenkins, Rye Grammar School.
1. McBryan, F. Private tuition.

Mensuration.

1. Coles, L. A. Messrs. Butler & Brown, Tollington Schools, N. Private tuition.
1. Byrne, H. J. Mr. Heath, Tudor Hall, Hawkhurst.
2. Fentum, C. A. Mr. Foster, Melbourne College, Anerley, S.E.
1. Prince, F. G. Mr. Osman Thomas, Lancaster College, West Norwood.

French.

1. Medard, R. Rev. Brother Attale, St. Joseph's College, Beulah Hill, S.E.
1. Ridel, Miss M. A. M. Miss Berdoe, Kenilworth School, Ealing.

COMPOSITION FOR SCHOOLS AND COLLEGES. Based on Outline Essays, with Exercises in Style. By C. H. MAXWELL, B.A. 1s.

A NEW SPELLING BOOK. With Side Lights from History. **Eleventh Edition.** Crown 8vo, 152 pp. ... 1s.

THE SONG OF HIAWATHA. With an Introduction and Notes. Edited by F. GORSE, M.A. **Third Edition.** Crown 8vo, 84+viii pp. ... 6d. net.

"The book contains a good vocabulary of the native words used in the poem, and the careful annotation will be found sufficient for ordinary purposes."—Practical Teacher.

EVANGELINE. Edited, with Notes, by F. GORSE, M.A., Head Master of the Intermediate Day School, Bootle, Lancs. Crown 8vo, 59 pp. ... 4d. net.

MACBETH. With an Introduction and Notes. Edited by M. J. C. MEIKLEJOHN, B.A. (Oxon.). Crown 8vo, 164+xxxii pp. ... 1s. 3d.

"The introduction is literary rather than grammatical, and we think the editor has justified his bold step of plunging at once into the question of *motif* and from the outset giving the student the clue to the drama. The characters are remarkably well sketched and the argument is ably presented."

HENRY V. With an Introduction and Notes. Edited by R. F. CHOLMELEY, M.A. (Oxon.), Assistant Master at St. Paul's School. Crown 8vo, 168+xxxii pp. ... 1s. 3d.

"This 'Life' is ably edited by F. F. Cholmeley, M.A., who provides, in addition to the text of the play, an analysis of the plot, an outline of the history of the reign, an essay on the character of the King, notes on the various characters introduced, explanatory maps and charts, and a capital series of examination papers for the use of the student. It makes an excellent text-book."

AN OUTLINE OF THE HISTORY OF ENGLISH LITERATURE. From the Earliest Times to 1880. Crown 8vo, 114 pp. ... 1s. 6d.

MEIKLEJOHN'S POETRY BOOKS.

A NEW SELECTION.

Book I. 40 pp. ... 2d.	Book III. 64 pp. ... 3d.
Book II. 64 pp. ... 3d.	Book IV. 72 pp. ... 4d.

"These small books are attractive in form, and that is half the battle with small children. They are also well graduated in difficulty. In Book I. there is no piece beyond the comprehension of a child of eight, and few that a child with a spark of poetry in him will not appreciate. Another good feature is the inclusion of new poets—Mrs. Tollemache, Mr. Newbolt, Mr. A. P. Graves. As a whole, the selection shows taste and judgment."—Journal of Education.

GEOGRAPHY.

A NEW GEOGRAPHY ON THE COMPARATIVE METHOD. With Maps and Diagrams, and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. **Thirty-Third Edition (Revised).** Crown 8vo, 630 pp. ... 4s. 6d.

"I am delighted with it. I expected something very good, and the actual product in no respect falls below my anticipations."—A. J. Wyatt, Esq., M.A. (Lond.), Univ. Corr. College, Cambridge.

THE COMPARATIVE ATLAS. By J. G. BARTHOLOMEW, F.R.G.S., and edited by Professor MEIKLEJOHN. Containing 64 plates, a General Index, and a Chapter on Map Drawing. **Third Edition (Revised)** ... 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."

THE BRITISH EMPIRE: Its Geography, Resources, Commerce, Landways, and Waterways. By J. M. D. MEIKLEJOHN, M.A. **Seventh Edition (Revised).** Crown 8vo, 350 pp. ... 3s.

A SCHOOL GEOGRAPHY. With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. **Third Edition (Revised).** Crown 8vo, 410 pp. ... 2s. 6d.

"This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—Educational Times.

A SHORT GEOGRAPHY. With the Commercial Highways of the world. **Twenty-Fifth Edition (Revised).** Crown 8vo, 196 pp. ... 1s.

THE BRITISH COLONIES AND DEPENDENCIES: Their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. **Fourth Edition.** Crown 8vo, 96 pp. ... 6d.

EUROPE: Its Physical and Political Geography. With Chapters on Latitude and Longitude, Day and Night, and the Seasons. With a double-page Map in Colour. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. **Second Edition (Revised).** 96 pp. ... 6d.

AFRICA: Its Geography, Resources, and Chronicle of Discovery up to 1898. For the Upper Standards. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. **Fifth Edition (Revised).** Crown 8vo, 75 pp. ... 4d.

TEST QUESTIONS IN GEOGRAPHY. Selected from Public Examination Papers. Arranged by A. T. FLUX. Crown 8vo, 82 pp. 1s. These questions—817 in number—have been selected from Papers set at the following Examinations:—Pupil Teachers', King's Scholarship, Certificate, London University, Oxford and Cambridge Junior and Senior, College of Preceptors, Joint Scholarship Board, Army Preliminary, Sandhurst, Civil Service, &c.

HISTORY.

A NEW HISTORY OF ENGLAND AND GREAT BRITAIN. With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. **Twentieth Edition.** Crown 8vo, 704 pp. 55 B.C. to the Death of Queen Victoria. ... 4s. 6d.

Also in two Parts. 2s. 6d. each.

Part I.—From B.C. 55 to A.D. 1509. Tenth Edition.

Part II.—From 1509 to 1901. Twelfth Edition.

A SCHOOL HISTORY OF ENGLAND. With Maps and Vocabulary of Historical Terms. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. **Third Edition.** Crown 8vo, 470 pp. 2s. 6d. This book is intended to stand midway between Professor Meiklejohn's New History and his short History, and has been written to meet the requirements of young people between the ages of fourteen and sixteen.

A SHORT HISTORY OF ENGLAND AND GREAT BRITAIN. B.C. 55 to A.D. 1900. **Eighteenth Edition.** Crown 8vo, 174 pp. ... 1s. (Large Type Edition, 1s. 6d.)

OUTLINES OF THE HISTORY OF ENGLAND AND GREAT BRITAIN TO A.D. 1902. Sixth Edition. Crown 8vo, 84 pp. ... 6d.

THE BUILDING OF THE BRITISH EMPIRE (1497-1900). With Notes on the Growth of Constitutional Government in the Colonies, Imperial Federation, Statistical Tables, Etymology of Colonial Names, Biographies of Empire Builders, and five double-page Maps in Colours. By ARTHUR T. FLUX. Crown 8vo, 254 pp. ... 2s.

TEST QUESTIONS IN HISTORY. Selected from Public Examination Papers. Arranged by A. T. FLUX. Crown 8vo, 80 pp. 1s.

"These questions are intended to serve as a guide and as a test to the student; as a guide as indicating the topics considered most important by examiners; and as a test whereby the student can ascertain whether his reading has been definite and thorough, and whether any important points have been omitted in preparation."

A Complete Catalogue will be sent post free to any address.

NORMAL CORR. COLLEGE,

47 MELFORD ROAD, EAST DULWICH, S.E., and
110 AVONDALE SQUARE, LONDON, S.E.

ENGINEERING.

NORTHAMPTON INSTITUTE, CLERKENWELL, LONDON, E.C.

ENGINEERING DAY COURSES

In MECHANICAL, ELECTRICAL, and HOROLOGICAL ENGINEERING.

FULL DAY COURSES in the Theory and Practice of the above subjects will commence on MONDAY, October 2nd, 1905. Entrance Examination on Wednesday and Thursday, 27th and 28th September.

The Courses for Mechanical and Electrical Engineering include periods spent in commercial workshops and extend over four years. They also prepare for the Degree of B.Sc. in Engineering at the UNIVERSITY OF LONDON. Fees for either of these Courses, £15 or £11 per annum.

Three Entrance Scholarships of the value of £52 each, giving free tuition for the full Course in Mechanical or Electrical Engineering, will be offered for competition at the Entrance Examination in September next. Conditions can be obtained from the PRINCIPAL.

Full particulars as to fees, dates, &c., and all information respecting the work of the Institute can be obtained at the Institute, or on application to

R. MULLINEUX WALMSLEY, D.Sc., Principal.

GOOD opening for a Boys' School near London.—To Let, a Commodious Old-fashioned HOUSE. Gravel soil. Large Iron School-rooms. Swimming Bath. 2½ acres. Apply—E. S., The Laurels, Barnet, Herts.

ST. THOMAS'S HOSPITAL, ALBERT EMBANKMENT, S.E. (UNIVERSITY OF LONDON.)

The WINTER SESSION will commence on Oct. 2nd. The Hospital occupies one of the finest sites in London, and contains 603 beds.

Entrance and other Scholarships and Prizes (26 in number), of the value of more than £500, are offered for competition each year.

Upwards of 60 resident and other appointments are open to Students after qualification.

A Students' Club forms part of the Medical School buildings, and the Athletic Ground, nine acres in extent, situated at Chiswick, can be reached in 40 minutes from the Hospital.

A Prospectus, containing full particulars, may be obtained from the Secretary, Mr. G. O. ROBERTS.

J. H. FISHER, B.S.Lond., Dean.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE. (UNIVERSITY OF LONDON.)

The WINTER SESSION will begin on Monday, October 2nd, 1905.

Students can reside in the College within the Hospital walls, subject to the Collegiate regulations.

The Hospital contains a service of 744 beds. Scholarships and Prizes of the aggregate value of nearly £800 are awarded annually.

The Medical School contains large Lecture Rooms and well-appointed Laboratories for Practical Teaching, as well as Dissecting Rooms, Museum, Library, &c.

The Club Ground of the Students' Union (ten acres) is at Winchmore Hill, within easy reach of the Hospital.

For further particulars apply, personally or by letter, to the WARDEN OF THE COLLEGE, St. Bartholomew's Hospital, E.C.

A Handbook forwarded on application.

ST. MARY'S HOSPITAL MEDICAL SCHOOL, PADDINGTON, W. (UNIVERSITY OF LONDON.)

The WINTER SESSION will begin on MONDAY, OCTOBER 2nd.

The Hospital is close to Paddington Station (G. W. Ry.), Marylebone (G. C. Ry.), Edgware Road and Praed Street (Met. and Dist. Ry.), and Lancaster Gate (Cent. Lond. Elect. Ry.).

CLINICAL PRACTICE.—All Dresserships and Clerkships (In-patient and Out-patient) are of four months' duration, so that each student serves as Medical Clinical Clerk and Surgical Dresser for eight months, besides holding office in the various Special Departments. The Resident Medical Officers (18 annually) are appointed by competitive examination, each appointment being for six months.

ATHLETIC CLUBS' GROUND.—An Athletic Ground of eight acres, comprising cricket, tennis, and Rugby and Association football grounds, has recently been acquired at North Kensington (within 20 minutes' journey of the Hospital) and will be available for use in October next.

UNIVERSITY COURSES.—The Medical School provides complete courses of instruction for the Prelim. Scientific, Inter. M.B., and Final M.B., B.S. Examinations of the University of London under Recognized Teachers of the University. Special Tuition is also provided for the Examinations of the Universities of Oxford, Cambridge, and Durham; for the Primary and Final F.R.C.S.; and for the Government Medical Services.

ENTRANCE SCHOLARSHIPS.—Four Open Scholarships in Natural Science, value £145 to £52. 10s., and Two University Scholarships, value 60 guineas each, will be competed for on September 25th, 26th, and 27th. Calendar and full particulars on application to the DEAN.

KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

UNIVERSITY OF ABERDEEN

FACULTY OF MEDICINE.

WINTER SESSION, 1905-1906.

The WINTER SESSION commences on Monday, 16th October, 1905. The PRELIMINARY EXAMINATION will commence on September 29th.

The Degrees in Medicine granted by the University are:—Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), Master of Surgery (Ch.M.). They are conferred only after Examination and only on Students of the University. A Diploma in Public Health is conferred after Examination on Graduates in Medicine of any University in the United Kingdom. The total cost for the whole curriculum, including Hospital Fees and Fees for the Degrees of M.B. and Ch.B., is usually about £150. Bursaries, Scholarships, Fellowships, and Prizes, to the number of fifty and of the aggregate annual value of £1,180, are open to competition in this Faculty.

A Prospectus of the Classes, Fees, &c., may be had on application to the SECRETARY OF THE MEDICAL FACULTY.

The University also grants the following Degrees:—In Arts: Doctor of Letters, Doctor of Philosophy, and Master of Arts. In Science: Doctor of Science, Bachelor of Science (in Pure Science and in Agriculture). In Divinity: Doctor of Divinity (Honorary), and Bachelor of Divinity. In Law: Doctor of Laws (Honorary), and Bachelor of Laws (B.L.).

Particulars may be had on application to the SECRETARY OF FACULTIES.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, Private Schools' Association, and Welsh County Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m.

Hours for interviews—10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m. Saturdays until 3 p.m.

JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Telegrams—"Educatario, London."

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS

provides a Course of Professional Training in preparation for Work in Secondary Schools or in Families.

The Students attend the University Lectures on the Theory, History, and Methods of Education, and have systematic practice in Class Teaching in Schools.

A Bursary of £30 is offered to a Graduate entering in October.

Apply for further particulars to the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

CLASSES FOR THE LONDON UNIVERSITY MATRICULATION AND PROFESSIONAL PRELIMINARY EXAMINATION.

Individual Tuition in all subjects required for the Examination. Fee for Half-yearly Course £3. 3s. Students may join at any time at proportional fees.

set at the Certificate, Lower Forms, Professional Preliminary, and Diploma Examinations held in 1904.

PROFESSOR MEIKLEJOHN'S SERIES.

Books suitable for the Oxford, Cambridge, and College of Preceptors Examinations.

ENGLISH.

THE ENGLISH LANGUAGE: Its Grammar, History, and Literature. By J. M. D. MEIKLEJOHN, M.A. **Twenty-Sixth Edition.** Enlarged, with Exercises and Additional Analysis. Crown 8vo, 470 pp. 4s. 6d.

"I gave it to a girl candidate for an English Scholarship—she got first place—and valued the help she got from the book."—W. Johnstone, Esq., B.A., Elmfield Cottage, York.

A NEW GRAMMAR OF THE ENGLISH TONGUE. With Chapter on Composition, Versification, Paraphrasing, and Punctuation. With Exercises and Examination Questions. **Twenty-Second Edition.** Crown 8vo, 284 pp. 2s. 6d.

A SHORT GRAMMAR OF THE ENGLISH TONGUE. With Three Hundred and Thirty Exercises. **Sixteenth Edition.** Crown 8vo, 176 pp. 1s.

This book is written in the clearest and simplest style for beginners. It contains:—

- | | |
|-----------------------------------|---|
| (i.) The simplest Definitions. | (iv.) Graduated Methods of Parsing. |
| (ii.) Slowly graduated Exercises. | (v.) Bad Grammar corrected, with Reasons. |
| (iii.) Clearly printed Tables. | (vi.) Analysis, with Plain Diagrams. |

THE ART OF WRITING ENGLISH. A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN. **Fourth Edition.** Crown 8vo, 340 pp. 2s. 6d.

ONE HUNDRED SHORT ESSAYS IN OUTLINE. By J. M. D. MEIKLEJOHN. **Sixth Edition.** Crown 8vo, 110 pp. 1s.

COMPOSITION FOR SCHOOLS AND COLLEGES. Based on Outline Essays, with Exercises in Style. By C. H. MAXWELL, B.A. 1s.

A NEW SPELLING BOOK. With Side Lights from History. **Eleventh Edition.** Crown 8vo, 152 pp. 1s.

THE SONG OF HIAWATHA. With an Introduction and Notes. Edited by F. GORSE, M.A. **Third Edition.** Crown 8vo, 84+viii pp. 6d. net.

"The book contains a good vocabulary of the native words used in the poem, and the careful annotation will be found sufficient for ordinary purposes."—Practical Teacher.

EVANGELINE. Edited, with Notes, by F. GORSE, M.A., Head Master of the Intermediate Day School, Bootle, Lancs. Crown 8vo, 59 pp. 4d. net.

MACBETH. With an Introduction and Notes. Edited by M. J. C. MEIKLEJOHN, B.A. (Oxon.). Crown 8vo, 164+xxxii pp. 1s. 3d.

"The introduction is literary rather than grammatical, and we think the editor has justified his bold step of plunging at once into the question of *motif* and from the outset giving the student the clue to the drama. The characters are remarkably well sketched and the argument is ably presented."

HENRY V. With an Introduction and Notes. Edited by R. F. CHOLMELEY, M.A. (Oxon.), Assistant Master at St. Paul's School. Crown 8vo, 168+xxxii pp. 1s. 3d.

"This 'Life' is ably edited by F. F. Cholmeley, M.A., who provides, in addition to the text of the play, an analysis of the plot, an outline of the history of the reign, an essay on the character of the King, notes on the various characters introduced, explanatory maps and charts, and a capital series of examination papers for the use of the student. It makes an excellent text-book."

AN OUTLINE OF THE HISTORY OF ENGLISH LITERATURE. From the Earliest Times to 1880. Crown 8vo, 114 pp. 1s. 6d.

MEIKLEJOHN'S POETRY BOOKS.

A NEW SELECTION.

BOOK I. 40 pp. ... 2d.	BOOK III. 64 pp. ... 3d.
BOOK II. 64 pp. ... 3d.	BOOK IV. 72 pp. ... 4d.

"These small books are attractive in form, and that is half the battle with small children. They are also well graduated in difficulty. In Book I. there is no piece beyond the comprehension of a child of eight, and few that a child with a spark of poetry in him will not appreciate. Another good feature is the inclusion of new poets—Mrs. Tollemache, Mr. Newbolt, Mr. A. P. Graves. As a whole, the selection shows taste and judgment."—Journal of Education.

GEOGRAPHY.

A NEW GEOGRAPHY ON THE COMPARATIVE METHOD. With Maps and Diagrams, and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. **Thirty-Third Edition (Revised).** Crown 8vo, 630 pp. 4s. 6d.

"I am delighted with it. I expected something very good, and the actual product in no respect falls below my anticipations."—A. J. Wyatt, Esq., M.A. (Lond.), Univ. Corr. College, Cambridge.

THE COMPARATIVE ATLAS. By J. G. BARTHOLOMEW, F.R.G.S., and edited by Professor MEIKLEJOHN. Containing 64 plates, a General Index, and a Chapter on Map Drawing. **Third Edition (Revised).** 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."

THE BRITISH EMPIRE: Its Geography, Resources, Commerce, Landways, and Waterways. By J. M. D. MEIKLEJOHN, M.A. **Seventh Edition (Revised).** Crown 8vo, 350 pp. 3s.

A SCHOOL GEOGRAPHY. With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. **Third Edition (Revised).** Crown 8vo, 410 pp. 2s. 6d.

"This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—Educational Times.

A SHORT GEOGRAPHY. With the Commercial Highways of the world. **Twenty-Fifth Edition (Revised).** Crown 8vo, 196 pp. 1s.

THE BRITISH COLONIES AND DEPENDENCIES: Their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. **Fourth Edition.** Crown 8vo, 96 pp. 6d.

EUROPE: Its Physical and Political Geography. With Chapters on Latitude and Longitude, Day and Night, and the Seasons. With a double-page Map in Colour. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. **Second Edition (Revised).** 96 pp. 6d.

AFRICA: Its Geography, Resources, and Chronicle of Discovery up to 1898. For the Upper Standards. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. **Fifth Edition (Revised).** Crown 8vo, 75 pp. 4d.

TEST QUESTIONS IN GEOGRAPHY. Selected from Public Examination Papers. Arranged by A. T. FLUX. Crown 8vo, 82 pp. 1s. These questions—817 in number—have been selected from Papers set at the following Examinations:—Pupil Teachers', King's Scholarship, Certificate, London University, Oxford and Cambridge Junior and Senior, College of Preceptors, Joint Scholarship Board, Army Preliminary, Sandhurst, Civil Service, &c.

HISTORY.

A NEW HISTORY OF ENGLAND AND GREAT BRITAIN. With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. **Twentieth Edition.** Crown 8vo, 704 pp. 5s. B.C. to the Death of Queen Victoria. 4s. 6d.

Also in two Parts. 2s. 6d. each.

Part I.—From B.C. 55 to A.D. 1509. Tenth Edition.

Part II.—From 1509 to 1901. Twelfth Edition.

A SCHOOL HISTORY OF ENGLAND. With Maps and Vocabulary of Historical Terms. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. **Third Edition.** Crown 8vo, 470 pp. 2s. 6d. This book is intended to stand midway between Professor Meiklejohn's New History and his short History, and has been written to meet the requirements of young people between the ages of fourteen and sixteen.

A SHORT HISTORY OF ENGLAND AND GREAT BRITAIN. B.C. 55 to A.D. 1900. **Eighteenth Edition.** Crown 8vo, 174 pp. 1s. (Large Type Edition, 1s. 6d.)

OUTLINES OF THE HISTORY OF ENGLAND AND GREAT BRITAIN TO A.D. 1902. **Sixth Edition.** Crown 8vo, 84 pp. 6d.

THE BUILDING OF THE BRITISH EMPIRE (1497-1900). With Notes on the Growth of Constitutional Government in the Colonies, Imperial Federation, Statistical Tables, Etymology of Colonial Names, Biographies of Empire Builders, and five double-page Maps in Colours. By ARTHUR T. FLUX. Crown 8vo, 254 pp. 2s.

TEST QUESTIONS IN HISTORY. Selected from Public Examination Papers. Arranged by A. T. FLUX. Crown 8vo, 80 pp. 1s. "These questions are intended to serve as a guide and as a test to the student: as a guide as indicating the topics considered most important by examiners; and as a test whereby the student can ascertain whether his reading has been definite and thorough, and whether any important points have been omitted in preparation."

A Complete Catalogue will be sent post free to any address.

MEIKLEJOHN & HOLDEN, 11 Paternoster Square, E.C.

NEW EDUCATIONAL BOOKS

AUTUMN, 1905.

HISTORY AND GEOGRAPHY.

EASY STORIES FROM ENGLISH HISTORY. By E. M. WILMOT-BUXTON, Author of "Makers of Europe." Crown 8vo, 1s. [The Beginner's Books.

"The book begins with King Caradoc and Queen Boadicea, and passes on, chapter after chapter, to General Gordon; in all, with appendices (list of principal events, with dates, and kings and queens from the time of Alfred) and index, 128 pages. The author attempts to give a bird's-eye view of one or two chief events in a century and so secure proportion. Children will certainly prefer to learn history in chapters centering round persons and places instead of the old dry-as-dust method of dates and names. Teachers will find these interestingly told stories helpful in themselves and suggestive of similar methods in other parts of the school curriculum."—*School Guardian*.

A HANDY DIGEST OF BRITISH HISTORY. Comprising an Analysis and Commentary, with Appendices illustrative of the points of contact between Great Britain, her Colonies, and Foreign Nations. By C. E. SNOWDON, M.A., of Ascham School, Eastbourne. Demy 8vo, 4s. 6d.

This book does not aspire to be more than a guide and companion, complementary and suggestive. It aims at presenting a clear and easily graspable analysis of the course of events to students who are reading, and at refreshing, at a minimum cost of time and trouble, the memories of those who have read. It supplies a commentary on the more important and leading questions of each period, while it contents itself with the barest mention of ordinary episodes, the details of which can be found in most text-books.

The features of the compilation which I hope will prove especially useful are:—

1. The *perpendicular* divisions of the analysis, showing in separate columns the development of the constitution, the expanding lines of domestic legislation, and the course of colonial and foreign intercourse from the beginning.
2. The very full genealogical tables, portions of which are repeated on occasion, to obviate the necessity of tiresome back reference.
3. The fairly full notes on points of ethnical and archæological interest, seldom discussed in text-books.
4. The numerous appendices, dealing with British relations with foreign nations, and giving information about other points of general interest not easily obtainable in a handy form.

THE ANCIENT WORLD. By E. M. WILMOT-BUXTON. With Maps and Illustrations. Crown 8vo, 3s. 6d.

This book tells the story of the great civilisations of the Ancient World, as made known by recent excavation and discovery, from the dawn of Egyptian history to the days of the Roman Empire.

A STUDENT'S HISTORY OF SCOTLAND. By D. W. RANNIE, M.A. With 4 Maps. Crown 8vo, 3s. 6d.

HISTORY AND GEOGRAPHY EXAMINATION PAPERS. By C. H. SPENCE, M.A., Clifton College. Third Edition. Crown 8vo, 2s. 6d. [School Examination Series.

The edition has been carefully revised and brought up to date. A large number of new questions and papers have been added.

AN ENGLISH CHURCH HISTORY FOR CHILDREN. By MARY E. SHIPLEY. With a Preface by the BISHOP OF GIBRALTAR, late Professor of Ecclesiastical History at King's College, London. With Maps and Illustrations. Part I. Crown 8vo, 2s. 6d. net.

"We can strongly recommend this little book, written in simple but not childish language, as well calculated to interest children in the early history of the English Church."—*School Guardian*.

A HISTORICAL GEOGRAPHY OF THE BRITISH EMPIRE. By H. B. GEORGE, M.A., Fellow of New College, Oxford. With a Coloured Map. Crown 8vo, 3s. 6d.

Included in the "School World's" List of Most Notable School-books of 1904. Set Book for Section 6, Oxford Local Examinations, 1906.

THE STORY OF THE BRITISH EMPIRE. By F. M. ANDERSON. With many Illustrations and Maps. Crown 8vo, 2s.

The book's aim is to present to the minds of young Britons all over the world a clear and definite picture of their great heritage.

H.M. DIVISIONAL INSPECTOR OF SCHOOLS writes: "I think it is well adapted in style and manner for use in Elementary Schools, and if teachers or managers consult me as to choice of books I should have no hesitation in recommending it."

FRENCH.

EASY FRENCH RHYMES. By HENRI BLOUET, B.A. With 6 Illustrations. Fcap. 8vo, 1s. [The Beginner's Books.

This little book, containing the time-honoured English nursery rhymes translated into French rhyme, will supply children with a fairly extensive and easily acquired vocabulary of French words, and it will be found of great use in kindergarten and preparatory schools.

A JUNIOR FRENCH PROSE. By R. R. N. BARON, M.A., Author of "French Prose Composition," Modern Language Master at Cheltenham Grammar School. Crown 8vo, 2s. [Methuen's Junior School Books.

This book has been written for pupils beginning continuous French Prose. It contains: (1) Examples and Rules in Syntax. These are not professedly exhaustive, but deal rather with points in which the two languages are seen to differ; and, as they deal with such points occurring in over a hundred passages and exercises, it is hoped they may be found sufficiently complete for the general purposes at which the book aims. (2) Exercises in *everyday language*, illustrative of the rules. (3) Graduated continuous passages.

Both the exercises and the continuous passages are accompanied by full vocabularies.

SCIENCE AND TECHNOLOGY.

ELEMENTARY EXPERIMENTAL CHEMISTRY. By A. E. DUNSTAN, B.Sc., Head of the Chemical Department, East Ham Technical College. With 4 Plates and 109 Diagrams. Crown 8vo, 2s. [Methuen's Junior School Books.

"A good course of work in elementary chemistry, written by an experienced and successful science master, which covers the subjects of typical preliminary examinations. The illustrations are numerous and clear."—*School World*.

"We have here a useful text-book, well arranged and experimental throughout. It is written for students preparing for Oxford and Cambridge Junior Locals, College of Preceptors (Second Class), and Board of Education (First Stage) Examinations. The book is plentifully supplied with diagrams."—*School Guardian*.

AN ELEMENTARY TEXT-BOOK OF INORGANIC CHEMISTRY. By R. LLOYD WHITELEY, F.I.C., F.C.S., Principal of the Municipal Science School, West Bromwich. With 137 Illustrations. Crown 8vo, 2s. 6d.

This book has been written primarily for the use of those who are commencing the Study of Theoretical Inorganic Chemistry on the lines laid down for Stage I. of that subject in the Syllabuses issued by the Board of Education. The subject matter of that syllabus has consequently been fully discussed, though its order has not been strictly followed.

As far as possible the deductive method has been employed, and the treatment of the subject throughout is experimental, so that, although the work is not intended as a laboratory text-book, the experimental details are so full that little difficulty would be experienced in using it as such.

REPOUSSÉ METAL WORK. A Scheme of Sheet Metal Work for Schools and Amateurs. By A. C. HORTH, Instructor of Metalwork to the London County Council. With Diagrams and 8 Plates. Cr. 8vo, 2s. 6d. [Text-books of Technology.

INSECT LIFE. A Short Account of the Classification and Habits of Insects. By F. V. THEOBALD, M.A., Vice-Principal and Zoologist to the South-Eastern Agricultural College. With numerous Illustrations. Second Edition, Revised. Crown 8vo, 2s. 6d.

MATHEMATICS.

EASY EXERCISES IN ARITHMETIC. Containing 5,000 Examples. By W. S. BEARD. Without Answers, 1s. With Answers, 1s. 3d. [The Beginner's Books.

This book is intended to be the working school book of young pupils, and contains many special features. It assumes that the teacher will lay great stress on fundamental principles. The suggestions of the Mathematical Association have been followed throughout. In use at upwards of 200 schools.

COMMERCIAL ARITHMETIC. By F. G. TAYLOR, M.A., Lecturer in Mathematics at University College, Nottingham. Fourth Edition, 1s. 6d. This edition contains a new chapter on the Slide Rule.

THE ECONOMICS OF COMMERCE. By H. DE B. GIBBINS, Litt.D., Head Master of King Charles I. School, Kidderminster. Second Edition. With many Additions. Crown 8vo, 1s. 6d. [Methuen's Commercial Series.

Kindly write for our New Educational Lists.

MESSRS. BELL'S NEW EDUCATIONAL WORKS.

JUST PUBLISHED.

UNIFORM WITH PENDLEBURY'S SHILLING ARITHMETIC.

Small crown 8vo, 192 pages, price 1s. 6d.; or, with Answers, 2s.

A FIRST ALGEBRA.

By W. M. BAKER, M.A.,

Head Master of the Military and Civil Department at Cheltenham College,

AND

A. A. BOURNE, M.A.,

Head Mathematical Master of the Classical Side at Cheltenham College.

Encouraged by the success of Messrs. Baker and Bourne's Elementary Algebra, and by the numerous requests for an Algebra for Beginners, Messrs. Bell have great pleasure in announcing the above by the same authors.

The range of this book, which includes Quadratic Equations and Fractional and Negative Indices, will be found specially suitable for the Local Examinations.

NOW READY. Crown 8vo, 295 pp., with or without Answers, 3s.

EXAMPLES IN ARITHMETIC.

WITH SOME NOTES ON METHOD.

By C. O. TUCKEY, M.A., Assistant Master at Charterhouse.

Books suitable for the College of Preceptors' Examinations, 1906.

SHAKESPEARE'S TEMPEST. Edited, with Introduction and Notes, by T. DUFF BARNETT, B.A. 2s. (*Bell's English Classics.*)

NOTES TO ABOVE WITHOUT THE TEXT. 1s.

NOTES ON SHAKESPEARE'S HENRY V. By T. DUFF BARNETT, B.A. 1s.

THE PARAPHRASE OF POETRY. A Practical Handbook on Paraphrasing, for use in Schools. By EDMUND CANDLER. With Introduction, Specimens of Paraphrases, and numerous Examples. 1s. 6d.

CÆSAR—DE BELLO GALLICO. Books I. and II. Edited, with Introduction, Notes, Exercises, and Vocabulary, by A. C. LIDDELL, M.A., Assistant Master at Westminster School. With numerous Illustrations, Maps, and Plans. 1s. 6d. each. (*Bell's Illustrated Classics.*)

TRANSLATION. 1s.

MR. EDWARD ARNOLD'S LIST.

GEORGE GILL & SONS, Ltd.

ARNOLD'S ENGLISH TEXTS.

With a view to meeting the requirements of Teachers who, with an Examination in prospect, prefer to place a plain text in the hands of their Pupils, Mr. EDWARD ARNOLD has now in preparation a series of texts of English Classics to which nothing has been added but a small Glossary of Archaic or Unusual Words. The first three Volumes, from **Arnold's School Shakespeare**, will be issued at once. In paper covers, 6d. each; or cloth, 8d.

I. **MACBETH.** II. **HENRY V.** III. **THE TEMPEST.**

THE ARNOLD PROSE BOOKS.

A Series of Representative Selections from leading Prose Writers, each Book confined to one Author. 24 Books. Each 48 pp., paper, 2d.; cloth, 4d.

Kindly send for detailed circular.

THE LAUREATE POETRY BOOKS.

A Series of Representative Selections from leading Poets. In 34 Books, the first seven of which contain graduated miscellaneous selections, the remainder being devoted to individual poets. Each 48 pp., paper, 2d.; cloth, 4d.

Kindly send for detailed circular.

STEPS TO LITERATURE.

A Graduated Series of School Reading Books for Preparatory Schools and Lower Form Pupils.

- BOOK I.—**Tales of the Homeland.** 112 pp., price 10d.
- BOOK II.—**Tales of Many Lands.** 144 pp., price 1s.
- BOOK III.—**Stories from English and Welsh Literature.** 192 pp., price 1s. 3d.
- BOOK III.A.—**Stories from the Literature of the British Isles.** 224 pp., price 1s. 6d.
- BOOK IV.—**Literary Readings relating to the Empire.** 224 pp., price 1s. 6d.
- BOOK V.—**Literary Readings relating to Europe.** 224 pp., price 1s. 6d.
- BOOK VI.—**Glimpses of World Literature.** 256 pp., price 1s. 6d.

PROF. OMAN'S ENGLISH HISTORIES.

A History of England. By C. W. OMAN, M.A., Deputy Professor of Modern History in the University of Oxford. Fully furnished with Maps, Plans of the Principal Battlefields, and Genealogical Tables. 760 pages. Ninth and Enlarged Edition (to end of South African War). Crown 8vo, cloth, 5s.

Special Editions, each volume containing a separate Index.

In Two Parts, 3s. each: Part I., from the Earliest Times to 1603; Part II., from 1603 to 1902.

In Three Divisions: Division I., to 1307, 2s.; Division II., 1307 to 1688, 2s.; Division III., 1688 to 1902, 2s. 6d.

*** In ordering please state the period required, to avoid confusion.*

England in the Nineteenth Century. By C. W. OMAN, M.A., Author of "A History of England," &c. With Maps and Appendices. Revised and Enlarged Edition. One volume, crown 8vo, 3s. 6d.

A Junior History of England. From the Earliest Times to the Death of Queen Victoria. By C. W. OMAN, M.A., and MARY OMAN. With Maps. Cloth, 2s.

Questions on Oman's History of England. By R. H. BOOKEY, M.A. Crown 8vo, cloth, 1s.

A Synopsis of English History. By C. H. EASTWOOD, Head Master of Redheugh Board School, Gateshead. 2s.

English History for Boys and Girls. By E. S. SYMES, Author of "The Story of Lancashire," "The Story of London," &c. With numerous Illustrations. 2s. 6d.

Men and Movements in European History. Fully Illustrated. 256 pages. 1s. 6d.

To be ready in September.

LINGUA MATERNA.

CHAPTERS ON THE SCHOOL TEACHING OF ENGLISH.

By R. WILSON, B.A. 256 pages. Crown 8vo. 3s. 6d.

Containing suggestions on the methods of meeting the new requirements in English language and literature, with schemes of work for the Four Years' Course for the Preparatory Schools.

GEORGE GILL & SONS, LTD., 13 Warwick Lane, London, E.C.

WILL BE READY IN SEPTEMBER.

A New and Thoroughly Revised Edition (containing nearly
80 additional pages) of

DE FIVAS'
NEW GRAMMAR OF FRENCH GRAMMARS

ENLARGED BY THE ADDITION OF CAREFULLY CHOSEN
GRADUATED FRENCH TEXTS FOR PREPARATORY READING AND TRANSLATION

Foolscap 8vo, 474 pages, price 2s. 6d., cloth.

Extracts from Preface to the New (Fifty-Seventh) Edition.

In the present Edition, the main body of the work as last revised has been faithfully preserved, but an important addition has been made by the insertion of 258 Graduated French PREPARATORY TEXTS in prose and verse, one of which precedes each of the original exercises, for use in reading and translation.

The Publishers feel confident that this valuable practical addition will efficiently complete the lucid theoretical part of the "Grammar of French Grammars," and make it a complete TEXT-BOOK FOR THE LEARNER — giving not only clear principles to apply, but practical and varied examples of style, forms of sentences, and arrangements of words to imitate, which cannot fail to be invaluable helps in translating the

Exercises. The object throughout has been to assist the student in points where he generally finds difficulties. In the Syntax such extracts have been selected as serve to represent the most varied styles in French literature, in order to familiarize the student not only with the great masters of the language, but also with the more familiar turns of modern conversation.

The new matter added to the present Edition amounts to an enlargement of the GRAMMAR by nearly 80 pages, and the Publishers trust that it will now more than ever be worthy of its title of

GRAMMAR OF FRENCH GRAMMARS.

DENT'S NEW SERIES OF MATHEMATICAL AND SCIENTIFIC TEXT-BOOKS FOR SCHOOLS.

Edited by W. J. GREENSTREET, M.A., F.R.A.S., Head Master of Marling School, Stroud, Glos.; Editor of the *Mathematical Gazette*.

JUST PUBLISHED.

PRACTICAL NATURE STUDY FOR SCHOOLS.

By OSWALD H. LATTER, M.A., Senior Science Master at Charterhouse; formerly Tutor of Keble College, Oxford.

PART I. (*Pupils' Book*), 2s. 6d. net. PART II. (*Teachers' Book*), 6s. net.

The Teachers' Book (*Part II.*) is supplied to Recognized Teachers only. A Specimen Copy of Part I. will be supplied to School Masters at half-price.

This book is intended for pupils from about ten to fourteen years of age, and its object is to train the faculty of observation. The method employed is to ask a series of questions with the purpose of compelling the pupil to look for himself, and to learn by the use of his own senses. A space is left for the answer to each question, and one side of each page is blank, so as to afford opportunity for writing consecutive accounts of the various phenomena and objects dealt with. In this way the work may be made a valuable training in English Composition. Part II. is a Key for the use of Teachers only; it is copiously but simply illustrated, and contains brief answers to the questions in Part I.

The *School Guardian* says:—"We heartily commend the book to all teachers who include 'Nature Study' in their time-tables."

The *School World* says:—"Mr. Latter's book is exactly the one to put into the hands of a class, the teacher of which either possesses the preliminary knowledge referred to above [*in earlier part of review*] or is content to be a fellow worker with his pupils."

NEARLY READY.

AN INTRODUCTION TO THE STUDY OF GEOMETRY.

By W. H. YOUNG, Sc.D., Senior Examiner to Welsh Examination Board, and Mrs. YOUNG, Ph.D.

Cloth, crown 8vo, 1s. 6d. net.

The Reform Movement in Geometry no longer needs an apologist. The leading idea of the reform movement is that the concepts and the facts of Geometry can only properly be approached practically, and that familiarity with the Geometry of the world around us is the necessary preliminary to any abstract thought in Geometry at all. Plane Geometry is a form of abstract thought, even when taught by the most practical methods. The effect of the inculcation of Plane Geometry before the pupil is familiar with three-dimensional objects is to destroy the habit of geometrical observation, and to leave undeveloped the geometrical insight. One of the aims of

the present Introduction is to deal with elementary three-dimensional forms by a method as simple, as inexpensive, and as practical as the method of drawing. This method, like drawing, requires no special apparatus, nor any mechanical contrivances (*e.g.*, protractor, compasses, &c.), only ordinary paper, not even gum. Throughout the course sketched in this introduction, the pupils are continually thrown on themselves both for appliances, constructions, and thought; the *book* and the *teacher* are meant to be *guides* and *helpers*, no more.

Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office

NEAR THE BRITISH MUSEUM.

KINGSLEY HOTEL

HART STREET, BLOOMSBURY SQUARE, LONDON.

Latin Texts

JUST
PUBLISHED.

This New Series has been designed especially for schools. The texts are intended for use in the first two or three years of the study of Latin. All vowels long by nature are marked. Each Volume has a *short* Introduction. A new and important feature in the Introduction is a brief Note on the MSS. and the principles of textual criticism. No other notes are given.

Eutropius. Edited by W. H. S. JONES, M.A. 8d. net. [Ready.]

Horace.—Odes. Edited by W. H. D. ROUSE, Litt.D. Each book separately. [Ready.]

Cicero.—De Amicitia. Edited by Professor J. S. REID, Litt.D.

Cicero.—De Senectute. Edited by Professor J. S. REID, Litt.D.

Elegiac Poems from Tibullus and Ovid. Edited by Professor J. P. POSTGATE, Litt.D.

Virgil.—Eclogues. Edited by S. E. WINBOLT, M.A. [Ready.]

Virgil.—Aeneid VI. Edited by S. E. WINBOLT, M.A.

Caesar.—De Bello Gallico, V., VI. Edited by W. H. D. ROUSE, Litt.D.

Livy.—Books V., VI. Edited by E. SEYMER THOMPSON, M.A. [Ready.]

Blackie's

General Editor—
W. H. D. ROUSE, Litt.D.

English Texts

Price 6d. each. Complete List on application.

This new and highly excellent Series provides, in small compass, the works of many of the best known and most famous authors. The aim has been to include only such books as are of permanent value, and have some bearing upon the development of the national life, character, and literature. In every case the books selected are good as literature, stimulating, varied, and enlightening; books indeed which every young person should know, and which, if once read, are sure to be valued and read again. Each Volume is provided with a brief Introduction dealing with the Author's life and place in literature. In neat blue cloth covers, price 6d. each.

The School World says:—"They may be commended without reserve to the attention of teachers."

The Academy says:—"The series is worthy of special attention, marking as it does a new departure in educational books."

Little French Classics

Price 4d. each Book.

"The idea is an excellent one, and admirably carried out."—Prof. SAUNTSBURY.

"A considerable boon to teachers and taught."—SPECTATOR.

"These little books supply a great want."—Dr. W. H. ROUSE.

This New and altogether unique series of dainty booklets embraces all classes of French Literature—Travels, Stories of Adventure, Scenes of Domestic Life, Essays, Letters, Poetry, and Drama—so graduated in difficulty and so varied in matter as to be suitable for readers of all stages of advancement. Many authors hitherto unobtainable in a suitable form for class reading are represented, as for example, Bossuet, Balzac, Stendhal, Rousseau, and Pascal.

** Complete Lists on application.

Little English Classics

Price 3d. each Book.

BLACKIE'S LITTLE ENGLISH CLASSICS contains some of the best-known and most representative Selections from Standard Authors. Each volume is carefully edited by teachers of ripe experience, and is provided with a short Biographical Sketch, and brief, concise Explanatory Notes. Among the Poets represented the following are included:—

Aytoun.	Goldsmith.	Moore.
Browning.	Gray.	Scott.
Burns.	Hogg.	Shakespeare.
Byron.	Johnson.	Shelley.
Campbell.	Keats.	Southey.
Coleridge.	Longfellow.	Tennyson.
Cowper.	Macaulay.	Wordsworth.
Emerson.	Milton.	

** Complete List on application.

Little German Classics

Price 6d. each Book.

This New Series is uniform in aim and general appearance with the well known Series of "Little French Classics," which received so instant a welcome from teachers and pupils.

Goethe—Hermann und Dorothea.
German Songs with Music.
Kotzebue—Der gerade Weg der beste.
Schiller—Select Ballads.
Heine—Die Harzreise.
Heine—Select Ballads.
The Nibelungenlied. Parts I. and II.
Körner—Select Songs.
Poems for Recitation.
Goethe—The Road to Italy.
Fouqué—Sirtram.
Goethe—Die Geschwister.
Mullenbach—Die Silberdiehl.

Layng's New Algebra

JUST
PUBLISHED.

Part I. Just published. 2s. 6d.

An entirely new work, by Mr. A. E. LAYNG, whose *Arithmetic, Euclid, Exercises in Algebra, &c.*, are so widely known and appreciated.

LIST OF CONTENTS.

1. Positive and Negative Numbers. 2. Plotting a Point. 3. Operations with Negative Numbers. 4. Generalized Arithmetic. 5. Numerical Substitution. 6. Graphs—Applications of Algebraic Methods (i.), Miscellaneous Exercises (i.). 7. Operations with Monomials. 8. Operations with Brackets. 9. Simple Equations. 10. Problems—Applications (ii.), Miscellaneous Exercises (ii.). 11. Simultaneous Simple Equations involving two Unknowns. 12. Problems. 13. Factors. 14. Easy Quadratic Equations. 15. Problems—Applications (iii.), Miscellaneous Exercises (iii.).

Experimental Science

JUST
PUBLISHED.

An Introduction to the Study of the Scientific Method. By MAYHOWE HELLER, B.Sc., and E. G. INGOLD.

Price 2s. 6d. net.

This new and highly excellent work is intended as a First Year's Course for pupils entering on the study of Science. It is based on the Scheme of the Committee of the British Association appointed to report on the teaching of Science and the means by which it might be improved.

LIST OF CONTENTS.

Aims and Methods—Practical Arithmetic—Measurement of Length—Measurement of Area—Measurement of Volume—Measurement of Mass—Methods of Finding the Weight of Unit Volume of Various Materials—Floating Bodies—The Principle of Archimedes—The Weight and Pressure of Air—Measurement of the Pressure of the Atmosphere—General Effects of Heat on Matter—The Measurement of Hotness or Temperature—Measurement of Expansion—Solubility and Fusion—Evaporation and Crystallization—Simple Laboratory Operations—Object Lessons—Index.

The Educational Times.

School and Home. A SANITARY INSPECTOR from Scotland has just been telling the Sanitary Inspectors' Association that "no sanitary improvement worth the name will be effected, whatever Act you pass or whatever power you confer upon public officers, unless you can create a real and intelligent interest in the matter among the people at large." He is quite right. And the same principle holds in the matter of Domestic Science: you must get domestics to realize that there is an intelligent and an unintelligent way of boiling potatoes or of sewing on buttons. In both departments—both, so far as they are not the same—the desiderated interest is certainly growing; but, to judge from the latest Board of Education "Special Report," the Americans are keener on domestic science than we appear to be as yet in England. The Mosely Commissioners may not be wrong in holding that the Americans do not teach cookery and sewing so well as we do; yet Miss Ravenhill is certainly right in pointing out their wider educational and sociological conception and handling of the whole subject of domestic economics. The real and intelligent interest is widespread and embodied in organizations to give it effect. The Americans are bent upon being the foremost nation in the world, and they have begun to boil their potatoes with an eye to the generation of such physical, intellectual, and spiritual energy as shall fulfil their anticipated destiny.

Miss Ravenhill's copious, painstaking, and capable report has been slumbering in an official pigeon-hole for more than two years: it is dated May, 1903. The explanation is given in a prefatory note to the volume. The Board proposed to publish a series of papers dealing with School Training for the Home Duties of Women, according to plans laid by Mr. Sadler; and, for one reason and another, they seem to have judged it expedient to send the papers forth, not singly, but together. The home reports were postponed "until the new Local Education Authorities had found more opportunity to organize this part of their work by the introduction of more systematized methods than have hitherto been possible"—which looks painfully like a dread of betraying the nakedness of the land. Then

the European countries that pay special attention to domestic economy subjects had to be ransacked for material, and that would necessarily take time. Fortunately, however, "the increasing attention drawn to all matters affecting the health and well-being of the individual and the family which has resulted from the Report of the Inter-department Committee on Physical Deterioration, and the action of influential organizations which represented educational opinion of various kinds, have made it seem desirable to publish as much of the information as possible immediately." This explanation places itself beyond comment; but it makes clearer than ever how hopelessly antagonistic to Mr. Sadler's were the practical notions ruling at the Board.

However, here at last is the American Report, and it will furnish our domestic science students with material for thought and practice till the home product is matured and European experience has been collected. By way of introduction, Miss Ravenhill explains the scheme of public education in the United States (a very necessary step for the avoidance of misconceptions), and traces the history and development of domestic science teaching. Under this generic term she comprehends cookery, needlework, dress-making, millinery, laundry work, housewifery (marketing included), elements of domestic and personal hygiene (house sanitation included), and the care of young children. The main part of the Report is laid out in three divisions:—(1) State Institutions: grade (primary and grammar) schools, high schools, colleges, normal colleges; (2) Private Institutions: kindergartens, primary and grammar schools, high schools, technical institutes, women's colleges, universities; and (3) Social Agencies: women's clubs, philanthropic agencies, summer schools, university extension, the domestic service problem. The scheme, it will be seen, is thorough-going. The subjects are, of course, distributed according to the age and the capacity of the pupils. Schemes and syllabuses typical of courses and methods are furnished liberally; and there are eight illustrations. Miss Ravenhill's sympathetic—nay, enthusiastic—treatment of the varied matters at every point sustains and deepens the interest throughout.

It is hopeless for us to attempt any detailed examination of such a multifarious congeries of materials. We can

only point to the Report in a general way, and indicate its extreme value. There may be—no doubt there are—here and there, as Miss Ravenhill herself very modestly concedes that there may be, errors of observation and of comprehension, omissions, exaggerations, and so forth; but that goes without saying, and is of but minor importance. No foreign observer could reasonably be expected to master infallibly, in the course of a brief visit, “all the points in courses of study, the evolutions which have constantly cost years of thought and experimental practice, and which are also adapted to social conditions diverse from our own.” The essential matter is that the Report is thoroughly sincere and capable, and no doubt sound in the main—though it seems to have just a tinge of the colour of the rose. One cannot turn its leaves without becoming aware of a deepening impression that here are processes of the most fundamental and far-reaching influence; nay, of an insistent doubt whether there is any more important sphere in the whole range of educational activity. The interweaving of the school teaching with the facts of daily life, personal and civic, is of the last importance. “Observation shows,” says Miss Ravenhill, “that a rational study of Household Science helps to bind the girl to her home, to centre her interest there, and to show her the worth and beauty of family life. It has been well said that this subject, above all others, forges the facts of science and art into practical tools, by whose aid the home’s efficiency in the production of health and character is materially increased. . . . Speaking generally, it seemed to me that the aspects of Household Science and Art most emphasized in High School courses are the sound theoretical and scientific bases which underlie household duties; the opportunities for immediate application afforded in home life for artistic training; the increased mental and physical efficiency which follows upon a wise economy of time and an intelligent expenditure of money; and the claims of civics and patriotism upon those responsible for the rearing of the race.” Miss Ravenhill exhibits in a strong light “the admirable spirit animating some of the leisured women of the community to set personal example of the strength of their convictions in respect of home dignity and worth”; while “the trained intelligence of college women has also been directed by circumstances too numerous to detail to the economic effects of ignorance, carelessness, or indifference in the conduct of homes or of cities.”

Whether the study be advocated on utilitarian grounds for raising the standard of health and happiness, or for the advantages resulting from manual training, or on the broadest educational results, scientific, economic, sociological, and artistic—that matters little: naturally, “the line of division is rarely defined with absolute clearness.” The effects are substantially the same. It is bootless, in that case, to quarrel with motives and expectations when they all lead eventually to the same goal, and that goal is, in the opinion of all thoughtful persons, a most desirable one. And, if the effects are looked to in the United States to yield the primacy among the nations, they may be well considered in England with a view to hold her pride of place.

*An Exemplary
Private School.*

It is a pleasing and useful custom in Norway and the adjacent countries, on the twenty-fifth anniversary of the foundation of a school, to issue with the ordinary yearly report a review of its progress and accomplishment during the previous quarter of a century. Such a document, entitled “Otto Anderssens Skole 1880–1905,” has just reached us from Christiania. It extends to 131 pages. There is a brief history of the school; reflections, gravely eloquent, on the relations between the work of the school, mechanical as it may often appear to be, and the civic activities of after life; an enumeration, with dates, portraits, and other particulars, of the teachers, more than a hundred in number, who have worked in the school; and a brief account, taking up one half of the book, of the careers of the 302 pupils that have been “dismissed” to the University—that is to say, have passed a State Leaving Examination equivalent in difficulty to London Intermediate Arts.

In Norway, as in Denmark, the recognized private schools have hitherto trained the bulk of the teachers engaged in the State secondary schools. And, though Mr. Anderssen’s school is by no means the largest of its kind in Christiania, it has taken its full share of this important work, inasmuch as quite one-fourth of its men teachers have attained the higher emoluments and more assured position of the State school. No wonder that work of such quality and extent has met with grateful acknowledgment and sympathy from the leading dailies in Christiania. To such acknowledgments we cordially add our own; for there are few, if any, Norsemen that stand nearer to us in knowledge and sympathy than Mr. Anderssen. He speaks and writes English with accomplished ease. He has written in English “A Short History of English Literature” for schools, which, in its choice of subjects and manner of treating them, has hardly any superior on this side of the North Sea. He is the only one of his countrymen who has contributed to our Board of Education’s “Special Reports” on educational subjects; and, besides all this, he was, as we saw at the time (October, 1900), chosen President of the Quinquennial School Meeting of teachers from the four countries of the North, which met at Christiania five years ago, and met again last month in Copenhagen. He is also one of the two private schoolmasters that make one-third of the members of the Consultative Committee in Norway.

In Christiania secondary school attendance amounts to 36 per 1,000 of the population; and 85 per cent. of the entire number of pupils is to be found in such schools as Mr. Anderssen’s, where the education costs public funds not a single penny. If it be asked what arrangements there are in Norway tending to produce such a result more speedily than in England, a twofold answer may be given. In the first place, when Mr. Anderssen’s school had been in existence one year, it received State recognition for its lower classes, and full recognition came four years later. But the young and struggling school was not in either case burdened with the expense of the investigations that preceded recognition: *that* in Norway is regarded as an expense that belongs to the State alone, as it ought to be in England. The second answer can be indicated here only in the briefest terms. The State in Norway has shown itself more uni-

formly appreciative than the English State of the inestimable value of private co-operation of the wiser sort in the work of education; and it has taken care, as we in England with tardy steps are just beginning to do, so to bring education within the reach of the poorest as not to discourage, but to encourage, the educational employment of capital on the part of capable teachers. We congratulate Mr. Anderssen on his educational semi-jubilee, and heartily wish him a prolonged career of useful activity.

NOTES.

THE British Association in South Africa is just the British Association at home, except for an occasional touch of local colour, and for the impulse that it may give to the things of the mind in that very practical region. The President has, of course, acquitted himself in masterly fashion, as becomes the name of Darwin. After the Presidential address comes perhaps Sir Richard Jebb's exposition of the university ideal, which will furnish the Cape University with aspirations till the Association revisit it. Newman and Huxley and Matthew Arnold we know; general breadth of intellectual sympathies is good; general discipline of the mental faculties is good; the social intercourse, the informal education that young men give to each other, is good; the development of imagination, judgment, intelligent sympathy—in a word, culture—is good: all good, and all familiar. Yet one would wish that Sir Richard had gone deeper. True, he recognized that culture "cannot be regarded as something superfine—as an intellectual luxury suited only for people who can lead lives of elegant leisure." But we should have liked some strong leading on the practical means of bringing the universities more fully into the general life of the nation—and conversely.

WE have perused with much regret the voluminous correspondence between Dr. Gray, Warden of Bradfield College, and Mr. Gross, joint Secretary of the Oxford and Cambridge Schools Examination Board, over a report on the Bradfield chemistry. "As regards chemistry," wrote Mr. Gross, "the report is not sufficiently good to allow us to recommend the school to the Army Council in this subject." Yet Dr. Gray could show that his pupils "have, up to September, 1904, at least, done consistently well in the Army examinations in chemistry"; indeed, that "from 1889, when our Army Class was established on its present basis, till 1905, about seventy boys passed direct from Bradfield College into Sandhurst alone," every one taking chemistry. In view of these previous successes, the Board gave way so far as to be "prepared to recommend the school as satisfactory in the subject for the present," and Dr. Gray's candidates, who had been withdrawn, might now go on with their examination—which, however, Dr. Gray found impossible. Again, "Who are 'us'?" asked Dr. Gray. Was the decision reported by Mr. Gross the decision of the whole Board in meeting assembled? Or whose decision? Mr. Gross declined to answer, "at any rate without the direction of the Board so to do." There the correspondence breaks off. It is not easy to dissent from Dr. Gray's remark:

The principle of completely ignoring (in the first instance) past results,

and the summary verdict of a judge or judges the revelation of whose identity is refused, are methods which seem to suggest the procedure of mediæval rather than of modern days, and do not seem likely to command that universal confidence among the head masters and governing bodies of secondary schools which it has been the aim alike of the Board of Education and of the Army Council to inspire.

It is gratifying to note that the City is "waking up" to the necessity of commercial education, and moreover directing attention to the really practical expedients. The lines of the new Day Higher Commercial Department of the City of London College are laid on the following principles:—

Those responsible for the present scheme believe that, other things being equal, a youth who has been trained to see the principles which lie behind the facts of commerce, to know how far Nature has been controlled by commerce, and commerce by Nature, to know the commercial methods of his own and other nations, and the reasons for their existence, will make, not only a better man, but a better business man, than one who has had no such training. They are well aware that many things which business men must know cannot be taught except by actual business experience. These things they will make no attempt to teach. But they also believe that there is a mass of experience, accumulated from past times, and gained in the present from the rest of the civilized world, a judicious selection from which, if assimilated, will save an English youth, on his actual entry to commercial life, from errors and waste of time. It is precisely the lessons of such experience which the Governors of the City of London College desire to see taught.

The discrimination set forth here appears to be eminently sound, and everything will depend upon the judicious application of the principles in the actual course of training. The right results will soon convince such business men as still require to be convinced; and nothing else will convince them. We shall watch the operation of the scheme with interest.

"THE purpose of the Public Elementary School is to form and strengthen the character and to develop the intelligence of the children entrusted to it." This declaration, taken from the Introduction to the Education Code for 1904, heads "A Graduated Syllabus of Moral Instruction for Elementary Schools" issued by the Moral Instruction League—a carefully framed and fairly exhaustive scheme. It is interesting to note that the "Scheme of Training in Citizenship" approved in the end of last year by the Education Committee of the County Council of the West Riding of Yorkshire, "as part of the secular instruction in all West Riding public elementary schools"—1,270 in number—is remarkably similar to, indeed almost identical with, the syllabus of the League. The syllabus is, of course, readily adaptable for use in secondary schools. Generally, more and more stress is being laid on moral teaching. There ought not to be any conflict with Biblical teaching, though unfortunately there is. The Cheshire scheme, gratuitously aggressive, says the moral instruction must be "non-theological," while the Bishops insist on moral education "on a Christian basis." Yet, we understand, "moral instruction, as a secular subject, is now being given in hundreds of Church schools," without any apparent trouble. There ought not, indeed, to be any trouble if people would only be moderately reasonable and considerate.

"A CERTIFICATED TEACHER AND LONDON GRADUATE" writes with bitter energy in the *Schoolmaster* (August 12) on "the degradation of the elementary-school teacher." There is the unfair differentiation "in favour of the newer Day Training Colleges as against the older Residential Colleges";

there has, similarly, been "a gradual but well marked movement against the higher elementary and higher-grade schools, and the pupil-teacher centres." "These movements are inspired," says the writer, "by one unworthy and sinister purpose, which is to confine the elementary teacher, trained or untrained, graduate or non-graduate, to work of a purely elementary kind, and to bring in persons of other antecedents for every kind of higher work and for every office of substantial emolument." Then "in no department has this recent tendency of the Board of Education been more marked than in dealing with the Inspectorate." Finally, there is the Teachers' Register :

If we needed any further evidence of this shameful campaign against the body of elementary teachers, it is found in the establishment of the Teachers' Register with its division into Column A and Column B. The elementary teacher, however high his academic qualifications, and however distinguished his career, must further qualify for registration by experience which is technically secondary. While this proviso has wrongfully excluded hundreds of teachers who are intellectually qualified, the "service" qualification has admitted to the register swarms of poorly qualified teachers who have no academic qualifications whatever, but who have been employed, it may be at work of the most elementary character, in some kind of secondary school. But, indeed, the inequitable and indefensible regulations with which the Register is hedged are not the worst part of the business. A statesman would have seized the opportunity of the establishment of the Register for taking the first effective steps towards that unification which obtains in the clerical and medical professions, and not only the whole profession, but—what is of much greater importance—the whole community, would have benefited from the resultant interplay.

There is no doubt that every one of these points, however disputable, requires fresh and unprejudiced consideration, not only for the removal of grievances and suspicions, but for the general health of the educational body.

THOUGH it is now some time since Mr. Macleod retired from the inspectorate, his educational friends in the North are still keeping hold of him. He has just been *fêted* by the Wester Ross people at Gairloch, when he took the opportunity of outlining a scheme of special training for teachers in the Highlands. He proposes the establishment of a training college at Inverness. He says :

The aim of the wise educationist should be to prepare our pupils for the industrial pursuits in which the majority of them must engage, and to train them so that their lives may secure the maximum of happiness to themselves and the healthiest and most agreeable intercourse with their fellow-citizens. For this work we must have specially trained teachers, for which the universities are not, and never can be, so well adapted as the existing training colleges. The training colleges are established to make this their life-work, and may therefore be looked for to accomplish it more thoroughly than other institutions which can but roughly dovetail it into their general arrangements.

Mr. Macleod, of course, guarded himself carefully against depreciation of universities in their proper sphere, but a training college would give him more of what he considers necessary for the particular object of local education in the Highlands. However excellent an implement a sledge-hammer may be, he cannot but regard it as "out of place in the hands of a housemaid driving tacks into a carpet." The lonely, ill-remunerated, and prospectless post of a teacher in the Highlands can be but little attractive, we fear, even to local men or women with the most approved ideals of social service. Still, as the ragamuffin said to the counsel that unexpectedly got him off: "You never know what you can do till you try."

THE Esperanto meeting at Boulogne appears to have been very enthusiastic, and Dr. Zamenhof, the inventor of the

language, was accorded a grand ovation, which he received with the modesty of real greatness. A circular was issued to clear away popular doubts as to the aims of the Esperantists. It says :

Many people are ignorant of the essential nature of our aims. They think (1) that we wish to kill national languages ; (2) that we have some hidden reason ; (3) that Esperanto is one out of many existing international artificial languages with which it will have to compete ; (4) that it is only a commercial enterprise ; (5) that we are not fighting for an international language, but only for a pet plan of our own, and that Esperanto is a purely personal affair, consequently subjected to the caprice of its author.

Accordingly, an official declaration, drawn up at the Congress and sanctioned by it, is to be circulated, defining clearly the true principles of the movement, and "to be signed by representatives of Esperanto in every country of the world, so that we may have a wherewithal to answer these attacks and to shut the mouths of our enemies and calumniators." We should wish, rather than hope, that the declaration may have the desired effect. The objects of Esperanto are plain and simple enough : nobody is compelled to learn it ; and it is at any rate harmless, and may, under favourable circumstances, be convenient. It need not be misrepresented or calumniated. Still, it has been said that persecution is good for the faith.

SUMMARY OF THE MONTH.

A TREASURY Minute, dated July 18, upon the recommendations of the University Colleges Committee, has been issued as a Parliamentary Paper (2621). My Lords accept the recommendation—"the main feature in the Committee's proposals"—of the establishment of a permanent Committee to advise the Board of Treasury as to the distribution of the grant in aid, and "will endeavour in the course of the autumn to constitute such a body, which should also, in their opinion, undertake either by itself or by means of a sub-committee the duties hitherto performed with signal success by the quinquennial Committee of Inspection." They seek to allay the apparent apprehensions of some of the colleges "that the intervention of such a Committee may tend to weaken the responsibility of the college authorities, and to interfere unduly with their internal administration": my Lords disclaim any such intention. The amount allotted to each college for the year 1905-6 will be as follows :—

Manchester	£12,000
University College, London	10,000
Liverpool	10,000
Birmingham	9,000
Leeds	8,000
King's College, London	7,800
Newcastle-on-Tyne	6,000
Nottingham	5,800
Sheffield	4,600
Bedford College, London	4,000
Bristol	4,000
Reading	3,400
Southampton	3,400
Dundee	1,000
				£89,000

It must, however, be understood that this allocation is for the current year only, and that modifications may be introduced next year when the new Committee has been appointed. The balance of the total sum of £100,000—£11,000—is reserved for distribution in March next, when the new Committee has been able to consider the questions referred to it.

THE Esperanto Congress at Boulogne has opened wide the door to possibilities of every description (writes to the *Westminster Gazette* an enthusiastic delegate). A language which has been used day after day for proclamations, fierce argumentative debate, and earnest decisions, and night after night for songs, comedies, recitations, and compliments, can no longer be looked upon as a fad or a folly. The more so as the Congress was public, attended by some two thousand people of eighteen

tongues and representing twenty-two nations; and the people who would travel from Helsingfors, from Montreal, New Zealand, and Tiflis—working men and women, too, doctors, teachers, merchants, and not idlers, for such a purpose as the discussion of a world-wide language organization are not people to be despised. The only question was: Was the gathering of any use? And the only possible answer is: Most certainly, because an effective auxiliary language for international purposes must be useful and is already needed. The question now is: Will English people rise to the occasion and study the language for a mouth instead of sneering, though the last is better than indifference! The members of the Congress came, some of them with faint hearts. All attended with unflagging interest the frequent meetings, and left with intensified enthusiasm.

THE Summer Meeting of University Extension and other students at Oxford brought together upwards of one thousand students, including representatives from Russia, Austria, France, Belgium, Switzerland, Spain, Holland, Scandinavia, Germany, and the United States. The Meeting extended throughout the month, and the lectures illustrated the history, literature, and art of the period of the Renaissance and the Reformation, and dealt with natural science and economics. The inaugural address was delivered by Prof. Stuart, who sketched the history of the preliminary steps which led to his proposing to the University of Cambridge in the year 1871 that they should undertake the system of University Extension, and outlined the subsequent developments. He said he saw in the Education Committees established throughout England by the Act of 1902 the creation of the very bodies which were aimed at by the founders of the University Extension movement. He strongly advised the University Extension authorities of to-day to put themselves into communication with these bodies, and to be prepared, if necessary, to adapt the system to their requirements. He did not expect this would be done in a moment, for the newly formed Education Committees were intensely occupied in learning their elementary work. But the time was at hand, and a new obligation was put on the universities to aid the nation in the development that was obviously coming in the direction of the class of higher education that the universities were so well qualified to supply.

A JOINT Conference of trade unions, co-operative societies, Education Authorities, and branches of the Association to promote the Higher Education of Working Men was held at Oxford (August 13), the Dean of Christ Church presiding. The Bishop of Hereford moved a resolution to the effect that the Conference, having regard to the educational wastage consequent upon young people of both sexes either neglecting or being prevented by the conditions of their employment from utilizing the facilities afforded by Education Authorities for instruction in the evening, urged the Board of Education to ascertain from the Local Education Authorities how far and under what conditions employers and employed in their respective areas would welcome legislation having for its ultimate object compulsory attendance at evening schools. Personally he thought the course advocated by the resolution would do good, though he did not expect a great deal from it, in view of the opinion of both employers and employed in the cities and in the country, and of the indifference of the average English mind with regard to the value of education.

Prof. Sadler expressed the hope that they would be able to suggest to the Board of Education when they undertook this very valuable and practical inquiry that they should put the question in such a form as to induce not only favourable consideration, but even a favourable answer. He hoped it might be possible for the Board of Education, when they sent out this question, to attach to it what was often called a prefatory memorandum, in which the attention of all interested should be called to the fact of how much had already been done in England on the very lines that this resolution pointed to. It was his duty last year to ascertain how we came out in England comparatively in regard to the attendance at evening continuation schools, and to his surprise he found that only one country in Europe—Switzerland—could show a better attendance at continuation schools than in England and Wales. He would like the Board of Education, if they would, to include a list of the great firms which had already required the attendance at evening schools as a condition of apprenticeship. He believed they would never get compulsory continuation schools until they laid upon employers of labour the statutory duty of securing a technical

and civic education for their young workpeople. He would like to see suggestions thrown out by the Board of Education for joint committees of employers and trade unions and educational students, so that they might really, when they were planting compulsory schools, have some more definite idea of what they meant to teach. The resolution was carried with two dissentients.

A DAY Higher Commercial Department will be opened at the City of London College on September 21, under Mr. F. H. Spencer, LL.B. The Department will form part of the Scheme for Commercial Education inaugurated at the opening of the new buildings on May 26. The object is to provide a higher education for those who have already had an ordinary secondary education up to about the age of sixteen. The prospectus says:

Those pupils who are prepared to stay long enough as pupils of the Higher Commercial Department and are of the requisite ability will be allowed to enter for the examinations of the University of London for the degree of B.Sc. in the Faculty of Economics. But the organizers of this scheme do not believe that examination success is the complete or proper test of the efficiency of the kind of education they propose to give. The work of the Department will be so set out as to cover the work for the B.Sc. Econ.; but the aim of the Department will not be to enable its pupils to gain degrees, but to fit them better for business life. If the passing examinations, in *each particular case*, does not interfere with the more important aim of the Department, pupils will be allowed and even encouraged to enter for examinations, but not otherwise.

A COMPREHENSIVE and able article in the *Morning Post* (July 31) on the registration of teachers concludes thus:

The failure of the Register would be a great disaster to education. It would mean that teaching would be the one learned profession in which ignorance and incapacity could find a home. It would involve the loss of the State certificate, by which it is hoped that the efficient private schools will be discriminated from the inefficient. But the thought of such a failure ought not to be tolerated. Secondary teachers especially, who understand the value of class-room craftsmanship and who regard the Register as a means of acquiring a professional standing, and as an instrument for welding their heterogeneous elements into an organized body, ought to make every effort to save the movement from shipwreck. Unfortunately, as has been often pointed out in this column, school masters and mistresses do not seem to have yet learnt the lesson of the faggot and the sticks ("Æsop's Fables" being probably no longer read in schools), and remain divided into several different associations. But rumours of a combination or federal union of these bodies have been rife for a long time, and the doubtful outlook for the Register may perhaps do something to hasten the pace of this rather dilatory movement. Secondary teachers, like other people, can combine when their own interests are at stake. A delegation from five associations of London school masters and mistresses recently laid their claim for better salaries before the Teaching Staff Sub-Committee of the London Education Committee. Surely these teachers are not going to let it be said of them that they cannot unite for any purpose but that of getting their wages raised.

To erect what is known as the educational ladder for the children, and deny access to the upper staging to the teachers, is (says the *Morning Post*) an inconsistent and reactionary procedure. On behalf of the policy of restricting the primary teacher to primary work it is argued that the work of teaching in secondary schools requires very special qualifications; and doubtless that is true. But those special qualifications are not of such a nature that they cannot be possessed or acquired by men and women whose lot has been cast in the primary grades of education. Analyze the special qualifications which head masters and parents alike desire in secondary schoolmasters, and you will find that they amount to knowledge of the ways of boys and girls of that particular class, capacity for sympathetic intercourse with them, and readiness to organize and share in their amusements. Nothing but experience can give the first; nothing but character the second; nothing but physique and animal spirits the third. So that, if you take a primary teacher, man or woman, who has the power of sympathy with immature humanity and no natural distaste for healthy recreation, and give him a month or two to learn the ways of children of the rank and wealth he aspires to teach, you will secure your qualified secondary master, and, what is more, you will secure a teacher. Now it is perhaps no more than a suspicion that by its latest regulations the Board of Education has attempted to exclude primary teachers from secondary schools. Yet this purpose alone would seem to account for the exclusion of primary teachers from the university courses necessary to qualify them as secondary teachers. An article on the situation and its

recent sinister development, written with real passion by "A Certificated Teacher and London Graduate," appeared in the *Schoolmaster* last week. [See "Notes."] Let him take courage. The attempt to keep the primary teacher "in his place" is only half-hearted, and when the demand for trained teachers in the secondary schools becomes universal the supply from the ranks of primary teachers will not be checked by reactionary regulations.

THE REV. CANON WILSON, speaking on the occasion of his retirement from the Vicarage of Rochdale (August 15), said:

When I think what progress in the conception and practice of real education has been made in my fifteen years here nothing seems to me impossible or utopian. The progress of physical education in schools has been marked and rapid. Nowhere greater than in Rochdale. . . . But we are far from the goal as yet even in our schools. Still less am I satisfied with what we are doing for boys and girls who have left our schools. The care of the health of many of our children and of infants in the families from which they come is another unexplored possibility and duty of the most pressing kind. We all know of the shameful and wicked waste of child life in Rochdale. We do not all see and understand the effects of an equally shameful and wicked waste of infant and child health and vigour, our greatest national asset. Here is a great work, worthy of our parish to undertake. Some such area or school must pioneer. Then, again, we need immensely more attention to the games of boys. The boys in our towns are placed in wholly unnatural circumstances, and Nature punishes us for our stupid violation of her laws. The Lord Chief Justice, six weeks ago, publicly stated his opinion that, second to drink, and only to drink, the real cause of crime in England was the difficulty of finding healthy recreation for the young. No expenditure of public or private funds could be so certainly remunerative as the providing every separate school with a good-sized field and a ground and games supervisor. We want some one in high place to care persistently for our children and give the town no peace till their natural needs are met. . . . Not all the wealth of the world can supply the want of healthy and good children.

Canon Wilson went on to plead for something to be done to prevent the waste in elementary education caused by the stoppage of educational work at the age of thirteen or fourteen. He also asked that means should be devised to help boys on leaving school to get employment suited to their tastes and capacities.

THE Report of the Sixth Annual Examination for the National Diploma in Agriculture shows that 91 candidates entered, 58 in Part I. and 33 in Part II. In Part II. 20 candidates were successful, and thus became entitled to the Diploma, 5 of them with Honours. In Part I. 38 candidates passed. The general results show substantial progress in the teaching of agriculture and allied sciences. The number of candidates was higher than on any previous occasion since the institution of the Diploma Examination in 1900, and the fact that so many as five of the candidates succeeded in obtaining Honours proves the attainment of a higher standard of merit, as the Honours Diploma has not been gained by more than one candidate at any previous examination held by the Board.

THE list of L.C.C. awards of Senior County Scholarships, Exhibitions, and free places shows that nine scholars have been awarded scholarships at Cambridge University of the value of £60 per annum for three years, together with the payment of tuition fees to the extent of £30 per annum; that 28 Senior County Exhibitions, ranging from £30 to £70 a year, at university colleges have been awarded, while 9 scholars receive free places at university or other colleges in London; and that Intermediate Scholarships have been awarded to 50 boys and 30 girls, and 20 boys receive Commercial Intermediate Scholarships.

At the recent Oxford Local Examinations, boys were examined at 186 and girls at 213 centres. The total number of candidates was 14,222, as compared with 14,149 last year, and 9,732 certificates were awarded, against 9,805 in 1904. The Senior candidates numbered 3,646, the Juniors 6,960, and the Preliminary 3,616. Of these, 2,416 Seniors, 4,861 Juniors, and 2,455 Preliminary passed. Girls stood well in all the examinations. Thirty-seven girls, as against 30 last year, showed sufficient merit to receive certificates qualifying them for admission to the University examinations for the degree of B.A. and B.Mus., on conditions prescribed by the delegates. In the examination generally there is a distinct improvement in religious knowledge, in English, and in science.

THE President of the Section Pédagogique of the Liège International Congress (see "Fixtures") is M. Salomon Reinach, Membre de l'Institut, Conservateur du Musée Saint-Germain, Paris. The subjects are these:

1. Rechercher quelles sont les méthodes les meilleures pour réfectionner l'enseignement du français dans les diverses écoles des pays de langue française, depuis les classes primaires jusqu'à l'Université. Heures de cours. Livres employés. Rôle des classiques dans l'enseignement moyen, &c.

2. Examiner si l'on ne pourrait multiplier dans les centres des pays bilingues des établissements libres d'enseignement moyen, dont le français serait la langue, en suivant l'exemple donné à Anvers et à Gand. Application particulière de ce point de vue aux écoles de filles.

3. Le rôle de l'instituteur vis-à-vis des patois doit-il être de les détruire, de les respecter ou de les cultiver?

4. N'y a-t-il pas lieu de substituer dans l'enseignement de la langue française la lecture des écrivains du XVIIIe siècle à celle des prosateurs du XVIIe, dont la langue est déjà archaïque?

THE Royal Meteorological Society, being desirous of advancing the general knowledge of meteorology, and of promoting an intelligent public interest in the science, and thinking that these ends can be most readily attained by means of lectures delivered in connexion with scientific societies and institutions in various parts of the country, have appointed a lecturer, and offer his services at a moderate fee (with travelling expenses). They are willing to arrange for exhibiting at the gatherings of local scientific societies, institutions, or schools a collection of photographs, drawings, diagrams, and charts illustrating meteorological phenomena, and of various patterns of instruments used for meteorological observations. They would also, if desired, lend and fit up a complete climatological station for exhibition, showing the necessary instruments in position and ready for use. Apply to the Assistant Secretary, 70 Victoria Street, S.W.

At a recent meeting of the Kent Branch of the Association of Assistant Masters in Secondary Schools at Rochester, the Rev. S. Richards (Maidstone Grammar School), the Secretary, gave an account of the scheme for federating all the societies engaged in the work of secondary education in England, and a motion in favour of federation was passed. Methods of co-ordination of the work of mathematical and science masters were discussed. A resolution was also passed urging the County Council to give effect to a scale of salaries adopted at a former meeting in every school engaged in the training of their pupil-teachers. The next meeting will be at Tonbridge School.

SIR WILLIAM MACKWORTH YOUNG, K.C.S.I., presided at the second annual prize distribution at Uplands School, St. Leonards-on-Sea. The prizes were distributed by the Lady Edith Ashley. The Head Mistress (Miss Walsh) stated that the year's record was particularly gratifying for so young a school. Six pupils had passed the Cambridge Local Examination, one with Honours. Ten pupils had been successful in the examinations of the Royal Academy and Royal College of Music, and Trinity College; one of them passing in the Advanced Grade and winning the prize given at the local centre for the highest marks in piano-playing, and afterwards obtaining the Associateship of the Royal College of Music. Gratifying distinctions were obtained at the Exhibition of Drawing held in March by the Royal Drawing Society; and of the seventy-six papers submitted at the examination in June not one was rejected, and sixty-one gained Honours. Two complete Honour Certificates were won by pupils who had taken Honours in each division. Good progress had also been made in practical subjects, such as cookery and needlework. The record in the playing-field was equally satisfactory. Sir W. Mackworth Young paid a high tribute to the tone and efficiency of the school.

THE prizes at Sandecotes School, Parkstone, Dorset, were distributed by the Lady Rodney. The Head Mistress (Miss A. Grainger Gray) reported a very gratifying success for the past year in outside examinations. Four pupils had obtained the full Higher Certificates from the Oxford and Cambridge Joint Board, and six others had passed in various groups. Another had succeeded in the London University Matriculation Examination; and in the Cambridge Higher Local a pupil obtained Second Class Honours. Numerous successes had been gained in musical examinations. Two full Honour Certificates had been gained, and no less than twenty-eight pupils had taken Honours in one or more divisions, at the examination of the Royal

Drawing Society, and three pupils had received commendation at the Exhibition of that Society. The examiners of the Royal Drawing Society had been so struck by the excellent quality of the work done by Sandecotes pupils that their drawing mistress, Miss de Chaumont, had received a gratifying invitation to become a member of that Society.

THE REV. DAVID MACRAE, in his circular letter of protest against the misuse of "England" for "Britain" in history books, which we printed in our July issue, mentioned that the Convention of Royal and Parliamentary Burghs, with other bodies, had "begun to take action" in the matter. Presently the Convention forwarded to the Secretary for Scotland a representation urging that steps be taken to see that in school history books dealing with British history prior to the Union of the Crowns of Scotland and England a more adequate and accurate presentation be given of the important events in Scottish history; that these events should be presented from an authentic Scottish standpoint; and that in books relating to British history after the Union the words "British" and "Britain," not "English" and "England," be used whenever the United Kingdom or its affairs are referred to. It was pointed out that "with regard to our national names, although historical accuracy and the express terms of the Treaty of Union between Scotland and England require that the United Kingdom shall be called by its united name, this provision is in many of the history books used in Scottish schools disregarded."

Now the Secretary of the Scottish Education Department (Dr Struthers) has replied to this effect:

My Lords are in agreement with the views expressed in the representation that it is matter for regret, in the interests of historical accuracy, that errors such as those to which attention is called should be of not infrequent occurrence in several of the school books at present in use in Scotland. In particular they regret that the facts relating to the Treaty of Union and its effects, as set forth in Sections 3 and 4 of your representation, should not be accurately stated.

In view of the importance of the matter, my Lords propose to direct their Inspectors to make special inquiry as to the treatment accorded to these national questions in the text-books which they find to be actually in use in schools, and where, without raising pedantic questions, they find such treatment to be either inaccurate or seriously inadequate to report the circumstances to their Lordships for their further consideration.

It is pointed out, however, that the selection of school books is primarily a matter for the Local Education Authority, with whom, or with the peccant publishers, the complainants should communicate directly.

THE death is announced of Prof. Alexander Melville Bell, "vocal physiologist," in his eighty-seventh year. He was inventor of "Visible Speech," author of many works upon speech, elocution, stenography, and editor of a highly popular work, prepared for the use of elocutionists, known as "Bell's Standard Elocutionist."

Alexander Melville Bell (says the *Athenaeum*) was born in Edinburgh in 1819. From 1843 to 1865 he lectured on Elocution in Edinburgh, at the University and at New College; and in 1865 was appointed Lecturer at University College, London. In 1870 he removed to Canada and became Professor of Philology at Queen's College, Kingston, and in 1881 he went to Washington. He was widely known as an elocutionist, and his Shakespearean readings were famous in the United States. His son, Mr. A. Graham Bell, was inventor of the telephone; a brother, David Charles Bell, was a teacher of elocution in Dublin.

DR. DAVID BINNING MONRO, D.C.L., the Provost of Oriel College, Oxford, died in Switzerland (August 22). He had been unwell for some time, and gave up the Vice-Chancellorship of the University in 1904 owing to indisposition. Dr. Monro was born in Edinburgh in 1836, the eldest son of A. Binning Monro, of Auchinbowie, Stirlingshire. He was educated at Glasgow University and at Brasenose and Balliol. He was in the First Class in Classical and in Mathematical Moderations in 1856, gained the Ireland Scholarship in 1851, and in 1859 won the Latin Essay (B.A. 1858, M.A. 1862). He was Fellow of Oriel from 1859 to 1882, Tutor from 1863 to 1873, Vice-Provost from 1874 to 1882, Classical Moderator in 1869 and 1871, and in 1882 he became Provost of Oriel. He was the author of a valuable "Grammar of the Homeric Dialect" and of a well known edition of the "Odyssey."

UNIVERSITIES AND COLLEGES.

THE Commissioners appointed under the University London. College, London (Transfer), Act, 1905, held their first meeting at the University of London, South Kensington (August 15), under the chairmanship of Sir Edward Fry. An order was made postponing the day on which the transfer of the college to the University is to take effect to September 1, 1906. Mr. Arthur Paget, 9 King's Bench Walk, Temple, was appointed secretary.

A Committee consisting of the Chancellor, the Vice-Chancellor, and Chairman of Convocation, Sir William Collins, Dr. T. Gregory Foster, Rev. Dr. A. C. Headlam, Mr. H. J. Mackinder, Lord Reay, Sir Owen Roberts, Sir Albert Rollit, and Mr. Sidney Webb, has been appointed to consider and report upon the organization of commercial education in the University.

Mr. Edgar Schuster, the Francis Galton Research Fellow in National Eugenics, has presented a report containing a preliminary account of inquiries which have been made into the inheritance of disease, and especially of feeble-mindedness, deaf-mutism, and phthisis. Arrangements have been concluded with Mr. John Murray for the publication of a work on Noteworthy Families in Modern Science, written by Mr. Francis Galton in conjunction with Mr. Schuster. This is to appear as Volume I. of the publications of the Eugenics Record Office, and will contain accounts of the families of some fifty Fellows of the Royal Society. Miss Ethel Mary Elderton has been appointed Secretary to the Eugenics Record Office.

The Annual Report of the Goldsmiths' College Delegacy shows that evening classes have been carried on during the past year by arrangement with the London County Council and with the aid of a special donation of £5,000 made by the Goldsmiths' Company over and above their normal grant of £5,000. It is hoped that a number of these classes may be continued during next session. With the co-operation of the London, Kent, Middlesex, and Surrey County Councils and the County Borough Council of Croydon, the University has now completed the arrangements for the establishment of the training department of the college. This will accommodate 500 students, of whom 250 will be admitted during the first year. The course of training will extend over two years. Considerable improvements are being effected in the buildings, and the college will be opened in all its departments towards the end of September.

The following Doctorates have been conferred:—D.Sc. in Chemistry (Internal), Miss Ida Smedley; D.Sc. in Chemistry (External), Mr. William Horace Sodean; D.Sc. in Botany (External), Mr. David Ellis; D.Sc. in Geology (External), Mr. Felix Arthur Clair Oswald.

THE Faculty of Commerce of the Victoria Manchester. University of Manchester has issued its prospectus, which declares that the aim of the Faculty is to afford systematic training in higher commercial subjects, in the study of government and administration, and in the work of economic and social investigation. It will confer special degrees and grant certificates. The work in the Faculty comprises, first, teaching in the subjects which are fundamental in all commercial and administrative education; second, instruction in more special branches of study; and, finally, research and investigation. The object of the training provided is not merely to give useful information but to develop and discipline the mind, both generally and with special reference to the problems which must be faced in business and public life. It is no substitute for experience, but it should broaden the outlook, train the faculties to analyze new commercial and economic situations, and impart organized knowledge.

An Honours School of Celtic Studies has been formed in the Faculty of Arts, which places Irish and Welsh on the same level with Classics and Modern Languages as subjects of study for the Honours degree of the University. The significance of this new departure lies in the fact that it affords the student who is interested in Celtic philology and literature an opportunity of specializing in any one of the branches of study on the programme. Thus, in the third and fourth years of his work in the Honours School the student in Celtic philology may take either translation of Irish texts or translation of Welsh texts and Breton or Cornish texts for his prescribed subjects. In the same way, the student of history and literature may select either Irish or Welsh History as his special study.

THE Board of Trinity College have instituted a Dublin. Diploma in Economics and Commercial Knowledge.

The course for the examination includes, as obligatory subjects, the theory of economics, commercial history and geography, accountancy, and commercial law; and, as optional subjects, a modern language (French or German or Spanish), any one of a variety of special economic subjects, and any one of the following branches of economic and business organization:—banking, railways, insurance, agriculture. The diploma will be given for proficiency in the obligatory portion of the examination, and will give credit for further success in the optional courses. All persons are eligible as candidates for the diploma who have matriculated at any university or have passed the senior or middle grade Intermediate Examination, or have the certificates of any recognized technical school or school of commerce, or “possess any other qualification deemed sufficient by the Board.” The examination may be taken in parts, and the fee for each year will be for members of Trinity College one guinea and for other candidates two guineas. In the case of Trinity College students, the diploma will be accepted as an equivalent for the exercises required for keeping the Hilary and Trinity Terms of the Senior Sophister year. The first examination for the diploma will be held in October, 1906.

PROF. HENRY JONES (Glasgow), in his recent speech Bangor. on the great administrative controversy, said that the real importance of the University of Wales lay in the fact that it had displaced the University of London. But they would never have a great university unless they got great teachers and gave them full freedom of teaching and research. He warned them that the strengthening of the centre had a tendency to crush initiative. They did not want a “Principal of the University” as such; they did not want to see the local colleges under the authority of any central despot, however wise. They wanted them to grow great according to their own ideals. He hoped to see the Bangor College made into a separate university, as had been done in the case of Leeds, Manchester, and Liverpool. That was the trend of all modern universities, and in every instance to the great benefit and strengthening of the districts in which the colleges were placed, and therefore of the community as a whole. It was very easy to legislate for temporary difficulties. His advice to them was “don’t.” Let them set an adequate ideal before them. He himself had removed from Bangor partly because of the greater freedom from despotism he was allowed at St. Andrews.

VOLUNTARY SCHOOL ENDOWMENTS.

BOARD OF EDUCATION DECISION.

THE Board of Education have decided that, in the case of trusts for purposes of religious and secular education in combination, any scheme for the application of the endowments should secure as far as possible a continuation of that combination; and that, in cases where it is proposed to apply the income of such endowments to the provision of exhibitions, the exhibitors should satisfy the trustees as to their knowledge of the doctrines of the particular denomination with which the endowment is connected, or that the exhibitor has attended a Sunday school in connexion with the denomination. It is not, however, necessary or desirable that the exhibitors should be confined to schools connected with the particular denomination. The Board attach great importance to the introduction of the representative element on the governing body of such endowments, one representative of the Local Education Authority being necessary, especially in the case of endowments where the income is applied to purposes of higher education. It is made clear, however, that the representative element should not have controlling power over the administration of educational endowments affected by denominational trusts, but that there should be a strong majority of *ex-officio* and co-opted members. An exception is, however, to be made in the case of endowments consisting of buildings or the proceeds of sale or letting of buildings of disused denominational elementary schools, where there should be a representative of the Education Authority on the governing body. In dealing with the proceeds of the sale of such buildings, the Board will be willing to appropriate one-third of the income to the maintenance of a Sunday school connected with the denomination, and the remainder to purposes of secular education without denominational restrictions.

CASSELL & CO.'S LIST.

NEW AND ENLARGED EDITION.

THE STORY OF ENGLISH LITERATURE.

By ANNA BUCKLAND. Cloth boards, 3s. 6d.

“A readable and wonderfully complete résumé of the subject.”—*Guardian*.

A HISTORY OF ENGLAND. By the Right Hon. H. O. ARNOLD-FORSTER, M.A., M.P. *28th Thousand, Revised.* Fully Illustrated. Extra crown 8vo, 816 pp., bound in cloth, price 5s.; or, handsomely bound, cloth gilt, 6s. 6d.

Cassell's Unrivalled Dictionaries.

CASSELL'S NEW FRENCH DICTIONARY.

(French-English—English-French.) Edited by JAMES BOÏELLE, B.A., Officier d'Académie, sometime Examiner in the University of London. 1,220 pages, demy 8vo, strongly bound in cloth, 7s. 6d.; or, in half-leather, 10s. 6d.

CASSELL'S FRENCH DICTIONARY. (French-English—English-French.) *721st Thousand, Revised and Corrected.* 1,150 pages, cloth, 3s. 6d.; half-morocco, 5s.

CASSELL'S GERMAN DICTIONARY. (German-English—English-German.) *327th Thousand.* By ELIZABETH WEIR. 1,128 pages. *Cheap Edition,* cloth, 3s. 6d.; half-morocco, 5s.

CASSELL'S LATIN DICTIONARY. (Latin-English—English-Latin.) *152nd Thousand. Cheap Edition,* 3s. 6d.; half-morocco, 5s.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & CO., Ltd., La Belle Sauvage London, E.C.

W. & A. K. JOHNSTON'S NEW ATLASES.

Just published. Royal 4to, strongly bound in art vellum, price 5s. net

AN ATLAS OF COMMERCIAL GEOGRAPHY.

Edited by R. FERGUSON SAVAGE, F.R.G.S., Author of
“A New Geography of the World.”

This new Atlas contains 46 Coloured Maps, 6 pages of Notes on the Maps, and complete Index. It has been prepared with the greatest possible care, and is probably the most complete School Atlas of its kind. A quotation from the Preface says:—“Indeed, it may reasonably be claimed that all the facts shown, whether directly commercial or indirectly so, and each item of information which may be inferred from an intelligent study of the Maps, ought to form part and parcel of what may be termed the permanent geographical stock-in-trade of any educated youth.”

Demy 8vo, strongly bound in art vellum, price 5s. net.

THE CLASS-ROOM ATLAS OF PHYSICAL, POLITICAL, BIBLICAL, AND CLASSICAL GEOGRAPHY.

Edited by EDWARD F. ELTON, M.A., sometime Scholar of Corpus Christi College, Oxford; Assistant Master in Wellington College.

This new Atlas has been produced at very considerable expense. All the Maps are entirely new, and everything possible has been done to have a work in keeping with the times. The Atlas is intended for use in the great Public Schools and the Middle-class Schools and Colleges, and the Publishers trust that their efforts will be appreciated.

Prospectus of either Atlas, with Two Specimen Maps, Two pages of Letter-press, and full details, posted to any teacher on application.

A Specimen Copy sent free to Head Teachers for 3s.

W. & A. K. JOHNSTON, LIMITED,
EDINA WORKS, EASTER ROAD, EDINBURGH;
7 PATERNOSTER SQUARE, LONDON, E.C.

MESSRS. RIVINGTONS LIST

ENGLISH HISTORY TEACHING FOR SCHOOLS, &c.

A Primary History of England.

By Mrs CYRIL RANSOME. Small fcap. 8vo, with Illustrations. 1s. [Just ready.]

A First History of England.

By Mrs. CYRIL RANSOME. Small fcap. 8vo, with numerous Illustrations. 2s. 6d.

An Elementary History of England.

By CYRIL RANSOME, M.A. Small fcap. 8vo, with Maps and Plans. 1s. 9d.

A Class Book of English History. For Middle

Forms of Schools, Training Colleges, Intermediate and Oxford and Cambridge Local Examinations, the Central Welsh Board, Irish Intermediate, Scottish Leaving Certificates, and other similar Examinations, &c.

By ARTHUR HASSALL, M.A., Student of Christ Church, Oxford. Crown 8vo, 3s. 6d.

An Advanced History of England.

For Upper Forms of Schools and Colleges.

By CYRIL RANSOME, M.A.

1 Vol., crown 8vo, with Maps and Plans, 7s. 6d.; or in Two Periods:—

Period I.—To Elizabeth, 1603. 4s.

Period II.—To Victoria, 1895. 4s.

AN ELEMENTARY HISTORY OF GREECE.

By C. W. C. OMAN, M.A., Deputy Professor of Modern History in the University of Oxford. Fcap. 8vo, with Maps and Plans, 2s.

A SHORT HISTORY OF GREECE.

For the use of Middle Forms of Schools.

By W. S. ROBINSON, M.A. Small fcap. 8vo, with Maps and Plans, 3s.

A SHORT HISTORY OF ROME.

For the use of Middle Forms of Schools.

By W. S. ROBINSON, M.A. Small fcap. 8vo, with Maps and Plans, 3s. 6d.

A HISTORY OF ROME.

For the use of Upper Forms of Schools.

By J. L. MYRES, M.A., Senior Student and Tutor of Christ Church, Oxford. Crown 8vo, with Maps, Plans, &c., 5s.

OUTLINES OF ROMAN HISTORY.

By H. F. PELHAM, M.A., President of Trinity College and Camden Professor of Ancient History in the University of Oxford.

With Maps. Crown 8vo, 6s.

RIVINGTONS' TEXT-BOOKS OF ENGLISH HISTORY.

For the use of Schools in which Special Subjects in English History are being taught. With Maps, Plans, Genealogies, Analyses, Lists of Dates, &c.

By ARTHUR HASSALL, M.A., Editor of "Periods of European History," and Author of "A Class Book of English History." Small fcap. 8vo, in Nine Volumes, 2s. each.

It is hoped that these text-books will prove suitable for the Middle and Upper Forms of Schools, for Local Examination purposes, and for other Examinations in England, Scotland, Ireland, Wales, &c. The volumes are sufficiently long to avoid the danger of being mere summaries of facts, and at the same time are not so lengthy as to overweight the pupils with more than they have time to assimilate. The arrangement of the matter in each volume will not only appeal to the eye of the learner, but will also be found to stimulate the memory.

Volume V.—The Tudor Dynasty. 1485–1603. [Published.]

Volume IX.—War and Reform. 1789–1832. [In the press.]

FRENCH TEACHING ON THE NEW OR DIRECT METHOD.

General Editor—W. G. HARTOG, B.A., Assistant Examiner to the University of London, and Lecturer in French at University College, London.

The following Series of Books is written entirely in French, and is based on the generally accepted rules for the teaching of modern languages.

A FIRST BOOK OF FRENCH ORAL TEACH-

ING. Containing 110 Lessons for Oral Practice, Questionnaire, Phrases, Thèmes, and Grammar in French, with Vocabulary and 24 Illustrations.

By C. V. CALVERT, B.A.

Crown 8vo, 2s.

In use at Winchester, Uppingham, Edinburgh, Bristol, Brighton, &c.

Four of the Illustrations, enlarged for Wall Pictures, may be had separately, mounted on linen, 3s. 6d. each net; or, mounted on linen, varnished, taped, eyeletted, and with wooden rollers, 6s. net each.

1. Street. 2. Railway Station. 3. House. 4. River. These Illustrations depict French people and French life, and are drawn by a well-known exhibitor in the Paris Salon.

GRAMMAIRE FRANCAISE PRATIQUE

SUR LA METHODE INDUCTIVE.

Par W. G. HARTOG, B.A. Lond. Crown 8vo, 3s. 6d.

Part I., forming a complete Elementary Grammar, may be had separately. 2s. 6d.

This Grammar is written entirely in French, and is an attempt to carry out the now established theory that grammar should be taught by example and not by precept.

ANECDOTES ET RECITS. A Reader for

Elementary and Middle Forms. With Oral Exercises in French, containing Questionnaire, Grammaire, Thème, Traduire en française, Passages for Re-translation, and Vocabulary. With 8 full-page Illustrations. By W. G. HARTOG, B.A. Lond. Crown 8vo, 2s. 6d.

MELANGES FRANCAIS. An Elementary

Reader for the Second and Third Years of French Instruction. With Oral Exercises, containing Questionnaire, Grammaire, Exercises in French and Vocabulary. With 11 full-page Illustrations.

By W. G. HARTOG, B.A. Lond. Crown 8vo, 2s. 6d.

In use at Charterhouse, Bedford, Cambridge, Edinburgh, Leeds, Bristol, Salisbury, Nottingham, &c.; and recommended by the London County Council in the Inspection for Modern Languages conducted by the University of London.

LECTURES ET CONVERSATIONS FRAN-

CAISES. A Reader for Middle and Upper Forms, composed of Subjects forming a suitable basis for French Conversation. With Oral Exercises, containing Questionnaire, Grammaire, Thème, Exercices, Dictée. With a Map of France and a Plan of Paris. By W. G. HARTOG, B.A. Lond.

Crown 8vo, 2s. 6d.

In use at Clifton, Cambridge, Edinburgh, Manchester, St. Andrews, Hull, Salisbury, Exeter, Worcester, Bangor, Tonbridge, &c., and recommended by the London County Council in the Inspection for Modern Languages conducted by the University of London.

RIVINGTONS' NEW JUNIOR FRENCH

TEXTS. On the Reform Method. With Notes and Oral Exercises, both in French, Passages for Re-translation, Questionnaires, and French-English Vocabularies. Edited by W. G. HARTOG, B.A. Lond.

Small fcap. 8vo, with Illustrations. Each Volume, 1s.

1. HISTOIRE DE LA PRINCESSE

ROSETTE (La Comtesse DE SÉGUR). [Published.]

2. CONTES DE FEES CHOISIS

(Mme. Le Prince DE BEAUMONT). [Just ready.]

3. MATEO FALCONE AND L'ENLEVEMENT

DE LA REDOUTE (PROSPER MÉRIMÉE). [Just published.]

FRENCH EXERCISES. Adapted for Exam-

inations for which Candidates are prepared at Public and other Schools. By C. EWING PRIOR, Modern Language Master at Harrow School. Crown 8vo, 4s. 6d. [In September.]

The method which is here put into practice is that of teaching French through the medium of French. It is the deductive method as expounded by Herbart and further by Ziller, and since then adopted by most modern educational establishments on the Continent.

A NEW ALGEBRA.

ELEMENTARY ALGEBRA.

By W. G. BORCHARDT, M.A., B.Sc., Assistant Master at Cheltenham College.

This Book is issued in the following ways:—

1. Complete in One Volume, without Answers, 3s. 6d.
2. " " " with Answers, 4s. 6d.
3. Part I., without Answers, 2s. 6d.; or with Answers, 3s.
4. Part II., without Answers, 2s.; or with Answers, 2s. 6d.

Part I. contains the more elementary portions, and includes Quadratic Equations, Graphical Solution of Equations, Graphs of Statistics and Formulae, Literal Equations, Easy Graphical Problems.

Part II. includes Surds, Indices, Four-figure Logarithms (with Tables), Indeterminate Coefficients, Square Root, harder H.C.F. and L.C.M., Proportion, Progressions, Permutations and Combinations, Binomial and Exponential Theorem, Miscellaneous Curves, &c.

ALGEBRAICAL EXAMPLES.

Taken from the "Elementary Algebra." With or without Answers, 3s.

Or in Two Parts—

Part I., 1s. 6d.; or with Answers, 2s.

Part II., with or without Answers, 2s.

Many of the suggestions of the Mathematical Association have been adopted.

A detailed Prospectus of this New Algebra can be had on application.

ARITHMETIC ON THE NEW METHOD.

ARITHMETICAL TYPES AND EXAMPLES.

By W. G. BORCHARDT, M.A., B.Sc. Second Edition, with Oral Examples.

This book is issued in four ways—

1. Types and Examples in One Volume, with Answers, 3s. 6d.
2. Types and Examples in One Volume, without Answers, 3s. 6d.
3. The Examples separately, with Answers, 3s.
4. The Examples separately, without Answers, 3s.

In use at Harrow, Cheltenham, Uppingham, Repton, Sedburgh, Malvern, Edinburgh Academy, Liverpool, Manchester, Leeds, Birmingham, York, Leicester, Durham, Berkhamstead, Aberdeen, Dublin, Worcester, Eastbourne, Dover, Epsom, Newark, Darlington, Sydney, N.S.W.

Most of the recommendations of the Committee of Mathematical Association have been adopted.

"An eminently successful exposition."—*Mathematical Gazette*.

"We heartily wish that many may be found to adopt the book, which, both in character and arrangement, seems to us to be a step in advance."—*Guardian*.

"Provides good and ample practice in arithmetical work."—*School World*.

"The exercises are numerous and well graded."—*Nature*.

"This is exactly the book required by preparatory mathematical masters to enable them to carry out arithmetical teaching as suggested by the Mathematical Association."—*Preparatory Schools Review*.

ALGEBRAICAL GROUNDING.

Treating of the Elementary Laws of Algebra, and giving proofs of those laws.

By the Rev. D. E. SHORTO, M.A., Mathematical Master at Rugby School. Crown 8vo, 1s. net.

AN INTRODUCTION TO THE STUDY OF

GEOMETRY. By A. J. PRESSLAND, M.A., F.R.S.E., Master at the Edinburgh Academy. Crown 8vo. With Diagrams, 1s.

GEOMETRICAL DRAWING.

By A. J. PRESSLAND, M.A., F.R.S.E. With Diagrams. Crown 8vo, 2s. 6d.

MR. MURRAY'S LIST.

Just published.

Fcap. 8vo, 2s. 6d.

THE RUDIMENTS OF PRACTICAL MATHEMATICS.

By A. CONSTERDINE, M.A., and A. BARNES, M.A.

This book is intended for the use of students over twelve years of age, and especially for those who wish to make practical use of their knowledge in after life. The method adopted throughout is that the materials used for calculation shall be got for the most part from reasonably accurate measurements made by each student for himself, and that these measurements shall, as far as possible, be measurements of actual objects selected for the purpose. In this way the several branches of elementary mathematics (measurement, drawing, arithmetic, geometry, algebra) are not merely correlated, but actually fused. A companion volume—PRACTICAL ARITHMETIC—for younger students has recently been issued. Prospectuses of both books may be had, post free, on application.

MURRAY'S HISTORY OF ENGLAND.

3s.

An Outline History for Middle Forms. From the earliest times to the death of Queen Victoria. By Miss M. A. TUCKER, History Mistress at St. Felix School, Southwold. With many Coloured and other Maps, Plans, Tables, &c.

While containing all that is necessary for the Junior Examinations, this book aims at arousing the interest of the student and stimulating him to further efforts in historical study. The book is very fully equipped with maps, plans, tables, &c., which greatly add to its practical utility.

VOLUMETRIC ANALYSIS.

2s.

By J. B. RUSSELL, B.Sc. Lond., and A. H. BELL, B.Sc. Revised and Enlarged Edition. Crown 8vo.

Concise directions and calculations are special features of this book. In the new edition additional matter has been added on the Standardisation of Acids by means of Sodium; Chalk; Borax, &c.; Potassium Bi-chromate; Iodine; Thiosulphate; and Silver Nitrate.

MECHANICS

5s.

An Intermediate Course. By A. W. PORTER, B.Sc., Assistant Professor of Physics in University College, London. With numerous Diagrams. Crown 8vo.

HISTORY OF ENGLAND, Pt. I.

5s.

Part I.: From the Earliest Times to the Close of the Middle Ages. By C. R. L. FLETCHER, M.A. With Coloured Maps, Plans, &c. NEW AND CHEAPER EDITION.

"We doubt whether a better historical work than Mr. Fletcher's has appeared in this country any time within the past fifty years. Certainly we never read a similar work with anything like the same pleasure and profit. The author merits our thanks as well as our congratulations, for he has succeeded in accomplishing what no previous writer, to our knowledge, ever before thought of attempting. He has contrived to give us not merely the pith and marrow of history, but its very spirit, its soul and essence."—*Daily Telegraph*.

Just published.

THE BOY AND HIS SCHOOL: WHAT IT CAN AND WHAT IT CANNOT GIVE HIM.

By ROBERT L. LEIGHTON, Head Master of the Bristol Grammar School.

Crown 8vo, 2s. 6d. net.

JOHN MURRAY, ALBEMARLE STREET, LONDON, W.

ENGLISH GRAMMAR

2s. 6d.

With Historical Introduction and Copious Exercises. By T. D. HALL, M.A. Third Revised and Enlarged Edition.

The new edition has been thoroughly revised and brought up to date. The chapters on the classification of languages, sound shifting, and the historical development of English have been entirely rewritten, and embody the most recent philological discoveries. The whole text has been re-set in a clear and striking type.

PRIMER of LOGIC. 1s. 6d.

By E. E. CONSTANCE JONES, Principal of Girton College, Cambridge. With Diagrams, Tables, Examination Papers, &c.

This is the latest addition to Mr. Murray's Series of Primers. It is an attempt to supply, at a price within the reach of everybody, a trustworthy book on the elements of *Logic*—a subject which is being more widely studied every day. Those who wish to use the book for examination purposes should find great assistance from the papers included. Other volumes in the series are *Philosophy*, by Dr. A. S. Rappoport; *Physiology*, by Prof. E. H. Starling, F.R.S.; and *The Use of Words*, by Miss Kinnear.

CLASSICAL MAPS.

Mare Aegaeum, Athens, The Acropolis, &c., Rome at various periods, **Egypt** and the **Bosphorus**. Cloth 2s., paper 1s. net.

A new map in Mr. Murray's Series of HANDY CLASSICAL MAPS, edited by Dr. G. B. Grundy. The *Athenaeum* says—"These maps of Mr. Murray's are far better than anything which has yet been attempted in the direction of teaching the physical features of ancient geography, and they deserve all attention from students and schoolmasters."

ON TRANSLATING HOMER.

3s. 6d.

A New School Edition of Matthew Arnold's Essay, edited, with Introduction and Notes, by W. H. D. ROUSE, M.A., Litt.D., Head Master of Perse Grammar School, Cambridge. Crown 8vo.

"... It was a happy thought to add to the resources of a sixth-form teacher by editing, with introduction and notes, Matthew Arnold's Essay on Translating Homer. In this volume a boy will find set forth the first principles of translation from classical languages in a manner which he is not likely to forget, in the phrases of critics from Longinus to Matthew Arnold. Dr. Rouse's introductory essay is a valuable piece of work, characterised by breadth and grip."—*School World*.

COLLEGE OF PRECEPTORS' CERTIFICATE EXAMINATIONS.

SPECIAL SUBJECTS, 1905.

- Caesar.—Gallic War, Books IV., V.** By A. H. ALLCROFT, M.A. Oxon., and others. 1s. 6d. each. Vocabulary, 1s. each.

CURRENT EVENTS.

Le Congrès international pour l'extension et la culture de la langue française se tiendra à Liège, les 10, 11 et 12 septembre. (For the Section Pédagogique see "Summary.")

Le 13 septembre aura lieu, en terre allemande, une excursion aux communes wallonnes qui ont conservé jusqu'aujourd'hui un patois d'origine française. On espère pouvoir consacrer une cinquième journée, le 14 septembre, à une excursion à Bruxelles, avec séance solennelle à l'université de cette ville, réception à l'hôtel de ville, &c.

Les Congressistes auront droit sur les chemins de fer français à une réduction de 50 p. c.; ils jouiront, en Belgique, et particulièrement à Liège, de toutes les faveurs accordées, à l'occasion de l'Exposition Universelle, aux visiteurs étrangers qui adhèrent à l'un des Congrès internationaux dont le siège sera en cette ville, l'été prochain.

On est prié d'adresser toutes les communications, relatives aux travaux du Congrès, à la propagande, &c., à M. Beck, secrétaire général du Congrès, Institut de sociologie Solvay, parc Léopold, Bruxelles. Les adhésions sont reçues par M. Tilkin, trésorier du Congrès, 5 rue Lambert-le-Bègue, à Liège.

* *

THE Board of Education announce that the Certificate Examination for Teachers in Elementary Schools will take place in 1907 and subsequent years during December instead of during July. This change is consequent upon the change in the date of the King's Scholarship Examination and upon the date fixed for the Preliminary Examination for the Certificate, which will take the place of the King's Scholarship Examination in 1907. The Examination for Students in Training Colleges is not affected, and will continue to be held in July. The detailed syllabus and regulations for the Certificate Examination of 1907 will be issued shortly.

* *

THE annual examination of candidates for the National Diploma in the Science and Practice of Dairying will be held for English students at Reading College, September 18–21, and for Scottish students at the Dairy Institute, Kilmarnock, September 25–28.

ON the occasion of the visit of the British Honours. Association the University of the Cape of Good Hope has conferred the following honorary degrees:—

D.Sc.: Prof. Darwin, President of the Association; Sir William Crookes, Past-President of the Association; Sir David Gill, Astronomer-Royal at the Cape; Prof. Porter, Montreal; Prof. Davis, Harvard University; Dr. Backlund, Director of the Nicholas Observatory, Pulkowa, Russia; Prof. Bohr, Copenhagen; Prof. Engler, Berlin; Prof. Kapteyn, Groningen; Prof. Penck, Vienna; and Dr. Sjogren, Stockholm.

D.Lit.: Dr. Murray, editor of the "Oxford English Dictionary," and Prof. Codier, Paris.

* *

LORD GREY, Governor-General of Canada, has received the honorary degree of LL.D. from Laval University.

THE University of London has accepted the offer of the Secretary of State for the Colonies of £700 a year for five years for a Chair of Protozoology, and has set aside a further sum of £200 a year for assistants and laboratory expenses in connexion with the chair.

THE following contributions have been promised to the building scheme of Bedford College for Women:—Mr. and Mrs. G. T. Pilcher, £1,000; Miss Shaen (one of the daughters of Mr. William Shaen, for some years Chairman of the college), £1,000; and the Clothworkers' Company, a donation when the sum collected has reached £50,000.

* * *

THE Drapers' Company, who have already done much for the East London Technical College (henceforth to be known as the East London College, courses in languages and literary subjects for the London B.A. having just been introduced), have made a further grant of £5,000 for an extension of the premises. They have also largely developed their scholarship scheme: next year they will award 19 scholarships of £40 a year for three years, some of them being reserved for women, while others will be awarded in the subjects of the London B.A. degree.

* * *

THE Dominion Government has just made a grant of £500 to the McGill University for its Faculty of Railway Engineering and Transportation. This is the Government's contribution, as owner of the Inter-Colonial, to a scheme to which the Grand Trunk and Canadian-Pacific have given £1,000, and the Canadian Northern £400, for the instruction of young men in railway construction and operation.

* * *

MISS SPARKS, of Bincombe House, Crewkerne, has given Crewkerne Grammar School £1,000 to defray the cost of the drainage and the refurnishing of the school gymnasium, the balance to be appropriated to a scholarship of £10 annually, for day boys, to be called the "John Sparks Scholarship."

* * *

THE University of Melbourne has received a largely increased endowment from the Government of Victoria to institute a degree in Agriculture, and invites applications for a Professorship of Botany and a Lectureship in Biochemistry.

* * *

MR. MOSES A. DROPSIE, late President of Gratz College, Philadelphia, has bequeathed 1,000,000 dollars to establish a Jewish College in that city. The institution will be non-sectarian and coeducational.

* * *

Scholarships and Prizes. THE Governors of the Merchant Venturers' Technical College, Bristol, will award annually to the most suitable candidate who, being a member of the College, has taken the B.Sc. degree of the University of London, or gained a similar distinction, a research scholarship of the value of £50, tenable at the College for one year.

* * *

Appointments and Vacancies. MR. S. HERBERT COX, A.R.S.M., and Past-President of the Institution of Mining and Metallurgy (1899-1900), has been appointed (temporarily) to the Professorship of Mining at the Royal School of Mines, vacant on the death of Sir Clement le Neve Foster.

* * *

MR. A. B. SKINNER has been appointed Director of the Art Museum at South Kensington, in succession to Sir Caspar Purdon Clarke, who goes to New York.

The Board are considering the advisability of making new arrangements in regard to the relations between the Council of Advice for Art and the work of the Art Museum, with a view to enlarging the scope and functions of the Council, and at the same time extending the responsibilities of the Director in certain directions.

* * *

THE Provostship of Oriel College, Oxford, is vacant by the death of Dr. D. B. Monro.

THE Professorship of Classical Literature in Manchester University is vacant through the death of Dr. A. S. Wilkins.

* * *

MR. FREDERICK MACKARNES, Barrister-at-Law, has been appointed Professor of Roman Dutch Law in University College, London.

* * *

MR. WILLIAM AUGUSTUS TILDEN, D.Sc., F.R.S., Professor of Chemistry at the Royal College of Science, has been appointed Dean of the College, in succession to Prof. J. W. Judd, C.B.

* * *

THE REV. F. E. BRIGHMAN, M.A., has been appointed to give a course of lectures on "The Ancient Liturgies" at King's College, London, in Lent Term next session.

* * *

SIR JOHN HALLIDAY CROOM has been appointed to the Chair of Midwifery in Edinburgh University.

* * *

AT the University of Aberdeen, Mr. Walter H. Moberley, M.A. Oxon., succeeds Prof. Lord as Lecturer in Political Science and Moral Philosophy; and two ladies, Miss Mary E. Thomson and Miss J. Forbes, have been appointed Senior and Junior Assistants to the Professor of Humanity.

* * *

AT Bristol University College, Mr. George Leonard, M.A. Camb., Lecturer in History in the college, has been promoted Professor of Modern History; Mr. Richard Pape Cowl, M.A. Dub., Lecturer in English Language and Literature in Birmingham University, has been appointed Professor of English Literature and Language; and Mr. J. H. Priestley, B.Sc. Lond., has been appointed Lecturer on Botany, in succession to the late Mr. George Brebner.

* * *

AT Royal Holloway College the following appointments have been made for next session:—Prof. Louis Brandin, M.A., Ph.D., as Visiting Lecturer in French Philology; Miss M. E. D. Honey, B.A., as Assistant Lecturer in French; Mr. Thomas Seccombe, M.A., as Visiting Lecturer in Modern History; Miss H. Fraser, B.Sc., as Demonstrator in Botany; Miss F. de Ghey as Assistant Lecturer in Classics. The Rev. Canon Beeching, M.A., will give a course of lectures on "English Lyrical Poetry."

* * *

THE REV. W. M. DAVIDSON, M.A., M.Sc., B.C.L., Lecturer in the Armstrong College, Durham University, has been appointed Vice-Principal of St. Katharine's College, Tottenham, in succession to the Rev. H. D'Albertanson, M.A., who has been appointed Chaplain of St. James's Church, Oporto, and Head Master of the Oporto British School.

* * *

THE REV. F. LOWMAN, M.A. Trinity College, Dublin, has been appointed Vice-Principal of the Exeter Diocesan Training College.

* * *

MR. C. E. GREENALL, B.Sc., has been appointed assistant master in the Bristol Day Training College for Men, which opens this month.

* * *

MR. D. R. HARRIS, M.A. Cantab., B.A. Lond., Lecturer on Education and Master of Method, London Day Training College, has been appointed Principal of the Bangor Normal College.

* * *

M. ALBERT BARRÈRE, Professor of French at Woolwich Military Academy, has been promoted Officer of the Legion of Honour. He is a brother of M. Camille Barrère, French Ambassador at Rome.

MISS KATHERINE C. CAIRD, M.A., has been appointed Lady Superintendent of Perth Academy.

* * *

MR. HAROLD G. D. TURNBULL, B.A. Oxon., Assistant to the Professor of Humanity in Aberdeen University, has been appointed Professor of English Literature in the Deccan College, Poona.

* * *

AT St. David's College, Lampeter, the Rev. W. H. Hayman, M.A. Oxon., has been appointed Theological Tutor, and the Rev. W. B. Frankland, M.A. Cantab., Mathematical Lecturer.

* * *

MR. R. G. WHITE, B.Sc., has been appointed Assistant Lecturer in Agriculture at University College, Bangor.

* * *

THE Rectorship of the Glasgow High School for Girls is vacant by the retirement of Dr. Milligan. Lady teachers are eligible.

* * *

THE REV. H. BUCHANAN RILEY, M.A. Oxon., Head Master of Sir Roger Manwood's Grammar School, Sandwich, has been appointed Head Master of Emanuel School, Wandsworth Common.

* * *

MISS BARBARA FOXLEY, Head Mistress of Queen Mary's College, Walsall (twelve years), will assist next session in the training of Diploma students in the University of Manchester.

* * *

MR. JOSEPH ERNEST BOYT, M.A. Cantab., B.A., B.Sc. Lond., assistant master, Bedford Grammar School, has been appointed Head Master of King Edward VI.'s Grammar School, Stourbridge.

* * *

MR. WATSON CALDECOTT, M.A. Dub., second master, Owen's School, Islington, and Lecturer in Birkbeck College, has been appointed Head Master of Wolverhampton Grammar School.

* * *

THE REV. JULIAN LLEWELYN DOVE, M.A. Cantab., Head Master of Denstone College, formerly of Haileybury, has been appointed second master of Durham School.

* * *

MR. W. ROOCROFT ANDERSON, M.Sc. Vict., assistant master, Leigh (Lancs.) Grammar School, has been appointed to Lady Manners' School, Bakewell.

* * *

MR. J. JOHN BENNISON, B.A. Lond., Poulton-le-Fylde Grammar School, has been appointed to Horsham Grammar School.

* * *

Literary
Items. THE Oxford University Press is about to publish a book of progressive lessons in Elementary Chemistry, experiment and theory, by Messrs. F. R. L. Wilson, assistant master at Charterhouse, and G. W. Headley, Head Science Master, Civil and Military Department, Cheltenham College. The object is to provide a school course of practical training in chemistry suitable for those studying the subject as an integral part of their general education, and at the same time to lay a solid foundation for such as may require to specialize later.

* * *

MESSRS. MACMILLAN will publish shortly "Essays on Mediæval Literature"—Early English prose, the similes of Dante, Boccaccio, Chaucer, Gower, Froissart, and Gaston Paris—by Prof. W. P. Ker, LL.D.

MESSRS. CROSBY LOCKWOOD & SON will publish this month a revised and greatly enlarged edition of De Fivas's "Grammar of French Grammars." More than 250 "Graduated French Texts" (selections from authors of repute of the most varied styles) precede the several original grammatical exercises.

* * *

THE Walter Scott Publishing Co. are issuing a work on "The Nurture and Management of Children," by the late Dr. Samuel Smiles, edited (with additions) by Sir Hugh Beevor, Bart., M.D., F.R.C.P.; also "The Story of the Harp," by Mr. W. H. Grattan Flood, organist of Ennis-corthy Cathedral, which will form the sixth volume of "The Music Story Series," edited by Mr. F. J. Crowest.

* * *

MESSRS. W. & A. K. JOHNSTON promise shortly "An Atlas of Commercial Geography," edited by R. Ferguson Savage, F.R.G.S.—36 maps, with notes—"attention being strictly confined to the real essentials of the subject only."

* * *

M. TCHERTKOFF is preparing for the Free Age Press four works of Tolstoy and several smaller pieces. The "critical essay on Shakespeare, explaining the conditions responsible for the misdirected worship of his writings," promises to be piquant.

* * *

THE *World's Work and Play* (August)—an excellent review, steadily improving—has an instructive article on "What the Public Libraries are doing for Children," by Ernest A. Baker, M.A. "In America, as in England, these libraries have proved an effectual means of combating the influence of low and pernicious journals and stories. They are a blow against hooliganism."

* * *

THE *University Review* for August has two notable (out of four good and live) papers: on "Summer Gatherings," by Dr. Alex Hill, and on "Workpeople and the University," by Albert Mansbridge. "The treasures brought back from a summer gathering," says Dr. Hill, "have a value which you are unlikely at any after time to call in question." "Any conception of a university as the parent of a high culture," says Mr. Mansbridge, "postulates broad and free contact with life." He concludes that "the outlook is full of promise."

* * *

MR. RALPH D. PAINE contributes a long, very interesting, and profusely illustrated article to the August *Century Magazine* on "American and English Rowing"—the first of a series on "The Spirit of School and College Sport."

* * *

THE Autophuistic Postal College, conducted by Mr. Oswald Sunderland, L.C.P., offers particular guidance in study with a special view to self-development of the industrious student.

* * *

General. THE first stone of the building erected in memory of Etonians who fell in South Africa in the years 1899 to 1902 was laid by H.R.H. Princess Alexander of Teck on July 29.

* * *

ANOTHER chance for the bards. Principal Reichel, of North Wales University College, is offering five guineas for a college song. It must be in Welsh, and not more than five stanzas long.

THE LOST SCOTTISH EDUCATION BILL.

[From the *Educational News*.]

Now that the Education Bill is out of the way, the country is in a position to sum up the results which have followed its introduction and its failure to pass. These we believe to be wholly bad. Better to have had no such Bill introduced at all than have the ordinary work of administration thus interfered with uselessly.

Among the evils we put first and foremost the encouragement given to lazy, indifferent, cheese-paring School Boards to postpone some necessary but expensive work, the extension and remodelling of inadequate and defective school premises, or the erection of a new school. When such School Boards saw the possibility of throwing upon the whole county district instead of upon the parish the cost of such operations delay became the order of the day until the Bill should become law. Complete paralysis supervened. Nothing was done, even in the most clamant cases. Inspectors of schools might confer with members and advise. School reports might threaten reduction of the grant were nothing done. Yet, greatly daring in the interests of their own pockets, School Boards did nothing. We have before us the case of a School Board which disregarded repeated warnings, and now the *whole grant* of its largest school has been withheld this year. As this fact has not yet been made public, because only a mutilated version of the Inspector's report appeared in the local press, we anticipate that the aggrieved rate-payers, in whose interests the Board has thus mistakenly acted, will have something lively to say to those short-sighted economists when the time for re-election comes on.

One thing the reluctant Board can urge in its defence. If it had not been for the Bill, action would have been taken long ago. A new school would ere this have been built. The health of the children and their education would have been better, the comfort of the teachers greater, and the town would have had a new school of which it was reasonably proud and for which it was ready to pay.

In more than one part of Scotland important reforms and extensions in the field of secondary education have been, of necessity, delayed—notably in Edinburgh. The Edinburgh Merchant Company had for some years been considering a large scheme for reorganizing their system of secondary schools, and, as the Education Department was year by year insisting on certain changes and extensions of the present buildings, the Company made preparations for an extensive building scheme. But when the Bill appeared it was evident that some of its provisions might affect the position of the managers of all endowed schools, and it was determined not to proceed until it was seen exactly how they would stand under the final form of the Bill. Now, after two years, the Merchant Company find themselves no further forward. They must now proceed, with the further disturbing thought that something will be done by the next Bill which, had they known, would have caused them to act differently. This experience could be paralleled in many parts of Scotland, and the result has been very unsatisfactory.

We need do no more than refer to the heavy but useless expense to which many bodies have been put. Many School Boards and other school managers put themselves to the trouble of issuing memoranda on the Bill in which there were to be found local facts bearing on critical questions, the preparation of which must have caused much labour and expense. The Educational Institute has of necessity spent money, and its committees and officials have had a heavy burden of responsibility as well as a great increase of work because of the Bill. A look at the gallery of the House of Commons on July 14, crowded with representatives from Scottish bodies, was sufficient proof of the great expense which the Bill had caused to be incurred.

Many teachers, especially rural teachers, to-day are wishing they had never seen the Bill. Their hopes have been raised as to better security of tenure, better promotion, better remuneration, better superannuation. The Bill was to put the teacher on a better footing professionally, and make him a self-respecting member of a community in which he could again hold up his head with some feeling of confidence and security. Now he is as he was, and unhappy at that. We have more than once proved the close connexion between the condition of the teacher in country districts and the supply of teachers, and we have expressed the conviction that improved conditions would mean supply more nearly adequate to the needs of the country than at

present obtains. In the interests of the country itself it is, therefore, a thousand times to be regretted that the Bill has been lost.

THE EDUCATION OF THE MASSES IN INDIA.

By V. R. NATU, B.A., LL.B.

[From the *Indian Review*.]

ONE of the resolutions at the recent Indian National Congress specially dealt with the question of the education of the masses. The general question of education is not new, so far as the deliberations of the Congress are concerned. It was more than once taken up and discussed, and yet it is a question which does not lose its importance by repetition. Education was, and will be, the principal concern of civilized man. No nation can neglect it without serious national deterioration. It is the foundation of all reforms, and without solving that question in a practicable manner no country can at all hope to come up to the modern standard of civilization. The ancient Aryas understood the importance of education and made it compulsory on all those who were included in the term "Arya." In their scheme of life one part was specially devoted to education. Though originally this education was almost exclusively religious, as was the case in all ancient countries, in the course of time different sciences were also included in the curriculum, not neglecting "Arthashastra," which included all sciences and arts then understood. This education was free, compulsory, and universal, in the "Aryan" society. Though conquered Shudras were not taught religion, still they could learn sciences and arts, and even Brahmins could learn the same from the Shudras. Though the Aryan nation admitted the Shudras—the mass of the people—into their society, they did not impart to them the full benefit of their own education, and the result was disastrous. Modern governments should take a warning from this historical event and try to bring the conquered races up to their own standard of civilization—by spread of education. . . .

Of all the countries, in India the education of the masses must receive the greatest attention of Government and the patriot. Notwithstanding the attempts of Government to extend education for nearly a century, the ignorance in the land is too terrible to describe. The darkness is deep and wide, and it is only a very thin fringe that has got some light. In enlightened countries like England and Germany there is still a cry for further progress in the popular education—a cry which requires more volume and depth in this country. Progress in education is not so rapid here as it should have been, and even at the beginning of the twentieth century only fifty-three persons in a thousand are considered "literate" under the wide sense that term has received at the hands of the Census reporter, so as to include great and renowned university *savants* with the "learned" police constable who scrawls out the letters of his name. This figure of literacy would also dwindle down if we exclude persons who receive education purely of a religious character, as is the case in Burma. It is also admitted that it is the select castes and professions which, through hereditary habits, take the chief benefit of the existing educational institutions, and the great mass of people remain in ignorance. Besides the natural apathy, the principal reason why in the lower strata of Indian society education is neglected, as given by the Census reporter, consists in the inability of the people to pay even the small fees charged in the elementary schools.

But the question of popular education in India cannot be left here with the knowledge of its defects and other causes, and given up as hopeless. All our reforms and the prosperity of the nation entirely depend upon the education of the masses. No political rights can be secured if the bulk of the people are ignorant. A sharp sowcar deprives a ryot of his land, a police constable teases him, a revenue agent robs him, a railway official treats him like a beast, or a shrewd liquor contractor tempts him to petition for a new shop. How are these evils to be remedied if not by education? How can the moral standard of these men be raised without education, and how can co-operation—so much needed for the industrial development of the country—play its full part if not by education? Can the *swadeshi* movement be popular without extensive mass education? Can any one expect that the agricultural population of the country,

steeped in ignorance, will be able to benefit itself by utilizing new labour-saving appliances? Give education to the masses in a practical way, and almost all our social and political reforms would be secured. In the recently published Quinquennial Report on Education in India for 1897 to 1902, the condition of primary education is thus summarized:

There was an almost complete arrest of progress in primary education during the quinquennium. In the period 1887-88 to 1891-92 the number of boys in the primary stage of instruction increased by 27,500, and in the next five years by 36,000; in the period under review it remained practically stationary. Bombay lost 55,000 and Bengal 19,000 boys in the primary stage, and the United Provinces' gain of 74,000 was the only considerable increase. The period which we have reviewed was one of misfortune: two severe famines and a widespread epidemic of plague disorganized both the administration and the population. But it would be idle to attribute the phenomenon wholly to these exceptional calamities: other and deep rooted causes lie below them. The work which has been accomplished by the Education Department in the past, great and laborious though it has been, is easy compared with the task which lies before it. Hitherto it has dealt, in the main, with the comparatively accessible and well-to-do classes of the population, who were more or less accustomed to education, and in some parts of the country were possessed of numerous indigenous schools. Now it has to carry education improved in methods and standards to meet modern ideas and requirements to the scattered and distant hamlets, to the poor ryots, to the landless labourer, to the ignorant low castes, and to the wild jungle tribes. To create a desire for education among these people and to supply them with a form of instruction which they are capable of assimilating, is an enterprise needing the most careful sympathetic treatment, a trained and intelligent agency, and ample funds.

The apathy of the people for the education now imparted in schools would be removed if the education took a more practical and useful shape. By knowing the three R's only, no tangible benefit is seen by the average ryot, and he naturally thinks that the money and time spent are wasted. The second cause for the neglect is the inability of the people to pay the fees, which also proves the poverty of the masses. In such a country, therefore, free education must be the ambition of the State. Its importance is now felt all over the civilized world, and poor countries like Italy have the courage to adopt it. The cost would be more than repaid by the improvement of the moral and material condition of the nation, and a country which pays crores of rupees as the price of conquest pure and simple can afford to bear this burden.

Fortunately the present unsatisfactory condition of education of the majority of the population in this country has been clearly admitted by the Government of India in the recent resolution on its education policy. After reviewing the past history of education in this country from the times of the Vedas up to the last report of the Educational Commission in 1884, and after noticing the benefits of education hitherto secured, the Government of India admits that the shortcomings of the present system in point of quantity need no demonstration. "Four villages out of five are without a school; three boys out of four grow up without education, and only one girl in forty attends any kind of school. The Government has clearly admitted that the existing methods of education stand in need of substantial reform." As regards the primary education, which alone would reach the masses, the admissions by the Government of India are surely very full:

Primary education is the instruction of the masses through the vernacular in such subjects as will best stimulate their intelligence and fit them for their position in life. It was found in 1884 that the consideration of measures to this end had been too much neglected, and a considerable increase of expenditure on primary education was then contemplated. The Education Commission recommended in 1883 that "the elementary education of the masses, its provision, extension, and improvement should be that part of the educational system to which the strenuous efforts of the State should be directed in a still larger measure than before."

The Government of India fully accept the proposition that the active extension of primary education is one of the most important duties of the State. They undertake this responsibility, not merely on general grounds, but because, as Lord Lawrence observed in 1868, "among all the sources of difficulty in our administration and of possible danger to the stability of our Government, there are few so serious as the ignorance of the people." To the people themselves, moreover, the task of education is now a more serious disadvantage than it was in more primitive days. By the extension of railways the economic side of agriculture in India has been greatly developed, and the cultivator has been brought into contact with the commercial world, and has been involved in transactions in which an illiterate man is at a great disadvantage. The material benefits attaching to education have at the

same time increased with the development of schemes for introducing improved agricultural methods, for opening agricultural banks, for strengthening the legal position of the cultivator, and for generally improving the conditions of rural life. Such schemes depend largely for their success upon the influence of education permeating the masses and rendering them accessible to ideas other than those sanctioned by tradition.

How, then, do matters stand in respect of the extension among the masses of primary education? The population of British India is over 240,000,000. It is commonly reckoned that 15 per cent. of the population are of school-going age. According to this standard there are more than 18,000,000 boys who ought now to be at school, but of these only a little more than one-sixth are actually receiving primary education. If the statistics are arranged by provinces, it appears that out of one hundred boys of an age to go to school, the number attending primary schools of some kind ranges from between 8 and 9 in the Punjab and United Provinces, to 22 and 23 in Bombay and Bengal. In the census of 1901 it was found that only 1 in 10 of the male population and only 7 in 1,000 of the female population were literate. These figures exhibit the vast dimensions of the problem, and show how much remains to be done before the proportion of the population receiving elementary instruction can approach the standard recognized as indispensable in more advanced countries.

These clear admissions leave little to be proved. No opinions and no statistics are necessary at least to enlighten Government on this point. The drawbacks and their extent are better known to the Government of India than to any of its critics. The Honourable Mr. Gokhale in his Budget speech in 1903 pointed out the defects and showed by admirable exposition the prime necessity of spreading education amongst the masses. As to general principles and actual facts, the Government of India admitted everything. On these points there is almost a complete unanimity, and the Government resolution is indeed a very instructive document on the question of education in all its branches. But the resolution itself will not remedy the shortcomings, unless honest strenuous attempts are made in the right direction to remove them at any cost. This question of cost is no doubt always important before any schemes of reform can be undertaken, and the Government of India says that the difficulty of finding out the requisite funds cannot be overcome. The Honourable Mr. Gokhale had anticipated this difficulty and suggested some means to get over the same. It is indeed amusing to see that the plea of cost should be put forward by a Government which finds enough funds to increase military charges, to undertake costly political missions, to construct non-paying railways, to hold costly durbars, or to pay exchange compensation to overpaid European officers, leaving the resources of the country undeveloped by allowing millions of its subjects to remain in darkness. This education of the masses is not a matter which can be achieved by purely private enterprise. It is the State which not only should recognize advancement of education in all branches as its first duty but should try to act up to it. The people, too, should come forward to assist in this national work. No doubt the new move of the Congress in holding industrial exhibitions is in that direction. It is the duty of educated India to advocate the cause of mass education on the platform and in the press; but they should also come forward with pecuniary help, establish societies for village education, and induce the younger generation to do the sacred duty of imparting useful knowledge to the people.

Mrs. Besant once said that education was not so much a matter for the Government as it was the duty of the people. "To be really successful, it must be taken, designed, guided, and carried out by those who are not only the lovers of the country but also men who understand its needs and who are well aware of its peculiarities, of its characteristics, and of its traditions." In India, elementary education was always a private concern until the establishment of Government schools. If our thoughts, our activities, our small charities, and our spare time are directed to the progress of education as a sacred and national duty, we shall in a short time achieve great results. Under the changed conditions of modern times, the solution of this question cannot, however, be left to the patriotic and philanthropic attempts of private enterprise. Government help is essential. It is, therefore, earnestly hoped that Government will treat this question liberally as an imperial paramount question, and when it acts on that faith the difficulty of funds will not be urged. We are, no doubt, thankful for the present attitude of Government towards education, but, bearing in mind that a vast population of 260,000,000 are poor, helpless, and ignorant, any delay in grappling with this question boldly would be against the vital interests of the Government and of the people.

THE AMERICAN NATIONAL EDUCATIONAL ASSOCIATION.

DECLARATION OF PRINCIPLES.

The National Educational Association, at its forty-fourth meeting held in Asbury Park and Ocean Grove, made the following declaration of principles:—

1. The Bureau of Education continues to render invaluable service to the nation. It is the judgment of the Association that the powers of the Bureau should be enlarged and that liberal appropriations should be made to it by Congress in order to enable it to widen its usefulness.

2. The National Educational Association notes with approval that the qualifications demanded of teachers in the public schools, and especially in city public schools, are increasing annually, and particularly that in many localities special preparation is demanded of teachers. The idea that any one with a fair education can teach school is gradually giving way to the correct notion that teachers must make special preparation for the vocation of teaching. The higher standard demanded of teachers must lead logically to higher salaries for teachers, and constant efforts should be made by all persons interested in education to secure for teachers adequate compensation for their work.

3. The rapid establishment of township or rural high schools is one of the most gratifying evidences of the progress of education. We believe that this movement should be encouraged until the children of rural communities enjoy the benefits of public education to an extent approximating as nearly as practicable the education furnished in urban communities.

4. The Association heartily approves of the efforts now being made to determine the proper place of industrial education in the public schools. We believe that the time is rapidly approaching when industrial education should be introduced into all schools and should be made to harmonize with the occupations of the community. These courses when introduced should include instruction in agriculture as well as manual training, &c. Wherever the conditions justify their establishment, schools that show the application of the branches of knowledge to practical life should be established.

5. The N.E.A. strongly recommends the increasing utilization of urban school buildings for free vacation schools, and for free evening schools and lecture courses for adults, and for children who have been obliged to leave the day schools prematurely.

6. It is the duty of the State to provide for the education of every child within its borders and to see that all children obtain the rudiments of an education. The constitutional provision that all persons must contribute to the support of the public schools logically carries with it the implied provision that no persons should be permitted to defeat the purposes of the public school law by forcing their children, at an early age, to become bread winners.

7. The National Government should provide schools for the children of all persons living in territory under the immediate control of the Government. The attention of Congress is specially directed to the need of adequate legislation to provide schools for the children of citizens of the United States living on naval reservations.

8. The N.E.A. regrets the revival in some quarters of the idea that the common school is a place for teaching nothing but reading, spelling, writing, and ciphering, and takes this occasion to declare that the ultimate object of popular education is to teach the children how to live righteously, healthily, and happily, and that to accomplish this object it is essential that every school inculcate the love of truth, justice, purity, and beauty through the study of biography, history, ethics, natural history, music, drawing, and manual arts.

9. The National Educational Association wishes to record its approval of the increasing appreciation among educators of the fact that the building of character is the real aim of the schools and the ultimate reason for the expenditure of millions for their maintenance. There is in the minds of the children and youth of to-day a tendency toward a disregard for constituted authority; a lack of respect for age and superior wisdom; a weak appreciation of the demands of duty; a disposition to follow pleasure and interest rather than obligation and order. This condition demands the earnest thought and action of our leaders of opinion, and places important obligations upon school authorities.

10. The National Educational Association wishes to congratulate the secondary schools and colleges of the country that are making the effort to remove the taint of professionalism that has crept into student sports. This taint can be removed only by forcing

students, alumni, and school faculties to recognize that interschool games should be played for sportsmanship and not merely for victory.

11. The National Educational Association observes with great satisfaction the tendency of cities and towns to replace large school committees or boards which have exercised through subcommittees executive functions by small boards which determine general policies but entrust all executive functions to salaried experts.

12. Local taxation, supplemented by State taxation, presents the best means for the support of the public schools, and for securing that deep interest in them which is necessary to their greatest efficiency. State aid should be granted only as supplementary to local taxation, and not as a substitute for it.

13. We cannot too often repeat that close, intelligent, judicious supervision is necessary for all grades of schools.

14. A free democracy cannot long continue without the assistance of a system of State-supported schools administered by the chosen agents of the people and responsible for its ideals, its conduct, and its results.

"SANE, SIGNIFICANT, AND SATISFACTORY."

There has not been a saner, more significant, and more all-round satisfactory convention in twenty years (says the *School Journal*) than was the one held at Asbury Park and Ocean Grove. Boston had larger numbers, enrolling almost twice as many tourist members. The 1905 meeting had President Roosevelt. The educational duty of the United States was never more comprehensively and more clearly presented. There was no desultory talking, and few attempts to make the welkin ring. Seriousness and purpose characterized the program from beginning to end. Minor topics were crowded to the rear even in the department meetings. Largeness of view prevailed. That pettiness which according to tradition is inseparable from the composite character of teachers was less in evidence than ever before, less than one meets with ordinarily in conventions of journalists, physicians, and clergymen. Reports of unusual value and importance were received and discussed. There were only few really great papers, but no less than at any previous meeting. The "declaration of principles" had bone and sinews and vital breath in it. A high standard has been set for years to come.

PRESIDENT ROOSEVELT AND THE TEACHERS.

I am peculiarly pleased (said President Roosevelt) to have the chance of addressing this Association, for in all this democratic land there is no more genuinely democratic association than this. It is truly democratic, because here each member meets every other member as his peer without regard to whether he is the President of one of the great Universities or the newest recruit to that high and honourable profession which has in its charge the upbringing and training of those boys and girls who in a few short years will themselves be settling the destinies of this nation. It is not too much to say that the most characteristic work of the Republic is that done by the educators, by the teachers, for whatever our shortcomings as a nation may be—and we have certain shortcomings (laughter)—we have at least firmly grasped the fact that we cannot do our part in the difficult and all-important work of self-government, that we cannot rule and govern ourselves, unless we approach the task with developed minds, and with what counts for more even—with trained characters. You teachers make the whole world your debtors. Of your profession this can be said with more truth than of any other profession, barring only that of the minister of the Gospel himself. If you—you teachers—did not do your work well, this Republic would not endure beyond the span of the generation. Moreover, as an incident to your avowed work, you render some well-nigh unbelievable services to the country. For instance, you render to the Republic the prime, the vital, service of amalgamating into one homogeneous body the children alike of those who are born here and of those who come here from so many different lands abroad. You furnish a common training and common ideals for the children of all the mixed peoples who are here being fused into one nationality. It is in no small degree due to you and to your efforts that we of this great American Republic form one people instead of a group of jarring peoples. The pupils, no matter where they or their parents were born, who are being educated in our public schools will be sure to become imbued with that mutual sympathy, that mutual respect and understanding which is absolutely indispensable for the working out of the problems we as a people have before

us. And one service you render which I regard as wholly indispensable. In our country, where altogether too much prominence is given to the mere possession of wealth, we are under heavy obligations to such a body as this, which substitutes for the ideal of accumulating money the infinitely loftier, non-materialistic, ideal of devotion to work worth doing simply for that work's sake. I do not in the least under-estimate the need of having material prosperity as the basis of our civilization, but I most earnestly insist that, if our civilization does not build a lofty superstructure on this basis, we can never rank among the really great peoples. A certain amount of money is of course a necessary thing, as much for the nation as for the individual; and there are few movements in which I more thoroughly believe than in the movement to secure better remuneration for our teachers.

[Here the President was interrupted by a storm of applause, in the midst of which a man near the front sprang to his feet and yelled out: "Three cheers for the President!" They were given with a will. When comparative calm reigned again the President, smiling his broadest smile, remarked: "I gather from this that I have your sympathy." He then went on with his speech.]

But, after all, the service you render is incalculable because of the very fact that by your lives you show that you believe ideals to be worth sacrifice and that you are splendidly eager to do non-remunerative work if this work is of good to your fellowmen. To furnish in your lives such a realized high ideal is to do a great service to the country.

Of the moulding influences at work on the great State system (writes Miss Ravenhill in Vol. XV., page 7, of the "Special Reports on Educational Subjects," recently published by the Board of Education), none is more powerful for good than the National Educational Association, which numbers its members by thousands, and is guided by some of the most gifted as well as most experienced educational leaders in the States. The bulky records of its annual meetings contain a mass of experience and suggestion combined with full recognition of the dignity and responsibility of teachers, and constitute a useful record of the worth of teaching ideals and of improved practice. Of the numerous organizations employed in the education of public opinion, few can compete with this potent, wisely regulated force; though to University Extension lectures, summer schools, and other culture agencies may be attributed a part of the prevalent public sympathy with, and respect for, the profession of teaching which prevails over a large part of the United States.

PRIMARY-SCHOOL METHODS.

PROFESSOR DEWEY'S DEVELOPMENTS.

MR. E. A. RILEY, B.A., speaking of "Self-Activity in the Pupil as a Guiding Principle in Education" (*Australian Journal of Education*), says: "An entirely new conception of education has been necessitated by the influx of population in all civilized countries into the great cities. In the old days the work of the school was instruction, and not education, the claims of which were fairly met by the life activities of the children. . . . But in city life all this was changed: the home industries disappeared for the most part, the close contact with Nature was no more. Yet, if human intelligence was not to shrivel, some substitute for the old home education must be found, and the work fell upon the schools, which, however, met the demand at first but indifferently.

"But, perhaps, the riddle has been read by John Dewey, of New York. It seems to me that he has, perhaps, made the most far-reaching progress that has been achieved during the past twenty-five years. I believe he has done for children of primary-school age what Froebel did for little children in his kindergarten. The principles of Froebel are no monopoly of the kindergarten. Many educators have felt this without seeing how to apply them to primary-school work. The introduction of manual training into the higher grades still left a big gap between them and the kindergarten. This gap had been filled tentatively by 'varied occupations'; but there was still no unity of spirit in the primary school such as marked the kindergarten. All was fractional, fragmentary. But Dewey, with the insight of genius, has bridged the gap. He makes life occupations the articulating centres of school life. The primary industries of the great world are taken and broken up, and their complexity so reduced as to be brought within the child's grasp. Round these occupations, domestic and industrial, all education, physical, intellectual, and moral, is made to cling. This is done

without the introduction of the technical spirit, though, of course, the school supplies a splendid basis for technical training afterwards. As every day brings varying employments, a great variety of muscular co-ordination is secured, together with adequate sense training. History, geography, science, &c., grow out of the child's curiosity as to the materials he is shaping. What are they? Whence come they? How does man use them? And a thousand other questions are ever in the pupil's mind, supplying continuous interest. As it is things in their human relationships that he is handling and thinking over, and as the whole school community is socially organized, the humanities are given full scope; and as the pupil is doing moral acts throughout the day, and not merely learning to talk about morality, moral education is a reality in the school. As an educator I am fascinated by this apparent solution of most of the difficulties which confront us in the primary school.

Miss Ravenhill writes ("Special Reports on Educational Subjects," Vol. XV., page 7):

In the United States, as in Great Britain, detailed conceptions of the best methods to follow in the scheming of a school programme are almost as numerous as the individuals who concern themselves with the question in any of its aspects; but emerging from this sea of opinions are a few prominent personalities whose freedom from prejudices or party spirit, scientific bases for their convictions, and courageous perseverance in face of obstacles and apparent failures secure a fair trial for their systems, and influence gradually the educational spirit and practice of their country. Of these one of the most notable is Dr. John Dewey, of Chicago University [now of Columbia University, New York], who has drawn public attention to two "tragic" weaknesses in the old school system, where, in his opinion, social spirit was wanting, being replaced by "that mediæval misconception which limited learning to books." By precept and undaunted practice, Dr. Dewey impresses on those who have ears to hear and eyes to see that "the ideal school should reproduce systematically, and in a large, intelligent, and competent way, what in most households is done only in a comparatively meagre and haphazard manner"; while he maintains that "the root question of education is that of taking hold of a child's activities, of giving them direction, and of so training them as to produce valuable results."

Again (page 143):

By written and spoken word, Dr. John Dewey and the late Colonel Francis W. Parker have asserted their conviction that all school work should connect on the social side with the life without; and that this connexion can be fitly and profitably made by means of suitable occupations carried on throughout the period of school life. "By occupation," writes Dr. Dewey, "is not meant any kind of 'busy work' or exercises that may be given to a child to keep him out of mischief or idleness when seated at his desk. By occupation I mean a mode of activity on the part of the child which reproduces or runs parallel to some form of work carried on in social life." In the Chicago University Elementary School these occupations are represented by the workshop with wood and tools, by cooking and sewing, and by textile work. To those to whom this conception is unfamiliar, a careful perusal of Dr. Dewey's book "The School and Society," and of his article on "The Psychology of Occupation" in the *Elementary School Record* will result in a better comprehension of his thesis. The limits of space forbid more than the most concise references to Dr. Dewey's writings, or to Colonel Parker's ideals and methods. Careful abstracts of a year's work in the schools where the views and methods of these leaders of educational thought are subjected to the test of practice are furnished in Tables XXI. and XXII. They are included in this portion of my report as affording the best illustrations I can offer of the means by which the domestic, equally with other, sciences and arts may be educationally employed to make schools for our children of all ages a "genuine form of active community life, instead of places set apart to learn lessons."

Dr. Dewey's opinion, shared, I believe, by the late Colonel Parker, must be borne in mind while studying these school programmes, viz., that "those subjects and that material develop the young intelligence of the child which (1) forge social links between school and home; (2) can be acquired largely in the first instance through the exercise of the bodily activities; (3) are so interwoven with family life as to appeal to the limited, familiar experience of a young child; and (4) demand thought, yet by their simplicity permit that thought to function in actions, habitual or suitably acquired at the special period of life at which the lesson requires them." Dr. Dewey also maintains that the educational material should stimulate efforts directed to the acquirement of technique, even though at considerable personal cost, and that each subject must possess inherent continuity in itself, adapting it for progressive development, consistent with the several periods of child growth. Further, both authorities agree that veritable correlation of each subject with the whole school programme is an essential qualification, not "through devices of instruction which the teacher employs in tying together things in themselves disconnected," but through wise selection, by which real, organic continuity of subject matter is ensured. In the University Elementary School at Chicago, therefore, the domestic sciences and arts appear throughout among the occupations for all

groups included in the time-table, from which it is Mr. Dewey's object to secure the absence of mere mechanical routine repetition, and to ensure the presence of conscious, intelligent action and habits of reflection.

THE BRITISH ASSOCIATION.

PAPERS ON EDUCATIONAL SUBJECTS.

UNIVERSITY EDUCATION AND NATIONAL LIFE.

SIR RICHARD JEBB, M.P., occupied the chair of the Educational Science Section of the British Association at the Capetown meeting. He discoursed on the Ideal of a University. The university, he said, tends to produce a general breadth of intellectual sympathies; it enables the specialist to acquire some sense of the relations between his own pursuit and other pursuits; he is helped to perceive the largeness of knowledge. But, besides bringing together students of various subjects, it is the business of a university to see that each subject shall be studied in such a manner as to afford some general discipline of the mental faculties. Sir Richard reviewed the development of universities at home, and of the condition of higher education in South Africa; expounded the characteristics of university education, making considerable critical reference to the views of Newman, Huxley, and Matthew Arnold; dwelt upon the common aims of literature and science; supported strongly the claims of literary culture; and urged that education is an Imperial concern. In conclusion, he said:

I would only say how entirely I share a conviction which has been expressed by one to whose ability, to whose generous enthusiasm and unflagging efforts, the cause of education in this country owes an incalculable debt—I refer to Mr. E. B. Sargant. Like him, I believe that the progress of education in all its grades, from the lowest to the highest, is the agency which, more surely than any other, will conduce to the prosperity and the unity of South Africa. For all workers in that great cause it must be an inspiring thought that they are engaged in promoting the most fundamental and the most far-reaching of national interests. They are endeavouring to secure that the men and women to whom the future of this country belongs shall be equal to their responsibilities and worthy of their inheritance. In that endeavour the sympathies which they carry with them are world-wide. As we come to see more and more clearly that the highest education is not only a national, but an Imperial, concern, there is a growing desire for interchange of counsels and for active co-operation between the educational institutions of the colonies and those of the mother country. The development of education in South Africa will command keen attention, and will be followed by earnest good wishes, not only in England, but throughout the British dominions. One of the ideas which are bound up with the history and the traditions of our English public schools and universities is the idea of efficient work for the State. Those institutions have been largely moulded, from generation to generation, by the aim of ensuring a supply of men qualified to bear a worthy part, either in the government of the nation, or in professional activities which are indispensable to the national welfare. In our own time, and more especially within the last thirty years, one particular aspect of that idea is illustrated by the closer connexions which have been formed between the Universities and the higher branches of the Civil Service. The conception of work for the commonweal is in its turn inseparable from loyalty to those ideals of character and conduct by which English life and public policy have been built up. It is by the long and gradual training which such ideals have given that our race has been fitted to grapple with responsibilities which have inevitably grown, both in extent and in complexity, far beyond anything which our forefathers could have dreamed. That training tends also to national self-knowledge; it makes for a sober estimate of our national qualities and defects; it quickens a national sense of duty to our neighbour. The munificence of a far-sighted statesman has provided that selected youths, whose homes are in this land, and whose life-work may be here, shall go for a while to England, shall breathe the intellectual and social atmosphere of a great English university, and shall learn to judge for themselves of the sources from which the best English traditions have flowed. That is excellent. But it is also most desirable that those traditions should pass as living forces into the higher teaching of South Africa itself, and that their spirit should animate educational institutions whose special forms have been moulded by local requirements.

THE DEVELOPMENT OF CAPE EDUCATION.

The Rev. W. E. C. Clarke, M.A., gave an interesting account of the historical development of education in the colony from 1652. He said:

Cape education had all along developed very much on its own lines,

and it had been the merit of the administration throughout to move forward less by radical changes than by adaptation of existing methods and machinery. This was evidenced in the remarkable increase in good school buildings, a result gained in spite of the want of continuity in the School Committees, and without sacrificing the pound-for-pound principle. The building loan scheme was probably Dr. Muir's most successful achievement. From the outset secondary work was combined with primary in the better schools, but during the last few years between thirty and forty high schools had been established, with a special curriculum arranged for them, leading up to the Matriculation certificate of the University. The new Education Act, while retaining Committees for individual schools, would provide School Boards for municipalities and large areas, with rating powers and with control over the communities in their area. One third of each Board was nominated by Government. A few institutions preparing for the University certificates and degrees were subsidized under the Higher Education Act of 1874, but as the number of students increased the idea arose of uniting the work of these separate colleges into a teaching University. While vested interests and keenness of rivalry had hitherto prevented such unification, the development of these separate colleges had proceeded rapidly, and it seemed likely that the teaching university of the future will consist of certain constituent colleges. The Rhodes Scholarships, while benefiting the individual holders, would also further higher education, if made post-graduation scholarships. In the original scheme they might have tended to do actual injury to higher education in the colony. A School of Mines was instituted at the South African College in 1896, and the students now completed their course at the Johannesburg Technical Institute. While the progress of education had thus proceeded satisfactorily along various lines, it could not be said that the position of the teacher had improved in a corresponding degree. It was true that the increased influence of the body of teachers was the most remarkable fact in modern education, and the Union of Cape Teachers in the South African Teachers' Conference, with its branches all over the country, had enabled them to speak with a strong voice on important questions, and to combine for purposes of mutual defence; but it was a matter for regret that so great a proportion of time and interest had been devoted in their meetings to questions of salary, pension allowances, and other factors making for the comfort of their position. It should not be necessary for teachers to have to assert their rights and to impress their claims on the rest of the community. The new Education Act arranged for greater security of tenure and for improvement of salaries; but satisfactory provision had yet to be made for pension on retirement. "The teacher should be removed beyond fear of want and anxiety about financial concerns. The community is not in a healthy condition in which education is not held in honour."

VARIOUS PROBLEMS.

Mr. A. D. Hall, Director of the Rothamsted Experiment Station, Harpenden, Hertfordshire, contributed a highly useful paper on "Rural Education appropriate to Colonial Life." Agriculture in South Africa, he said, showed that the kind of teaching which was required was one which would turn out experts on the one hand and practical farmers on the other. He advocated the establishment of practical schools, and for industries experimental institutions similar to those in Hungary.

UNIVERSITY FEDERATION.

Miss Clark explained the present position of higher education of women in South Africa; and a paper on the disabilities of the South African schoolboy, by Mr. Way, Principal of Graaf Reinet College, was read in the author's absence.

In the course of a general discussion on educational questions, Prof. Loveday strongly protested against the idea of university federation. He said he had received a large number of letters from colonial and new universities in Great Britain, and the weight of opinion against federation was overwhelming.

Miss Harvey declared that until South Africa could produce its own women teachers it was desirable that they should be imported from England. Prof. Ritchie advocated the establishment of a great teaching university at Cape Town as the best means of reconciling racial differences.

MATHEMATICS.

In the Mathematical and Physical Section Prof. Forsyth gave a very comprehensive summary of the progress of scientific discovery during the last three centuries. In this Section something of the nature of a sensation was created by a remarkable paper by Mr. Jeans, of Trinity College, Cambridge, on "The Theory of Argol Variables," which incited the enthusiastic interest of Prof. Darwin, Sir David Gill, and other astronomers. The general consensus was that Mr. Jeans's contribution was the most remarkable of the present meeting.

REVIEWS.

SUDERMANN.

Hermann Sudermann: Poète dramatique et Romancier. Par Henri Schoen, Agrégé de l'Université, Docteur-ès-Lettres, Chargé de Cours à l'Université d'Aix-Marseille. (3 fr. 50. Paris: Didier.)

Dr. Schoen is well known in England and America as an educationist, and at home his versatile pen has made his mark also in the regions of metaphysical, theological, dramatic, and literary exposition and criticism, especially on historical lines, to say nothing of his academic functions at Poitiers and at Aix-Marseille. Moreover, he brings special qualifications to his present task of appreciating Sudermann and his works. "Comme membre du 'Théâtre Libre' de Berlin, il a assisté aux débuts de Sudermann sur la scène allemande. Chargé pendant plusieurs années de la critique théâtrale pour l'un de nos plus grands journaux de l'Europe centrale," says the publisher, "il a suivi avec sympathie l'évolution et les progrès de la scène allemande depuis vingt ans. Ancien élève des Universités de Berlin et de Munich, il a connu personnellement la plupart des jeunes auteurs réalistes de l' 'Ecole Moderne.'" Such intimacy, however, does not deflect Dr. Schoen's judgment: his leaning is indeed favourable, and his admiration is open, but none the less his criticism is free.

First he sketches the moulding foreign influences—French, Scandinavian (meaning Norwegian), and Russian, but not English—upon German dramatic literature since 1860, and the internal influences, adverse and favourable (especially the establishment of the Freie Bühne in Berlin, 1889) to the development of the Ecole Moderne (Die Moderne). He finds that, while Sudermann's early works betray too much imitation of modern French writers, his later works present "des héros bien allemands, dans un milieu bien germanique." "En un mot, Sudermann est bien le poète de son temps et de son pays; et c'est dans la mesure où il est le représentant et le critique de son époque qu'il nous instruit et nous intéresse." For the highest achievement one looks for a wider interest and instruction, and that is supplied, to some extent, in the detailed examination of his works—"nouvelles, romans, études de mœurs, drames, comédies, tragédie biblique et conte dramatisé," a mass and variety of production constituting at least one element of greatness. Sudermann finds his own feet in "Magda." "Dans *Magda*, toutes ces influences étrangères, parfaitement légitimes du reste, se sont harmonieusement fondues, ou plutôt il n'y a plus qu'un seul auteur. Sudermann s'est enfin trouvé lui-même." "Enfin, l'art technique et la délicatesse des sentiments, la beauté de la forme et la vérité des émotions vont s'unir dans un drame qui obtiendra l'approbation des critiques d'art" (except that "pour rendre le contrast plus saisissant il a cru devoir forcer les caractères, et il l'a fait, semble-t-il, plus qu'il n'était nécessaire"), "sans faire naître les craintes des moralistes" (pages 152, 170). "*Magda* marque l'apogée de la popularité, sinon du talent dramatique de Sudermann" (page 305). The "qualité maîtresse" of Sudermann is found to be his exact observation—so much so that "on dirait quelquefois que l'écrivain allemand est resté absorbé dans les caractères extérieurs et n'a plus eu le temps de pénétrer dans les replis les plus cachés de l'âme de ses personnages"; and, notwithstanding Sudermann's psychological efforts, M. Richard Meyer affirms that his characters "n'ont que la vérité du moment présent." His "esprit satirique" is more especially prominent in his earlier works, where he does not scruple to ridicule the foibles of his countrymen, and to utter "assez de sarcasmes" on "les mensonges de convention et les soirées mondaines" and the like. His verse shows "un peu trop l'effort du poète," though he has moments of "l'élan lyrique ou la note sentimentale, si rare dans l'école réaliste." But it is in the matter of the author's work that Dr. Schoen takes the principal interest (page 314):

Sudermann aime à poser les plus grands problèmes de la vie moderne: qu'est-ce que l'honneur, qu'est-ce que l'art véritable, quels sont les droits et les devoirs de la femme, quelles sont les limites de l'autorité paternelle, qu'est-ce que le foyer ou la patrie, qu'est-ce que le vrai bonheur, quels sont les droits de la famille ou de la société, du patron ou des travailleurs? Il aime à présenter ces questions sous leur faces les plus diverses, à plaider tour à tour le *pour* et le *contre*, à nous faire entendre les arguments opposés. Mais il donne rarement une réponse nette et précise.

Again (page 327):

Il est difficile de caractériser les œuvres de Sudermann mieux que

l'auteur lui-même. Pourquoi lui demander plus qu'il n'a voulu nous donner? Satisfaire aux aspirations les plus élevées d'une partie de la génération de son temps, répondre à l'attente des esprits *actuellement* vivants et tourmentés, donner une forme artistique à leurs revendications, à leurs angoisses, à leurs plaintes, à leurs griefs et à leur révolte, leur présenter une image fidèle de leurs préoccupations et de leurs luttes, leur fournir les moyens de mieux comprendre leur tâche quotidienne, de se justifier à eux-mêmes leurs convictions ou leurs espérances, n'est-ce pas là un but assez élevé pour un poète dramatique? No doubt; but the deeper question is how it is done—the artistic characters of the literary presentation. To this point Dr. Schoen addresses himself, more or less, in his review of Sudermann's successive works, pointing out the gradual development of his *technique*. Still, the purely literary criticism is much subordinated to the subject-matter and the technicalities of mechanism. Altogether, however, the volume presents a most interesting account of Sudermann's life and work, with independent criticism within the limits indicated; and it throws instructive sidelights on the general literary and dramatic situation in the Germany of the period.

MODERN LANGUAGE TEACHING.

The Teaching of Modern Languages. By Leopold Bahlsen, Ph.D. Translated by M. B. Evans. (2s. 6d. Ginn.)

The author of this book is, or has been, an *Oberlehrer* in the Realschulen of Berlin, and Lecturer on Methods of French and German Teaching in the Teachers' College of Columbia University, and has played his part in Germany as an advocate of the *neuere Richtung* or reformed method. His object is to give an historical account of the growth of that method and some details as to its working. In his historical sketch he goes back to the time when Latin was the only language studied and the object was to put the student in a way of speaking and writing it from first-hand acquaintance with the classical authors. Melancthon, known as the "Praeceptor Germaniae," while dwelling on the importance of grammar, did not look upon it as an end in itself. Even in his time less stress was laid upon speaking Latin, and Luther actually had to tell teachers "to open the mouths of their children." Before long grammar, from being the servant in the acquisition of languages, became the master, and the "logical schooling" of the youthful intellect became a catchword. Protests were raised by eminent schoolmasters, notably by Ratich and Comenius, whose "Orbis Sensualis Pictus" anticipates many of the ideas now in vogue. The sketch of the history of Latin teaching is carried down to the middle of the nineteenth century, when a certain Dr. Kröger denounced the established method as leading to aversion to learning and to dullness of intellect.

Passing to the teaching of modern languages, we read of Meidinger (1756-1824), whose methods are familiar to us through his pupil and successor Ollendorff; of Jacotot, whose motto was "Tout est dans tout," and whose *tout* was practically Fénelon's "Télémaque"; of Hamilton, associated with interlinear translation; and of other inventors of methods; and, finally, of Ploetz, till lately "the undisputed monarch of French teaching in German schools." Of Ploetz's mastery of French and his clearness of statement Dr. Bahlsen speaks in the highest terms, but he deplores the absence from his books of any encouragement of the practical application of the living language. Before proceeding to more recent developments, he devotes a little space to the methods of self-instruction adopted by Schliemann, which remind us of the equally original methods of the great Arabic scholar E. H. Palmer. To pass on, the herald of the new method in Germany was Hermann Perthes, who in 1875 published a pamphlet on the reform of Latin teaching. It was followed by articles by Count Pfeil and by Moritz Trautmann; in 1882 appeared the epoch-making tractate of Vietor, who under the pseudonym of "Quousque tandem?" published "Der Sprachunterricht muss umkehren." Dr. Bahlsen briefly analyses Vietor's pamphlet (which, it appears, has not been translated into English) and gives a rapid sketch of the progress made by his ideas in Germany. It is sufficient to refer to an official manifesto of 1890 to the effect that in the higher schools the oral and written employment of the foreign languages shall be placed in the foreground and that grammar shall be treated merely as means to an end. Further ordinances, extorted by the persistence of the reformers, to whom their method became a sort of religion, recognized phonetic transcripts, free composition in the foreign language, and the discussion in that language of passages read in lieu of translation, as admissible deviations from established methods.

Among other improvements in teaching Dr. Buhlson com-

mends two steps taken by Prof. Martin Hartmann, of Leipsic—the organization of international correspondence between school-boys and the arrangement for peripatetic English and French elocutionists to visit various towns and read literary masterpieces to the pupils in the schools. He also dwells on the importance of *Realien*, in many cases illustrated by pictures of a better type than Hölzel's too familiar wall pictures of the seasons. Subsequent chapters are devoted to phonetic instruction, which, according to the author, should be the first stage, and the "analytic-inductive" method of teaching grammar—that is, the teaching of grammar direct from the reading book. Of the latter he gives some well selected examples, but a reading book combining literary merit with adaptation to the method is still a *desideratum*. On the whole, Dr. Bahlsen's sympathies are with the more moderate reformers, known in Germany as *Vermittler*: he recognizes that for English-speaking nations, whose language is practically uninflected, it is extremely difficult to dispense with systematic grammar. The book concludes with some sensible observations on the choice of German reading books.

ERASMUS AS EDUCATIONIST.

Desiderius Erasmus concerning the Aim and Method of Education.

By William Harrison Woodward, Professor of Education in the University of Liverpool. (4s. net. Cambridge University Press.)

"It may be reasonably maintained," says Prof. Woodward, "that of all the activities of Erasmus none was more congenial to him, none more characteristic, none of more influence in his own age and subsequently, than that which was concerned with education." His purpose, then, is to set forth this educational activity, disengaged as far as possible from other aspects of the work of the master. Accordingly he presents a sketch of the life of Erasmus, mainly in regard to his career as a scholar, and, in immediate connexion therewith, an exposition of "Characteristics," with a view to precise realization of "the appeal which Antiquity made to Erasmus and the message which he believed it to convey to the modern world."

Antiquity, as Erasmus read it, made this twofold appeal to him: the first, that of a social-cultural ideal, capable of being harmonized with the Christian ideal, and so fit for the modern age; the second, that of an intellectual type deeply congruous with his own. It is in the operation of this double attraction that we find the explanation of his zeal for the study of the ancient world, and, it may be added, the key to certain limitations and inconsistencies which we shall note in his interpretation of it.

Two sections on particular aspects—the Ciceronian controversy and the attitude of Erasmus towards the vernacular tongues of the day—are strikingly illuminative. In the latter Prof. Woodward summarizes the argument of Franciscus Floridus "as expressing the judgment of the group of scholars of whom Erasmus is chief."

In his third chapter Prof. Woodward comes to "The Educational Aim of Erasmus"—a social aim, though "we may perhaps doubt whether Erasmus had reached a clear reconciliation of social and individual aims in education." He sums up thus:

Briefly put, the only available material for instruction was that contained in the ancient writers. Partly, because through them alone could mind come into contact with mind. Partly, because subsequent inquiry had added nothing to the scientific wisdom therein contained. Partly, that outside of them there was no *organized* secular knowledge at all. And Erasmus knew that facts which, however interesting, are formless and unrelated have no value for the education of the young. Finally, the doctrine that education can only follow opinion is clearly realized. Erasmus is for ever proclaiming that "opinion" both in clergy and laity must be reformed before scholars can effect their ends. Rulers, parents, nobles must move before instruction can be moulded upon new lines. The absence of State organization throws the onus upon the Church and the governing classes. A new standard, a fresh subject of education, is impossible without the strong impulse of social, or professional, interest.

Then we have in detail "the Beginnings of Education" and "the Liberal Studies"—a concise, but very careful and complete, representation of the teaching of Erasmus in the various stages and in the various subjects. Prof. Woodward insists most properly that "in the study of Erasmus the text is the first, the second, and the third, authority"; and Part II. of the volume (pages 161-230) he devotes to a selection of Erasmian educational literature in English, "including the two treatises which best express the ordered views of their author upon Education," namely, the tract "De Ratione Studii" (which now, we imagine, appears for the first time in an English version) and the "De

Pueris Instituendis." There is a useful and fairly extensive "Chronological Outline," showing the principal dates of the life and writings of Erasmus, with contemporary events in the history of Humanism on the opposite page; very serviceable bibliographical lists; and a good index. The volume is comprehensive, thoroughly well considered, and most instructive. It is a very valuable and opportune contribution to the history of Education.

GENERAL NOTICES.

CLASSICS.

Corpus Poetarum Latinorum. Edited by J. P. Postgate. Fasc. V. (6s. net. George Bell.)

This part completes a work of notable scholarship and careful labour, most creditable to Prof. Postgate and his colleagues, and to the printers and publishers, who have combined to lay a weighty obligation upon all serious students of Latin poetry. The present fascicle contains Martial (by J. D. Duff), Juvenal (by Prof. A. E. Housman), and Nemesianus (by Heinrich Schenkl and Prof. Postgate).

The Teaching of Latin. By W. H. S. Jones, M.A. (1s. net. Blackie.)

Mr. Jones wishes "to show what a classical course can do for a boy, even though the time devoted to it be strictly limited." Even a boy, within the ordinary time-table, ought to do a considerable deal of Latin in three years. Mr. Jones lays out plans for three successive years, and much that he recommends—especially by way of method—is sure to reward adoption in practice. But one cannot get away from the impression that more progress would be made—that is to say, time and temper would be saved—if the study were commenced later, after the boy had been better prepared to grapple with the subject. At one point, Mr. Jones says: "Suppose a teacher is beginning work with a class of young scholars who know no grammar and cannot yet understand what a declension is." Any such supposition seems preposterous: it implies the doing of a right thing at a wrong time, or in the wrong order of procedure. The preliminary chapter on classics in schools may be useful in some quarters, though it does seem waste of time to prove the value of Latin and Greek and to argue that they can be profitably taught in secondary schools. The little essay, however, is all in the right direction.

Messrs. Blackie have just added to their series of "Latin Texts" the four books of the *Odes of Horace*, in separate volumes (6d. net each), with a concise and fresh introduction by Dr. Rouse, the general editor. The naturally long vowels are marked throughout. The type and get-up are excellent. The series is sure to find much favour.

MATHEMATICS.

An Elementary Treatise on Graphs. By George A. Gibson, M.A., F.R.S.E. (3s. 6d. Macmillan.)

Not a very large volume, but a text-book that acquires a special importance when compared with the minor publications which have appeared recently and which are intended to form supplementary chapters to well known elementary works on algebra. Mr. Gibson's book deals with this branch of mathematical science in a manner at once thorough, connected, and attractive. The earlier portions are presented in a form suitable even for the beginner, whilst the more advanced student will find the treatise adequate for much of his higher work. It discusses the subject in many of its principal developments, and considers those amongst its numerous applications which are of primary interest and admit of discussion by means of elementary mathematics. Many and varied problems in geometrical and physical science and others based on statistics are either treated fully for the sake of illustration or proposed as exercises for the student. The data in a large number of specified instances are the more valuable because they have been furnished by actual observation and experiment. In the course of his brief preface the author dwells on the importance of assigning its true position to graphical work. Until very lately but little general use was made of graphical methods, and now the tendency is to make them so prominent that there is some danger lest analysis may suffer. As usual, what is desirable is the happy medium—the recognition that, in a sense, graphical representation and analysis may, perhaps, be regarded as complementary instruments of investigation. Each is powerful for special purposes, and a problem is often best understood if considered from the two standpoints. Mr. Gibson's work will prove a thoroughly acceptable text-book, supplying a definite want.

Preliminary Practical Mathematics. By S. G. Starling, B.Sc. Lond., A.R.C.Sc. Lond., and F. C. Clarke, B.Sc. Lond., A.R.C.Sc. Lond. (1s. 6d. Edward Arnold.)

Written principally, but not exclusively, for students attending classes and requiring some knowledge of elementary mathematics to aid them in the course of a technical education. The authors have been able to bring long experience in the teaching of such students to bear upon their work, and the little volume will doubtless serve a

useful purpose, although the best methods are not invariably adopted, and the manual is not entirely free from inaccuracies.

Practical Geometry with Mensuration. (1s. Oliver & Boyd—Educational Series. Simpkin, Marshall, & Co.)

A suggestive and useful course in elementary geometry. The pupil gains a knowledge of the groundwork of the subject principally as the result of the "accurate use of ruler, compasses, protractor, and set-squares." The treatment in general is satisfactory, though rather superficial owing to the wide range which the material of so small a volume is made to cover. The exercises may be divided into two classes, including, on the one hand, those which are experimental and lead up to the enunciation of theorems; and, on the other, those that form series of tests of the knowledge already acquired.

Elementary Plane Geometry. By V. M. Turnbull. (2s. Blackie.)

A good and instructive introduction to deductive geometry designed to follow a course of experimental and practical work. To derive full benefit from the text, however, the book should be studied under an untiring and competent teacher, consistently careful to elicit from the young pupil the many reasons for arguments which may perhaps appear to be superfluous in print, but the constant repetition of which forms an essential part of a thorough training in elementary geometry.

FRENCH.

(1) *A Junior French Grammar.* Edited by L. A. Sornet and M. J. Acatos, B. ès L., ès Sc. (2s. Methuen.)—(2) *Latour's New Course of French: First Part of Vol. I., Lessons i.-vii.* (2s. net. Schulze, Edinburgh.)—(3) *Siepmann's Primary French Course, Second Part.* (2s. 6d. Macmillan.)—(4) *Bell's French Course.* By R. P. Atherton, M.A. Part II. (1s. 6d. George Bell.)—(5) *French Lessons on the Gouin Method.* By F. Thémoin, B. ès L., Principal of the Gouin Schools of Languages, London. Vols. I. and II. (2s. 6d. net each. Hachette.)—(6) *A New First French Reader and Writer.* By Prof. R. J. Morich. (2s. Swan Sonnenschein.)—(7) *New French Course for Schools.* By Charles Copland Perry, M.A., Ph.D., and Dr. Albrecht Reum. Part I. (1s. 6d. Macmillan.)

(1) About one-half of the book is given to the main points of the formal grammar; the second part consists of exercises, well devised and variously illustrative; then follow examination papers and vocabularies. If the grammar and the exercises be judiciously worked together, the results should be good. The work has been carefully and thoughtfully executed. (2) is "based on Gouin's method made etymological and grammatical." Lessons on pronunciation and orthography are alternated with lessons on grammar and elaborately treated vocabularies; and footnotes are abundant and discursive. The handling is freely unconventional. The multitudinous references, especially in the vocabularies, are probably wasted: not one student in a thousand, we should think, will heed them, except under direct compulsion. (3) consists of a reader—thirty lessons describing a trip to France (each illustrating a chapter in Part I. of the work), with some miscellaneous passages—a grammar (leading principles and rules only), and a varied series of exercises, with phraseology and vocabulary appended. It should be very effective in the hands of teachers and pupils that will follow the author's directions for its use. (4) offers nine lessons worked out in full; next, a series of prose passages (short stories) to be treated similarly, and a number of poetical pieces for repetition; then, a summary of grammar; and, finally, sentences for translation. Special attention is bestowed on the main uses of the subjunctive. A bright and practical book, with illustrations. (5) exemplifies the Gouin system authoritatively, with breadth of scope, and with great fertility of adaptation. After all, the English and the French expressions have to be brought together; but, given a fair vocabulary or else situations inevitably suggesting the meaning, the Gouin practice will be very rewarding. The latter half of the second volume mainly consists of extracts in French, with very slight notes. (6) is a new issue of the work by R. J. Morich and W. S. Lyon, M.A. Oxon., which was published in 1890 and has gone through nine editions. Now it has been "entirely rewritten" by Prof. Morich, though still framed on the same general principles. The Reader is the foundation, and the Writer is based on its subject-matter and vocabulary. The grammar is systematic, details being rigidly excluded. A very attractive, practical, and serviceable book. (7) is a well considered and skilfully executed first book "based on the principle of the direct method, combining the practical use of the living language with a systematic study of grammar." "The special features of the book are the *Phrases à compléter*, the *Arithmétique*, the *Division du Temps*, and the *Devoir* which concludes each lesson." The graduation is markedly careful.

ENGLISH.

Longmans' Class-books of English Literature.

(1) *Tales of King Arthur and the Round Table*, adapted from "The Book of Romance" by Andrew Lang, and furnished with brief introduction and notes by J. C. Allen, and with 20 charming illustrations by H. J. Ford (1s.), will be extremely interesting to younger readers. (2) *The Lays of Ancient Rome, with Iury and The Armada* (Macaulay), provided with a short biography by David Salmon, and with introduc-

tion and notes by J. W. Bartram, M.A. (1s.), will delight the new generation of school folk. (3-6) Then Scott is well represented: *The Lay of the Last Minstrel*, with introduction and notes by Fred. W. Tickner, M.A. (1s.); *Marmion*, with introduction and notes by Guy Kendall, B.A. (1s. 6d.); *The Lady of the Lake*, with introduction and notes by W. Horton Spragge, M.A. (1s. 6d.); and *The Talisman* (abridged), with introduction and notes by J. Thornton, M.A. (1s. 4d.). All the volumes have a very interesting and judicious biography of Scott by Andrew Lang; and (3) and (6) have "Questions" appended, and (5) has "Examination Papers" and "General Questions" as well—but, mercifully, they are neither numerous nor unreasonable. (7-9) *Paradise Lost* (Milton), Books I.-III., in separate volumes (6d. each), have a biography by D. Salmon, and argument and notes by W. Elliott, M.A. The series is efficiently edited and beautifully printed and got up. It cannot fail to be attractive, and it will do much to foster the habit of reading and the taste for good literature.

Elements of English Composition. By Tuley Francis Huntington, A.M. Harv., recently Member of the Faculty of the Leland Stanford Junior University. (3s. 6d. Macmillan.)

The book is "designed for use in secondary schools," and it is written in a breezy practical style that will catch and hold the attention of pupils that have any "spunk" in them (as Mr. Huntington might phrase it). The author labours to inculcate the notion that young compositors "must be taught at the start, not 'rules' of writing, but habits of writing"; and insists that "the only order on which the whole course in English composition should be based is the order a trained writer lays down for himself more or less instinctively in the writing of a specific composition"—first prevision, then revision. Accordingly, Part I. (pages 1-128) deals with "planning and writing"—first with "the whole composition" (choice and limits of subject, gathering materials, selection, arrangement, rough draft), and then with the paragraph. Part II. (pages 129-203) has to do mainly with "rewriting." "No one whose mind is wholly possessed by the desire to write something, and who also has something to write . . . ever stops to think of the sort of sentences he is writing," says Mr. Huntington; and so, after you have written something, more or less impetuously, you come to consider your sentences and your words. Then Part III. (pages 205-346) expounds four "kinds of writing"—letter-writing, narration, description, explanation and argument. Remarks on the preparation of school manuscripts and on punctuation are relegated to an appendix. There is much good practical matter in the book, with not a little exuberance; and the virtue of it perhaps lies more in its brisk directness of manner than in the newness or the validity of its precepts.

The Tempest, in Messrs. Blackie's "Red Letter Shakespeare," edited by E. K. Chambers, is a very charming volume, with an unusually piquant introduction (1s. 6d. net leather; 1s. net cloth). It appeals alike to the book-lover and to the general reader.

EDUCATION.

The Educational Theory of Immanuel Kant. Translated and edited by Edward Franklin Buchner, Ph.D. Yale, Professor of Philosophy and Education in the University of Alabama. (6s. Lippincott. Educational Series.)

Prof. Buchner's translation of the "Ueber Pädagogik," which apparently was completed before he saw Miss Churton's translation, runs from page 101 to page 222, with numerous footnotes, which will prove extremely serviceable. Supplementing the treatise, and completing Kant's contribution to the general theme of education, are "Selections" (pages 223-291), all newly translated, from Kant's other technical and popular writings. These are interesting and suggestive; but many of them can hardly be regarded as educational, except in the very widest sense. These "Lecture-Notes" of Kant, as the editor of the series puts it, "are of great practical value, because they consistently unfold in outline a rational pedagogic system: the vital matter is not wholly what system they unfold, but rather that they do unfold a system." They are to be reckoned with as the thoughts of a very great thinker, by no means as absolute pronouncements, but as stimulating inquiry, and it is well to note "the fact that Kant had a perennial interest in education and the relation of its practices to the philosophical doctrines which he was slowly working out in the eighties." Prof. Buchner, indeed, reminds us that the late Dr. Thomas Davidson "set forth Kant as the most important historical individual in the whole of modern education." The Introduction treats very fully (pages 11-94) the sources, the philosophical, psychological, and evolutionary bases, and the limitations of Kant's educational theory. It will reward careful study. A selection of the literature of the subject is convenient and helpful.

The Democratic Ideal in Education. By R. E. Hughes. (1s. net. Charles & Dible.)

Mr. Hughes believes that a certain "unreasoning admiration of some of our people (some, indeed, of the best friends of education) for foreign systems of schools is a most serious danger to our own schools," and sets about showing "that, although we may learn much, we dare copy but little, from the foreign schools"—"we must work

out our own salvation, we must dare to be ourselves." Sketching a curriculum for a complete English education, he works out the main features to this general form: "the right of each child of the State to complete growth; the solidarity of the national school; the independence of each of its parts and of itself as a whole; the solidarity and unity of the curricula of the schools; the solidarity of the teaching profession; and, lastly, the recognition of the sanctity of the personality of each child." Then he discusses his ideal in practice, and shows how the difficulties of realization may be overcome. It is in the field of "so-called secondary education" that "England's lamentable lack is at once apparent"; but "in the primary school we need more trained teachers, and those better trained," and "we need to place our rural schools on an equality with our town schools." To put things right we need "mutual co-operation and self-sacrifice," and we must work "with no mean aim of immediate profit or commercial success," but with a view to "the common good, not of to-day nor of to-morrow only, but also of the many morrows yet to come." The handling is earnest, broad-minded, elevated, and lucid; and, if the ideal stretches away into far regions, yet it can be reasonably well accommodated to the practical realities of the present. The essay should be widely read and pondered by educationists.

Messrs. Williams & Norgate have issued "the forty-sixth thousand of the cheap edition" of *Spencer's Education* (2s. 6d.). The type is agreeable and the get-up tasteful.

THE VOICE AND MUSIC.

(1) *The Voice: its Downfall, its Training, and its Use.* (2) *Exercises for Technical Department.* By Charles Lunn. (3s. 6d. each. Reynolds.)

Mr. Lunn can't sing effectively, and he has already expounded the philosophy of voice. The present volume re-inculcates his principles, with occasional thrusts at differing schools and practitioners. Though tending to be pleasantly discursive, he puts his case with ability, as regards both theory and practice, and his book is well worth study. The exercises are progressive and well conceived.

Messrs. Novello publish *Three Pieces for Children*, for the pianoforte, composed by Hubert G. Oke, A.R.A.M. (2s. net) — bright and pleasant; *Novello's School Songs*, Book 119 (six unison songs, Grade III., by various composers, 8d.), Book 159 (six two-part songs, with accompaniment for two violins and pianoforte, 1s.), Book 160 (four two-part songs, with accompaniment for two violins and pianoforte, 8d.), and Book 162 (a garland of songs for children, Set I., 6d.) — all attractive; also a variety of new "Numbers" of the same popular series (2d., 3d., or 4d. each); and *The Yarn of the Nancy Bell* ("Novello's School Music" series, 1s.), a cantata or school song for soli and chorus of boys, words by W. S. Gilbert, music by T. Arthur Burton, which is sure to be very popular.

Music in Speech: Drama in Song—Queen Victoria Lectures delivered at Trinity College of Music, London, in July last, by Albert E. Drinkwater, M.A. (Oxon.)—are bright and suggestive addresses (6d., Hammond).

An excellent representative selection of *British Songs for British Boys*, by Sydney H. Nicholson, M.A., Mus. Bac. (Oxon.), is published by Messrs. Macmillan & Co. (6d.)

ART—DESIGN—DRAWING.

Messrs. George Bell & Sons have added to their very interesting series of "Handbooks to Continental Churches" an admirable monograph on *The Cathedral Church of Bayeux, and other Historical Relics in its Neighbourhood*, by the Rev. R. S. Mylne, M.A., B.C.L. Oxon., F.R.S. Scots, &c., with eleven excellent illustrations (2s. 6d. net). "The special excellence of the grand interior" lies in its deftly harmonious combination of Norman and Gothic work; and "no one can comprehend the great principles of the noble art of architecture without making a serious study of all the methods by which the marvellous transition from Norman to Gothic was effected towards the end of the twelfth century."

Messrs. Chapman & Hall publish a "Step by Step" Series of progressive *Brush Forms* for Standards I. and II. (1s. 6d. net each Standard), by H. Foster Newey. The development of forms is very gradual. The series affords scope for very useful practice.

Philips' Nature-Story Studies (Nos. 1-16, 6d.) are prettily outlined. They illustrate stories contained in Miss Edith Hiron's interesting volume, "In Nature's Storyland." The children will like them.

The "A.L." *Freshand Outlines of Famous Men*, by H. H. Stephens, A.C.P., offer a fresh variety of general interest. They are disposed in four books, each containing 12 portraits (2d. net), and also in two packets of 24 cards each (1s. 6d. each packet). The subjects belong to English history, from Alfred to Gladstone, and there is a short biographical summary at the foot of each copy. Messrs E. J. Arnold & Son are the publishers. The same firm also issue *The "A.L." Nursery Rhyme Tracings*, for crayon or brush-work, in two books, each containing 6 copies (2d. each book); and also in sixpenny packets, containing 24 sheets all alike. The "Tracings" are pretty and attractive.

A First Series of *Play Lessons in Modelling* (Harbutt's Plasticine) consists of 12 cards of designs, with one card of instructions. The system is attractive enough, and it promises to be distinctly effective. The cards exhibit great variety of form and colour.

AGRICULTURE.

The Education Committee of the Staffordshire County Council publishes an interesting joint report of *Field Experiments* conducted during 1904 in Staffordshire and Shropshire and at the Harper-Adams Agricultural College, Newport, Salop. The Committee, it may be noted, place the services of their agricultural instructor (Mr. John C. Rushton, F.H.A.S.) at the disposal of farmers in the county, so far as time permits, for advice upon all agricultural matters.

The Midland Agricultural and Dairy Institute (Kingston, Derby) issues a fresh batch of *Bulletins* for 1904-5, reporting experiments with (1 and 3) varieties of potatoes, and (4) barley, and field trials on (2) the manuring of seeds hay, and on (5) the manuring of mangels. The work of the Institute is carried on in conjunction with the County Councils of Derbyshire, Leicestershire, Lincolnshire (Lindsey), and Nottinghamshire.

MISCELLANEOUS.

Paton's List of Schools and Tutors, 1905. (1s. 6d. J. & J. Paton, 143 Cannon Street, E.C.)

This is the eighth annual issue. The contents are intended to "assist parents in their choice of schools, by placing before them in a concise and practical form particulars of many of the best English schools for boys and girls." The schools are classified in no fewer than fourteen lists, but there are other fourteen sections upon cognate institutions, with pertinent information: scholarships and exhibitions obtainable at boys' and at girls' schools; tutors for various special lines; naval, military, medical, agricultural, engineering, and other institutions; the Civil Service; physical training colleges, &c. A very large number of illustrations show the schools, &c. The information is given concisely, but in sufficient fullness to convey an adequate idea of the institutions; and "the publishers will be pleased to forward prospectuses of any of the schools, on application, free of charge." The volume has well over 1,000 pages, and is nicely got up. It ought to be very serviceable.

Mr. Fisher Unwin adds to his "Green Cloth Library" (6s. each) *Driven*, by Margaret Watson, a simple and sincere story illustrating forcibly the cruel fate of the working classes under the Corn Laws, specifically in the agricultural districts. "How's a man to live if he don't help himself?" And, if he do, then jail, transportation, or the scaffold, according to variety of circumstances. Men were "druv" to it. The characters are skilfully drawn, the turning-points of the plot are cleverly devised, and the interest is steadily maintained, though the broad issue is never in doubt.

Mr. Fisher Unwin also publishes a fresh and vigorous pamphlet on "Industrial Depression—its Cause and Cure," by Arthur Kitson (6d.). The cause is "an inequitable distribution of wealth resulting from our monetary and land systems." The cure is "to abolish them by repealing those inequitable laws and by nationalizing or socializing the instruments and factors of production." There still seems to be room for more discussion of the question.

The "Health Resort" continues to offer interesting and informative articles (with numerous illustrations) on eligible places for holidaying both at home and abroad. It is very much in season just now.

FIRST GLANCES.

CLASSICS.

Bell's Classical Translations.—The Iliad of Homer, Book XXIV. Translated into English Prose by E. H. Blakeney, M.A. 1s.

[Careful, independent, and scholarly. Mr. Blakeney "hopes to publish a rendering of the entire Iliad in due course."]

Blackie's Latin Texts.—Eutropi Breviarium. Edited by W. S. H. Jones, M.A. 8d.

[Best text in Britain, with introductory explanations; brief life; index of names; chief dates. "For the intermediate stage in the new system of language teaching." Good type; limp cloth, firm.]

Cicero's Rhetorischen Schriften, Schülerkommentar zur Auswahl aus. Von Dr. Richard Thiele, Kgl. Gymnasialdirektor. 1 m. 60 pf. geb. Williams & Norgate.

[Miscellaneous notes, fully and carefully explanatory.]

MATHEMATICS.

Algebra, A First. By W. M. Baker, M.A., and A. A. Bourne, M.A. With Answers. 2s. George Bell.

[Adapted from the first part of the authors' larger book. Emphasizes connexion with Arithmetic and Geometry; oral examples and revision papers. Lucid explanation; examples very numerous and varied. An excellent first book.]

(Continued on page 402.)

OXFORD UNIVERSITY PRESS.

BOOKS SET AND SUITABLE FOR CAMBRIDGE LOCAL EXAMINATIONS, 1906.

By DR. HENRY SWEET.

NEW ENGLISH GRAMMAR: LOGICAL AND HISTORICAL. Crown 8vo, cloth. PART I: Introduction, Phonology, and Accidence. 10s. 6d. PART II: Syntax. 3s. 6d.

SHORT HISTORICAL ENGLISH GRAMMAR. Extra fcap. 8vo, cloth, 4s. 6d.

PRIMER OF HISTORICAL ENGLISH GRAMMAR. Extra fcap. 8vo, cloth, 2s.

SHAKESPEARE. Extra fcap. 8vo, stiff covers. Edited by W. G. CLARK and W. ALDIS WRIGHT. *Henry the Fifth.* 2s. *Tempest.* 1s. 6d.

SCOTT'S LADY OF THE LAKE. Edited by W. MINTO. Extra fcap. 8vo, cloth, 3s. 6d.

SCHILLER'S MARIA STUART. Edited by C. A. BUCHHEIM. Extra fcap. 8vo, cloth, 3s. 6d.

CAESAR.—THE GALLIC WAR, Books VI-VIII. Edited by C. E. MOBERLY. Extra fcap. 8vo, cloth, 3s. 6d.

CICERO.—DE AMICITIA. Edited by ST. GEORGE STOCK. Extra fcap. 8vo, cloth, 3s.

HORACE.—ODES, CARMEN SAECULARE, and EPODES. By E. C. WICKHAM. Crown 8vo, cloth, 6s.

VIRGIL.—AENEID, Books IV-VI. Edited by T. L. PAPILLON and A. E. HAIGH. Crown 8vo, stiff covers, 2s.

EURIPIDES.—ALCESTIS. By C. S. JERRAM. Extra fcap. 8vo, cloth, 2s. 6d.

XENOPHON.—ANABASIS. The First Four Books. Fcap. 8vo, cloth, 1s. 6d. Each volume contains Introduction, Text, Notes, and a full Vocabulary to the Anabasis. Book I. By J. MARSHALL. Book II. By C. S. JERRAM. Books III and IV. By J. MARSHALL. And *Vocabulary to the Anabasis.* By J. MARSHALL. 1s.

TACITUS.—DE GERMANIA. VITA AGRICOLAE. Edited by H. FURNEAUX. 8vo, cloth, 6s. 6d. each.

HELPS TO THE STUDY OF THE BOOK OF COMMON PRAYER. By W. R. W. STEPHENS. Crown 8vo, cloth, 2s. 6d. net; also in leather bindings. Printed on Oxford India paper and bound with the Prayer Book, from 11s. 6d.

MANUAL OF THE FOUR GOSPELS. Edited by the late T. H. STOKOE, D.D. Crown 8vo, cloth, with Maps, 3s. 6d. Or, separately, PART I, The Gospel Narrative, 2s.; PART II, The Gospel Teaching, 2s.

MANUAL OF THE ACTS. By the same Author. Crown 8vo, cloth, 3s.

HISTORICAL GEOGRAPHY OF THE BRITISH COLONIES. By C. P. LUCAS, C.B. Crown 8vo, cloth.

Introduction. New edition by H. E. EGERTON. With Eight Maps. 3s. 6d. In cheaper binding, 2s. 6d.

Vol. I. The Mediterranean and Eastern Colonies. With Eleven Maps. 5s.

Vol. II. The West Indian Colonies. With Twelve Maps. 7s. 6d.

Vol. III. West Africa. Revised by H. E. EGERTON. With Five Maps. 7s. 6d.

Vol. IV. South and East Africa. Historical and Geographical. With Eleven Maps. 9s. 6d.

Also Part I. Historical. 6s. 6d. Part II. Geographical. 3s. 6d.

Vol. V. Canada, Part I. 6s.

A TREATISE ON STATICS WITH APPLICATIONS TO PHYSICS. By G. M. MINCHIN. 8vo, cloth.

Vol. I. Equilibrium of Coplanar Forces. 10s. 6d.

Vol. II. Non-Coplanar Forces. 16s.

ELEMENTARY PLANE TRIGONOMETRY. By R. C. J. NIXON. Crown 8vo, cloth, 7s. 6d.

PRACTICAL WORK IN GENERAL PHYSICS. By W. G. WOOLLCOMBE. Crown 8vo, cloth, 2s. each part.

Part I. General Physics. Part II. Heat. Part III. Light and Sound. Part IV. Magnetism and Electricity.

EUCLID REVISED, containing the essentials of the Elements of Plane Geometry as given by Euclid in his first six books, edited by R. C. J. NIXON. Crown 8vo, cloth, 6s.

Separately, Book I, 1s.; Books I, II, 1s. 6d.; Books I-IV, 3s.; Books V, VI, 3s. 6d.

GEOMETRICAL EXERCISES FROM NIXON'S EUCLID REVISED. With Solutions. By A. LARMOR. Crown 8vo, cloth, 3s. 6d.

THE "JUNIOR" EUCLID. By S. W. FINN. Crown 8vo, cloth. Books I and II, 1s. 6d. Books III and IV, 2s.

EXPERIMENTAL AND THEORETICAL COURSE OF GEOMETRY. By A. T. WARREN. With or without Answers. Crown 8vo, cloth, 2s.

GEOMETRY FOR BEGINNERS: an Easy Introduction to Geometry for Young Learners. By G. M. MINCHIN. Extra fcap. 8vo, cloth, 1s. 6d.

NOTES ON ANALYTICAL GEOMETRY. By A. CLEMENT JONES. Crown 8vo, cloth, 6s. net.

NEW EDUCATIONAL BOOKS.

MA PREMIÈRE VISITE À PARIS. Par A. E. C. Being an Elementary French Reading Book. Crown 8vo, cloth, with Illustrations. [*Nearly ready.*]

OXFORD MODERN FRENCH SERIES. Edited by LEON DELBOS, M.A. Crown 8vo, cloth. Two New Vols.

LA RÉVOLUTION FRANÇAISE. By MIGNET. Edited by A. L. DUPUIS. 240 pp., 3s.

MÉMOIRES D'UN TOURISTE. By STENDHAL. Edited by H. J. CHAYTOR. 116 pp., 2s.

COMBINED GERMAN READER, WRITER, AND GRAMMAR. By H. G. SPEARING, M.A. 8vo, cloth. [*Immediately.*]

DER UNGEBETENE GAST, and other Plays in German. For Reading and Acting. Second Series. With Notes and Vocabulary. By EMMA S. BUCHHEIM. Extra fcap. 8vo, cloth, 2s. 6d.

GREEK READER. Vol. I. Selected and Adapted, with English Notes, from Prof. VON WILAMOWITZ-MOELLENDORFF'S "Griechisches Lesebuch." By E. C. MARCHANT. Crown 8vo, cloth, 2s.

PLAUTI COMOEDIAE. Edited by W. M. LINDSAY. Tomi I et II. Crown 8vo, paper covers, 5s.; cloth, 6s. Together, on Oxford India paper, 16s. [*Oxford Classical Texts.*]

ELEMENTARY CHEMISTRY. Progressive Lessons in Experiment and Theory. Part I. By F. R. L. WILSON, M.A., and G. W. HEDLEY, M.A. 8vo, cloth. [*Ready early in September.*]

A CLASS-BOOK OF ELEMENTARY CHEMISTRY. By W. W. FISHER, M.A., F.C.S. Fifth Edition. Crown 8vo, cloth. Revised and Enlarged, with Fifty-nine Engravings on Wood. 4s. 6d.

ELEMENTARY MODERN GEOMETRY. Part I. Experimental and Theoretical. (Chap. I-IV.) Triangles and Parallels. By H. G. WILLIS, M.A. Crown 8vo, cloth. [*Immediately.*]

THE TRAVERSING OF GEOMETRICAL FIGURES. By J. COOK WILSON. Crown 8vo, cloth. [*Immediately.*]

- Algebra, Elementary. By W. G. Borchardt, M.A., B.Sc. 4s. 6d. Rivingtons.
[On modern lines. Numerous examples; answers; test papers.]
- Algebra, Examples in. By Charles M. Clay. Head Master of Roxbury High School, Boston, Mass. 4s. net. Macmillan.
[8,000 exercises and problems carefully graded. "An attempt has been made to approach each subject from as many standpoints as to offer as great a variety as possible." Ample and excellent materials, the basis of over twenty years' teaching.]
- Algebra, The Three-Term. By C. W. Crook, B.A., B.Sc. Lond., and W. H. Weston, B.A. Lond. Book III.: Simultaneous and Quadratic Equations, with problems involving the same; Equations solvable like Quadratics; Square Root. 6d. Jack (Mathematical Series).
- Algebraical Functions, Graphs of, of the First and Second Degrees. By W. Mudie, F.E.I.S. 8d. Jack (Mathematical Series).
- Algebraical Grounding. By D. E. Shorto, M.A. 1s. net. Rivingtons.
- Arithmetic, Examples in (with some notes on method). By C. O. Tuckey, M.A. 3s. (with or without Answers). George Bell.
["A complete course for classes in which the bookwork is supplied by the teacher." Follows reform tendencies.]
- Arithmetic: McDougall's Junior Scholarship Tests. 1s. 3d. net.
[32 cards, each containing 12 questions graduated. Answers. Well devised and arranged. Very helpful.]
- Arithmetic, The Primary. Part I. Edited by Wm. Briggs, LL.D., M.A., F.C.S., F.R.A.S. 6d. cloth, with or without Answers. University Tutorial Press.
[Two more parts, uniform, are in preparation.]
- Arithmetic, The Three-Term. By J. W. Iliffe, M.A. Books I.-III. 2d., 4d., 4d. Jack (Mathematical Series).
- Arithmetic, Westminster, Scheme B. Standards 1-7. 1-4, 2d. net each; 5-7, 3d. net each. Answers, 1-4 and 5-7, 4d. net each.
- FRENCH AND GERMAN FOR CLASS READING.
- Arnold's French Reading Books. Mémoires d'un Ane. Par la Comtesse de Ségur. Edited by Lucy E. Farrar, B.A. Lond. 1s.
[Interesting for youngsters; 25 careful "exercices"; vocabulary.]
- Arnold's French Texts. (1) Crispin Rival de son Maître. Comédie en un acte, par Le Sage. (2) Deux Héroïnes de la Révolution: Mme. Roland, Charlotte Corday. Par Jules Michelet. (3) Laurette, ou Le Cachet Rouge. Par le Comte Alfred de Vigny. (4) Mercadet. Comédie en trois actes et en prose (édition abrégée). Par H. de Balzac. 6d. each.
[New series, graduated, with notes and vocabulary. Excellent and varied matter, carefully edited, well printed, and substantially got up. The general editor is M. A. Gerothwohl, B.Litt., L. ès L.]
- German Plays, Short: Second Series. Der ungebetene Gast, and other plays. By E. S. Buchheim. 2s. 6d. Clarendon Press.
[Six plays. Plenty of action; language suitable for beginners; notes mainly translations of idiomatic phrases. Must prove very serviceable.]
- Heath's Modern Language Series. Zadig, and other stories (Voltaire). Chosen and edited by Irving Babbitt, Assistant Professor of French, Harvard University. 1s. 6d.
[The other stories are: Micromégas, Le Monde comme il va (vision de Babouc), Jeannot et Colin, and Histoire d'un bon Bramin. Brief literary introduction, slight notes, vocabulary. Handy and attractive.]
- Macmillan's French and German Reading Books—Primary Series. Emile et Hélène. A French Primer, by Mrs. J. G. Frazer. 1s.
["The story is all about a little boy Emile and his sister Hélène and their cousins and aunts. He first tells his own story, then talks with his family, and then his grandmother tells the children a fairy tale." Grammatical exercises (by M. L. Chonville, B. ès L. Cæu); vocabulary.]
- Rhymes, Easy French; being French Versions of English Nursery Rhymes. By Henri Blouet, B.A. 1s. Methuen.
[English and French on opposite pages. Clever and interesting.]
- Rivingtons' New Junior French Texts. Histoire de la Princesse Rosette. Par la Comtesse de Ségur. Edited by W. G. Hartog, B.A. Lond. 1s.
[Notes, oral exercises, passages for retranslation, "questionnaires," and vocabulary. Two illustrations. Attractive.]
- Technical Schools, German Reader for. By Ewald F. Secker. 2s. Blackwood.
[Useful selection, chiefly physical and chemical. Vocabulary.]
- EDUCATION.
- Board of Education. (1) Regulations for the Training of Teachers and for the Examination of Students in Training Colleges (Cd. 2,568). 4½d. (2) Outline Scheme for teaching Hygiene and Temperance to the scholars attending Public Elementary Schools. 1d.
- (3) Suggestions for the consideration of Teachers and others concerned in the work of Public Elementary Schools (Cd. 2,638). 8d. (4) Circular 603: Manual Work in Secondary Schools.
- Froebel and Pestalozzi, The Educational Ideas of. By J. H. Boardman, B.A. Lond., L.C.P. 1s. 6d. net. Normal Press (Normal Tutorial Series).
[Brief sketch "primarily written to meet the requirements of the Teachers' Certificate Examination of the Board of Education." Systematic and clear; examination questions; biographies of F. and P.; notices of prominent educational reformers before or contemporary with F. and P.]
- Home-Education Series. Vol. I.: Home-Education. Vol. IV.: Ourselves. By Charlotte M. Mason. 3s. 6d. net each. Kegan Paul, Trench, Trübner, & Co.
- Industrial Training in Public Elementary Schools. By Edric Bayley, L.C.C. 1d. Cornell (63 Borough Road, S.E.).
- Music, The Study of, as a means of Education (with other addresses). By Edgar Mills. With Preface by Mrs. S. Bryant, D.Sc., Litt.D. 1s. net. Oxford: Blackwell; London: Simpkin, Marshall, & Co.
[Comprehensive and sensible.]
- Number Pictures, Model Lessons on the. By A. Sonnenschein and H. A. Nesbitt, M.A. 1s. Swan Sonnenschein.
[Fifth edition, revised and enlarged. Has justified itself.]
- Ontario. Report of the Minister of Education for 1904. Parts I. and II. Toronto: Cameron.
- Pestalozzi, Fröbel, Herbart: Three Historical Educators. By Dr. F. H. Hayward. 6d. net. Ralph, Holland, & Co.
[Vigorous and distinctive; popular; suggestive.]
- Rabelais, The Teacher's. By Geraldine Hodgson. 1s. Blackie.
[Free rendering of selected passages from Gargantua and Pantagruel, with instructive introduction, biographical, literary, and educational. Very interesting and judicious.]
- Tolstoy as a Schoolmaster. By Ernest Crosby. 6d. net. Fifield (Simple Life Series, No. 10).
[Brings together a considerable range of Tolstoy's ideas in a very interesting manner.]
- United States. Report of the Commissioner of Education for 1903.
[Exhaustive. Many special articles; one on "Some Early English Writers on Education," by Prof. Foster Watson.]
- Victoria. Report of the Minister of Public Instruction for 1903-4. Melbourne: Braine.
- Yorkshire, West Riding of. County Council Education Committee. Handbook: Part II., Higher Education, Sections 1-6; new edition.
- MUSIC AND GAMES.
- Just before Bedtime. Six little Songs for Good Children, by Elphinstone Thorpe, music by J. M. Capel. 2s. 6d. net.
- Novello's Octavo edition of Two-part Songs for Female Voices. No. 135, Charming Chloe, by Robert Burns, music by E. T. Sweeting. 3d.
- Novello's School Music. (1) Orpheus, cantata for soprano and alto voices and orchestra, words by Wordsworth, music by George Rathbone. 1s. 6d. (2) The Witch of the Wood, an operetta for children, in one Act, words by Mrs. Willoughby Wallace, music by John W. Ivimey. 2s.
- Novello's School Songs. No. 329, Children's Fire Drill Song (Marching Orders), by Louisa Newsham, music by Percy E. Fletcher. 3d. No. 701, A Sailor's Song of the Sea, two-part song, by Barry Cornwall, music by Charles Hoby. 2d. No. 762, Name of England, two-part song, by Mrs. Hemans, music by Charles Hoby. 2d. No. 763, Stars of the Summer Night, two-part song with *ad lib.* accompaniment, by Longfellow, music by James Rodger. 1½d. No. 795, Slumber, Beloved, unison song, by Rev. J. Troutbeck, music by J. S. Bach. 3d. No. 796, To Music, unison song, by Mary Bradford Whiting, music by Franz Schubert. 1½d. No. 797, Huntsman, rest, unison song, by Sir Walter Scott ("Lady of the Lake"), music by F. Schubert. 1½d. No. 799, Angels, ever bright and fair, recitative and air, composed by Handel ("Theodora"). 1½d. No. 810, La petite Ecole, action song and recitation in French for junior classes, libretto and actions arranged by E. Hocquard, music arranged by Thomas Facer. 4d. No. 815, A Cradle Song, a trio for female voices, words by William Blake, music by H. Walford Davies. 3d. No. 830, A Gipsy Pair, two-part song, words from the German of Alberta von Puttkamer, music by Karel Bendl. 3d.
- Novello's Songs. Vol. II.: Thirty-six Classical Songs by various Composers. 1s. 6d.
- Song Games and Ball Games. Adapted for school use by Kate Bremner. 3s. 6d. net. Philip.
[Music, except in one case, Swedish. 35 photographs and 12 diagrams. Attractive; excellent.]

. . THE . .

BRITISH EMPIRE

Is the Latest Volume of
THOMAS NELSON & SONS'
NEW GEOGRAPHICAL READERS.

The World and its People.

A SERIES OF MODERN GEOGRAPHICAL READERS, ADAPTED TO
 THE SPECIMEN SCHEMES OF THE BOARD OF EDUCATION.

This Volume contains 368 pages, 16 Coloured Plates, numerous Maps and Black-and-White Illustrations, and a Summary of the Geography of the British Empire, with pronunciation of difficult names.

~~~~~ Cloth, price 1/10. ~~~~~

Messrs. T. NELSON & SONS claim that the books of this Series are the most attractive and instructive Geographical Readers ever issued in this country. They are written in a bright picturesque style, and describe in a simple but thoroughly interesting way the various aspects, physical, political, and ethnographic, of the countries with which they deal. As Supplements to the Geography lesson they are unrivalled, and the children enjoy them as much as story books. The Illustrations are of remarkably high quality, and comprise not only many well-executed illustrations in black-and-white, but numerous plates in full colours. The Maps, too, are a special feature. These books have earned the hearty commendation of educational experts and the educational press.

### LIST OF THE SERIES.

#### FIRST STEPS IN GEOGRAPHY.

144 pages. 8 Coloured Plates. Price 10d.

#### SEA AND LAND.

160 pages. 8 Coloured Plates. Price 1s.

#### ENGLAND AND WALES.

208 pages. 8 Coloured Plates. Price 1s. 3d.

#### EUROPE.

272 pages. 16 Coloured Plates. Price 1s. 6d.

#### AMERICA.

286 pages. 8 Coloured Plates. Price 1s. 6d.

#### NOTE TO CORRESPONDENTS.

The Mathematical Editor has received an empty wrapper bearing post-mark:—"Culenburg, Aug. 11th, /05," and conveying no clue as to the contents originally enclosed in it.

15523. (A. M. NESBITT, M.A.)—A man, who has  $m$  hats of his own in his hall, is visited by  $n$  friends, each wearing a hat. They leave their hats with those of their host. When they are going away they are unfortunately not in a condition to distinguish between one hat and another. Find the chance that no guest takes away his own hat.

*Solutions (I.) by Professor M. W. CROFTON, F.R.S.; (II.) by Hon. G. R. DICK.*

There are  $n$  objects  $a, b, c, \dots$ , each of which has its proper place—say  $A, B, C, \dots$ —and there are besides  $m$  places  $X, Y, Z, \dots$ . If the  $n$  objects are distributed at random among the  $m+n$  places, to find the chance that no object shall be in its proper place.

It is easy to see that the number of ways the  $n$  objects can be distributed is  $(m+n)!/m! = (m+1)(m+2) \dots (m+n)$ .

Now this number consists of the cases (1) when all the objects are in their proper places, (2) when all but one are in their places, (3) when all but two are, and so on.

Let  $u_r$  = number of ways that  $r$  objects, each having a proper place, can be distributed among  $m+r$  places (as above) in such a manner that no object is in its place.

The number of cases (1) is 1. The number of cases (2) is  $nu_1$ : for suppose  $a$  the object out of its place: this gives  $u_1$  cases (it is evident that  $u_1 = m$ ); and there are  $n$  objects. The number of cases (3) is  $\frac{1}{2}[n(n-1)]u_2$ : for suppose  $a, b$  out of their places: this gives  $u_2$  cases; and the number of such pairs is  $\frac{1}{2}[n(n-1)]$ ; and so on. We infer that

$$(m+1)(m+2) \dots (m+n) = 1 + nu_1 + \frac{1}{2}[n(n-1)]u_2 + \dots + nu_{n-1} + u_n \dots (1).$$

By putting  $n$  successively equal to 1, 2, 3, ..., we can easily find  $u_1, u_2, u_3, \dots$  from this formula: thus  $u_1 = m, u_2 = 1 + m + m^2, \dots$

To find the general value of  $u_n$ , we have, from (1),

$$(m+1)(m+2) \dots (m+n) + u_0 - 1 = u_0 + nu_1 + \frac{1}{2}[n(n-1)]u_2 + \dots + u_n = (1+E)^n u_0,$$

where  $E$  is an operator increasing the variable by 1 in any function.

Also  $(m+1) \dots (m+n-1) + u_0 - 1 = (1+E)^{n-1} u_0,$   
 $(m+1) \dots (m+n-2) + u_0 - 1 = (1+E)^{n-2} u_0.$

Now  $u_n = E^n u_0 = (1+E-1)^n u_0;$

hence, from the above values for the powers of  $1+E$ ,

$$u_n = (m+1) \dots (m+n) - n(m+1) \dots (m+n-1) + \frac{1}{2}[n(n-1)](m+1) \dots (m+n-2) - \dots;$$

therefore  $u_n = \frac{(m+n)!}{m!} \left( 1 - \frac{n}{m+n} + \frac{1}{2!} \frac{n(n-1)}{(m+n)(m+n-1)} - \dots \right).$

Hence, dividing  $u_n$ , the number of favourable cases, by the whole number  $(m+n)!/m!$ , we have for the required probability

$$p = 1 - \frac{n}{m+n} + \frac{1}{2!} \frac{n(n-1)}{(m+n)(m+n-1)} - \frac{1}{3!} \frac{n(n-1)(n-2)}{(m+n)(m+n-1)(m+n-2)} + \dots$$

There are  $n+1$  terms. The terms  $u_0 - 1$  obviously disappear, as the sum of the binomial coefficients, alternately  $+$  and  $-$ , is 0.

*Note.*—The Problem is a very puzzling one. For the success of the modes of attack used by solvers in earlier volumes of *The Educational Times* and the *Reprint*, it is necessary to form the product of the following probabilities:—(1) the probability of A. not taking his own hat, (2) the probability of B. not taking his own if A. has not, (3) of C. not doing so if A. and B. have not, and so on; but it may be observed that the difficulty of solving on such lines would probably be very great. [Rest in Reprint.]

15819. (Professor NEUBERG.)— $a, b, c, R$  désignant les côtés d'un triangle ABC et le rayon du cercle circonscrit, trouver le maximum ou le minimum du rapport  $(a^2 + b^2 + c^2) : R^2$ .

*Solution by SARADAKANTA GANGULI, M.A.; Professor SANJANA, M.A.; and C. M. ROSS.*

$$\frac{a^2 + b^2 + c^2}{R^2} = \frac{4R^2(\sin^2 A + \sin^2 B + \sin^2 C)}{R^2} = 4(\sin^2 A + \sin^2 B + \sin^2 C) = u \text{ suppose.}$$

Then  $du = 0$ ; therefore  $\sin 2A dA + \sin 2B dB + \sin 2C dC = 0$ . Also  $dA + dB + dC = 0$ ; therefore  $\sin 2A = \sin 2B = \sin 2C$ . Therefore either

$$A = B = C = 60^\circ \dots (1),$$

or any two of  $A, B, C$  are each equal to  $0^\circ$  and the third =  $180^\circ \dots (2)$ .

(1) gives the maximum value, viz. 9; and (2) the minimum value, viz. 0.

15786. (I. ARNOLD.)—An equilateral triangle ABC is suspended at A and its side is kept vertical by a ring at B. It is required to find what the angular velocity of the triangle round AB must be in order that there may be no pressure at B.

*Solution by W. J. DOBBS, M.A.*

The resultant weight  $Mg$ , through the centre of mass  $G$ , and the reaction at A must be together equivalent to  $M\omega^2(a/2\sqrt{3})$  along  $CG$ , where  $a$  is the side of the triangle and  $M$  its mass. Hence, taking moments about the axis through A perpendicular to the plane of the triangle, we have

$$M\omega^2 \frac{a}{2\sqrt{3}} \frac{1}{2}a = Mg \frac{a}{2\sqrt{3}};$$

therefore  $\omega = \sqrt{\frac{2g}{a}}.$

15806. (Rev. F. H. JACKSON.)—Given

$$P_n(x) = \frac{[2n]!}{(2)_n [n]! [n]!} \left\{ x^n - p^3 \frac{[n][n-1]}{[2][2n-1]} x^{n-2} + \dots \right\},$$

in which the  $p$  prefixes of the terms of the series form the sequence

$$(p^3, p^8, p^{15}, \dots, p^{r(r+2)}, \dots),$$

and  $[n] = (p^n - 1)/(p - 1), (2)_n = (1 + p^n)(2)_{n-1}, [n]! = [n][n-1]!$ ,

show that  $\frac{[n]}{[2n-1]} \frac{P_n}{P_{n-1}}$  may be expressed as a continued fraction

$$\frac{\frac{[n]^2}{[2n+1][2n-1]} x^{n+2}}{x - \frac{[n+1]^2}{[2n+3][2n+1]} x^{n+3}} \dots$$

*Solution by the PROPOSER.*

It is easy to establish for  $P_n$  a recurrence form

$$[n] P_n = [2n-1] x P_{n-1} - p^{n+1} [n-1] P_{n-2},$$

reducing, in case  $p = 1$ , to the recurrence form of Legendre's function

$P_n$ ; hence  $\frac{[n+1] P_{n+1}}{[2n+1] P_n} = x - p^{n+2} \frac{[n] P_{n-1}}{[2n+1] P_n}$

and  $f_n \frac{[2n+1][2n-1]}{[n]^2} p^{-n-2} = \frac{1}{x-f_{n+1}} \dots\dots\dots (A),$

where  $f_n = \frac{[n] P_n}{[2n-1] P_{n-1}}$ .

From (A) the form of the continued fraction at once follows.

15794. (ROBERT W. D. CHRISTIE.)—Where  $p_n, q_n$  are any convergents of  $p_n^2 - 2q_n^2 = \pm 1$ , prove

$2 \tan^{-1} \frac{q_n}{q_{n+1}} \pm \tan^{-1} \frac{1}{p_{2n+1}} = \tan^{-1} 1 = \frac{1}{4}\pi \dots\dots\dots (1),$

$2 \tan^{-1} \frac{p_n}{p_{n+1}} \mp \tan^{-1} \frac{1}{p_{2n+1}} = \tan^{-1} 1 = \frac{1}{4}\pi \dots\dots\dots (2);$

and show that Euler's and Machin's series are simple cases (signs alternate).

*Solution by the PROPOSER.*

A few preliminary results are desirable.

(a)  $p_{n+1} = q_{n+1} + q_n, p_n = q_{n+1} - q_n \dots\dots\dots (1, 2);$

for  $p_{n+1}^2 - 2q_{n+1}^2 = \pm 1$  and  $p_n^2 - 2q_n^2 = \mp 1$  from the general equation. Adding and equating,  $p_{n+1}^2 + p_n^2 = 2(q_{n+1}^2 + q_n^2) = (q_{n+1} + q_n)^2 + (q_{n+1} - q_n)^2;$

thus  $p_{n+1} = q_{n+1} + q_n, p_n = q_{n+1} - q_n.$

(b) From (1), (2) by addition and subtraction,

$p_{n+1} + p_n = 2q_{n+1}, p_{n+1} - p_n = 2q_n \dots\dots\dots (3, 4).$

(c) We have, by *Reprint*, Vol. VI., p. 99,

$p_{2n+1}^2 + 1 = (p_{n+1}q_{n+1} + p_nq_n)^2 + (p_{n+1}q_n - p_nq_{n+1})^2;$

thus  $p_{2n+1} = p_{n+1}q_{n+1} + p_nq_n, \pm 1 = p_{n+1}q_n - p_nq_{n+1} \dots\dots\dots (5, 6).$

(d)  $2q_nq_{n+1} = q_{n+1}^2 - q_n^2 \pm 1$ , for  $p_{n+1}^2 - 2q_{n+1}^2 = \pm 1$  and  $p_{n+1} = q_{n+1} + q_n$ ; therefore  $2q_nq_{n+1} = q_{n+1}^2 - q_n^2 \pm 1.$

A. We have to show that  $2 \tan^{-1} \frac{p_n}{p_{n+1}} \mp \tan^{-1} \frac{1}{p_{2n+1}} = \tan^{-1} 1 = \frac{1}{4}\pi.$

$2 \tan^{-1} \frac{p_n}{p_{n+1}} = \frac{2p_n p_{n+1}}{p_{n+1}^2 - p_n^2} = \frac{2p_n p_{n+1}}{2q_{n+1} + 2q_n} = \frac{q_{n+1}^2 - q_n^2}{2q_n q_{n+1}} = \frac{q_{n+1}^2 - q_n^2}{q_{n+1}^2 - q_n^2 \pm 1};$

also  $p_{2n+1} = p_{n+1}q_{n+1} + p_nq_n$  where  $p_{n+1} = q_{n+1} + q_n$  and  $p_n = q_{n+1} - q_n$ ; thus  $p_{2n+1} = q_{n+1}^2 - q_n^2 + 2q_nq_{n+1} = 2q_n^2 - 2q_n^2 \pm 1.$

Now, for brevity, let  $a = q_{n+1}^2 - q_n^2$ ; thus the theorem to be proved is practically then  $p_{2n+1} = 2a + 1 = 2q_{n+1}^2 - 2q_n^2 + 1,$

$\tan^{-1} \frac{a}{a+1} + \tan^{-1} \frac{1}{2a+1} = \frac{\frac{a}{a+1} + \frac{1}{2a+1}}{1 - \frac{a}{(a+1)(2a+1)}} = \tan^{-1} 1 = \frac{1}{4}\pi.$

Again, let  $a = q_{n+1}^2 - q_n^2 - 1$ ; then  $p_{2n+1} = 2a + 1 = 2q_{n+1}^2 - 2q_n^2 - 1$ ; thus

$\tan^{-1} \frac{a+1}{a} - \tan^{-1} \frac{1}{2a+1} = \frac{\frac{a+1}{a} - \frac{1}{2a+1}}{1 + \frac{a+1}{a(2a+1)}} = \tan^{-1} 1 = \frac{1}{4}\pi.$

B.  $2 \tan^{-1} \frac{q_n}{q_{n+1}} \pm \tan^{-1} \frac{1}{p_{2n+1}} = \tan^{-1} 1 = \frac{1}{4}\pi,$

for  $2 \tan^{-1} \frac{q_n}{q_{n+1}} = \frac{2q_n q_{n+1}}{q_{n+1}^2 - q_n^2} = \frac{q_{n+1}^2 - q_n^2 \pm 1}{q_{n+1}^2 - q_n^2}.$

Let  $a = q_{n+1}^2 - q_n^2 + 1$ ; thus  $2a - 1 = 2q_{n+1}^2 - 2q_n^2 + 1$ ; therefore

$\tan^{-1} \frac{a}{a-1} - \tan^{-1} \frac{1}{2a-1} = \frac{\frac{a}{a-1} - \frac{1}{2a-1}}{1 + \frac{a}{(a-1)(2a-1)}} = \tan^{-1} 1 = \frac{1}{4}\pi;$

and again,  $a = q_{n+1}^2 - q_n^2 - 1$ ; then  $2a + 1 = 2q_{n+1}^2 - 2q_n^2 - 1$ ; therefore

$\tan^{-1} \frac{a}{a+1} + \tan^{-1} \frac{1}{2a+1},$

as before.

C. It follows, since A and B each equal unity, that

$\tan^{-1} \frac{q_n}{q_{n+1}} + \tan^{-1} \frac{p_n}{p_{n+1}} = \tan^{-1} 1,$

which is proved directly from the results given.

2357. (T. COTTEBILL, M.A.)—(1) If the determinant  $\begin{vmatrix} a & f & e \\ f & b & d \\ e & d & c \end{vmatrix}$  vanish, the equations

$\alpha (bz^2 + cy^2 - 2dxy) = \beta (cx^2 + az^2 - 2cxy) = \gamma (ay^2 + bx^2 - 2fxy)$

are satisfied by two conjugate pairs of values of the variables, one pair

being independent of the constants  $\alpha, \beta, \gamma$ . Find the equation to the quadric satisfying the values  $y = z = 0, z = x = 0, x = y = 0$ , and the last pair of values, and the linear equations satisfying each conjugate pair. (2) Show that such a system of equations is the analytical representation of the projection of the three circles described on the lines connecting the opposite points of intersection of four lines in a plane as diameters, the circle circumscribing their diagonal triangle, and the line at infinity.

*Solution by Professor NANSON.*

The locus of a point such that the tangents from it to two conics given tangentially by  $\Sigma = 0, \Sigma' = 0$  form a harmonic pencil is a third conic given punctually by  $S = 0$ , where the coefficients of  $S$  are linear in the coefficients of  $\Sigma$  and in those of  $\Sigma'$ . Hence, if  $\Sigma'$  belongs to a range, then  $S$  belongs to a pencil. Taking the four common tangents of the range to be  $\alpha\xi^2 = \beta\eta^2 = \gamma\zeta^2$ , we have

$\Sigma = (abcfgh)(\xi\eta\zeta)^2, \Sigma' = a'\xi^2 + b'\eta^2 + c'\zeta^2, S = a'A' + b'B' + c'C',$

where  $A' = bz^2 + cy^2 - 2fyz, \dots$ , and  $a'/\alpha + b'/\beta + c'/\gamma = 0$ .

The four vertices of the pencil are seen, by taking  $a', b', c'$  in turn to be zero, to be given by  $\alpha A' = \beta B' = \gamma C' \dots\dots\dots (1),$

and these are the equations given in the Question,  $d, e, f$  having been replaced by  $f, g, h$ . Now, if the discriminant  $\Delta$  of  $\Sigma$  vanishes, the three equations  $A' = 0, B' = 0, C' = 0$  have two common solutions, viz., the co-ordinates of the two points now given by  $\Sigma = 0$ . These two points—P, Q, say—are independent of  $\alpha : \beta : \gamma$  and are two of the four vertices of the pencil.

Now the co-ordinates of P, Q are given by

$\xi^2/A = \eta^2/B = \zeta^2/C = \eta\zeta/F = \zeta\xi/G = \xi\eta/H,$

where A, ... are the co-factors of a, ... in  $\Delta$ . Hence the equation of PQ is  $x/F + y/G + z/H = 0 \dots\dots\dots (2),$

and this is one of the linear equations asked for. By combining this linear equation with any one of the quadratic equations  $A' = 0, B' = 0, C' = 0$ , we readily find the quadric relation asked for to be

$ayz/F + bzx/G + cxy/H = 0 \dots\dots\dots (3).$

One of the conics of the range touches PQ, viz., the one determined by

$Aa' + Bb' + Cc' = 0,$

and the corresponding S conic is

$(1/\alpha)(BC' - B'C) + (1/\beta)(CA' - C'A) + (1/\gamma)(AB' - A'B) = 0.$

It is obvious from geometry that this conic breaks up into the line PQ and the join of the remaining two vertices of the pencil. Accordingly, we readily verify that the last equation breaks up, in virtue of the condition  $\Delta = 0$ , into (2) and

$\frac{1}{\alpha} \left( \frac{gx - az}{H} - \frac{hx - ay}{G} \right) + \frac{1}{\beta} \left( \frac{hy - bx}{F} - \frac{fy - bz}{H} \right) + \frac{1}{\gamma} \left( \frac{fz - cy}{G} - \frac{gz - cx}{F} \right) = 0 \dots\dots\dots (4).$

This is the second linear relation asked for.

The three conics (1) are conics of the pencil, and the corresponding conics of the range are flat conics coinciding with the diagonals of the quadrilateral formed by the four common tangents. Each of the three conics (1) is therefore the locus of a point at which PQ and one of the three diagonals subtend a harmonic pencil. When then P, Q are at the foci of the conics (1) are the circles on the diagonals, their finite intersections are the two points defined by Clifford as the foci of the quadrilateral; (2) is the line at infinity; (3) is the circum-circle of the diagonal triangle; and (4) is the directrix of the parabola of the range.

15772. (R. W. D. CHRISTIE.)—Prove  $A^2 = B^2 + C^2$  (integers) when  $A = \sum_0^n \{(m+n)! / [2n!(m-n)!]\} (m \succ n).$

*E.g.,*  $m = 5, n = 5, 4, 3, 2, 1, 0$ ; then

$A = \sum_0^5 (1 + 9 + 28 + 35 + 15 + 1) = 8^2 + 5^2.$

*Solution by F. N. MAYERS, M.A.*

If we indicate the proposed expression by  $u_{2n-1}$ , and the parallel expression  $\sum_1^{n+1} \{(m+n)! / [(2n-1)!(m-n+1)!]\}$  by  $u_{2n}$ , then is  $u_l$  means the number of ways in which  $l$  playing cards can be dealt out without any succession of two or more red occurring if each card is returned to the pack every time. It can be immediately inferred from this that  $u_l$  obeys the law  $u_{l+1} = u_l + u_{l-1}$  (Art. "Probability," *Encyclopædia Britannica*, Section 1). But it can also be proved from the expressions themselves. The manner of addition is shown as follows:—

$u_5 = 1 + 5 + 6 + 1$   
 $u_6 = 1 + 6 + 10 + 4$   
 $u_7 = 1 + 7 + 15 + 10 + 1$   
 $u_8 = 1 + 8 + 21 + 20 + 5$

It appears, therefore, that the  $r$ -th term of  $u_l$ , added to the  $(r+1)$ -th term of  $u_{l+1}$ , is equal to the  $(r+1)$ -th term of  $u_{l+2}$ ; and this can be

shown to be always the case. It will be seen that  $u_{2n}$  has the same number of terms as  $u_{2n-1}$ ; hence, in this manner of addition, in adding  $u_{2n-1}$  to  $u_{2n}$ , there is unity overlapping one each side, and  $u_{2n+1}$  begins and ends in 1, as it should do; but, in adding  $u_{2n-2}$  to  $u_{2n-1}$ ,  $u_{2n-1}$  has one more term, and therefore no term overlaps at the end; so that  $u_{2n}$  begins with 1 and ends with  $n+1$ , as it should do.

To prove the  $r$ -th term of  $u_l$  +  $(r+1)$ -th term of  $u_{l+1}$  =  $(r+1)$ -th term of  $u_{l+2}$ . The  $r+1$ -th term of  $u_{2m-1}$  is  $(2m-r)! / [(2m-2r)! r!]$ . The  $(r+2)$ -th term of  $u_{2m}$  is  $(2m-r)! / [(2m-2r-1)! (r+1)!]$ . Their sum is  $(2m-r)! / [(2m-2r)! (r+1)!] (r+1+2m-2r)$

$$= (2m-r+1)! / [(2m-2r)! (r+1)!] = (r+2)\text{-th term of } u_{2m+1},$$

i.e.,  $u_{2n+1} = u_{2m} + u_{2m-1}$ . The  $(r+1)$ -th term of  $u_{2m}$  is

$$(2m-r+1)! / [(2m-2r+1)! r!];$$

the difference between this and the  $(r+1)$ -th term of  $u_{2m-1}$  is

$$(2m-r)! / [(2m-2r+1)! r!] - (2m-r+1 - (2m-2r+1))$$

$$= (2m-r)! / [(2m-2r+1)! (r-1)!] = r\text{-th term of } u_{2m-2},$$

i.e.,  $u_{2m} = u_{2m-1} + u_{2m-2}$ . Hence the relationship in question is proved, whether  $l$  is even or odd. The equation  $u_{n+1} = u_n + u_{n-1}$  gives  $E^2 - E - 1 = 0$ ; and, since  $u_1 = 2, u_2 = 3$ , we get, solving for  $E$ ,

$$u_n = (\alpha^{n+2} - \beta^{n+2}) / (\alpha - \beta),$$

where  $\alpha, \beta$  are roots of  $x^2 - x - 1 = 0$ . Then

$$\begin{aligned} & \left( \frac{\alpha^{n+2} - \beta^{n+2}}{\alpha - \beta} \right)^2 + \left( \frac{\alpha^{n+1} - \beta^{n+1}}{\alpha - \beta} \right)^2 \\ &= \frac{\alpha^{2(n+2)} + \beta^{2(n+2)} \pm 2\alpha^{2(n-1)} + \beta^{2(n-1)} \mp 2}{(\alpha - \beta)^2} \quad (\text{since } \alpha\beta = -1) \\ &= \frac{\alpha^{2n+4} + \beta^{2n+4} + \alpha^{2n+2} + \beta^{2n+2}}{(\alpha - \beta)^2} \\ &= \frac{\alpha^{2n+4} - \beta^{2n+3} + \beta^{2n+4} - \alpha\beta^{2n+3}}{(\alpha - \beta)^2} \quad (\text{since } \alpha\beta = -1) \\ &= \frac{(\alpha - \beta)(\alpha^{2n+3} - \beta^{2n+3})}{(\alpha - \beta)^2} = u_{2n+1}; \end{aligned}$$

therefore

$$u_{2n+1} = u_n^2 + u_{n-1}^2.$$

This proves the required relationship. It might, of course, be also deduced from the fact that the series 2, 3, 5, ... form numerators (or denominators) to successive convergents of the continued fraction

$$1 + \frac{1}{1 + \frac{1}{1 + \dots}}$$

It would, doubtless, be more elegant to prove the relationship

$$u_{2n+1} = u_n^2 + u_{n-1}^2$$

direct from the expression itself, without the intermediate relation

$$u_{n+1} = u_n + u_{n-1}. \quad [\text{Rest in Reprint.}]$$

15781. (Professor NEUBERG.)—Soit A le sommet d'une parabole. En un point quelconque M de cette courbe on mène une corde MN perpendiculaire à MA. Trouver le lieu du milieu de cette corde.

Solutions (I.) by J. A. H. JOHNSTON, M.A., and Professor SANJANA, M.A.; (II.) by W. AUSTIN SLEIGH, B.A., and L. ISSERLIS, B.A.; (III.) by A. M. NESBITT, M.A., and F. W. REEVES, B.A.

(I.) Let the chord be given by  $x'y'$  and  $x''y''$ , and be at right angles to the line from 0 to  $x'y'$ . If the middle point be  $(\xi, \eta)$ , and  $y^2 = 4ax$  the parabola,  $2\xi = x' + x''$  or  $8a\xi = y'^2 + y''^2, 2\eta = y' + y'' \dots \dots \dots (1)$ .

The direction of the chord is given by  $\tan \theta = 4a/(y' + y'') = 2a/\eta$ , where  $y'/x' = -\eta/2a$ , and therefore  $y' = -8a^2/\eta$  from (1); therefore

$$y''^2 = 8a\xi - 64a^3/\eta^2 \quad \text{and} \quad y'' = (2/\eta)(\eta^2 + 4a^2);$$

therefore

$$(\eta^2 + 4a^2)^2 = 2a\xi\eta^2 - 16a^4,$$

or the locus is

$$(y^2 + 4a^2)^2 = 2axy^2 - 16a^4.$$

[Rest in Reprint.]

15788. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Show that the product of the two series

$$1^3 + 2^3 + 3^3 + 4^3 + 5^3 + \dots + n^3, \quad 1^5 + 2^5 + 3^5 + 4^5 + 5^5 + \dots + n^5$$

may be represented as a single series.

Solution by C. M. ROSS and KELA DEVA RAU, B.A.

$$1^3 + 2^3 + 3^3 + \dots + n^3 = \frac{1}{4}n^2(n+1)^2,$$

$$1^5 + 2^5 + 3^5 + \dots + n^5 = \frac{1}{12}n^2(n+1)^2(2n^2+2n-1);$$

therefore the product of the series is  $\frac{1}{48}n^4(n+1)^4(2n^2+2n-1)$ , which may be taken as the sum of  $n$  terms of a certain series. Hence the sum of  $n-1$  terms of this certain series is obtained by putting  $n-1$  for  $n$ ; therefore

$$S_{n-1} = \frac{1}{48}n^4(n-1)^4(2n^2-2n-1).$$

Therefore the  $n$ -th term of the series

$$\begin{aligned} &= S_n - S_{n-1} = \frac{1}{48}n^4[(2n^2-1)\{(n+1)^4 - (n-1)^4\} + 2n\{(n+1)^4 + (n-1)^4\}] \\ &= \frac{1}{12}n^5(5n^4 + 8n^2 - 1). \end{aligned}$$

Thus the required single series is

$$1 + 296 + 9639 + \dots + \frac{1}{12}n^5(5n^4 + 8n^2 - 1).$$

2439. (T. COTTERILL, M.A.)—If  $a, b, c, d$  are collinear points as well as  $x, y, z, t$ , and in the same plane, then, of the sixteen intersections of  $ax, ay, bx, by$  with  $cx, ct, dz, dt$ , eight lie on one conic and eight on another. The four points of intersection of these conics lie on a third conic through  $a, b, x, y$  and a fourth through  $c, d, z, t$ , and these conics are respectively harmonics to the lengths  $(ab, xy)$  and  $(cd, zt)$ . Also the tangents to the four conics at any point of intersection are harmonic.

Solution by Professor NANSON.

Take the bases of the ranges as axes of  $x, y$ ; denote the eight points by  $a, b, c, d, a', b', c', d'$  and the reciprocals of their distances from the origin by  $a, b, c, d, a', b', c', d'$ , and let  $(aa') = ax + a'y - 1$ ; then the equation

$$S_1 \equiv \frac{(aa')(bb')}{(a-b)(a'-b')} - \frac{(cc')(dd')}{(c-d)(c'-d')} = 0$$

clearly represents a conic through the four meets

$$aa', cc'; aa', dd'; bb', cc'; bb', dd' \dots \dots \dots (1).$$

But  $S_1$  also passes through the four meets

$$ab', cd'; ab', dc'; ba', cd'; ba', dc' \dots \dots \dots (2).$$

For at the first of these meets we have  $ax + b'y - 1 = 0, cx + d'y - 1 = 0$ , and therefore at this point  $S_1$  reduces to

$$\frac{(a'-b')y(b-a)x - (c'-d')x(d-c)y}{(a-b)(a'-b')(c-d)(c'-d')},$$

i.e., to zero. Also  $S_1$  is not altered by interchanging  $c$  with  $d$  and  $c'$  with  $d'$ , or by interchanging  $a$  with  $b$  and  $a'$  with  $b'$ . Hence  $S_1$  passes through the eight meets (1), (2). It is obvious geometrically, and may be verified algebraically, that  $S_1$  can be put in the form

$$S_1 \equiv \frac{(ab')(ba')}{(a-b)(a'-b')} - \frac{(cd')(dc')}{(c-d)(c'-d')}.$$

Similarly, the other eight meets lie on a conic  $S_2$  where

$$S_2 \equiv \frac{(ad')(bb')}{(a-b)(a'-b')} + \frac{(cd')(dc')}{(c-d)(c'-d')} \equiv \frac{(ab')(ba')}{(a-b)(a'-b')} + \frac{(cc')(dd')}{(c-d)(c'-d')}.$$

Now we have identically

$$(a-b)(a'-b')(S_1 + S_2) = (aa')(bb') + (ab')(ba') \equiv S_3,$$

$$(c-d)(c'-d')(S_2 - S_1) = (cc')(dd') + (cd')(dc') \equiv S_4.$$

Thus the four meets of  $S_1, S_2$  lie on  $S_3$  and  $S_4$ , which go through  $aba'b', cdc'd'$  respectively. Again, since  $S_3$  is not altered when  $a, b$  are interchanged,  $S_3$  is harmonic to the lengths  $ab, a'b'$ . Also, since  $S_3, S_4$  are of the forms  $\lambda S_1 + \lambda S_2, \mu S_1 - \mu S_2$ , the tangents at any meet of the four form a harmonic pencil.

QUESTIONS FOR SOLUTION.

15840. (R. CHARTRES.)—Find the mean distance of all points within a square from one of the corners in terms of a parabolic arc. (Elementary proof.)

15841. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Jack and Jill run a race of 300 yards to the top of a hill, and then the same distance down the other side to a fixed goal. Going up the hill Jill takes 5 steps to Jack's 4, and going down takes 6 steps to Jack's 5. If their speed in ascending is half what it is in descending, and if the length of Jill's step to Jack's is as 3 to 4, how much start should be given to Jill in order that they may reach the goal together?

15842. (C. BICKERDIKE.)—Three motorists start from three different towns and meet at a junction and, on comparing notes, find that the sum of the distances travelled was a minimum, the distance of the places from each (as the crow flies) being  $a, d$ , and  $e$  miles respectively. Find the speed of each car, all starting and meeting at the same time, the time from starting to meeting being  $n$  hours.

15843. (OTTO MEISSNER.)—Required to show, by a single trial, that 20857 is a prime.

15844. (ROBT. W. D. CHRISTIE.)—Divide a straight line into two such parts that the square on one part shall equal three times the square on the other. Can it be solved generally?

15845. (Professor NANSON.)—If  $P_r$  is the arithmetic mean of the products  $r$  together of  $n$  positive quantities  $a, b, c, \dots$ , show that

$$P_r^2 - P_{r-1}P_{r+1} = k\Sigma(a-b)^2(\varpi_{r-1}^2 - \varpi_r\varpi_{r-2}),$$

where  $k$  is a positive numerical coefficient and  $\varpi_r$  is the sum of the products  $r$  together of the  $n-2$  quantities  $c, d, e, \dots$ ; and deduce that  $P_1, P_2^2, P_3^3, \dots$  are in descending order of magnitude.

15846. (H. CHENNAKESAVA IYENGAR.)—Solve the equations

$$\Sigma x(b-c) = \Sigma a(x-a^m) = \Sigma (b^n - c^n) a/x = 0.$$

15847. (Professor SANJANA.)—If  $a, b, c$  are all of one sign, and

$$\begin{aligned} & (b^2 + c^2 - a^2)^2 + (c^2 + a^2 - b^2)^2 + (a^2 + b^2 - c^2)^2 \\ &= (a+b+c)(-a+b+c)(a-b+c)(a+b-c), \end{aligned}$$

prove that  $a = b = c$ . Hence deduce that, when in a plane triangle  $\cot A + \cot B + \cot C = \sqrt{3}$ , the triangle is equilateral.

15848. (R. F. DAVIS, M.A.)—Solve the equations

$$(x^3 - 3acx)^2 = 4a^3c^3, \quad a^3x^6 + (b^3 - 3abc)x^3 + c^3 = 0 \dots (i., ii.)$$

15849. (Professor NEUBERG.)—On sait que les pieds M, M', M'', M''' des normales abaissées d'un point P sur une conique  $\Sigma$  sont sur une hyperbole équilatère  $\Sigma'$  passant par P et par le centre C de  $\Sigma$ . Étant donné l'hyperbole équilatère  $\Sigma'$  ( $xy = 1$ ) et les trois points M, M', M'' sur cette courbe, trouver (1) la relation entre les abscisses des points M, M', M'', M'''; (2) la relation entre les abscisses des points M, M', M'', P; (3) celle entre les abscisses des points M, M', M'', C.

15850. (C. E. YOUNGMAN, M.A.)—A parabola  $\pi$  and an ellipse  $\epsilon$  intersect at points A, B, C, D such that the centroid of ABC is both focus of  $\pi$  and centre of  $\epsilon$ ; the tangents at A, B, C to  $\pi$  and  $\epsilon$  form triangles  $A'B'C'$  and  $A_0B_0C_0$ ; the common tangents to  $\pi$  and  $\epsilon$  touch  $\pi$  at P, Q, R, V and  $\epsilon$  at  $p, q, r, v$ ; and the first three of them form a triangle  $P'Q'R'$ . Then (1) V is the vertex of  $\pi$  and P, Q, R lie on the sides of  $A_0B_0C_0$ , making  $A_0P, B_0Q, C_0R$  diameters of  $\pi$ ; (2)  $PpQ'R'$  is perpendicular to  $AA'$ ; (3)  $PQRVpqr$  are concyclic; (4) PQR has its orthocentre  $v'$  on its maximum inscribed ellipse; (5)  $rv'$  is a diameter of  $\epsilon$ , also polar of D in the triangle ABC; (6)  $pv', qv', rv'$  are normal to  $\epsilon$ ; (7) DV is tangent to  $\epsilon$ , also radical axis of circles ABC and PQR; (8) the axis of  $\pi$  is the pedal line of  $v$  in PQR and the polar of  $v$  in ABC; (9)  $\epsilon$  subtends a right angle at the centroids of PQR and  $P'Q'R'$ ; (10) the orthocentres of ABC,  $A'B'C'$ , and PQR are collinear; (11) normals to  $\pi$  at P, Q, R, and perpendiculars from  $P', Q', R'$  on the sides of  $pqr$  all meet on the Euler line of PQR; (12)  $2\Sigma \cot A = 3\Sigma \cot A'$ ; (13) the minimum eccentricity of  $\epsilon$  is  $\frac{1}{2}\sqrt{14}$ ; and many other particulars, especially when account is taken of the common self-polar triangle.

15851. (A. M. NESBITT, M.A.)—Two tangents ZP, ZQ are drawn to a parabola from a point Z on the directrix. The bisector of the angle PZQ cuts the curve in F, and the tangent at F meets PQ in K. Prove that the angle KZF is a right angle.

15852. (M. V. A. SASTRY, B.A.)—The normals at the points P, Q, R, S of an ellipse pass through the same point O and cut the ellipse again at  $P', Q', R', S'$ . If these points be concyclic, show that O lies on a hyperbola which cuts orthogonally all conics passing through the extremities of the axes of the ellipse.

15853. (S. C. BAGCHI, B.A.)—A pair of spheres of diameters  $d_1, d_2$  having internal contact at O is cut orthogonally by a second pair of spheres of diameters  $d_3, d_4$  and having internal contact at O. If

$$d_2^{-1} - d_1^{-1} = d_4^{-1} - d_3^{-1},$$

the spherical box so formed is inscribed in another sphere which is touched in a specific way by two other pairs of spheres circumstanced similarly to the first two pairs and passing through the same point O.

15854. (The late R. TUCKER, M.A.)—ABC is a triangle, D, E, F are the points of contact of the ex-circles with the sides BC, CA, AB. Find (i.) area of DEF, (ii.) the Brocard angle of DEF. Prove also that the equation to the circle DEF is

$$2 \Sigma a\beta\gamma = \Sigma a\alpha \Sigma \left( \frac{a \cos^2 \frac{1}{2}A - (b+c) \sin^2 \frac{1}{2}A}{s-a} \alpha \right).$$

15855. (D. BIDDLE.)—In the plane triangle ABC, suppose BC fixed, but A movable; also  $B = 2A, C < \frac{1}{2}\pi$ . Find the locus of A (for a range of C from  $\frac{1}{2}\pi$  to  $\pi$ ), and determine its variation from the circular arc whose centre is in BC produced and such that  $OC = \frac{1}{4}BC$ , and whose radius  $= \frac{1}{4}BC$ . Also estimate the error which would result from employing the aforesaid circular arc, instead of the proper locus, for the purpose of trisecting any angle less than  $\frac{1}{2}\pi$ , as represented by the external angle at C. Finally, on the radius bisecting the sector formed by joining O to the extremities of the aforesaid circular arc, find a point P from which, as centre, can be described another circular arc which shall afford a minimum of error in the above respect. [It is confidently expected that any attempt to depict the required locus and either one or the other circular arc as distinct curves, in any diagram drawn to scale and capable of insertion in *The Educational Times* or *Reprint* in the usual way, will prove futile.]

15856. (Professor COCHEZ.)—Trouver le lieu des points tels que leurs polaires relatives à trois cercles concourent en un même point.

15857. (Professor NEUBERG.)—Un cercle variable C touche deux cercles fixes A, B aux points D, E; soient D', E' les points du cercle C diamétralement opposés à D, E. Trouver (1) les lieux des points D', E'; (2) les enveloppes des droites DE', ED'; (3) l'enveloppe de la droite D'E'.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10450. (Professor CÉSARO.)—Démontrer que (1) les cercles osculateurs d'une courbe plane ne peuvent rencontrer un même cercle sous un angle constant; (2) il n'y a pas de courbes dont les sphères osculatrices rencontrent orthogonalement une sphère fixe. Y en a-t-il dont les sphères osculatrices rencontrent une même sphère sous un angle constant?

10743. (W. J. GREENSTREET, M.A.)—Prove that

$$\int_{-1}^{+1} A_n B^{-3} dy = \frac{2x^n}{1-x^2} \int_{-1}^{+1} A_n B^{-5} dy = \frac{4}{3} \frac{x^n}{(1-x^2)^2} \left( \frac{2n+3}{2} + \frac{2x^2}{1-x^2} \right),$$

where  $\sum_0^\infty A_n x^n = (1-2xy+x^2)^{-\frac{1}{2}} = B, \int_{-1}^{+1} A_n B^{-1} y = \frac{2x^n}{2n+1}$ .

10779. (Colonel CLARKE, C.B., F.R.S.)—Determine the positions in which a cube would float.

10792. (Professor SYLVESTER.)—If of a symmetrical matrix the determinant and the sum of the squares of all its first minors both vanish, prove that (1) the sum of the principal first minors must also vanish; (2) that the same thing will be true if, instead of the determinant, the sum of the principal second minors vanishes along with the sum of the squares of all its first minors; and (3) apply (1) to prove that a general quadratic function of  $n$  variables (with  $m$  conditions imposed as to the reality of its coefficients) can always be represented as a sum of the squares of  $n$  linear functions of the variables, unless the discriminant of the well known discriminating function of the  $n$ -th order related to the given quadric vanishes, in which case such representation in general becomes impossible to be effected.

10808. (Professor RAMASWAMI AIYAR.)—A body moves in space from one position to another. Show that volumes equal to those described by surfaces fixed in the body may be obtained by two motions of the body, one of them about and the other along a certain axis in the body.

10860. (H. J. WOODALL.)—Trace the curve

$$(a-x)^2 (x^2+y^2)^3 = 4x^2 [(a-x)^2 + y^2]^3.$$

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. VII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

KOH-I-NOOR

PENCILS

PEERLESS

**Best in every Way.**

Many firms have tried to make a better pencil than L. & C. Hardtmuth's. Years and years they have tried. But it hasn't been done yet. Ask the artist. Ask the student. Ask the photographer. Ask any one who uses a pencil. "Best"—the laconic unanimous answer, meaning

**HARDTMUTH'S.**

IN SEVENTEEN DEGREES for all Pencil Purposes.

## COLLEGE OF PRECEPTORS.

### Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

#### PRACTICAL PROBLEMS IN CLASS TEACHING.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Principal of the University of London Training College.

The Second Course of Lectures (Thirty-third Annual Series) will commence on Thursday, September 28th, at 7 p.m.

The purpose of the Course is to present the theory of teaching in the way most suited for application to the ordinary work of a class. In the ultimate resort, every teacher must apply for himself the theory of his profession, but he may be greatly helped by observing how others have dealt with the problems that he must face. To this end the lectures will be very copiously illustrated throughout by references to the teaching of all the subjects of the ordinary school course, while particular attention will be given to those subjects that must be taught by all teachers who are not specialists. The Lecturer will base his suggestions on the state of things actually existing in schools.

#### SYLLABUS.

I.—*Class Management.* Nature of a class. Difference from a group of individuals. Sympathy of numbers. Fallacy of "the average." Common and peculiar qualities. The class as unit, Class leaders. Laws of interaction of the elements of the class. Troublesome elements and their treatment.

II.—*Class Teaching.* Contrasted function of private coach and class teacher. Class must be taught as a whole; yet may be taught through individuals. Advantages and disadvantages of teaching by types. The intellectual lowest common denominator of a class. Teacher's duty to brilliant and to dull pupils. Different class-standing of pupils according to subject. The average boy.

III.—*Art of Exposition.* Nature and function of exposition. Often regarded as the whole of teaching. Distinction from "telling." Essentially a process of analysis followed by synthesis. Relation between content of pupil mind and teacher mind. Law of consecutive clearness. Stages in the process. Rhythm of concentration and diffusion of attention. Place of integration and re-integration.

IV.—*Lecturing.* Unipolar form of exposition. Cause of its popularity. Where successful it is bipolar. Suitable where material has been gathered, but not arranged. Room for it all through school course, but size of lecture-unit should increase directly as the stage of advancement of the pupils. University rank. Note-taking in school work, and its relation to the lecture and the text-book.

V.—*Socratic and Heuristic Teaching.*—Both essentially dialectic. Applicable to all subjects, though perhaps specially to science. They differ in aim and in process. The *Zielangabe*. Difference of application of *interest* in the two methods. The Socratic irony and the torpedo shock. Heuristic stimulus. Limitations of the methods, and illustrations from common school subjects.

VI.—*Concentric Method and Correlation.* The concentric method in relation to the "rapid impressionists." Illustration from geography teaching. The test of a good "concentric" text-book. In ultimate analysis all teaching is concentric. Correlation is the complement of the concentric method. Selection of "core" subjects. Extravagances of correlation. Illustrations from American school syllabuses. Results of actual experiments in the application of correlation.

VII.—*Art of Illustration.* Nature and function. Psychological bases. Analogy. Kinds: (a) Verbal, as figures of speech, exemplification, types, the attendant circumstance; (b) Material, as actual objects, models, pictures, diagrams. The point of view. Appeal to the preferred sense. Dangers of illustration.

VIII.—*The Use of the Blackboard.*—Appeal to sense. Writing as important as drawing in connexion with form. Distinction between rough and slovenly drawing and writing. Blackboard pictures v. diagrams. Mechanical aids. Coloured chalks. The optics of the blackboard. Eye-strain, and how to prevent it. Excessive use.

IX.—*The Mother Tongue.*—The art of intercourse. The three vocabularies of the individual. Analysis v. synthesis of sentences as educational processes. Place and function of grammar. The fundamental principle in teaching composition. The elimination of self-consciousness. Forms of composition exercise—narration, description, letter, paraphrasing, essay. Suggested subjects.

X.—*The Mechanism of Reading.* Purpose for which art of reading is acquired. Visual and audible elements in reading. The place of reading aloud and silent reading. Various methods of teaching to read. The resulting powers of reading as an acquirement. Various degrees of "block" reading.

XI.—*Spelling and Dictation.* Different purposes of spelling and dictation as school exercises. Static and dynamic elements. Oral spelling easier for audiles, written spelling for visuals. Dangers of the "awful example." Classification of errors in dictation—graphic, phonetic, psychic—causes and treatment of each.

XII.—*Arithmetic.*—Counting and calculating. Cornical arithmetic. Essential distinction between arithmetic and algebra. Importance of the imagination and clearly imaged ends. Elimination of the units in calculation means the turning of fact into faculty. Disturbing power of consciousness. Formulæ, as in simple interest. Donaldson's reduction of all arithmetic to the equation.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\*\* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.

C. R. HODGSON, B.A., Secretary.

# From WILLIAMS & NORSGATE'S LIST.

## DELBOS' FRENCH READERS.

**The Student's Graduated French Reader.** For the use of Public Schools. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., of H.M.S. "Britannia." 12th Edition. 166 pp. Crown 8vo, cloth, 2s. II.—Second Year: Historical Pieces and Tales. Edited, with Notes, by LEON DELBOS, M.A., of H.M.S. "Britannia," late of King's College, London. 6th Edition. 180 pp. Crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.

"The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times*.

**Little Eugène's French Reader.** For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. 4th Edition. Crown 8vo, cloth, 1s. 6d.

This Reader is intended for young children who have mastered the most elementary rules of French accidence, and who know their regular verbs.

## HUGO'S LES MISÉRABLES.

**Les Misérables.** Les Principaux Episodes. Edited, with Life and Notes, by J. BOÏELLE, late Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s. 6d.

"A worthy addition to our stock of French reading-books which will be welcomed by numberless masters. . . . M. Boiëlle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education*.

"Has done extremely well in putting forth his selection of the most striking episodes of Victor Hugo's masterpiece, and has done it well."—*Educational Times*.

## HUGO'S NOTRE DAME.

**Victor Hugo—Notre Dame de Paris.** Adapted for the use of Schools and Colleges. By J. BOÏELLE, B.A., Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s.

"His notes abound in good renderings of sentences and phrases, opportune remarks on the proper meanings of words, and historical information necessary to elucidate the text."—*Athenæum*.

"His famous work, adapted with commendable taste and judgment, . . . presents every factor which could be put together to make a perfect school-book."—*Spectator*.

"Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school-book."—*Scotsman*.

## BOÏELLE'S FRENCH COMPOSITION.

Crown 8vo, cloth, 3s. per Volume.

**Boiëlle (James).—French Composition through Lord Macaulay's English.** Edited, with Notes, Hints, and Introduction, by JAMES BOÏELLE, B.A. (Univ. Gall.), Senior French Master, Dulwich College, &c., &c.

Vol. I. Frederick the Great. Vol. II. Warren Hastings.

Vol. III. Lord Clive.

"This volume is obviously the work of a practical teacher, produced, or rather begotten, not in the closet, but in the class-room, and—what is rarer—of a teacher equally conversant with both languages. In reviewing the two previous volumes we explained and expressed our approval of M. Boiëlle's method of teaching French composition, and it is sufficient to say that the present essay is as fully and judiciously annotated as the two previous ones."—*Journal of Education*.

## KIEPERT'S ATLAS ANTIQUUS.

**Kiepert's Atlas Antiquus.** Twelve Maps of the Ancient World. For Schools and Colleges. By Dr. HENRY KIEPERT. Twelfth Edition. Improved, Corrected and Enlarged, with List of Names. Now Ready. Third Hundred Thousand. Folio, boards, 6s.; cloth, 7s. 6d.

## MEDICAL INDOOR GYMNASTICS.

Recently published, demy 8vo. 3s. net, with large Plate and numerous Illustrations in the Text.

**Medical Indoor Gymnastics; or, a System of Hygienic Exercises for Home Use.** To be practised anywhere without Apparatus or Assistance by Young and Old of either Sex, for the Preservation of Health and General Activity. By D. G. M. SCHREBER, M.D., late Director of the Orthopædic and Medicinal Gymnastics Institution in Leipzig. Revised and Supplemented by RUDOLF GRAEFE, M.D. Translated from the 26th German Edition. Invaluable to both Teachers and Scholars.

## EUGÈNE'S GRAMMAR, EXERCISES, AND METHOD.

**The Student's Comparative Grammar of the French Language.** With an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises. By G. EUGÈNE FASNACHT, late French Master, Westminster School. 21st Edition, thoroughly revised. Square crown 8vo, cloth, 5s. Or separately, Grammar, 3s.; Exercises, 2s. 6d.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern as well as of ancient languages. . . . The rules and observations are all scientifically classified and explained. . . . Mr. Eugène's book is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times*.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum*.

**French Method.** Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. 17th Edition. Crown 8vo, cloth, 1s. 6d.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

"To those who begin to study French, I may recommend, as the best book of the kind with which I am acquainted, 'Eugène's Elementary Lessons in French.' It is only after having fully mastered this small manual and exercise-book that they ought to begin the more systematic study of French."—Dr. BREYMANN, Lecturer on the French Language and Literature, Owens College, Manchester (Preface to "Philological French Grammar").

**Comparative French-English Studies, Grammatical and Idiomatic.** Being an entirely re-written Edition of the "French Exercises for Middle and Upper Forms." Sixteenth Edition. Cloth, 2s. 6d.

## ROGET'S FRENCH HISTORY, LITERATURE, &c.

**First Steps in French History, Literature, and Philology.** For Candidates for the Scottish Leaving Certificate Examinations, the various Universities' Local Examinations, and the Army Examinations. Crown 8vo, cloth, 5s.

"This manual will be a boon to many who have neither time nor inclination to work through a large volume on the history of French literature, but who yet desire to obtain a knowledge sufficient to enable them to pigeon-hole their reading of French prose and poetry."—*Educational Times*.

**An Introduction to Old French.** By F. F. ROGET, of Geneva University, late Tutor for Comparative Philology, Edinburgh. History, Grammar, Chrestomathy, and Glossary. 2nd Edition, with Map of French Dialects. Crown 8vo, cloth, 6s.

## GERMAN GRAMMAR, LITERATURE, IDIOMS, &c.

**Apel's Short and Practical German Grammar for Beginners.** With copious Examples and Exercises. 3rd Edition. 12mo, cloth, 2s. 6d.

Intended for students who cannot command a sufficient amount of time for a full acquisition of that difficult tongue, but who nevertheless wish to obtain a fair knowledge of it within a brief period, and in the least laborious manner possible.

**A Short Sketch of German Literature.** Prepared for the Scottish Leaving-Certificate Examinations. By VIVIAN PHILLIPPS, B.A., Fettes College. Thoroughly Revised. 2nd Edition. Pott 8vo, 1s.

**Weisse's Short Guide to German Idioms.** Being a Collection of the Idioms most in use; with Examination Papers. 8vo, cloth, 2s.

This book of German Idioms will be found to be a fairly complete collection of such phrases as come under this designation, being commonly used both by good writers and in ordinary conversation; while the arrangement in alphabetical order of the characteristic or cue-words will make it easy for the student to refer to any particular expression.

## HOW TO LIVE.

JUST READY. 2nd Edition. Stiff Cover. 3d.; post free, 4d.

**How to Live.** A Short Account in Simple Words of the Laws of Life, with brief reference to Habits and Conduct. Written for the Older Pupils in Primary Schools. By RICHARD CATON, M.D., F.R.C.P., J.P., &c., Consulting Physician, Liverpool Royal Infirmary, Emeritus Professor of Physiology, University of Liverpool.

# RELFE BROTHERS' BOOKS

For OXFORD LOCAL EXAMINATIONS, 1906, &c.

**Scripture Manuals.** By G. CARTER, M.A. With very full Notes on Authorised and Revised Versions, Maps, &c., containing all the Information required for Local Exam. work.

**Old Testament History.** From the Descent into Egypt to the election of Saul. [In preparation.]  
St. Luke. Acts of the Apostles. 1s. 6d. each.

**Public Examination Scripture Manuals.** By A. RICHES, F.R.G.S.  
St. Luke. 1s. 6d. Acts of the Apostles. 1s. 6d.  
\* Specially prepared for Teachers' use or Private Instruction.

**Notes on the Church Catechism.** By H. WORSFOLD. Together with a Selection of Questions from recent Local Examination Papers. 8d.

**The Local Examination Geography of the World.** By A. G. HAYNES, B.A. Edited by G. CARTER, M.A. Compiled from the latest and most reliable statistics. Thoroughly up-to-date, special attention being paid to *Commercial Geography*. Fully Illustrated with Maps and Diagrams. Cloth, 1s. [Just published.]

**A New Geography of Great Britain and Ireland.** By A. G. HAYNES, B.A. Special for Preliminary. Arranged as suggested in the Syllabus. With 6 excellent Maps (three Commercial). Crown 8vo, cloth, 8d.

**A School Geography and Atlas.** By G. CARTER, M.A. Ninth edition, entirely reset and brought up-to-date with new coloured Maps. The best Geography for all Pass and Competitive Examinations. Crown 4to, cloth, 2s. 6d.

**The Local Examination Physiography.** By W. J. PERRY, M.A., LL.D. Syllabus in PHYSIOGRAPHY and PHYSICAL GEOGRAPHY. With Illustrations, Diagrams, and Maps. A selection of RECENT QUESTIONS.

Special Edition to cover all the Requirements of the Syllabus for 1906 in Mathematical and Physical Geography. Cloth gilt, 2s. 6d.

**Outlines of English History, B.C. 55—A.D. 1901.** By G. CARTER, M.A. Unrivalled as a Manual for Candidates who wish to obtain high marks in this important subject. The Biographical Sketches are especially valuable, and full Genealogical Tables are appended. Seventy-fifth Thousand. Cloth, 1s. 6d.

**History of England.** By G. CARTER, M.A. In Three Parts. Crown 8vo. Part I. (to A.D. 1485) in preparation. Parts II. (1485-1689) and III. (1689-1897) ready. The reigns have been divided into sections, and the well written Biographies will be of the greatest use to the student. Each Part, 2s.

**RELFE BROTHERS, LTD.,**

6 Charterhouse Buildings,

**How to Read French.** A New French Reader by H. BLOUET, the well known Author of several French Educational Books. Crown 8vo, cloth, 9d. Quite a new selection of interesting readings—very good practice in Unseens.

**De Musset's Pierre et Camille.** Clear type, Notes and Vocabulary, By A. HEWETSON. Cloth, 9d.

**The Charterhouse Parsing Books.**  
**The Charterhouse Analysis Books.** } Compiled on the lines laid down for this Examination. Price net 3s. doz.

**An Algebra for Junior Forms.** By R. B. MORGAN, B.Litt. (Author of "Graphs," &c.). Written on the lines recommended by the Mathematical Association. With 14 Diagrams. Cloth, 1s. 6d. Answers, 6d. net.

**Macaulay's Horatius and Lake Regillus.** Short succinct Notes, Life, Paraphrases, &c. By F. GORSE, M.A. Cloth, 8d.

**Relfe Brothers' New Aldersgate Atlas.** 136 Maps and Diagrams—Astronomical, Physical, and Political—arranged on the Comparative Method, with Introduction and full Index. Imperial 4to, 3s. 6d.

**Relfe Brothers' Special Outline Maps.** England, Scotland, Ireland, Europe, Canada, France. On good drawing paper, 1d. each, or 8d. per doz. net.

**New Preparatory Atlas.** Containing 28 very clear full-page Maps, beautifully printed in Colours (*quite up-to-date*). 4to, 6d.

A beautifully printed and coloured Atlas. Only most important places are marked, making it practically unequalled for Elementary Work.

**Oxford Local Drawing Copies.** The actual Copies set for Preliminary for the last ten years. Per set, 1s.; Junior and Senior Copies from the Cast. Per set, 1s.

**Relfe Brothers' Charterhouse Atlas.** 38 Maps (Coloured), containing Railway Map of the British Isles; Coloured Maps of the Environs of London, Liverpool, Manchester, &c.; large-scale Map of Palestine, and a good clear Map of the World as known to the Ancients. Folio size. Seventh Edition. Cloth, 1s.

**The Charterhouse English Grammar.** By Rev. A. MACRAE, B.A. (Emanuel School, Wandsworth Common). 168 pp. Crown 8vo, full cloth, 1s. 4d. Specially written for the Locals.

**Hints on Essay-Writing for Schools.** By C. H. HODGSON, M.A. Contains:—"General Hints," "Common Faults," and "Skeleton Outlines" on varied subjects, besides several Model Essays. Second Edition. 50 pages, cloth, 8d.

Educational Publishers, Booksellers, and School and College Stationers,  
Aldersgate, London, E.C.

## EDUCATIONAL WORKS BY A. K. ISBISTER, M.A., LL.B.

(LATE DEAN OF THE COLLEGE OF PRECEPTORS.)

Third Edition. 12mo, price 1s. 6d.

**FIRST STEPS TO EUCLID:** Comprising the Propositions

of Book I., prepared for writing out, with a recapitulation of the steps of the Demonstration appended to each. Forming a Text-book for the above.

Fifth Edition. Two Quarto Copy Books, price 6d. each.

**THE GEOMETRICAL COPY-BOOK.** Arranged for

writing out the Propositions of Euclid in the Abbreviated and Symbolical Form adopted in the Universities and Public Schools.

New Edition. 18mo, price 9d.

**THE ELEMENTS OF BOOK-KEEPING,** by SINGLE

and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

LONDON: LONGMANS & CO., PATERNOSTER ROW, E.C.

# G. PHILIP & SON'S ANNOUNCEMENTS.

## PHILIPS' COMPARATIVE SERIES OF LARGE SCHOOL-ROOM MAPS.

An entirely New and Original Series, combining Physical and Political Geography.

The great success that has attended the publication of Philips' School Atlases of Comparative Geography, which embody the recommendations of a special Advisory Committee of the London School Board, has induced the Publishers to produce this Series of Wall Maps based upon the same principle.

Physical Features specially prominent. Uniformity of Scale and Comparison of Areas. Political Boundaries clearly shown. Careful Selection and Spelling of Names. Each mounted on cloth, rollers, and varnished.

|                                                      |                                                            |

\* Ditto, politically coloured. Same size and price.

A series of **Test Maps** is also issued, uniform in size and price, with full Physical Colouring, Political Boundaries, and Town Stamps, but without names. *Coloured reduced facsimile, post free.*

## PHILIPS' SCHOOL ATLASES OF COMPARATIVE GEOGRAPHY.

Combining Physical and Political Geography.

This series of publications, intended for students of all ages, has revolutionized the teaching of Geography. The Maps are the outcome of the recommendations of the special Advisory Committee of the London School Board, and they have received the approval of the Geographical Association and the Royal Geographical Society.

**PHILIPS' SIXPENNY ATLAS OF COMPARATIVE GEOGRAPHY.**—16 COLOURED PLATES, containing 40 Maps and Diagrams. 11½ by 9 inches; stiff cover, 6d.

**PHILIPS' ELEMENTARY ATLAS OF COMPARATIVE GEOGRAPHY.** 36 PLATES, containing over 80 Maps and Diagrams, with 8 pages of Introductory Letterpress. 11 by 9 inches; stiff cover, 1s.

**PHILIPS' LARGE PRINT ATLAS OF COMPARATIVE GEOGRAPHY.**—36 PLATES, printed in bold, clear type, containing 80 Maps and Diagrams, with complete Index. 11 by 9 inches; stiff cover, 1s.

**PHILIPS' JUNIOR ATLAS OF COMPARATIVE GEOGRAPHY.**—40 PLATES, containing upwards of 90 Maps and Diagrams, with 8 pages of Introductory Letterpress and Index. 11 by 9 inches; limp cloth, 2s.; cloth boards, 2s. 6d.

**PHILIPS' MODERN SCHOOL ATLAS OF COMPARATIVE GEOGRAPHY.**—64 beautifully COLOURED PLATES, containing 136 Maps and Diagrams, with Introductory Letterpress and complete Index. 11 by 9 inches; cloth boards, 3s. 6d.

\*\* Specimen Map, with list of Contents, post free.

\*\* Complete Catalogue of Educational Publications, including Globes, Copy Books, Reading Books, Object Lesson Pictures and Diagrams, Drawing and Brushwork, Music and Manual Training, &c., post free.

LONDON: GEORGE PHILIP & SON, LIMITED, 32 FLEET STREET, E.C.

## From GINN & COMPANY'S LIST.

# The Mother Tongue.

By G. L. KITTREDGE, S. L. ARNOLD, and (Vol. III.) J. H. GARDINER.

### Book I. Lessons in Speaking, Reading, and Writing English.

xiv + 294 pages. Illustrated. Price 1s. 6d. Specially revised for use in English Schools by J. W. ADAMSON, B.A., Professor of Education at King's College, London.

This book sets forth in plain terms the object and method of the study of English, discusses words, sentences, and paragraphs; explains and illustrates the principles of unity, variety, emphasis, and transition; treats of the selection and arrangement of material, and gives abundant practice in the writing of letters, brief essays, telegrams, and advertisements.

### Book II. Elementary English Grammar, with Lessons in Composition.

xxii + 417 pages. Price 3s.

The forms of discourse are here dealt with—narration, description, explanation, and argument. A special section is devoted to literary criticism.

### Book III. Elements of English Composition.

xx + 431 pages. Price 4s. 6d.

The third volume deals in a more advanced way with the paragraph, sentence, and choice of words. An appendix treats of common errors. Abundant exercises.

"Those teachers who are fortunate enough to be allowed the use of Parts I. and II. of 'The Mother Tongue,' will scarcely need any further persuasion to purchase Book III. (in the same series). We know of no better manual of composition, and that, considering the activity of our Trans-Atlantic contemporaries, is saying a good deal."—*School World*.

**UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.**

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A., LL.D.

Next Session begins October 3rd, 1905. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the subjects for the B.A. and B.Sc. Degrees of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional fee for ordinary Arts Course, £11. 1s.; ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students: fee, Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

**ABERDARE HALL, CARDIFF.— RESIDENCE FOR WOMEN STUDENTS OF THE UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.**

Principal—Miss KATE HURLBATT.

Fees, £42. 10s., £36, and £32 per annum. College tuition fees, £10 per annum. Scholarships of £40, £25, and Exhibitions of £10 awarded on the result of Scholarship Examination held annually in September. Students prepare for the B.A. and B.Sc. Degrees of the University of Wales. A Medical School and Department for Secondary, Elementary, and Kindergarten Training are attached to the College. Residents can attend Dispensing Classes at Cardiff Infirmary. Apply to the PRINCIPAL.

**CHERWELL HALL, OXFORD.**

A TRAINING COLLEGE FOR WOMEN TEACHERS.

A RESIDENTIAL COLLEGE providing a year's Professional Training for Secondary Teachers.

The Course includes preparation for the Oxford Teachers' Diploma and the Cambridge Teachers' Certificate, and the Teachers' Diploma of the University of London.

For instruction in the Theory and History of Education, the Students attend the Lectures of the University Reader in Education. The practical work in Teaching in Schools and Demonstration Lessons, &c., is under the supervision of the Principal and Staff of the Hall.

Particulars as to qualifications for admission, Scholarships, &c., may be obtained by application to the Principal, Miss CATHERINE I. DODD, M.A., Cherwell Hall, Oxford.

**BEDFORD COLLEGE FOR WOMEN**

(UNIVERSITY OF LONDON),

YORK PLACE, BAKER STREET, W.

The Session 1905-6 will open on Thursday, October 5th. Students are requested to enter their names on Wednesday, October 4th. Lectures are given in all branches of General and Higher Education. Taken systematically, they form a connected and progressive course, but a single course in any subject may be attended.

Courses are held in preparation for all Examinations of the University of London in Arts and Science, for the Teacher's Diploma (London), and for the Teacher's Certificate (Cambridge), and also a Special Course of Scientific Instruction in Hygiene.

Six Laboratories are open to Students for Practical Work.

Two Entrance Scholarships will be offered for competition in June, 1906. The Early English Text Society's Prize will be awarded in June, 1906.

Students can reside in the College.

**DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.**

Head of the Department—Miss M. MORTON, M.A.

Students are admitted to the Training Course in October and in January.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge held annually in December.

A Course of Lectures for Teachers on School Hygiene is held on Saturday mornings.

Full particulars on application to the PRINCIPAL.

**THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.**

Principal—Miss H. L. POWELL,

late Scholar of Newnham College (Hist. Tripos, Class I.), late Head Mistress of the Leeds Girls' High School.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge.

THE INCORPORATED

**FROEBEL EDUCATIONAL INSTITUTE.**

TALGARH ROAD, WEST KENSINGTON, LONDON, W.

Recognized by the Board of Education as a Training College for Secondary Teachers.

Chairman of the Committee—Sir W. MATHER.

Treasurer—Mr. C. G. MONTEFIORE, M.A.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

**TRAINING COLLEGE FOR TEACHERS.**

Principal—Miss E. LAWRENCE.

**KINDERGARTEN AND SCHOOL.**

Head Mistress—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union, and for the University of Cambridge Teachers' Examination, and Special Classes are held in subjects required for the Cambridge Higher Local Examinations.

TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.

Prospectuses can be obtained from the PRINCIPAL.

**ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS**

provides a Course of Professional Training in preparation for Work in Secondary Schools or in Families.

The Students attend the University Lectures on the Theory, History, and Methods of Education, and have systematic practice in Class Teaching in Schools.

Apply for further particulars to the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

# Regulations for Secondary Schools on the Teaching of Geography.

EXTRACTS.

1. Each scholar should possess an Atlas.
2. Atlases should be simple, *i.e.* not overcrowded with names nor overburdened with detail of any kind; relative land levels and sea depths should be indicated by colour graduations.
3. Teachers should accustom themselves to bring the information given on Commercial and Political Geography up to date.
4. Wall Maps should be large, clear, and up to date.
5. For teaching of Physical and Commercial Geography **separate Maps**, if possible, should be used.
6. Globes of a suitable size for class demonstration, and a collection of County and Detailed Maps for reference, are recommended.

**Messrs. W. & A. K. JOHNSTON, Ltd.**, beg to direct the attention of Principals of Secondary Schools to their publications which in every way satisfy the above requirements:—

1. They publish Atlases from 3d. to Six Guineas, but they specially recommend for Secondary Schools their Class-Room Atlas and their Atlas of Commercial Geography.
2. These Atlases will be found precisely as described and containing all the information wanted.
3. All their Maps and Atlases are accurate and up to date.
4. Their series of Wall Maps are very clear and up to date.
5. The Maps in their Class-Room Atlas can be had separately, and those in the Commercial Atlas will also be issued as soon as possible separately.
6. They make Globes of all sizes and prices, but for school purposes they recommend their New Century Globe (21s.).

Full particulars of all their Publications will be sent on application.

Just published. Price **5s.** net. Royal 4to, strongly bound in art vellum.

## AN ATLAS OF COMMERCIAL GEOGRAPHY.

Edited by R. FERGUSON SAVAGE, F.R.G.S., Author of "A New Geography of the World."

This new Atlas contains 46 Coloured Maps, 6 pages of Notes on the Maps, and complete Index. It has been prepared with the greatest possible care, and is probably the most complete School Atlas of its kind. A quotation from the Preface says:—"Indeed, it may reasonably be claimed that all the facts shown, whether directly commercial or indirectly so, and each item of information which may be inferred from an intelligent study of the Maps, ought to form part and parcel of what may be termed the permanent geographical stock-in-trade of any educated youth."

The most important Maps in this Atlas will be issued separately, price 1d. each net.

Specimen Copy sent post free to Principals for 3s.

Now ready. Demy 8vo, strongly bound in art vellum.

## THE CLASS-ROOM ATLAS OF PHYSICAL, POLITICAL, BIBLICAL, AND CLASSICAL GEOGRAPHY.

Edited by EDWARD F. ELTON, M.A., sometime Scholar of Corpus Christi College, Oxford; Assistant Master in Wellington College.

This Atlas is intended for use in the great Public Schools and the Middle-class Schools and Colleges. All the Maps are entirely new, and everything possible has been done to have a work in keeping with the times.

The most important Maps in this Atlas may be had separately, price 1d. each net.

Specimen Copy sent free to Principals for 3s.

Prospectus, with Two Specimen Maps, Two pages of Letterpress, and full details, posted to any Teacher on application.

**PIONEERS OF MODERN EDUCATION, 1600-1700.** By JOHN WILLIAM ADAMSON, Professor of Education in King's College, London, Examiner in Pedagogy in the University of London. Crown 8vo, 4s. 6d. net.

The first volume to be published, though number three in the chronological order, of a new series of educational writings entitled "Contributions to the History of Education."

Now ready, a Reissue, containing an additional Chapter on *Essay-Writing*.

**THE ELEMENTS OF ENGLISH GRAMMAR.** By A. S. WEST, M.A., Trinity College, Cambridge. New and Enlarged Edition. Seventieth to Eighty-fifth Thousand. Extra fcap. 8vo, 2s. 6d.

*Guardian.*—"It is far and away the best of its class hitherto published for boys of thirteen to sixteen years of age, and, if we mistake not, will soon become a standard text in secondary schools and mark a new epoch in the teaching of English Grammar."

**AN ENGLISH GRAMMAR FOR BEGINNERS.** By A. S. WEST, M.A. 100th to 125th Thousand. 1s.

*School World.*—"The smaller of these two works ought to be extensively used for the teaching of junior forms. . . . Altogether the book is worthy of high commendation."

*Schoolmaster.*—"It is a capital little work, which we can heartily recommend."

## BOOKS SUITABLE FOR OXFORD LOCAL AND COLLEGE OF PRECEPTORS EXAMINATIONS, 1906.

# CAMBRIDGE UNIVERSITY PRESS.

## A List of Books suitable for the Preliminary, Junior, and Senior Cambridge Local Examinations, 1906.

- PART I.** **Arithmetic for Schools.** By C. SMITH, M.A. With or without Answers. 3s. 6d. Also in two parts, separately. 2s. each.  
Solutions of the Examples. By GEORGE HALE, M.A. 7s. 6d.
- PART II. Religious Knowledge.** **The Church Catechism Explained.**—By the Rev. A. W. ROBINSON, B.D., Examining Chaplain to the Bishop of Wakefield. 2s. [Preliminary and Juniors.]  
**The Prayer Book Explained.** By the Rev. PERCIVAL JACKSON, M.A. Part I.—The Daily Offices and the Litany. 2s. 6d. [Juniors and Seniors.]  
**The Cambridge Companion to the Bible.** With Glossary, Maps, and Concordance. Edited by the Rev. Prof. LUMBY, D.D. Large type Edition. 5s. Editions in smaller type, 3s. 6d., 2s. 6d., and 1s.
- Cambridge Bible for Schools.** **Ezra and Nehemiah.** Edited by the Right Rev. HERBERT EDWARD RYLE, D.D., Bishop of Winchester. 3s. net. Smaller Edition, 1s. [Preliminary, Juniors, and Seniors.]  
**Jeremiah, together with the Lamentations.** Edited by the Rev. A. W. STREANE, D.D. 3s. net. [Juniors and Seniors.]  
**The Gospel according to St. Luke.** Edited by the Very Rev. F. W. FARRAR, D.D. 3s. net. Smaller Edition, 1s. [Preliminary, Juniors, and Seniors.]  
**The Acts of the Apostles.** Edited by the Rev. J. R. LUMBY, D.D. With 4 Maps. 3s. net. Smaller Edition, 1s. [Juniors and Seniors.]
- Greek Testament.** **The Gospel according to St. Luke.** Edited by the Very Rev. F. W. FARRAR, D.D. 6s.
- English.** **The Elements of English Grammar.** By A. S. WEST, M.A. 2s. 6d.  
**English Grammar for Beginners.** By A. S. WEST, M.A. 1s.  
**Key to West's Elements of English Grammar and English Grammar for Beginners.** By A. S. WEST, M.A. 3s. 6d. net.  
**Outlines of the History of the English Language.** By T. N. TOLLER, M.A. 4s.  
**Scott.—The Lady of the Lake.** Edited, with Introduction, Notes, and Glossaries, by J. HOWARD B. MASTERMAN, M.A. 2s. 6d. [Preliminary and Juniors.]  
**Shakespeare.—Henry V.** Edited by A. W. VERITY, M.A. 1s. 6d. [Juniors and Seniors.]  
**Shakespeare.—Tempest.** Edited by A. W. VERITY, M.A. 1s. 6d. [Seniors.]  
**Scott.—Old Mortality.** Edited, with Introduction, Notes, and Glossary, by J. A. NICKLIN. 2s. 6d. [Seniors.]  
**Geography, Elementary Commercial.** A Sketch of the Commodities and the Countries of the World. By H. R. MILL, D.Sc. Sixth Impression. 1s. 6d.  
**An Atlas of Commercial Geography.** By J. G. BARTHOLOMEW, F.R.G.S. With an Introduction by Dr. H. R. MILL. 3s.  
**A Short History of the Expansion of the British Empire.** By W. H. WOODWARD, Christ Church, Oxford. Second Edition, Enlarged. With 10 Maps. Cloth, 4s.  
**An Outline History of the British Empire from 1500 to 1902.** By the same Author. 1s. 6d. net.
- Latin.** **Caesar.—De Bello Gallico, Book VI.** Edited by A. G. PESKETT, M.A. 1s. 6d. [Juniors.]  
**Caesar.—De Bello Gallico, Book VI.** Edited, with complete Vocabulary, by E. S. SHUCKBURGH, Litt.D. 1s. 6d. [Juniors.]  
**Vergil.—Aeneid, Book VI.** Edited by A. SIDGWICK, M.A. 1s. 6d. [Juniors and Seniors.]  
Another Edition, by the same Editor, with complete Vocabulary. 1s. 6d.  
**Tacitus.—Agricola and Germania.** Edited by H. M. STEPHENSON, M.A. 3s. [Seniors.]
- Latin (continued).** **Cicero.—De Amicitia.** Edited by J. S. REID, Litt.D. 3s. 6d. [Seniors.]  
**Horace.—Odes, Books II. and IV.** Edited by J. GOW, Litt.D., Head Master of Westminster School. 1s. 6d. each. [Seniors.]
- Greek.** **Xenophon.—Anabasis, Book V.** Edited, with complete Vocabulary, by G. M. EDWARDS, M.A. 1s. 6d. [Juniors.]  
**Xenophon.—Anabasis, Book V.** Edited by A. PRETOR, M.A. 2s. [Juniors.]  
**Euripides.—Alcestis.** Edited by W. S. HADLEY, M.A. 2s. 6d. [Juniors and Seniors.]  
**Lucian.—Somnium, Charon, Piscator et de Luctu.** Edited by W. E. HETTLAND, M.A. 3s. 6d. [Seniors.]
- French.** **Erckmann-Chatrion.—Le Blocus.** Edited by ARTHUR R. ROPES, M.A. 3s. [Juniors and Seniors.]  
**Molière.—L'Avare.** Edited by E. G. W. BRAUNHOLTZ, M.A., Reader in Romance. 2s. 6d. [Seniors.]
- German.** **Hauff.—Die Karavane.** Edited by A. SCHLOTTMANN, Ph.D. 3s. [Juniors.]  
**Schiller.—Maria Stuart.** Edited by KARL BREUL, Litt.D., Ph.D., Reader in Germanic. 3s. 6d. [Seniors.]  
**Riehl.—Culturgeschichtliche Novellen.** Edited by H. J. WOLSTENHOLME, M.A. 3s. [Juniors and Seniors.]
- Mathematics.** **Elementary Geometry.** Practical and Theoretical. By C. GODFREY, M.A., Head Master of the Royal Naval College, Osborne, and A. W. SIDONS, M.A., Fellow of Jesus College, Assistant Master at Harrow School. 3s. 6d.  
Or separately. Vol. I., 2s. Vol. II., 2s. Or in 5 Parts, 1s. each.  
**Euclid's Elements of Geometry.** Books I.-VI., and XI., XII. Edited by H. M. TAYLOR, M.A. 5s. Books I. and II., 1s. 6d. Books III. and IV., 1s. 6d. Books V. and VI., 1s. 6d. Books XI. and XII., 1s. 6d. Also Books I.-IV., 3s. Books I.-VI. 4s.  
**Elementary Algebra.** By W. W. ROUSE BALL, M.A. 4s. 6d.  
**An Elementary Treatise on Plane Trigonometry.** By E. W. HOBSON, Sc.D., F.R.S., and C. M. JESSOP, M.A. 4s. 6d.  
**Plane Trigonometry.** By S. L. LONEY, M.A. Sixth Edition. 7s. 6d.  
Or in Two Parts:  
PART I.—Up to and including the Solution of Triangles. 5s.  
PART II.—Analytical Trigonometry. 3s. 6d.  
**The Elements of Trigonometry.** By S. L. LONEY, M.A. 3s. 6d.  
**Elements of Statics and Dynamics.** By S. L. LONEY, M.A. Ninth Edition. 7s. 6d.  
Or in Two Parts:  
PART I.—Elements of Statics. 4s. 6d.  
PART II.—Elements of Dynamics. 3s. 6d.  
**Elements of Hydrostatics.** By the same Author. Second Edition. 4s. 6d.  
**Mechanics and Hydrostatics.** By R. T. GLAZEBROOK, M.A., F.R.S. 8s. 6d.  
Also separately:  
Dynamics, 4s. Statics, 3s. Hydrostatics, 3s.
- Drawing.** **Geometrical Drawing.** With Notes and Examples. By W. H. BLYTHE, M.A.  
PART I.—Plane and Elementary Solid. 2s. 6d.  
PART II.—Solid or Descriptive Geometry. 2s.
- Natural Science.** **Heat and Light.** An Elementary Text-Book, Theoretical and Practical, for Colleges and Schools. By R. T. GLAZEBROOK, M.A., F.R.S. Crown 8vo, 5s.  
Also separately:  
Heat, 3s. Light, 3s.  
**Electricity and Magnetism.** By the same Author. Crown 8vo, 7s. 6d.

A LIST OF NEW AND STANDARD BOOKS FOR SCHOOLS WILL BE SENT ON APPLICATION.

# BLACKIE'S ANNOUNCEMENTS

**BLACKIE'S NEW SERIES OF LATIN TEXTS** General Editor, Dr. W. H. D. ROUSE. This new series is being issued in neat booklets at the very low price of 6d. and 8d. net each. The texts are intended for use during the first two or three years of Latin.

The long vowels are marked throughout. Each volume has a short introduction dealing with the author and subject of the book. A new and important feature in the introduction is a brief note on the MSS. and the principles of textual criticism. No other notes are given. The following scholars are contributing volumes to this series: Prof. J. P. POSTGATE, Prof. J. S. REID, Dr. W. H. D. ROUSE, Messrs. S. E. WINBOLT, W. H. S. JONES, and E. SEYMER THOMPSON.

**LANDMARKS IN EUROPEAN HISTORY** By E. H. McDOUGALL, M.A. (Oxon.) *The Journal of Education* says: "[The author] has done his work well. Considering the immense period he has had to deal with, he writes lucidly, and leaves a distinct impression on the minds of his readers of the great events of European history." *Price 3s. 6d.*

**LAYNG'S NEW ALGEBRA** Mr. A. E. LAYNG has just issued Part I. (2s. 6d.) of a new text-book of Algebra, embodying graphic and other solutions and applications to Arithmetic and Geometry.

Part I. conducts the pupil as far as simple quadratic equations, and includes only such portions of the subject as lead to some practical application, and are therefore most likely to interest a beginner. The wide acceptance accorded to Layng's Geometry should insure a favourable reception to Mr. Layng's latest book.

**BLACKIE'S LITTLE FRENCH CLASSICS** Price 4d. each. This series of about seventy dainty booklets embraces all classes of French literature — Travels, Stories of Adventure, Scenes of Domestic Life, Essays, Letters, Poetry, and Drama—so graduated in difficulty and so varied in matter as to be suitable for readers of all stages of advancement.

**BLACKIE'S NEW SERIES OF ENGLISH TEXTS** General Editor, Dr. W. H. D. ROUSE. The volumes of this series, published at 6d. each, are drawn from the highways and byways of many literatures. In addition to such authors as Macaulay, Gibbon, Lamb, Dickens, Defoe, and Swift, there are many works not hitherto available for school reading—Raleigh's *Discovery of Guiana*, Purchas his *Pilgrimes*, Drake's *World Encompassed*, *The Arabian Nights*, Erasmus, Boccaccio, Plutarch, and Lucian.

The thirty volumes already issued cover a very wide range of subjects, and not one of them but is stimulating reading and thoroughly good literature. Each volume is provided with a brief introduction dealing with the author's life and his place in literature.

**BLACKIE'S LITTLE GERMAN CLASSICS** In cloth covers, 6d. each. This series is uniform in aim and general appearance with the well-known series of "Little French Classics," which received so instant a welcome from teachers and pupils.

**AN INTRODUCTION TO ALGEBRA** By R. C. BRIDGETT, M.A., B.Sc., F.C.S. 1s. An application to Algebra of the methods now generally advocated for use in the other branches of mathematics. By approaching the subject through Arithmetic, and by introducing Graphs, the relations between Arithmetic, Algebra, and Geometry are made clear.

**INTRODUCTORY MATHEMATICS** By R. B. MORGAN, Author of "Elementary Graphs," &c. 2s. Answers, 6d. This book deals simultaneously with Algebra, Geometry, and Graphs, and so removes the barriers that have hitherto divided the different branches of Mathematics.

**WRITE FOR NEW CATALOGUE**

**BLACKIE & SON, LIMITED, 50 OLD BAILEY, LONDON, E.C.**

## The Educational Times.

Prof. Sadler's  
Reports.

MR. MATTHEW ARNOLD repudiated with some warmth the appellation which, if we remember right, the *Daily Telegraph* sought

to affix to him as a weeping Jeremiah, "the one of the Hebrew prophets whom I the least admire"; but he was pleased to pose as a John the Baptist, a "vox clamantis in deserto." As his favourite character in English history, Lord Falkland, "ingeminated peace," so Mr. Arnold was never tired of preaching, in season and out of season, on the text: "Organize your secondary education." He did not live to garner even the first-fruits of his mission; but the seed fell on good ground, and, though we have not yet attained, it may be fairly said that the fields are white already to harvest.

This dead season of the year, when there is a lull in educational politics, when there are no conferences of teachers and Education Committees have not yet reassembled, would seem a favourable opportunity for surveying the ground and examining how far our present campaign against chaos and the powers of darkness has followed the lines laid down by Mr. Arnold, and to what extent his hopes have been realized. For such a survey the various Reports of Prof. Sadler, which virtually cover the whole country, extending as they do from a cathedral city in the West (Exeter) and an agricultural county in the South (Hampshire) to the chief port of England (Liverpool) and the engineering metropolis in the extreme North (Newcastle-upon-Tyne), afford us sufficient material.

It is not irrelevant to note in passing the strange irony of fate whereby it has devolved upon a retired officer of the Board of Education to expound and show the practical application of those principles to which an Inspector who died in harness failed to convert his superiors. No Wilhelm von Humboldt has yet arisen in England, and the best of our statesmen have been content to embody in legislation the educational reforms that have been forced upon them from outside.

The first demand that Mr. Arnold made was for a Minister of Education, not only for administrative con-

venience, but as a centre in which to fix responsibility. By the Act of 1902 we have our Minister of Education; not, indeed, a Humboldt—Lord Londonderry, who is a modest man, would be the first to deprecate any such comparison—but a head who, in the last resort, can be held responsible for the supply and maintenance of national education; not of primary alone, as was the case in Mr. Arnold's day.

Mr. Arnold's second suggested reform was the establishment of a High Council of Education on the lines of the French Conseil Supérieur. Such a Council we have in embryo in the Consultative Committee, but it is needful to point out how far it yet falls short of Mr. Arnold's ideal. The Committee is not representative, but is nominated by the President of the Board. Its deliberations are limited to matters referred to it by the Board; it sits *in camera*, and its recommendations, if they do not commend themselves to the Board, are quashed. Mr. Arnold desiderated a Council of recognized educational authorities, appointed without regard to politics, whose opinion the Minister should be obliged to take on all measures not purely administrative.

But, though Mr. Arnold was an out-and-out advocate of State interference, and looked to State control and State aid as the only remedy for the anomalies of English education, and in particular for the low ideals and defective culture of our middle classes, yet he was not blind to the dangers of centralization and bureaucracy. He suggested provincial School Boards with administrative powers, representing the State in the country, being the direct public organ of communication with the schools, superintending the execution of all public regulations applied to them, inspecting and examining them as far as was necessary to see that they were fulfilling their purpose.

It would take us too far to examine how far the County and Borough Councils, since they have been constituted the Local Authorities for Education, conform to Mr. Arnold's scheme, or whether he would have approved the merging of education with other municipal functions. He might, and probably would, have objected to the method pursued as leaving too much to local initiative without sufficient central control, but he would assuredly have acknowledged that his main object has been, in theory at least, attained. We have at last an authority, or authorities, on whom is laid the duty of co-ordinating all grades of education, and, as

a part of this duty, though in this case no compulsion is, so far, applied, the provision of an adequate supply of schools for the middle classes.

If we turn now to Prof. Sadler's Reports, we find convincing evidence (though from the nature of the case it is indirect) that the machinery set up by the Act of 1902 is already well in motion, and that it is working so far with little friction. The very fact that so many Councils have called in an educational expert is in itself a favourable omen. It is too early to tell how far his recommendations will be adopted in whole or in part, but it is a remarkable and encouraging fact that the Reports, in spite of the sweeping changes that they suggest and the large expenditure that they involve, have provoked little opposition and no violent protest. To deal first with the financial side of the question—which will loom largest in the eyes of County Councillors—Prof. Sadler proposes generally a 2d. rate for the purposes of secondary education over and above the “whisky money,” which by the Education Act is earmarked, and apart from initial expenses for sites and building.

More important, as involving a question of principle, is the suggested division of the cost of secondary education between the three interested parties—the parent, the Local Authority, and the State. We omit details and only give the scheme in the rough. The Local Authority should provide site, buildings, and upkeep of premises; and, further, the rungs of the educational ladder in the form of scholarships and maintenance allowances. The State should defray by capitation grants one-fourth of the gross cost of tuition. The parent should contribute the remainder in the form of school fees.

What impressed Mr. Arnold most on his official visit to Continental schools, next to their efficiency, was the lowness of the fees. According to him the French or German parent gets a better article at a fourth of the cost to the English parent. Times have changed, and Prof. Sadler is wise enough to see that the danger which confronts us in the immediate future is the multiplication of what, in vulgar phrase, may be described as “cheap and nasty” schools. His advice to the Hampshire County Council is to establish “a sufficient, though limited, number of well placed secondary day schools, so staffed and equipped as to give an intellectual and corporate training of high value as a preparation for professional callings and for posts of responsibility in business and administration, instead of spending all available funds upon a cheaper type of secondary schools.”

This brings us to the last point with which we can at present deal—a point on which Mr. Arnold and Prof. Sadler are wholly in accord—the staffing of the schools. As are the masters so is the school, and, unless the conditions of school-mastering are rendered more attractive, it will be impossible to induce men of brains and character to enter a profession which, except for the few prize-winners, entails virtual celibacy and offers no security against sickness or old age. Hitherto, the complaints from teachers of overwork and underpay have been brushed aside as “a tale of little meaning, though the words are strong”; but, now that an unimpeachable witness, who will not be suspected of having any axe of his own to

grind, has spoken out, his deliberate and often repeated judgment cannot fail to command attention.

We had intended to say something on private schools, to which a considerable space is allotted in the Reports, but this is too large and important a subject to be broached at the end of an article.

## NOTES.

SIR WILLIAM MATHER, who may be regarded as a pioneer of technical education in England by his foundation and fostering of the Salford Science School, only just superseded by recent local developments, appears to have been “discouraged” by his present visit to America. “The highest examples of technical schools to be found in the world,” he says (according to a Boston interviewer), “are here, in America”—not in England, which shows “such poor results,” nor even in Germany. How is this? Sir William finds the cause in the interest of the American parent in education; and this interest, he thinks, is “keener in the West even than it is in the East.” Accordingly, he concludes that “our duty must be to instil into the mind of the English parent some of the pride and self-sacrifice that, to my mind, adorn the conduct of the American parent.” For, though we have the schools, “we lack the support and interest of the parents, without which ours must be an almost hopeless task.” In Scotland, however, the “pride” of parents in the education of their children, and their “self-sacrifice” to this end, are certainly not inferior to those of American parents. It would thus be an interesting, and a somewhat important, inquiry to find out why it is that the English parent has arrived at, and stubbornly adheres to, such a very different—and very deplorable—view of the matter. However, after all, “we only want a little more intelligence brought to bear on our educational system and on our general conduct of business life, and we shall stand shoulder to shoulder with America.” There is not a little virtue, though, in that “only.”

WRITING about the high schools of Denmark, a correspondent of the *Morning Post* points out that the Danes themselves attribute the marked rise and intellectual development of the peasantry and the power of combination displayed by the tillers of the soil to the ever-increasing influence of the “high school” movement. The agriculturists (he says) save money and make sacrifices in order that their sons and daughters may enjoy the intellectual and spiritual culture that the “high schools” offer. “The only analogous movement we have in Great Britain is the burning desire on the part of the Scotch peasantry and small Scotch farmers for education. In England it would appear difficult to create a similar demand among our rural population. This may be because in the past country life has not been synonymous with intellectual life, except for the rich and well placed. Now that the intellectual needs of various classes are being more scientifically studied, an intimate knowledge of the working of these Danish schools, which have been so successful in revolutionizing intellectually and spiritually the rural life of Denmark, might be of

special value to members of rural Educational Councils in England. Mrs. Browning wrote: 'It takes a soul to move a body.' In Denmark of to-day the body, through its steadily growing co-operative undertakings, can be seen moving and gaining in strong and healthy national life. It is claimed by the more patriotic and intelligent among the Danes that the soul which moves and quickens this body was reborn in the daily life and aspiration of the 'high schools.'

THE *Guardian* gives considerable prominence to a disquisition by a correspondent which leads up to a recommendation that "the public schools give their minds to the meaning of co-education." "It is no longer of any use to bid our mothers and sisters mind their own business, to tell them that they don't know anything about boys, and to parry inconvenient questions by remarks about the formation of character." "They want to know not only what this process of formation is, but even whether this character ought to have been formed at all." And it is as an experiment in this inquiry that co-education comes in. The writer says:

On the face of it there is surely a strong presumption in favour of the opinion that boys and girls ought to be educated together. If education is to be the reasonable preparation by which children are fitted to become parents, the burden of proof lies upon those who would maintain that to separate boys and girls is the best warranty for wholesome relations between men and women. Is our present system of education equal to that burden? Are those who have been educated at our great public schools satisfied—are those who are working at education in those schools satisfied—that it is good for boys to be alone? It is impossible to be satisfied. As a matter of theory, it is absurd to suppose that the separation of the sexes during adolescence will lead them either to understand or to respect each other when they reach maturity. As a matter of practice, we know that this separation is attended with an enormous amount of moral evil.

There will, in any case, probably have to be a balancing of evil and good. The question should perhaps be argued on a wider basis, and there is much room for discriminations.

THE *Morning Post* does good service in branding "the vice of students of education" that "regard it not as a department of national life needing organization like other departments, but as an isolated function of the nation which can be perfected without reference to the whole organism and its place in the life of the world." At the same time the broad outlook requires very careful observation and discrimination, and may very easily mislead, perhaps no less than the narrower outlook which is rather more familiar. Our contemporary, fairly assuming that "it will probably be agreed that efforts of reform should in this country be directed first of all at the secondary-school system, since that is the weakest link in the chain," approaches the problem of secondary education with some other assumptions that will divide opinion decisively, not to say violently. It says:

We assume, then, that the obligation of military service in some form will, by consent of the nation, be imposed ultimately upon every British citizen; we assume that the success of the administration in India ensures the continuance of much the same system for another century, and that Egypt will not be abandoned; and we assume, though the point is still arguable, that the ideal of a federated Empire will never be realized, but that an alliance between the Old Country and fully developed colonial nationalities is the more natural outcome of the expansion, which probably reached its limits at the end of the nineteenth century.

There will be no difficulty, we apprehend, about universal military service in some form on one fundamental condition, namely, that the people of this country see exactly, and approve, what it is wanted for; and we venture to say that none of its advocates, nor all of them together, have yet faced the full handling of the question, and the public instinctively feel this. The inference from "the success of the administration in India," we confess, chills us to the bone. It was not without very definite facts in mind that we said that "the broad outlook requires very careful observation and discrimination."

OUR contemporary's onset on the traditions of the public schools, with "their attendant train of private preparatory schools," and on the operations (or, rather, lack of operations) of the Board of Education in regard to these, may help to stir efforts of reformation; and, at all events, the field of criticism is well within common knowledge and appreciation. With regard to the various types of secondary school, and the suggestions for differentiation, not by revolutionary methods, but by judicious adaptation to "altered conditions," if not to "a change in the national aim" (which has yet to be established, unless we mistake the meaning of the expression), our contemporary will probably conciliate a large amount of agreement and support. It is the plainest practical course to urge the Board of Education to "concentrate its efforts—and its grants—upon the schools which seem likely to supply most adequately the most urgent needs"—if we could only agree on "the most urgent needs." "What is needed is," undoubtedly, "a clear conception of the varieties actually needed by the nation, and a determination to secure those varieties at any cost." Here, then, is a task for an educational Hercules, especially in the matter of cost. "Would it be educationally a good use of public money?" There can be no two opinions. "We plead," says the *Morning Post*, "for an adequate provision of higher secondary schools and for a general raising of their standard, because experience has shown that the pupils of that type of school are well trained to fill positions which require adaptability and breadth of mind, disinterestedness and devotion to duty." Are we quite sure, however, that these qualities have been due to that type of school? And is it not certain that they are not peculiar to that type of school? The essential point seems to be to impress the officers that guard the strings of the public purse; and we must hope that our contemporary's more extravagant pleas will not detract from the unquestionable validity of its more sober arguments.

ON the other hand, there appear to be officers in the public services that entertain a very poor opinion of the education of the schools. Here is Major A. J. Richardson, 2 E. York R., writing in the *United Service Magazine* in a tone of withering contempt for "That Idol—Education." He does think that "the young officer from the public school compares, both in peace and war, very favourably with the product of all pass-examination factories"; but still he fancies that this is "only the result of heredity, because they are sensible parents who send their sons to these establishments." The

public schools will hardly care to use his testimonial to their superior virtues—especially when they bear in mind how far their educational training is supplemented by “pass-examination factories.” “Books make brain power?” he queries. And his answer is: “The eternity of their own production is the only point on which they resemble the organ of thought. Short sight, atrophy, inaction, timidity—negative attributes all of them—such is the harvest of a faith in the printed icons of the prevalent superstition.” There is still some need for our speculators on education to unravel their ideas.

THE Educational Institute of Scotland, or at all events the *Educational News*, declares its opinion “that the Institute as an Institute will never be able to exercise the power it ought until we have a teacher member on the benches of St. Stephen’s.” Moreover, “it is not material, we believe,” adds our contemporary, “on what side of the House he may happen to be, inasmuch as his opinion will be that of the expert, and will be backed up by the great and increasing influence of the Institute, whose mouthpiece both in professional and educational matters he would be.” This view, which is not without basis, simplifies the situation considerably, and widens the area of political openings. Some three years ago the Institute considered the question, and, after study of the returns from the Branches, approved the principle of having a parliamentary representative, though at the time the aspiration was judged to be “impracticable.” Since, then, however, “there have been observed on every side numerous indications of the growth and development of a stronger professional spirit of union and of a deeper and more widespread interest in the affairs of the Institute”: 3,136 new members have joined the ranks—an average of 1,045 each year—and the funds have increased by £1,083 odd, the general funds now standing at £5,433. This plethora of capital is a temptation to “some enterprise that hath a stomach in’t.” The opportunities of the private member of Parliament nowadays are indeed somewhat exiguous, but an able and energetic man with strong backing can always make room for himself.

### SUMMARY OF THE MONTH.

THE REV. THOMAS LAW, Secretary of the National Free Church Council, speaking at the annual meeting of the East Yorks Federation of Free Church Councils at Scarborough (September 14), said the Liberal leaders were absolutely pledged to make the reversal of the education policy of the present Government their first work on being returned to power. The education proposals of the new Government would certainly include absolute popular control of all schools, and freedom from all sectarian tests. There would be no provision made for right of entry during school hours to administer denominational teaching. United Nonconformity would not for a moment agree to that. It was very probable that there would be facilities for denominational teaching before or after school hours.

At a meeting of the Executive of the Northern Counties Education League, held (September 14) at the Leeds and County Liberal Club, Leeds, the following resolution was carried unanimously:—

That this League rejoices that the proposed Manchester “Concordat” is reported to be dead, and trusts that it will never be revived, and that the friends of non-sectarian education will not consent to the

teaching of denominationalism in public elementary schools maintained out of public funds.

Under Section 13 of the Act of 1902 the proceeds of endowments left for educational objects, which it is the duty of the Education Authorities to provide for, are to be applied to the reduction of the rates. It was reported to the Executive, however, that at Killamarsh, Derbyshire, an attempt is being made to apply the money of the “Turie” and the “Pole” endowments to the establishment of scholarships, one of which scholarships is to be awarded only to a scholar who is a member of the Church of England. The opinion of the Executive was that such an application of the money should be disallowed, as contrary to Section 13. The annual meeting of the League will be held at Bolton in November.

COMMENTING on the Circular to Inspectors recently issued by the Board of Education, the *Times* writer of “Educational Notes” says:

What masters in secondary schools are keenly anxious to understand is the nature of the evidence from which the inspectors are to form opinions as to the efficiency of a master’s work. Is a teacher to be reported as inefficient or old-fashioned from a few minutes’ casual observation under exceptional conditions, or is a careful study to be made of all the results, as shown in examination results or in other ways, of the teacher’s work? Great danger is to be apprehended, under the present system of tenure of assistant masters in secondary schools, from the confidential communications between inspectors and head masters. Inspectors have on several occasions used their influence to secure the appointment of particular masters. It is reported that one of the Board’s inspectors recently advised the authorities of the new municipal secondary school at Leamington to appoint as head master a graduate of Oxford and Cambridge, ignoring all other British universities established by Act of Parliament or by Royal Charter. Enough has been said to indicate the need of further guidance to inspectors in the conduct of their important work. The President of the Board of Education, in a recent speech at Poole, advised Local Authorities to submit protests to the Board against the recommendations of inspectors which appeared to them unreasonable. The advice is passing strange, and it would not often be necessary for Local Authorities to adopt it, if inspectors were given fuller instructions as to the character of their work and the limits of their jurisdiction.

At the recent examination held by the London Chamber of Commerce 5,118 candidates were examined, of whom 3,486 were successful. A special feature has been added this year to the Chamber’s educational scheme by the institution of an examination for teachers’ diplomas in commercial subjects. Of 144 candidates who presented themselves for examination, 96 obtained diplomas, 42 of whom “passed with distinction.” The principal subjects taken at the examination for diplomas were: English, French, German, Spanish, Russian, commercial history and geography, political economy, methods and machinery of business, banking and currency, commercial and industrial law, book-keeping, drawing, shorthand, and typewriting.

THE Kensington Vacation Course, which commenced on August 12 at the Froebel Institute, was attended by seventy-seven students. The interest was deep and general, and “one of the most helpful and pleasing features,” we learn, “was the strong unity of purpose manifest in every department.” A strong desire has been expressed that the work should be continued and developed next year. This should readily be attained, seeing that the income covered all the necessary expenses, leaving a small balance, which will appropriately go to the Libraries Fund of the Froebel Institute.

MARY DATCHELOR’S GIRLS’ SCHOOL (Camberwell) again shows a long list of successes of a very gratifying character. The Training College is no less effective. Thirteen students of the Senior Division gained teaching diplomas this summer, one the London diploma and the remaining dozen the Cambridge diploma (eight in the First Class, four in the Second Class). Moreover, every student leaving the college in July (with a single exception) had obtained a good appointment before the term closed.

THE Cardiff Cymmrodorion, of which the Mayor of Cardiff is President, have forwarded to the County Councils, colleges, and Education Committees of Wales a draft circular containing the following resolution:—

That, in view of the fact that the Education Committees of the

County Councils of Wales have adopted the teaching of Welsh as a subject in their schools, this society is of opinion that the constituent colleges of the University of Wales, together with the training colleges in the Principality, should devote special attention to the teaching of the Welsh language and the history of Wales; and, in the opinion of this society, it is of extreme importance that a diploma should be issued by the aforesaid colleges to the effect that the students have shown proficiency in these subjects.

THE fight between the Universities and the examiners for the Indian Civil Service (says the *Western Daily Press*) has ended at length in the victory of the Universities. The Oxford dons tried in 1897 to raise the age of candidates for examination from 21-23 to 22-24. They failed then with Lord George Hamilton. They have tried again with Mr. Brodrick, and easily succeeded. The Universities, of course, want the Indian Service to be filled, so far as possible, with University men. It is contended that such youthful excellence in learning as is demanded by the present system can come only from a painful and harmful forcing process. Moreover, the Service is self-deprived of University men. The dons have again approached the Civil Service Commissioners. The Civil Service Commissioners have passed on the memorial to Mr. Brodrick, and the Secretary for India has accepted it because of the "advantage which will result from extending the field of selection and enabling University candidates to complete the full college course before competing."

THE Science School in association with the Salford Ironworks (Messrs. Mather & Platt), which has been of great service to many hundreds of engineers who are now scattered over Great Britain and the colonies, has ended its useful career. The school was started in 1873. At that time public provision for technical instruction as we now have it was scarcely thought of, and Sir William Mather was then first among British engineers to establish a school in which apprentices could receive in the evening theoretical instruction in relation to the work in which they were engaged in the day time. Having established his evening science school, he compelled all his apprentices to attend it. Since 1875 the classes have been held regularly in the Queen Street Institute at Salford. Now, however, when both Manchester and Salford possess magnificent municipal technical schools, the necessity for their continuation has ceased. From the opening of the classes in 1873 to the close of the session 1904-5 the number of individual students registered was 1,173. While deciding to close the school, the Committee recommend that an Education Committee be appointed to assist the apprentices in selecting proper courses of study at the Manchester and Salford Technical Institutes and elsewhere, to watch their progress, and to examine the official reports from the institutions attended. They recommend that the rule of the company making it compulsory upon every apprentice to attend courses of instruction be retained, and its observance ensured by the Committee. Also that the annual meeting for the distribution of prizes be retained in such modified form as may be found desirable, and that the students be assisted, as hitherto, in regard to class fees.

ABOUT a year ago the Langholm School Board introduced phonographs into Langholm Academy, specially with the view of teaching French pronunciation. The Government Inspector now commends the use of the phonograph for training the ear by means of records of French oratory or songs, and remarks the evident pleasure the pupils take in learning French songs. He says the device is one which might be employed in other schools through the country.

IN view of proposed educational legislation, a deputation of the Victorian State School Teachers' Union laid before the Minister of Education (July 8) all the recommendations of the Union conference on the subject of salaries, higher pay for lower class teachers, increased pay for fifth and sixth class female teachers in charge of country schools, and a scale of four-fifths pay of the male teacher for female teachers in the same class. These recommendations were spoken to by every member of the deputation. Special attention was given to the heart-breaking pay of the lower class teachers. It was urged that the pay of these might be increased. The Minister, who listened very sympathetically (says the *Australasian Schoolmaster*), stated that the request of the deputation could not be granted. The Government would not listen for a moment to any proposal for increasing the expenditure.

MR. LOUIS TYLOR died at Oakdene, Redhill, at the age of sixty-eight. For many years he took an active part in social and educational work in Bradford under Mr. W. E. Forster. In 1876 he undertook financial control of a large colliery, and was concerned in the establishment of University College, Cardiff, on popular lines, becoming its treasurer on the death of Lord Swansea. He had lived in retirement at Redhill during the past five years.

THE DEAN OF CARLISLE (the Very Rev. W. G. Henderson) died on September 24. He was born in 1819, and had been Dean of Carlisle since 1884. Previously he had been Head Master of Magdalen College School, Oxford, Tutor in the University of Durham, Principal of Hatfield Hall, Durham, and Head Master of Leeds Grammar School (1862 to 1884). He has not long survived his son Colonel Henderson, the distinguished military writer.

## UNIVERSITIES AND COLLEGES.

THE *Calendar* of the London School of Economics and Political Science for 1905-6 shows that since the school was opened in 1895 more than four thousand students have been entered on the books. In every session there has been an advance in the number of students, 1,414 being on the books for 1904-5. The *Calendar* contains the new regulations for the Economic, Political, and Commercial degrees of the University of London, by which students can gain a diploma for the degree of B.Sc. It especially calls attention to the opportunities the school affords for post-graduate study and research. The programme of classes and lectures for the coming session is given in full, and special prominence is given to the courses on what may be described as the higher commercial education. In this section of the school's work—one in which a striking advance has been made in the last year or two—courses of lectures will be given in Accounting and Business Methods, Banking, Insurance, and Transport.

THE report of the President of Queen's College, Galway. Galway, for 1904-5 states that the total number of students in attendance during the session was 106-53 from Connaught and 33 from Ulster. Of 40 scholarships awarded at the beginning of the session, 22 went to students from Connaught. The President says: "It is in a high degree encouraging that so many students from the West of Ireland are making use of the facilities for university education which the college gives; and it is to be hoped that, in the future, more such students will embrace the opportunities which it affords of receiving a liberal education."

AT the suggestion of Principal Griffiths, the Cardiff. Education Committee of the Glamorgan County Council some time ago adopted a scheme for the instruction, at the expense of the county, of fifty miners selected from all parts of the coalfield, in advanced mining subjects during a summer course of three weeks at the University College. It has been tried for the first time this year. Forty of the students were miners drawn direct from the pits, and their work has been so thoroughly satisfactory that the scheme, adopted as an experiment, is likely to become a permanent institution. Principal Griffiths has been greatly impressed with the way the miners applied themselves to their six hours' daily studies at the college and with the results they have achieved.

## PROMOTION FOR TEACHERS.

### FROM ELEMENTARY TO SECONDARY SCHOOLS.

A CORRESPONDENT writes to the *Morning Post*:—"In your interesting educational article of August 18, you contend unreservedly that elementary teachers should be encouraged to look for promotion in secondary schools. May I be allowed to point out in as few words as possible another side to the question?"

Your contention is plausible and, in a sense, theoretically sound; certainly there should be no artificial barrier to such promotion for any properly qualified individual. But, if the wide difference between the aims and possibilities of the elementary and secondary schools is properly understood, it is difficult to see how experience and training in the one type of school can be a suitable preparation for work in the other.

Social or class differences, whether they exist or not, have little to do with the question, and the fact that a large percentage of the scholars at present in secondary schools have passed through the elementary school, if it affects it, does so in a way very adverse to your argument, for, whatever may be said of the teacher, it may safely be said of the scholar that an elementary-school training is the worst possible preparation for a career in a secondary school. And this is not merely due to the fact that subjects are taught in the one school which are of necessity ignored in the other, but rather to the intellectual attitude and habits of the pupil, which are ill adapted for a course of study which demands initiative and a high sense of responsibility. The aim of the elementary school is to provide the necessary minimum of instruction without which a man can hardly earn his own living whatever be his walk in life: more than this can hardly be attempted in schools where the scholars are huddled together in classes of sixty, seventy, or eighty. It is, on the contrary, the individual child that is or should be trained in the secondary school, and it is upon the initiative and responsibility of the scholar that this training is based. If the efficiency of an elementary school may be measured by the quantity and quality of the information carried away by a pupil when he leaves, it is the pupil's habit of acquiring information, his capacity to acquire it, his power of assimilation, and his own adaptability that measure the efficiency of a secondary school. As with the scholar so with the teacher. It is the business of the elementary teacher to teach as much as possible, of the secondary teacher to teach as little as possible; the one gives his pupils the utmost he can, the other makes the utmost demand upon them. The process of teaching and the methods of the teacher are in each case distinct.

Moreover, to talk of promotion from the one school to the other is like talking of promotion from the Army to the Navy; each has its own special use, neither is of more value or service to the State than the other, and the scale of pay should be higher in the case of secondary teachers only to such a degree as represents a more costly education and training.

The claim of the National Union of Teachers to what they call promotion is most unfortunate, for nothing shows more clearly their ignorance of the meaning of secondary education.

Mr. Marshall Jackman, Chairman of the Parliamentary Committee of the N.U.T., replies in the *Morning Post*:

In reply to "C. E. T." I should like to say that so far as the wishes of the National Union of Teachers are concerned he grants the primary teachers all they require when he agrees that "certainly there should be no artificial barrier to such promotion [viz., to be allowed to teach in secondary schools] for any properly qualified individual." We primary teachers only want to secure, as you suggest in your able article of August 18, "a fair field and no favour." To particularize, we demand, and shall continue to demand, that the Columns A and B of the Teachers' Register be discontinued, and that the Register be a single list of the names of persons qualified to teach, academical qualifications being shown after the names of the teachers who possess them. It should be in the power of Local Education Authorities, governors, and managers of schools, whether primary or secondary, to select the teacher whose qualifications fit their requirements. We shall also demand that no "artificial" restrictions be placed on teachers entering the profession in order to prevent them from obtaining such academical qualifications as their abilities bring within their reach. We are glad to see that your powerful advocacy has been thrown on this side of the question.

Now that secondary schools are subsidized out of public funds all recognized schools are in a sense national, and there can be no longer any reasonable grounds for requiring persons, after passing through a training college for primary teachers, to serve for a time or continuously in primary schools, especially when we see on the other hand that university graduates who possess a teaching diploma may now be recognized as certificated teachers in elementary schools without previous experience in such schools, without passing through a training college for teachers, and without passing the Certificate Examination of the Board of Education.

Mr. G. A. Christian, Principal of the Battersea Pupil-Teachers' School, writes to the *Morning Post*:

There is some substratum of truth in "C. E. T.'s" contention that the aims of the elementary school and the secondary school are (or have been) somewhat different. The fault of this, however, was due to the Education Department (now Board of Education) in forcing upon the schools the uneducational system of "payment by results," against which, from its inception to its death, the teachers through the N.U.T. never ceased to protest. A second factor that militated against real educational work was large classes. Happily "payment by results" was abolished out of sheer shame by the Department which gave it birth, and classes are being reduced in size. If "C. E. T." will take the trouble to examine the official reports of the Board of Education's Inspectors, he will see that a newer, better, and more educational spirit is rapidly extending in the elementary schools, and that the spirit of the work is approximating more and more to that which "C. E. T." claims as the special characteristic of the secondary schools. But even under their past disadvantages the elementary schools have done remarkably good work, and have, as "C. E. T." practically admits, sent numbers of scholarship holders to the secondary schools. Many of these boys and girls have done remarkably

well, following up their success at the universities or other places of higher education.

As to whether elementary teachers are or are not capable of successfully conducting secondary schools the facts are very unfortunate for "C. E. T.'s" argument. Not a few teachers who are in the purely technical sense elementary have received the major part of their early education in secondary schools, and some of these recruit the ranks of successful secondary teachers. As to their achievements I take the London Central Foundation School (lately under Dr. Wormell), Aske's Hatcham School (lately under Mr. Barker), Aske's Hampstead School (Mr. Hinton), Dame Owen's School (Mr. Easterbrook), Colfe Grammar School (Mr. Lucas), and the Roan School (Greenwich). All of these are or were until recently under elementary trained teachers. Let "C. E. T." apply any recognized test to these places, and say whether he impugns their efficiency. To these a little research would add a host of other secondary schools and colleges officered by "elementary" teachers, and we might cite the training colleges, the pupil-teacher centres, and the higher-grade schools, all of which are engaged in secondary work carried on mainly by elementary trained teachers. The facts are incontestably against "C. E. T.'s" argument. The interests of the community even more than fair play to the individual demand that there shall be freedom of movement in all parts of the scholastic world.

Commenting on these and a number of other letters in the same strain, the writer of the "Schools and Scholars" column in the *Morning Post* remarks:

"The letters from members of the National Union of Teachers express the claim that body makes for access to the ladder which a considerable number of its members are perfectly capable of climbing by their own merit alone. To have had experience of keeping discipline and imparting information to classes of sixty scholars unfits no man for the same work in classes of twenty. And it is a fact that the methods used in teaching elementary subjects to many can be used with even greater success in teaching the same subjects to a few. But the secondary school is dominated by the requirements of examinations, and that is where such difference as there is between teaching in secondary and teaching in elementary schools arises. Under present conditions the man who has been through those examinations himself is, so far, better fitted to get boys and girls through them than the man who has not. But it is quite a different matter to train intelligence, to find out and develop the pupil's real bent.

"The demand for teachers who have been trained to teach will increase. Before many months are passed no more teachers in secondary schools will be able to get their names on to the Register without the qualification of training as well as those of experience and academic degrees. Where will the trained teachers come from? There must be one column only in the Teachers' Register. All teachers who have been trained, whether for primary or secondary work, must be admitted to it, and their academic qualifications, if any, will naturally appear against their names and influence the choice of those who have appointments to offer. The double column of the Teachers' Register is the last fortress of the vested interests of education. It will have to be carried. The Board of Education has only to give those vested interests notice to quit and the thing is done."

## INTERMEDIATE EDUCATION IN WALES.

### REPORT OF THE CENTRAL BOARD:

THE eighth annual report of the Central Welsh Board, constituted under the Welsh Intermediate Education Act, 1889, for the year 1904-1905, shows that the numbers of pupils in schools in 1904 was 9,284, as against 8,789 in 1903 and 8,322 in 1902. There are 95 schools. As to secondary education in the Principality, the Board remark:

In issuing their eighth annual report to the County Education Authorities the Central Welsh Board desire at the outset to express a hope that, amid the inevitable pressure of work in connexion with the administration of primary education, the difficult problems connected with secondary education will continue to receive close attention. In Wales the county schools administered under the Welsh Intermediate Education Act of 1889 are already, through the vast majority of their pupils, in closest touch with the elementary schools of the country, and, on the other hand, through a considerable proportion of their pupils, in similarly close relations to institutions of higher education in Wales and elsewhere. Moreover, the courses of training given by the schools, in conjunction with the certificates awarded by the Central Welsh Board for proficiency shown therein, now form, through the acceptance of these certificates by numerous public and professional bodies, the natural avenues of most able Welsh boys and girls to careers of usefulness and responsibility.

In order to secure the maximum efficiency of this system of secondary

schools it is imperative that the County Authorities, who have the requisite local knowledge, should exercise the greatest vigilance in order to see that the schools within their areas are fully meeting the needs of the communities with which they are associated. The County Authorities may rest assured that the Central Welsh Board, through its accumulated experience of the development of secondary education in the Principality as a whole, will only too gladly render every assistance in the solution of the various educational problems that arise in the course of this adjustment.

Nor should the part played by the County Education Authorities in this matter be one merely of collective action and public educational machinery. The Central Welsh Board venture to express a hope that, as has frequently been the case in the past, so also in the future, the individual members of the various Education Authorities will keep a sharp look out for boys and girls of genuine promise in their respective localities, not in the interests of these children merely, but in the interests of the community as a whole; and that they will, to the best of their ability, help to create around such children of clearly proved capacity and their parents a social atmosphere of sympathy and encouragement during the very trying and acutely anxious period which a prolonged course of education implies. The Board regard this as one of the most vital conditions of the success of any system of secondary education.

The Board mention that during the past year many of the county intermediate schools were called on to play their part in the educational training of pupil-teachers. They make the following interesting observations on the teaching of Welsh:—

From their organic relation to the life of Wales the county intermediate schools should, in the opinion of the Board, be kept in harmonious correlation with the best and most educative elements of Welsh life. It would be fatal to true educational progress in Wales if any of the county schools came to be regarded as isolated alien garrisons in the midst of an unsympathetic population. It is important, therefore, that the language, literature, and history of Wales (with especial reference to the district where the school is placed) should find their rightful place in the school curricula. Any obstacles arising from schemes or from existing curricula of school work to the attainment of this end should be carefully considered by the County Education Authorities and reported to the Central Welsh Board, so that the necessary representations may be made for their removal.

### THE BRITISH-DANISH-DUTCH SUMMER MEETING IN AMSTERDAM.

By J. S. THORNTON, B.A.

AMONGST the forty or fifty members of Miss Butlin's Summer Meeting in Copenhagen last year were nine English-speaking Dutch, who added greatly to the brightness and vivacity of the meeting. One of them, Miss Ott de Vries, the daughter of a late physician in Amsterdam, a cultivated lady of much energy and public spirit, was patriotic enough to think that what Miss Butlin was doing for Denmark she could do for Holland, using (like Miss Butlin) English only as the language in which all lectures and explanations were to be given. But what Miss Butlin has now for four summer holidays in succession been doing for Denmark is perhaps unknown to some readers of these lines; and so it may be well to repeat here a brief statement from *The Educational Times* twelve or fourteen months ago that "she has arranged with rare skill and great good fortune a rapid succession of lectures, discussions, visits, and excursions which . . . give the students of one nationality the beginnings of a first-hand exact knowledge of what another nation is doing in the way of social reform, municipal government, co-operation, education, and the like."

Miss Ott de Vries had, by her *bonhomie*, made so many friends both among Danes and Englishmen in the short ten days in Copenhagen last year that when she had, with willing help from leading citizens and men of letters at Amsterdam and the Hague, elaborated her plans and drawn up a programme, she found no difficulty in assembling twenty-four Danish and thirty-one English men and women, with two or three Americans thrown in, to the meeting that began in the early part of August last. More than that number could not be received, from a feeling that justice could hardly be done to a larger number; and so many English applicants who applied late had to have their guineas returned.

All the lectures were given in the handsome rooms of the *Vrije Gemeente* (the South Place Chapel of Amsterdam), generously placed at the disposal of the visitors, the pastor himself, Mr. Hugenholtz, being one of the lecturers (on Spinoza). Space fails for any description, however brief, of lectures dealing

with the language, literature, and fine arts of Holland, with its industries and colonies, and its "eternal struggle with the waters"; or of the visits to museums, canals, polders, factories, business resorts, social institutions, and historic sites, which seemed most suitable for the illustration of the lectures; or of the merry meetings at our various *pensions* (all near to Vondel Park), and at the *cafés*, of the dinners and the dances, the songs and the concerts—all the more joyous and free from stiffness, because more than a dozen of us were already comrades from the previous year. Not the least interesting sight to the English visitors was the congregation on Sunday morning in the English Reformed Church, which seems to be equally in touch with the National Churches of Scotland and Holland, and has met continuously in the same picturesque building in the Begijnhof since 1607.

It was indeed a "personally conducted" party; but the conductors were our comrades and friends. We were cheered on 'Change: at high market one Friday at Alkmaar, whilst we threaded our way among the cheese-laden sledges that are half dragged, half carried by porters in white hollands spotless and clean, the National Anthems of Denmark and then of England were heard pealing from the market tower, to the delighted surprise of the Danes. At Bergen, hard by, the lord of the manor put fourteen carriages at our disposal; in the evening of the same day the Tourist Association of Alkmaar, led by the member of Parliament for the town, gave us another drive in the suburbs. The excursion to Volendam was even more delightful. As one looks back upon those days, they seem to have been one long *fête*.

The gratitude of the party to its originator and leader found its fullest expression when, at the parting dinner at the Hague, Miss Ott de Vries was presented with a handsome armchair; and, being duly installed therein, was (no doubt much to the lady's surprise) hoisted arm-high by four stalwarts amongst the cheers of the company.

It is to Miss Butlin in particular that great praise must be given for devising, and making a success of, these Continental meetings. She was formerly a student at Somerville College, Oxford, and, being still a resident in the neighbourhood, has many friends and connexions there. She is, therefore, intimately acquainted with all the details of a Summer Extension Meeting in Oxford. But the idea of transplanting such a meeting to a foreign city, of taking the subjects for lectures entirely from the foreign country, and employing for the most part as lecturers English-speaking scholars of the country, was all her own. It seems to have come to her four or five years ago, whilst she was making a prolonged study of the great lock-out in Copenhagen; and the many friends she made amongst thoughtful people there readily did their best to make her idea the brilliant success it has proved to be. And now Miss Ott de Vries's success shows that the idea is capable of indefinite expansion. Educational and social work in England has often suffered from a lack of ideas, especially as compared with similar work abroad. But the success which has attended Miss Butlin's efforts gives us hope of better days—of a time, indeed, long since pictured by Miss Ott de Vries's illustrious countryman, Hugo Grotius, when "any nation shall be called upon to effect that which is wanting in another, in order that things germinated somewhere may be seen to have risen everywhere."

### VISIT TO DANISH HIGH SCHOOLS.

Mr. PERCY ALDEN, writing in the *British Friend* (September) on the August visit of the Friends' Social Union to Denmark ("to study for ourselves the present state of the agricultural and educational system, although other social movements were not lost sight of"), makes the following remarks on the Danish high schools:—

It is almost impossible to exaggerate the influence of the high schools (due to the inspiration of Grundtvig) which have re-created the Danish peasantry, and helped to make them, as Björnson says, "the most enlightened in the world." About ten of our party had the opportunity of spending the week-end at the largest of these schools, situated at Vallekilde, near Hörve, by the kind invitation of the Principal of the school, Mr. Paul Hansen, and Mr. J. S. Thornton. Although the school was not in session, they were able to meet some of the teachers and to get a general impression of a system which has been Denmark's original contribution to the theory and practice of education. There are over ninety of these schools in the country, and it is estimated that not less than

10 per cent. of the population pass through them; 10 per cent., it must be remembered, of the adults who would probably receive no further instruction but for these schools. They are directed by private enterprise, but are under Government inspection to a limited extent and receive grants in aid. There are no examinations, and for the most part the curriculum and the appointment of teachers are left to the discretion of the boards of management of the various schools. The fees for board, lodging, and instruction at these schools average nine or ten shillings per week; but to defray the expenses of the poor scholars the County Councils levy a small rate, from which fund they grant scholarships, and to this fund the State makes an equivalent grant. Such a scholar has the right to attend any one of the high schools in the country. At first it was mainly the sons and the daughters of the peasantry who availed themselves of these schools, but gradually other classes are beginning to recognize the importance of this means of education. The objects aimed at by the founder seem to have been, first, to foster a love of country and national feeling; secondly, to educate the people to make a proper use of the free constitution obtained in 1849; and, thirdly, to prepare the youth of Denmark in such a way for the battle of life that they will have a fair chance of success in any work which they may undertake, the whole spirit and feeling of the school being moral and religious. Generally speaking, it is the opinion of the Danes that the high school has had an immense effect upon the life of the people, and it is gradually transforming the peasants into a race of educated and cultured men and women.

### TECHNICAL EDUCATION IN THE COLONIES.

MR. HUBERT READE has addressed the following letter to Sir Philip Magnus:—

Travellers' Club, Pall Mall, S.W.  
September 11, 1905.

DEAR SIR PHILIP MAGNUS,—In view of our conversation, may I submit to you some suggestions as to the means of affording educated English immigrants opportunities for receiving technical education in our colonies?

As the Colonial Conference meets in 1906, I would call your attention to the question: How can Englishmen who have received an advanced education and wish to settle in our colonies be admitted to their universities and technical colleges for the purpose of receiving technical training under local conditions?

I would suggest that the University of London and Head Masters' Conference might unite in asking the Secretary of State for the Colonies to place this question on the agenda paper of the Conference. A precedent is afforded by the Educational Conference held at the request of the University of Oxford in connexion with the Conference of 1902. Subsequently the Colonial Office circulated in all our colonies a memorandum drawn up by the University of Oxford, giving all information relating to it which might be of use to colonial students desiring admission. Mr. Secretary Lyttelton promised, in answer to Sir James Rankin, that the Colonial Office would circulate such memoranda on behalf of any colonial university or technical school whose authorities applied to him to take action.

Could not the Colonial Office circulate this answer (at the request of the University of London) amongst all officers administering the government of colonies, and embody the information thus obtained in an *Imperial Universities Gazette* issued at regular intervals? A summary of such information could be given in the calendars issued by English universities, public and technical schools. Further, it would be well if the University of London and Head Masters' Conference could draw up a scheme for the admission of candidates from England, who had passed an examination held in England, to any colonial university or technical school, for submission to the Colonial Conference.

Matriculated students of any British university are, as a rule, admitted to any colonial university or technical school without further examination. An exception exists in the case of the Engineering Faculty of the McGill University of Montreal, which may require a supplementary examination in mathematics. Such provision is not made for English students.

I would suggest that such students should be eligible for admission to any colonial institution granting degrees or diplomas recognized by the Government of the colony on the production of certificates attested by the representative of the colony in London, (under the "Rules governing the Issue of Foreign Office Passports"): (1) That they held the "testamur" of a recognized qualifying examination; (2) certificates of moral character in the form required by the Civil Service Commissioners.

These qualifying examinations might, in the absence of a general final examination, include: (a) the Senior Local University Examinations, (b) the College of Preceptors Examination, (c) the Science and Arts Department, and other examinations of a similar calibre.

The standard of qualification should include, say, four *ordinary certificates* (taking the Oxford Senior Local Examination as an example) in such subjects as—(a) English, including History and General Geography; (b) one Foreign Language (Translation, Composition, Grammar) or Latin; (c) Science (the Committee should determine the qualifying subjects under this head); (d) Mathematics.

A scheme might also be drawn up for the admission of the undergraduates of any British university or admitted students of any higher technical school *ad eundem*, to be determined by the applicant's standing in England (*i.e.*, according to examinations passed, number of terms kept, &c.).

Any institution accepting any of these schemes would be free to withdraw its acceptance after a certain interval on due notification to the Secretary of State for the Colonies. Every institution would be at liberty to determine—(a) the age limit of students admitted under such a scheme, (b) if it should apply to both sexes.

It would be very desirable that colonial universities and technical institutions should afford facilities to students from England who were not desirous of taking their full degree or diploma course to attend classes in which certificates could be gained after examination. These certificates could be granted on the results of the ordinary terminal examinations. A somewhat similar plan is being considered at the Transvaal Institute, and is in force at Cirencester R.A.C. Admission to such classes might be obtained on the production of a certificate signed by the agent for the colony in London. Such certificates might be granted to persons producing an attested certificate of fitness for admission signed by the principal of the institution in which they had received their education.

A report as to the working of the scheme (if adopted) might be submitted by the Colonial Office to the Colonial Conference meeting in 1910.

This scheme includes the students of all higher agricultural colleges in England. The case of those from our normal training colleges for teachers also requires consideration.—I am yours very truly,

HUBERT READE.

### L.C.C. EVENING CLASSES.

IN about 272 school buildings, situated in every part of London, Evening Schools have just been opened for the enrolment of students. The instruction will, as a rule, be of a character preparatory to that given in the higher institutions, and will embrace commercial subjects such as Book-keeping, Shorthand, and Modern Languages, and general subjects such as Arithmetic, Geography, History, and Composition. Women and girls will be able to receive lessons in Practical Cookery, Dress-cutting and Dress-making, and Laundrywork; and instruction in Woodwork will be provided for men and boys. Gymnastics will be taught, and lectures by doctors and nurses on First Aid, Home Nursing, Health, and Infant Care will be given. Scholars under sixteen are admitted free. In 65 schools, situated in poor districts, no fees are charged to any students, but, as a rule, a charge of one shilling for the session for one or more subjects will be made to students of sixteen years and over.

In addition, there are 34 Commercial and Science and Art Centres where instruction of a more advanced character will be given, including commercial subjects, such as Accountancy, Banking and Currency, Commercial Law, Book-keeping, Commercial Correspondence, Shorthand and Typewriting, and Modern Languages; and Science and Art subjects such as Physiology, Geology, Mathematics, Chemistry, Building and Machine Construction, Drawing in Light and Shade, Model, Free-hand, and Geometrical Drawing, Painting from Still Life, &c. As in the case of Evening Schools, scholars under sixteen are admitted free. To other students, fees of 2s. 6d. in the case of Commercial Centres, and 5s. in the case of Science and Art Centres, will be charged for the Session.

Instruction of a still higher description is provided in the various Polytechnics, Technical Institutes, and Schools of Art situated in the county. In these institutions classes in Science, Art, and Technology, Music, Artistic Handicrafts, &c., have just been re-opened. The fees are nominal, and, in many cases, apprentices, learners, and improvers are admitted free. Every facility is offered to different types of students to supplement workshop, office, or studio practice by evening study under the most favourable conditions. Courses are arranged where necessary to prepare professional students for various examinations, art students for the examinations of the Board of Education, and artisans for the examinations of the City and Guilds of London Institute, &c. The Council offers annually scholarships and exhibitions to the total value of £1,500 for competition among students of Polytechnics, Technical Institutes, and Art Schools.

It is also proposed, provided the necessary number of students be forthcoming, to open certain new classes. Any persons who desire further information concerning the various classes are advised to ask for a leaflet from the Schoolkeeper of any one of the Council's schools.

COLLEGE OF PRECEPTORS.

CERTIFICATE EXAMINATION,

JULY, 1905.

THE following is the list of the successful candidates at the Colombo, Constantinople (Hasskein and Pera), Freetown (Sierra Leone), Gibraltar, Johannesburg, Lagos, Rangoon, Uitenhage, and Wei-hai-wei Centres.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively:—

- a.* = Arithmetic.
- al.* = Algebra.
- d.* = Drawing.
- du.* = Dutch.
- e.* = English.
- f.* = French.
- g.* = Geography.
- gm.* = Geometry.
- h.* = History.
- s.* = Scripture.
- sp.* = Spanish.

The small figures <sup>1</sup> and <sup>2</sup> prefixed to names in the Second and Third Class Lists denote that the Candidates were entered for the First and Second Classes respectively.

Bracketing of names denotes equality.

Boys.

FIRST CLASS [OR SENIOR].—PASS DIVISION.

- Edgar, W.H. *d.* Wei-hai-wei School
- Carroll, J.P. *f.du.* Marist Brothers' Coll., Uitenhage
- Brouchoud, J.J. *f.d.* Marist Brothers' S., Johannesburg
- Lorenzen, M.A. Wei-hai-wei School
- Dotto, John *sp.* Christian Brothers' Coll., Gibraltar
- Rainage, A. *f.sp.* Christian Brothers' Coll., Gibraltar
- Devins, H. *f.du.* Marist Brothers' S., Johannesburg
- Wilkrasingke, S.F. City College, Colombo

SECOND CLASS [OR JUNIOR].—HONOURS DIVISION.

- Rugeroni, J.V. Christian Brothers' Coll., Gibraltar
- Ossorio, M. *sp.* Christian Brothers' Coll., Gibraltar

SECOND CLASS [OR JUNIOR].—PASS DIVISION.

- <sup>1</sup>Bandinel, J.M. Wei-hai-wei School
- Aung, M.P. *a.* City College, Colombo
- <sup>1</sup>Dissanayaka, M.D.A. City College, Colombo
- Moller, J.P. Wei-hai-wei School
- Stark, F. Christian Brothers' Coll., Gibraltar
- Lorenzen, C.W. Wei-hai-wei School
- Jayanayake, C.A.S. City College, Colombo
- Ephraums, A. City College, Colombo
- Martins, T.A. C. M. S. Gram. S., Lagos
- Woodward, E. Christian Brothers' Coll., Gibraltar
- Nicolls, J.O. Wesleyan High S., Freetown, Sierra Leone
- <sup>1</sup>Williams, A.E.N. C. M. S. Gram. S., Lagos
- Mendis, R.A. City College, Colombo
- Roope, W.J.B. Wei-hai-wei School
- Cole, M.W. Wesleyan High S., Freetown, Sierra Leone

THIRD CLASS.—HONOURS DIVISION.

- Causse, L. *f.* Marist Brothers' Coll., Uitenhage
- Dumunier, B. *e.f.* Marist Brothers' Coll., Uitenhage
- Bonnefoy, H. *e.f.* Marist Brothers' Coll., Uitenhage
- Ruggeri, F. *e.al.* Christian Brothers' Coll., Gibraltar
- Rainage, E. *e.d.* Christian Brothers' Coll., Gibraltar
- Tauleigne, J. *f.* Marist Brothers' Coll., Uitenhage
- Dotto, Joseph. *e.f.* Christian Brothers' Coll., Gibraltar
- Gomez, S. *f.* Christian Brothers' Coll., Gibraltar
- Walker, C.C. *g.* Wei-hai-wei School
- Levy, J. *e.* Christian Brothers' Coll., Gibraltar

THIRD CLASS.—PASS DIVISION.

- <sup>2</sup>Taylor, F.B. C. M. S. Gram. S., Lagos
- <sup>2</sup>Conner, W. *s.* Wei-hai-wei School
- <sup>2</sup>Holgado, J. *d.* Christian Brothers' Coll., Gibraltar
- <sup>2</sup>Canessa, L. *sp.* Christian Brothers' Coll., Gibraltar
- <sup>2</sup>Buyers, G.A. Wei-hai-wei School
- <sup>2</sup>Williams, H.A. C. M. S. Gram. S., Lagos
- <sup>2</sup>Devadass, B.M.I. 18 Simpson Rd., Rangoon, Burma
- Pinela, G. Christian Brothers' Coll., Gibraltar
- Conner, T.C. Wei-hai-wei School
- Aruldassen, G. 18 Simpson Rd., Rangoon, Burma
- Coker, B.D. Wesleyan High S., Freetown, Sierra Leone
- Adelagun, J.A. *e.* C. M. S. Gram. S., Lagos
- Cardona, J.M. Christian Brothers' Coll., Gibraltar
- <sup>2</sup>Doherty, K.L. C. M. S. Gram. S., Lagos
- Grimble, E.G. Wei-hai-wei School
- <sup>2</sup>Lahanmi, V.R. C. M. S. Gram. S., Lagos
- Barnes, A. Christian Brothers' Coll., Gibraltar
- John, D. 18 Simpson Rd., Rangoon, Burma
- <sup>2</sup>Solomon, D. 18 Simpson Rd., Rangoon, Burma
- <sup>2</sup>Williams, M.A. C. M. S. Gram. S., Lagos
- <sup>2</sup>Francis, E.B. Wesleyan High S., Freetown, Sierra Leone
- Wright, P.W.H. Wesleyan High S., Freetown, Sierra Leone
- Cummings, E.H.T. Wesleyan High S., Freetown, Sierra Leone
- Toulmin, S.N. Wei-hai-wei School
- John, E.A. Wesleyan High S., Freetown, Sierra Leone
- Salako, J. C. M. S. Gram. S., Lagos
- <sup>2</sup>Stober, A.H. Wesleyan High S., Freetown, Sierra Leone
- daSilva, E.V. C. M. S. Gram. S., Lagos
- Roberts, I.K. Wesleyan High S., Freetown, Sierra Leone

GIRLS.

FIRST CLASS.—PASS DIVISION.

- Morton, D. *h.f.d.* English High S., Pera, Constantinople
- Binns, A.K. *f.d.* English High S., Pera, Constantinople
- Tucker, M. *f.* English High S., Pera, Constantinople
- Salerian, E. *f.* English High S., Pera, Constantinople

SECOND CLASS.—HONOURS DIVISION.

- Likiadopoulos, C. *a.gm.f.* English High S., Pera, Constantinople

SECOND CLASS.—PASS DIVISION.

- Binns, M.E. English High S., Pera, Constantinople
- Lombardo, H. *f.d.* English High S., Pera, Constantinople
- Zavaro, V. *sf.* Church of Scotland Mission S., Hasskein, Constantinople

THIRD CLASS.—HONOURS DIVISION.

- Parseghian, M. *a.f.* English High S., Pera, Constantinople
- Lander, D. *gm.* English High S., Pera, Constantinople
- Vincombe, D.C. *d.* English High S., Pera, Constantinople
- Bond, D.G.M. *e.al.* English High S., Pera, Constantinople
- Keun, W. *s.e.* English High S., Pera, Constantinople
- Isaac, M. *s.* 18 Simpson Rd., Rangoon, Burma
- Laendler, L. *f.* English High S., Pera, Constantinople
- Jugovitch, N. *e.f.* English High S., Pera, Constantinople

THIRD CLASS.—PASS DIVISION.

- Missak, A.M. English High S., Pera, Constantinople
- Michalino, C. English High S., Pera, Constantinople
- Josepovici, H. English High S., Pera, Constantinople
- <sup>2</sup>Devadass, A. 18 Simpson Rd., Rangoon, Burma

COLLEGE OF PRECEPTORS.

PROFESSIONAL PRELIMINARY EXAMINATION—PASS LIST.

SEPTEMBER, 1905.

THE Supplementary Examination by the College of Preceptors for Certificates was held on the 5th, 6th, and 7th of September, in London, and at five other local centres, viz., Birmingham, Bristol, Leeds, Liverpool, and Manchester. The following candidates obtained Certificates:—

FIRST CLASS [OR SENIOR].

Pass Division.

Ker, E. C.

SECOND CLASS [OR JUNIOR].

Honours Division.

- Bennett, P. L. T. *al.* Noel, H. L. C. *gm.it.*
- Carter, W. E. *l.gr.* Shearburn, Miss M. R. *e.f.*
- Hooton, W. H. *a.gm.f.* Welch, H. V. *a.al.gm.f.*
- Maurice, G. K. *al.f.l.* Wells, F. *gm.*

Pass Division.

- Appleyard, S. V. *g.* Chandler, H. W. Close, H. D. S. *h.*
- Birch, C. Charter, E. J. M. Cooper, T.
- Burch, H. J. Carruthers, N. S. Davis, H.
- Brentnall, T. C. *gm.* Cline, E. C. Evans, D. A. *gm.*

- Falkner, S. Lang, L. W. Rogers-Tillstone, H. F. *f.*
- Fenwick, A. G. B. Lendrum, F. S. Ross, J. H.
- Fenwick, P. C. C. Levy, F. *al.gm.* Scales, W. H. *gm.*
- Fisher, A. G. T. Lindsey, M. *f.* Shaw-Crisp, C.
- Foster, H. E. B. Ling, C. C. Smith, G.
- Gibson, A. Mason, H. Swire, F.
- Griffiths, H. L. S. *a.gm.* Matthews, L. C. Tanner, R. D.
- Hallinan, W. Edwd. *al.* Matthews, W. H. Tilden-Smith, Miss
- Hallinan, W. Ewart. May, G. M. E. N. *f.*
- Heath, P. A. *a.* McRae, D. *f.* Titmas, O. H.
- Hieber, A. *gm.ge.* Milton, A. C. Tucker, J. L.
- Hough, G. H. *gm.* Morgan, E. A. Tuxford, H.
- Howard Kent, T. Morgan, I. M. Tyson, J.
- Hughes, F. M. Morris, C. D. Verrall, A. G.
- Humphrey-Davy, O'N. Murphy, P. *ch.* Wallis, F. R.
- Hurst, R. C. O'Hagan, C. *gm.* Watton, G. E.
- Ivens, E. L. Parker, C. Welch, T. B. *f.*
- Jackson, T. H. Parry, F. G. *a.al.gm.* Wheeler, T. M. *gm.*
- Jenkins, G. R. Penny, C. H. G. Wild, A. S.
- Jones, G. L. Pern, A. S. Wilkinson, R. F.
- Jones, R. L. Richmond, A. I. Wright, W. E.
- Jones, W. E. *al.*

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—

- a* = Arithmetic.
- al* = Algebra.
- ch* = Chemistry.
- e* = English.
- f* = French.
- g* = Geography.
- gm* = Geometry.
- ge* = German.
- gr* = Greek.
- h* = English History.
- it* = Italian.
- l* = Latin.

## MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on September 16. Present: Dr. Wormell, President, in the Chair; Prof. Adams, Mr. Armitage Smith, Mr. Barlet, Rev. Canon Bell, Mr. A. E. Butler, Mr. J. L. Butler, Mr. Charles, Miss Crookshank, Mr. Hawe, Miss Jebb, Mr. Kelland, Dr. Lawrence, Dr. Moody, Mr. Morgan, Rev. Dr. Scott, Mr. Starbuck, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Summer Examination for Diplomas had been held on August 28—September 2, and had been attended by 402 candidates. The Professional Preliminary Examination had been held on September 5-7, and had been attended by 242 candidates.

The report of the Finance Committee was adopted.

The following persons were elected members of the College:—

Mr. E. C. J. L. Addenbrooke, 13 Bourne Street, Dudley.

Mr. E. H. Butt, A.C.P., Lower School of John Lyon, Harrow-on-the-Hill.

Miss L. Counsell, 9 Park Lane, Calcutta.

Mr. C. Reddie, B.Sc. Edin., Ph.D., Abbotsholme School, Rochester.

Mr. J. R. Sisling, B.A. Lond., Newcastle Modern School, Newcastle-on-Tyne.

Mr. A. E. P. Voules, M.A. Oxon., Oxford House, South Croydon.

The following books had been presented to the Library since the last meeting of the Council:—

By the BUREAU OF EDUCATION, WASHINGTON, U.S.A.—Report of the Commissioner of Education, 1903, Vol. II.

By the GENERAL MEDICAL COUNCIL.—Minutes of the Council, Jan.—May, 1905.

By G. BELL & SONS.—Baker and Bourne's First Algebra; Tuckey's Examples in Arithmetic; York Readers, Book III.

By A. & C. BLACK.—Kirkman's *La Première Année de Française*; Mitton's *The Glory of London*; Reynolds's *Regional Geography (Europe)*.

By BLACKIE & SON.—Blackie's Commercial Course of Writing and Bookkeeping, Books I.—VI.; Little Tales for Little Folk (4 Parts); Model Readers, Books I., II., III.; Story Book Readers (Standards I., III., and IV.); The English Counties (4 Vols.); New Concentric Arithmetics, Books I. and II.; South African Script Figure Arithmetics, Standards I. and II.; Picture Shakespeare (King Henry VIII. and Twelfth Night); English School Texts, edited by Dr. Rouse (Macaulay's First Chapter, Macaulay's Second Chapter, Gipsy Stories from Borrow's "Bible in Spain," Swift's Gulliver's Travels, Tales from the Decameron of Boccaccio, Erasmus's Praise of Folly, Napier's Battles of the Peninsular War (2 Parts), Drake's World Encompassed, Lamb's Schooldays and other Essays, Plutarch's Life of Alexander, Hawthorne's Tanglewood Tales, Raleigh's Discovery of Guiana, Sindbad the Sailor, Defoe's Robinson Crusoe, Tales from the Arabian Nights, Washington Irving's Rip Van Winkle, &c., Lamb's Adventures of Ulysses, The Stories of Antonio and Benedict Mol from Borrow's "Bible in Spain," Saris and

Adams's Early Voyages to Japan, Black Hole of Calcutta, History of Virginia, and Kingsley's Heroes); Little French Classics (Dumas' Adventures in Switzerland, Episodes from Guizot's *La Révolution en Angleterre*, Dumas' *Le Voyage de Chicot*, Selections from the Orators of the French Revolution, Select Fables of Florian, Glimpses of Napoleon (from De Vigny's *La Canne de Jone*), Voltaire's *Le Blanc et le Noir*, Longer Poems for Recitation, Legouvé's Jacques L'aveugle and Méricime's *L'Enlèvement de la Redoute*, Bourget's *Récits de Guerre*, Barbé's Songs with Music, Nerval's Oriental Scenes, Daudet's *La Dernière Classe*, Beaumarchais' *Le Barbier de Séville*, Dumas' *Jacomo*, Méricime's *Mateo Falcone*, Molière's *L'Avare*, and Molière's *Les Femmes Savantes*); Little German Classics (Goethe's *Road to Italy*, Muellenbach's *Die Silberdistel*, De la Motte-Fouqué's *Sintram*, and Goethe's *Die Geschwister*); Blackie's Latin Texts (Eutropius, Horace's Odes, Livy V., Vergil's *Aeneid VI.*, and Vergil's *Bucolics*); Matthew Arnold's *Sohrab and Rustum*; Atkins's French Exercises and German Exercises; Bridgett's *Introduction to Algebra*; Carlyle's *Essay on Burns*; Chaytor's *Select Tales of Hans Andersen*; Creswell's *Longfellow's Hiawatha*; Dougall's *Test Papers in Mathematics*; Fry's *Tennyson's Princess*; Heller and Ingold's *Elementary Experimental Science*; Hodgson's *The Teacher's Rabelais*; Jamieson's *Graphs for Beginners*; Jones's *The Teaching of Latin*; Kaiser's *Choix de Lectures Françaises*; Kastner and Atkins's *French Literature of the 17th Century*; Layng's *Algebra, Part I.*; Liddell's *Xenophon's Anabasis, Book III.*; Macarthur's *British History in Review*; Meyer's *Brief Vocabulary of Common German Words*; Notcutt's *Macaulay's England in 1685*; Peel's *Coal-Mining*; Phillips's *Select Poems of Emerson*; Poole and Becker's *Lectures Françaises (Géographie et Histoire)*; Riach's *Recitations for Infant Schools, and School Recitations (Seniors)*, Books I.—III.; Roberts's *Milton's Paradise Lost, Books V. and VI.*; Saunio's *L'Anniversaire de Blanche*; Scott and Jones's *Second Latin Course*; Sellon's *Selections from Spenser*; Swinstead's *How to Draw a Map from Memory*; Vinall's *Complete Course of Free-Arm and Industrial Drawing*; Wakefield's *Lessons on Living*; Scholle and Smith's *German Reader*; Ellis's *Soldier's Historical Geography of the British Empire*; Palgrave's *Golden Treasury*.

By the CAMBRIDGE UNIVERSITY PRESS.—Cambridge Higher Local Examination Papers, June, 1905.

By W. B. CLIVE.—Matriculation Directory, No. XL., June, 1905.

By MACMILLAN & Co.—Cotterill's *Longfellow's Shorter Poems*; Fowler's *Essays from Addison*; Hadley's *Magnetism and Electricity for Students*; Stewart's *The Tale of Troy*; Twentyman's *Macaulay's Essay on Sir William Temple*; Watson's *Book of Golden Deeds*; MacLehose's *Tales from Spenser*.

By METHUEN & Co.—Blouet's *Easy French Rhymes*; Dunstan's *Elementary Experimental Chemistry*; Wilmot Buxton's *Easy Stories from English History*.

By J. MURRAY.—Rouse's *Matthew Arnold on Translating Homer*; Jones's *Primer of Logic*; Porter's *Intermediate Mechanics*.

By the OXFORD UNIVERSITY PRESS.—Chaytor's *Stendhal's Mémoires d'un Touriste*; Dupuis' *Mignet's Histoire de la Révolution Française*; Fisher's *Class Book of Elementary Chemistry*; Marchant's *Greek Reader, Vol. I.*; Willis's *Elementary Modern Geometry, Part I.*; Wilson and Hedley's *Elementary Chemistry*.

By G. PHILIP & SON.—Landseer *Object Lesson Handbook and Reader, No. 1*; Landseer *Object Readers (4 Vols.)*; Semi-Upright Copy Books (3 Parts); Bremner's *Book of Song, Games, and Ball Games*.

By RIVINGTONS.—Borchardt's *Elementary Algebra*; Hartog's *Grammaire Française sur la Méthode Inductive, and De Ségur's Histoire de la Princesse Rosette*; Shorto's *Algebraical Grounding*.

By SANDS & Co.—De Pothonier's *Qu'est-ce que cela veut dire?*

By WHITTAKER & Co.—Mackay and Curtis's *First French Book*. Calendars of Glasgow University; Cape of Good Hope University; St. Andrews University; Queen's College, Cork; University College, Bristol.

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.

Chairman—THE DEAN OF CANTERBURY.

Vice-President—THE LORD HARRIS.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to  
**THE CLERGY AND THEIR RELATIVES.**

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, **£4,194,485.** Annual Income, **£398,982.**

Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

**IMPORTANT  
NOTICE.**

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

### PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
  2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
  3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
  4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
  5. Any Person holding any permanent appointment under the Society.
- Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.
- Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.
- The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

# MESSRS. BELL'S EDUCATIONAL BOOKS.

Educational Catalogue Post Free on application.

## NEW MATHEMATICAL BOOKS.

Written on Modern Lines and following the Recommendations of the Mathematical Association and the Cambridge Syndicate.

**NEW SCHOOL ARITHMETIC.** By CHARLES PENDLEBURY, M.A., Assisted by F. E. ROBINSON, M.A. Second Edition. With or without Answers, 4s. 6d.; or in Two Parts, 2s. 6d. each. KEY to Part II., 8s. 6d. net.

"The new sections on graphs, mensuration, and logarithms add considerably to the value of the book, which in this form is unrivalled."—*Athenæum*, June 3, 1905.

**NEW SCHOOL EXAMPLES IN ARITHMETIC.** Extracted from the above. With or without Answers, 3s.; or in Two Parts, without Answers, 1s. 6d. and 2s.

**EXAMPLES IN ARITHMETIC.** With some Notes on Method. By C. O. TUCKEY, M.A., Assistant Master at Charterhouse. Crown 8vo, with or without Answers, 3s.

**ELEMENTARY GEOMETRY.** By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Complete, Fifth Edition, Revised, 4s. 6d. Also in Parts. BOOKS I.-III., Seventh Edition, Revised, 2s. 6d. BOOKS I.-IV., Fourth Edition, 3s.

Also published in the following forms:—

BOOK I., 1s. BOOKS I. and II., 1s. 6d. BOOKS II. and III., 1s. 6d. BOOKS III. and IV., 1s. 6d. BOOKS II.-IV., 2s. 6d. BOOK IV., 1s. BOOKS IV. and V., 2s. BOOK V., 1s. 6d. BOOKS IV.-VII., 2s. BOOKS V.-VII., 2s. 6d.

ANSWERS TO NUMERICAL AND MENSURATION EXAMPLES, 6d. net.

COMPLETE KEY, 6s. net.

**ELEMENTARY GRAPHS.** Reprinted from the above. New and Enlarged Edition, 6d. net.

**THE ELEMENTS OF PRACTICAL MATHEMATICS AND PHYSICAL MEASUREMENT.** By H. A. STERN, M.A., Principal of Cedar Court Army College, Roehampton; and W. H. TOPHAM, Science Instructor at Cedar Court Army College and at Harrow School. Crown 8vo, 4s. 6d. [Shortly.]

CONTENTS:—Contracted Arithmetical Processes—Graphical Methods—The Measurement of Length—The Measurement of Angles—The Measurement of Mass—The Measurement of Area—The Measurement of Volume—The Measurement of Specific Gravity—The Calibration of Tubes and Graduated Vessels—Slide Rule—Further Graphical Methods—Vectors—Graphical Statics—Centre of Gravity—Practical Statics and the Mechanical Powers—Friction—Graphical Representation of Motion—Force, Velocity, Acceleration, Work and Energy—Impulse, Momentum, Impact, Coefficient of Restitution—The Pendulum—The Determination of  $g$ —The Barometer and Boyle's Law—Moments of Inertia—Centre of Pressure—Elasticity.

**ELEMENTARY PRACTICAL MATHEMATICS.** By the same Authors. Crown 8vo, 2s. 6d.

\* \* This Volume contains the First Nine Chapters of the Author's larger Work.

**ELEMENTARY ALGEBRA.** By W. M. BAKER, M.A., and A. A. BOURNE, M.A., of Cheltenham College. Complete. Crown 8vo, Second Edition, with or without Answers, 4s. 6d.; or in Two Parts. Part I., 2s. 6d.; or with Answers, 3s. Part II., with or without Answers, 2s. 6d.

TEACHERS' EDITION, with the Answers to each Set of Examples printed opposite them. Two Parts, 5s. net each.

COMPLETE KEY, with numerous Graphical and other Figures, 10s. net; or in Two Parts, 5s. net each.

**EXAMPLES IN ALGEBRA.** Extracted from the above. With or without Answers, 3s.; or in Two Parts. Part I., 1s. 6d.; or with Answers, 2s. Part II., with or without Answers, 2s.

**A FIRST ALGEBRA.** By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Small crown 8vo, 192 pages. 1s. 6d.; or with Answers, 2s.

This book, which takes the subject as far as Quadratic Equations, will be found specially suitable for the Local Examinations.

**EXAMPLES IN ALGEBRA.** By C. O. TUCKEY, M.A., Assistant Master at Charterhouse. Fifth Edition. With or without Answers, 3s.

These Examples are intended to provide a complete course of Elementary Algebra for classes in which the book-work is supplied by the Teacher.

**A NEW TRIGONOMETRY FOR SCHOOLS.** By W. G. BORCHARDT, M.A., B.Sc., and the Rev. A. D. PERROTT, M.A., Assistant Masters at Cheltenham College. Crown 8vo, 4s. 6d.; or in Two Parts, 2s. 6d. each.

The Authors hope that this book will supply the need felt for a Trigonometry based on Four-figure Logarithm Tables, the authorities responsible for the various Cambridge Examinations, Army Entrance Examinations, &c., now dispensing with Seven-figure Logarithms. The book lays stress on the more practical parts of the subject. Squared paper is freely made use of, and 600 Miscellaneous Examples are provided.

**ELEMENTARY DYNAMICS.** By W. M. BAKER, M.A., Head Master of the Military and Civil Department at Cheltenham College. New Edition, Revised and Enlarged. With chapters on Graphical Methods. Crown 8vo, 4s. 6d.

**DIFFERENTIAL CALCULUS FOR BEGINNERS.** By ALFRED LODGE, M.A., Mathematical Master at Charterhouse. With an Introduction by Sir OLIVER LODGE, D.Sc., F.R.S., LL.D., Principal of the University of Birmingham. Second Edition, Revised. 4s. 6d.

**INTEGRAL CALCULUS FOR BEGINNERS.** By ALFRED LODGE, M.A., Mathematical Master at Charterhouse. Crown 8vo, 4s. 6d.

SUITABLE FOR

### CAMBRIDGE LOCAL EXAMINATIONS, 1906.

**SCOTT'S LADY OF THE LAKE.** Edited, with Introduction and Notes, by the Rev. A. E. WOODWARD, M.A. 3s. 6d.; or Cantos I. and V. separately, 8d. each. (*Bell's English Classics.*)

**BYRON'S CHILDE HAROLD, Cantos III. and IV.** Edited, with Introduction and Notes, by H. G. KEENE, M.A., C.I.E. 1s. 9d. (*Bell's English Classics.*)

**SHAKESPEARE'S TEMPEST.** Edited, with Introduction and Notes, by T. DUFF BARNETT, B.A. 2s. (*Bell's English Classics.*)

NOTES TO ABOVE WITHOUT THE TEXT. 1s.

**NOTES ON SHAKESPEARE'S KING HENRY V.** By T. DUFF BARNETT, B.A. 1s.

**CÆSAR—DE BELLO GALlico.** Book IV. Edited, with Introduction, Notes, Exercises, and Vocabulary, by T. PHILLIPSON, M.A., Head Master of Christ's College, Finchley. 1s. 6d. (*Bell's Illustrated Classics.*)

TRANSLATION. 1s. (*Bell's Classical Translations.*)

**VIRGIL—ÆNEID.** Book VI. Edited, with Introduction, Notes, and Vocabulary, by J. T. PHILLIPSON, M.A., Head Master of Christ's College, Finchley. 1s. 6d. (*Bell's Illustrated Classics.*)

TRANSLATION (Books IV.-VI.). 1s. (*Bell's Classical Translations.*)

**CICERO—DE AMICITIA.** Edited, with Introduction, Notes, Exercises, and Vocabulary, by H. J. L. J. MASSÉ, M.A., Assistant Master at St. Paul's Preparatory School. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics.*)

TRANSLATION. 1s. (*Bell's Classical Translations.*)

**HORACE—ODES.** Book II. Edited, with Introduction, Notes, and Vocabulary, by C. G. BOTTING, B.A., Assistant Master at St. Paul's School. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics.*)

TRANSLATION. 1s. (*Bell's Classical Translations.*)

**HORACE—ODES.** Book IV. Edited, with Introduction, Notes, and Vocabulary, by H. LATTER, M.A., Assistant Master at Cheltenham College. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics.*)

TRANSLATION. 1s. (*Bell's Classical Translations.*)

**EURIPIDES—ALCESTIS.** Edited, with Introduction, Notes, Appendices, and Vocabulary, by E. H. BLAKENEY, M.A., Head Master of the King's School, Ely. With numerous Illustrations. 2s. (*Bell's Illustrated Classics.*)

TRANSLATION. 1s. (*Bell's Classical Translations.*)

**TACITUS—AGRICOLA.** Edited, with Introduction and Notes, by J. W. E. PEARCE, formerly Assistant Master at University College School. With numerous Illustrations, and 3 Maps and Plans. 2s. (*Bell's Illustrated Classics.*)

TRANSLATION, 5s. (*Bolin's Classical Library.*)

**HAUFF—THE CARAVAN.** Translated by S. MENDEL. 1s. (*Bell's Modern Translations.*)

TRANSLATION. 1s. (*Bell's Classical Translations.*)

**XENOPHON—ANABASIS.** Books II. and III. Edited, with Introduction, Notes, and Vocabulary, by E. C. MARCHANT, M.A. With Illustrations and Map. 1s. 6d. each. (*Bell's Illustrated Classics.*)

TRANSLATION. Books I. and II., 1s.; Books III., IV., and V., 1s. (*Bell's Classical Translations.*)

London: GEORGE BELL & SONS, Portugal Street, Lincoln's Inn, W.C.

# MACMILLAN & CO.'S LIST.

FOURTH EDITION, REVISED AND ENLARGED. NOW READY.

## ELEMENTARY TRIGONOMETRY.

By H. S. HALL, M.A., and S. R. KNIGHT, B.A.

Globe 8vo, 4s. 6d.

This edition is adapted to all the modern requirements. In particular, it contains Graphs of the Trigonometrical Functions, and Examples of their use. A special feature is the large number of Examples in illustration of Four-figure Tables. Tables of Logarithms, Antilogarithms, Natural and Logarithmic Functions (specially compiled) are given at the end of the book. \*\*\* The old edition is still on sale.

**ESSAYS ON MEDIEVAL LITERATURE.** By W. P. KER. Extra crown 8vo, 5s. net.

**MACHINE CONSTRUCTION AND DRAWING.** By FRANK CASTLE, M.I.M.E., Mechanical Laboratory, Royal College of Science, South Kensington, Lecturer in Machine Drawing, Building Construction, and Mathematics at the Morley College, London. Globe 4to, limp cloth, 4s. 6d.

**SIMPLE LESSONS ON HEALTH.** For the use of the Young. By Sir MICHAEL FOSTER, K.C.B., M.P., &c. Fcap. 8vo, 1s.

*Westminster Gazette.*—"Should be very useful. There is a lack of books of this kind by leading authorities."

## ENGLISH LITERATURE FOR SECONDARY SCHOOLS.

General Editor: J. H. FOWLER, M.A.

NOW READY.

**BALLADS OLD AND NEW.** Selected and Edited for School use, with Glossary, &c., by H. B. COTTERILL, M.A. In Two Parts. 1s. each.

**THE TALE OF TROY.** Retold in English by AUBREY STEWART, M.A. Edited for Schools, with Introduction, &c., by T. S. PEPPIN, M.A. Illustrated. 1s. 6d.

**TALES FROM SPENSER.** Chosen from "The Faerie Queen" by SOPHIA H. MACLEHOSE. School Edition, with Introduction, Notes, &c. 1s. 3d.

**LONGFELLOW'S SHORTER POEMS.** Selected and Edited, with Notes, Glossary, &c., by H. B. COTTERILL, M.A. 1s.

**ESSAYS FROM ADDISON.** Selected and Edited, with Introductions, Notes, Glossary, &c., by J. H. FOWLER, M.A. 1s.

**MACAULAY'S ESSAY ON SIR WILLIAM TEMPLE.** With Introduction, Notes, &c., by G. A. TWENTYMAN, B.A., Assistant Master at Manchester Grammar School. 1s. [Ready.]

**A BOOK OF GOLDEN DEEDS.** Of all Times and all Lands. By CHARLOTTE M. YONGE. A Selection, Edited, with Introductions, Notes, Glossary, &c., by HELEN H. WATSON. Part I. 1s.

Others to follow.

*EDUCATION.*—"We greet this excellent series with hearty welcome. It satisfies a distinct and long-felt want, and is adapted in every way for the purposes of securing a first-hand acquaintance with the works of great authors. . . . We have no hesitation in adjudging this the best series at present on the market."

## New Works on Geometry to meet the New Requirements.

**PRACTICAL GEOMETRY FOR BEGINNERS.** By V. LE NEVE FOSTER and F. W. DOBBS, Assistant Masters at Eton College. Crown 4to, 2s. 6d.

**PRACTICAL EXERCISES IN GEOMETRY.** By W. D. EGGAR, M.A., Assistant Master at Eton College. Revised Edition, with Answers. Globe 8vo, 2s. 6d.

**A NEW GEOMETRY FOR SCHOOLS.** By S. BARNARD, M.A., Assistant Master at Rugby School, and J. M. CHILD, B.A. Cantab., Lecturer in Mathematics, Technical College, Derby. Containing the Substance of Euclid, Books I.-VI. Crown 8vo, 4s. 6d.

**A NEW GEOMETRY FOR JUNIOR FORMS.** By S. BARNARD, M.A., and J. M. CHILD, B.A. Cantab. Containing the Substance of Euclid, Books I., III., 1-31, the easy parts of Book IV., and a description of the forms of the Simpler Solids. Crown 8vo, 2s. 6d. This volume contains all the Practical and Theoretical Geometry required for a pass by Junior Candidates in the University Locals.

**A NEW GEOMETRY FOR SENIOR FORMS.** By S. BARNARD, M.A., and J. M. CHILD, B.A. Containing the Substance of Euclid, Books II., VI., XI., together with the Mensuration of Solids. Crown 8vo, 3s. 6d.

**THEORETICAL GEOMETRY FOR BEGINNERS.** By C. H. ALLCOCK, Senior Mathematical Master at Eton. Part I. (containing the Substance of Euclid, Book I.); Part II. (containing the Substance of Euclid, Book III., Props. 1-34, and Book IV., Props. 1-9); Part III. (containing the Substance of Euclid, Book II., Props. 1-14; Book III., Props. 35-37; and Book IV., Props. 10-16); Part IV. (this Part treats of Ratio and Proportion, and their application to Geometrical Theorems and Problems). Globe 8vo, 1s. 6d. each.

## LESSONS IN EXPERIMENTAL AND PRACTICAL GEOMETRY.

By H. S. HALL, M.A., and F. H. STEVENS, M.A. Crown 8vo, 1s. 6d.

## A SCHOOL GEOMETRY.

By H. S. HALL, M.A., and F. H. STEVENS, M.A. Crown 8vo.

This work is based upon the recommendations of the Mathematical Association, and will be found to satisfy the requirements of University, Local, London Matriculation, Army, Navy, and other Examinations. In particular, the suggestions recently proposed by the Cambridge Syndicate have been carefully considered.

Part I.—LINES and ANGLES, RECTILINEAL FIGURES. 1s.  
Parts I. and II.—Part I., LINES and ANGLES, RECTILINEAL FIGURES. Part II., AREAS of RECTILINEAL FIGURES (containing the Substance of Euclid, Book I.). 1s. 6d. KEY, 3s. 6d.

Part III.—CIRCLES (containing the Substance of Euclid, Book III., 1-34, and part of Book IV.). 1s.  
Parts I., II., and III. 2s. 6d.

\*\*\* This volume exactly suits the requirements of the New Syllabus for the King's Scholarship Examination.

Part IV.—SQUARES and RECTANGLES, GEOMETRICAL EQUIVALENTS OF CERTAIN ALGEBRAICAL FORMULÆ (containing the Substance of Euclid, Books II. and III., Props. 35-37). Sewed, 6d.

Parts I.-IV. 3s. KEY, 6s.  
Parts III. and IV.—Containing the Substance of Euclid, Books II. and III. and part of Book IV. 1s. 6d.

Part V.—Containing the Substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.  
Parts I.-V. 4s.

Parts IV. and V.—Containing the Substance of Euclid, Book II., Book III., 35-37, and Book VI. 2s.

Parts IV., V., and VI.—Containing the Substance of Euclid, Book II., Book III., 35-37, Book VI., Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. 2s. 6d.

Part VI.—Containing the Substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. 1s. 6d.

Parts I.-VI.—Containing Plane and Solid Geometry, treated both theoretically and graphically. 4s. 6d. KEY, 8s. 6d.

MACMILLAN & CO., Ltd., St. Martin's Street, London, W.C.

# SCHOOL EXAMINATIONS, 1906.

Suitable Text-Books issued by the  
University Tutorial Press.

GENERAL EDITOR—

WM. BRIGGS, LL.D., M.A., B.Sc., F.C.S., F.R.A.S.

## COLLEGE OF PRECEPTORS' Examinations, 1906.

- Caesar.—Gallic War, Book I.** By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Caesar.—Gallic War, Book II.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Euripides.—Alcestis.** By J. H. HAYDON, M.A. Camb. 2s. 6d. Vocabulary, 1s.
- Horace.—Odes, Book I.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Vergil.—Aeneid, Book I.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Shakespeare.** By W. J. ROLFE, D.Litt. *Henry V.* 2s. 6d. *Tempest.* 2s.
- Matriculation Modern History.** Being the History of England, 1485-1901, with some reference to the Contemporary History of Europe and Colonial Developments. By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d.
- English History. The Intermediate Text-Book of (1603-1714).** By C. S. FEARENSIDE, M.A., and A. JOHNSON EVANS, M.A. 4s. 6d.
- Shakespeare.—Henry V.** Edited with Introduction. Prof. W. J. ROLFE' D.Litt. 2s. 6d.

## CAMBRIDGE LOCAL Examinations, 1903.

- Caesar.—Gallic War, Book VI.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Cicero.—De Amicitia.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Euripides.—Alcestis.** By J. H. HAYDON, M.A. Lond. 2s. 6d. Vocabulary, 1s.
- Horace.—Odes, Book II.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Horace.—Odes, Book IV.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Horace.—Odes, Books I-IV.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. Introduction, Text, and Notes. 3s. 6d.
- Tacitus.—Agricola.** By GILBERT NORWOOD, B.A. Cantab., and A. F. WATT, M.A. Oxon. 2s. 6d. Vocabulary, 1s.
- Vergil.—Aeneid, Book VI.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Shakespeare.—Tempest.** Edited, with Introduction and Notes, by Prof. W. J. ROLFE, D.Litt. 2s.
- Shakespeare.—Henry V.** Edited, with Introduction and Notes, by Prof. W. J. ROLFE, D.Litt. 2s. 6d.

## OXFORD LOCAL Examinations, 1906.

- Aeschylus.—Persae.** By J. H. HAYDON, M.A. Camb. and Lond. 3s. 6d.
- Caesar.—Gallic War, Books I, II, III.** By A. H. ALLCROFT, M.A. Oxon. and others. 1s. 6d. each. Vocabulary, 1s. each.
- Euripides.—Alcestis.** By J. H. HAYDON, M.A. Camb. 2s. 6d. Vocabulary, 1s.
- Horace.—Odes, Book I.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Vergil.—Aeneid, Book I.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.
- Shakespeare.**—Edited, with Introduction and Notes, by Prof. W. J. ROLFE, D.Litt. *Macbeth, Henry V.* 2s. 6d. each. *Tempest.* 2s.
- Spenser.—The Faerie Queene, Book I.** By W. H. HILL, M.A. 2s. 6d
- English History, The Intermediate Text-Book of (1603-1714).** By C. S. FEARENSIDE, M.A. Oxon., and A. JOHNSON EVANS, M.A. Camb. 4s. 6d.
- English History, The Intermediate Text-Book of (1714-1837).** By C. S. FEARENSIDE, M.A., and A. JOHNSON EVANS, M.A. 4s. 6d.

Complete Catalogues, and Lists of Books Classified for each of the following Examinations, may be had free on application:—

LONDON UNIVERSITY MATRICULATION, Inter. Arts and B.A., 1906, 1907, Inter. Science, B.Sc., Royal University of Ireland and Intermediate Education Board, Cambridge and Oxford Local and College of Preceptors', Leaving Certificate (Scotland), King's Scholarship, and Teachers' Certificate, 1906, Board of Education (Science and Art), and other Examinations.

London: W. B. CLIVE, University Tutorial Press Warehouse, 157 Drury Lane, W.C.

### CURRENT EVENTS.

At the Members' Meeting of the College of Fixtures. Preceptors on October 18, at 7.30 p.m., Professor J. W. ADAMSON will give a lecture on "The Map in the Class-room."

\* \* \*

M. ALFRED P. HUGUENET will address the Société Nationale des Professeurs de Français en Angleterre on "Les Précieuses" at the College of Preceptors on October 25, at 4 o'clock.

\* \* \*

PROF. ADAMS, M.A., B.Sc., will give two courses, open to teachers without fee, on Saturday mornings at 11.30: the first, during Michaelmas term (beginning October 7) at King's College, London, on "The Nature and Origin of Ideas"; the second, during Lent term (beginning January 20), at University College, London, on "The Art of Exposition in Teaching." Application for cards of admission should be made to Prof. Adams, 9 Southampton Street, High Holborn, W.C., giving full name and address, and name and address of the applicant's school.

\* \* \*

THE inaugural lecture in the Women's Department of King's College, London, for the coming session, will be delivered by the Bishop of Exeter (Dr. Robertson, formerly Principal of King's) in the Jehanghir Hall, University of London, on October 5, at 3 p.m. Open.

\* \* \*

THE College of Hygiene and Physical Culture, Dunfermline (Carnegie Trust), will be formally opened by the Marquis of Linlithgow on October 4. The School of Music was opened on September 25.

THE University of St. Andrews have resolved to confer the honorary degree of LL.D. upon the following gentlemen on the occasion of the installation of Mr. Andrew Carnegie, LL.D., as Lord Rector of the University, on October 17:—

Hon. Whitelaw Reid, M.A., LL.D., United States Ambassador, London; Hon. Charlemagne Tower, LL.D., United States Ambassador, Berlin; the Right Rev. Henry Godman Potter, B.D., LL.D., Bishop of New York; Nicholas Murray Butler, M.A., Ph.D., LL.D., President of Columbia University; W. J. Holland, Ph.D., D.D., LL.D., Director, Carnegie Museum, Pittsburg; Hon. Lord Low, B.A., Senator of the College of Justice of Scotland; Hon. Lord Ardwall, M.A., Senator of the College of Justice of Scotland; Sir Robert Pullar, Perth; David Masson, M.A., LL.D., Litt.D., Emeritus Professor of English Literature, Edinburgh University, Historiographer Royal for Scotland.

\* \* \*

DR. JAMES A. H. MURRAY, editor of the Oxford English Dictionary, has been elected a Corresponding Member of the Academy of Sciences, Vienna.

\* \* \*

THE honorary freedom of the city of Worcester has been conferred upon Sir Edward Elgar.

MR. E. G. BAWDEN, of the Stock Exchange, has devoted £100,000 to charitable objects, including £16,000 to complete the sum necessary to effect the incorporation of

Endowments and Benefactions.

University College in the University of London, and £1,000 to the Horticultural College, Swanley.

\* \* \*

MR. W. J. LANCASTER has presented King's Lynn with a new Grammar School at a cost of £40,000. It is expected that the King, who has consented to its being named the King Edward VII. Grammar School, will open the new building.

\* \* \*

MR. ANDREW CARNEGIE has given £10,000 for the endowment of the various institutions he has presented to the University of St. Andrews during his Rectorship, chiefly for the benefit of the students.

\* \* \*

SIR DONALD CURRIE has offered £20,000 to Queen's College, Belfast, on condition that an equal sum is otherwise raised. A large portion of the necessary sum has already been promised.

\* \* \*

MR. BASIL MCCREA, a Belfast railway contractor, has given £6,000 to found a Chair of Experimental Physics in Magee College, Londonderry, and to provide two scholarships in connexion therewith, on condition of the subscription of funds for a suitable laboratory within a certain period.

\* \* \*

THE family of the late Mr. H. J. Gill have founded a Gill Memorial Scholarship in Modern Literature for Clongowes boys—£20 a year for two years, tenable at University College, Dublin.

Scholarships  
and Prizes.

THE Drapers' Company will award in July, 1906, the following scholarships, tenable at the East London College:—4 of £40 a year for 3 years, to boys from the Coopers' Company's School, Parmiter's School, Rain's School, and the Whitechapel Foundation School; 9 (6 for men and 3 for women) of £40 a year for 3 years, on the result of the London Inter-collegiate Scholarship Examination in Science subjects to candidates between 16 and 19 years of age on October 1, 1906; and 6 (3 for men and 3 for women) of £40 a year for 3 years, on the result of the London Inter-Collegiate Scholarship Examination in Art subjects, to candidates between 16 and 19 years of age on October 1, 1906.

\* \* \*

THE London County Council will shortly hold a competition for scholarships to domestic servants (age 17 to 25), tenable at the National Training School of Cookery (14 Buckingham Palace Road, S.W.), and enabling the holders to pursue a course in household cookery for 12 weeks. The scholarships provide a maintenance grant of £5. Candidates must have been in some branch of domestic service for not less than one year previous to September, 1905.

\* \* \*

SOME free studentships are vacant at the School of Art Wood-carving, South Kensington (top floor of the Royal School of Art Needlework in Exhibition Road). Apply to the Manager.

Appointments  
and Vacancies.

PROF. EDWIN RAY LANKESTER, M.A., LL.D., D.Sc., &c., has been elected President of the British Association for 1906.

\* \* \*

DR. EDMUND J. JAMES has been elected fourth President of the University of Illinois, in succession to Prof. Draper, who has been appointed Commissioner of Education for the State of New York.

MR. WILLIAM SERVICE, M.A., B.Sc., Rector of the High School, Coatbridge, is the new President of the Educational Institute of Scotland. Miss Isabel C. Hamilton, Pupil-Teachers' Institute, Glasgow, has been elected Vice-President.

\* \* \*

THE VERY REV. DR. RIORDAN has been appointed Rector of the Irish College, Rome.

\* \* \*

MR. GEORGE GREGORY SMITH, M.A. Edin. and Oxon., Lecturer in English, Edinburgh University (since 1892), has been appointed to the chair of History and English Literature in Queen's College, Belfast, in succession to Prof. Boas.

\* \* \*

AT Queen's College, Cork, Prof. Stockley, who holds the Chair of English in the University of Ottawa, has been appointed Professor of English History and Literature; and Prof. T. P. Molohan, M.A., who holds the Chair of Classics at St. Edmund's College, Ware, and at Downside College, has been appointed Professor of Latin. The vacancies were caused by the resignation of Prof. Savage Armstrong and Prof. Bunnell Lewis.

\* \* \*

MISS CATHERINE DODD, for many years Lecturer in Education and Mistress of Method at Owens College and Manchester University, has been appointed Principal of the Cherwell Hall Training College (Church Education Corporation), Oxford.

\* \* \*

MISS MABEL FAITHFULL, Winchester, has been appointed Warden of Lady Warwick's Agricultural and Horticultural College at Studley Castle, Warwickshire.

\* \* \*

MISS GRACE CHARLOTTE POLLARD, Med. and Mod. Lang. Trip. Camb., assistant mistress, St. Lawrence School, Cromer, has been appointed Lady Principal of Riebeck College, Uitenhage, Cape Colony.

\* \* \*

MISS C. E. SPRUNT, M.A. Edin., mistress of the P.-T. Central Classes, Duchess School, Alnwick, has been appointed an assistant mistress in Perth Academy.

In addition to her M.A. degree from Edinburgh University [says the *Educational News*] Miss Sprunt has the Schoolmaster's Diploma, the Cambridge Teachers' Certificate with First Class Honours in the practical part, and, after taking her graduation classes, underwent a full course of training for secondary-school work at St. George's Training College, Edinburgh.

\* \* \*

MR. ROBERTSON, Head Master of the Lauder Technical School, has been placed in charge of the teaching of art drawing in all the schools under the Carnegie Dunfermline Trust.

\* \* \*

MR. WALTER CHARLTON COX, M.A. Lond., assistant master, Aberdare County School, has been promoted Head Master.

\* \* \*

MR. JOHN EVANS, M.A. Cantab., assistant master, Leeds Grammar School, has been appointed Head Master of Ashford Grammar School.

\* \* \*

MR. EUSTACE ARNOLD HOW, B.Sc. Lond., assistant master, Hale's Grammar School, Hertford, has been appointed Head Master of Beaminster Grammar School.

\* \* \*

MR. C. B. GUTTERIDGE, M.A., assistant master at Alleyn's School, has been appointed Head Master of the Warehousemen, Clerks, and Drapers' Schools, at Purley.

\* \* \*

MR. ARCHIBALD LANG, M.A., B.Sc., mathematical and

science master, Provanside Higher-Grade School, Glasgow, has been appointed a Junior Inspector of Schools.

\* \* \*

MR. FREDERICK PHILLIPS, B.Sc. Lond., has been appointed Assistant Lecturer in Mathematics and Physics in the Hartley University College, Southampton.

\* \* \*

MR. E. A. C. STOWELL, M.A. Oxon., Head Master of Kirkby Lonsdale Grammar School, has been appointed Head Master of Kingston-on-Thames Grammar School.

\* \* \*

MR. D. F. H. MACKAY, M.A. Glas., B.A. Oxon., has been appointed classical master in Kilmarnock Academy.

**Literary Items.** MESSRS. NELSON will presently publish "Trafalgar Refought," a book for boys (with illustrations), written by the late Sir W. Laird Clowes and Mr. Alan H. Burgoyne. "The authors imagine Trafalgar as it would be if refought under steam and with steel-clad ships, the tremendous weapons, and murderous possibilities of to-day."

\* \* \*

MESSRS. BLACK are issuing new cheap illustrated editions of Farrar's popular school tales, "Eric," "Julian Home," and "St. Winifred's"; and they promise for this autumn two more "Animal Biographies"—"The Cat," by Violet Hunt, and "The Black Bear," by H. Perry Robinson.

\* \* \*

MESSRS. A. & C. BLACK will also publish presently "The Adventures of Punch," by Ascott R. Hope, with illustrations in colour by Stephen Bagot de la Bere. The narrative of the hero's pitiful struggles, it is said, "may be looked on as a companion volume to Dr. Smiles's 'Self-Help.'" It is sure to be well charged with healthy humour.

\* \* \*

MESSRS. CHAPMAN & HALL have started (August) a new "Monthly Magazine for Boys and Girls," styled the *Jabberwock* (6d.), and edited by Brenda Girvan. It is attractive in form, varied in matter, and liberally and effectively illustrated. It should make room for itself.

\* \* \*

MESSRS. SIMPKIN, MARSHALL, & Co. are publishing a new edition of "The Story of Pet Marjorie," with new matter, including Dr. John Brown's "Marjory Fleming" and original illustrations by Warwick Brookes, and the newly discovered "journals" of Pet Marjorie.

\* \* \*

SIR ISAAC PITMAN & SONS are issuing cheap editions of Dean Plumtre's "Spirits in Prison," Dr. Horton's "The Teaching of Jesus" and "The Commandments of Jesus," and Prof. Stalker's "The Two St. Johns of the New Testament."

\* \* \*

MESSRS. WATTS & Co. announce a half-crown reprint of "Supernatural Religion," which made so much noise a generation ago; also a sixpenny issue of Paine's "Age of Reason," with a long biographical introduction by Mr. J. M. Robertson.

\* \* \*

THE September "Educational Number" of the *British Medical Journal* is practically an elaborate handbook to the profession, furnishing full information about courses of study, degrees, diplomas, fees, &c., at all the medical schools in the three kingdoms; with special articles on post-graduation study, tropical medicine, psychological medicine, preventive medicine, the public medical services, and dental surgery.

## CURRENT CRITICISM OF THE KINDERGARTEN.

By DR. M. V. O'SHEA,  
Professor of Education, University of Wisconsin.

[From the *School Journal*.]

### GENERAL EDUCATIONAL UNSETTLEMENT.

It may be well to acknowledge at the outset that there is no department of educational activity from the kindergarten to the university which is not under fire to-day. There has been no vital proposition made the past ten years, and affecting either curricula or methods or management, which has not had illustrious names alike for advocates and for opponents. The radicals in education, of which the number is constantly increasing, are dissatisfied with the mediæval character (as they maintain) of much of our current theory and practice, while the conservative people among us lament that we have already strayed so far from the traditions of the fathers. The times are ill at ease in all things educational. Those who view education from the standpoint of contemporary scientific thought feel that much of the philosophy that has come down to us from other times is unsound because it is founded upon a very incomplete and largely erroneous knowledge of the mind of man. The new conceptions of human nature growing out of evolutionary doctrine are producing active fermentation in all departments of teaching, and it is inevitable that they should create disaffection with the present order. Whether we like it or not, there is no escape from this situation. The innovators, having faith in the new light being shed by modern science, will be urging us forward; they will be pointing out the crudity of things as they are, while the conservative will be sounding the praises of the ancient *régime* and bemoaning the decadence of modern institutions.

### ALLEGED SHORTCOMINGS IN KINDERGARTEN.

Now, so far as I can tell, the kindergarten is not subject to more extensive or harsher criticism to-day than other departments of our educational system, though the critics have attacked it so recently that the shortcomings ascribed to it are fresh in the public mind. It is charged, in the first place, by the conservatives and disciplinarians, such as Munsterberg and Briggs, with sentimentalism; it humours its children, and does not develop in them respect for authority or habits of industry and self-control. Its pupils acquire the notion that the school is a place for fairy tales and play, and they must suffer many hard knocks in the elementary school before they learn that they should restrain their spontaneous activities and apply themselves to hard tasks. Teachers of the old school have testified that children entering the primary grade from the kindergarten are considerably worse off than their fellows who have been let run at large, for they have gained wrong notions respecting their duties and privileges in the schoolroom. They expect the teacher to entertain them, and as for learning the lessons assigned them they strenuously rebel. It should be added that these charges have all been denied by teachers of high standing, with the result that the evidence is contradictory at every point.

### WEAKNESS OF THE ALLEGATIONS.

Like all other educational questions, this one is so complex that it is impossible to do more than offer opinions upon it. We are certainly without any reliable data whatever showing that the kindergarten is spoiling its pupils in the manner indicated. The few complainants, so far as I have read them, present no evidence that would receive the slightest attention in any scientific camp. They rely upon the method of ridicule, and they imagine that when they have turned a laugh upon some practice of the kindergarten they have proved a point against it. And it is easy for many people to make merry over any of the innovations in teaching, which is equally true of everything novel. When old fogies cannot adjust themselves to changing conditions, they console and strengthen themselves in their helplessness by poking fun at all things new.

This is not to say that the criticisms of the kindergarten are without foundation, but only that the critics have not complied with the simplest principles of scientific procedure in pointing out defects. It is possible that the whole matter is purely relative any way. It is easily conceivable that when children have had much freedom and life in a kindergarten, and are then transplanted to a dry, desert-like primary grade, it will take them some time to get acclimated. I have observed very closely a situation of just this sort, and I have wondered often whether

the habits and expectations acquired in the kindergarten were not a disadvantage under the changed conditions. The children were subject to constant nagging in the new situation, and it took some time for them to learn to sit still, keep their mouths shut, learn their lessons, and always do as they were bid. But in a primary school where rigidity and militarism give place to vital, interesting activity I have observed that the kindergarten child is more completely *en rapport* with his environment than his less fortunate comrade. He has more self-confidence, is more executive, dynamic, expressive, and, from the very beginning, he reacts more effectively to the educative stimulations of the class-room. In the University of Wisconsin, during the past year, special studies have been made upon the abilities of children trained in different ways, and we are confident that the kindergarten child has himself better in hand, in all this means, than the child of the street or the home or the formal primary grade.

#### LACK OF A STANDARD TEST.

It is suggestive to note, in this connexion, that, according to my observations, children who have thoroughly enjoyed the kindergarten sometimes thoroughly dislike the restrictions and formalism of the primary grade. I realize that the disciplinarians regard this as a point against the kindergarten, for the children need, for their souls' health, to do tasks which they dislike. Now, it is needless to wrangle over this question; no one's views can be changed by argument about it. If you are a formalist, and believe in the prophylactic value of drudgery, you will find fault with the kindergarten; and you can find plenty of reasons to fortify your position. If, however, you are a naturalist and have faith in the moral worth of following lines of interest in educational work, then you will endorse the fundamental principles of the kindergarten; but you cannot demonstrate the soundness of your doctrines to those whose conception of human nature and whose temperament are the antithesis of yours. We cannot at present *prove* anything regarding this complex question; we have devised no system of experiments that will show precisely what is the motor, intellectual, emotional, and moral *status* of the kindergarten as compared with the non-kindergarten child at different stages in his development. Viewing the situation with my conceptions of human nature and education, I feel that the year or two spent under a wise kindergartner are of positive value.

#### ROOM FOR IMPROVEMENT.

But, having said this, I must hasten to add that I believe there is room for improvement in the kindergarten in respect of some of the matters we have been discussing. I fear that sentiment plays too large a part in the treatment of many children; and by sentiment is meant the desire and the effort to shield the child from all pains and penalties as a natural consequence of his experiments with people and things. The kindergartner is sometimes taught that a child comes among us fresh from the hand of the Creator, and he is pure and spiritual in his tendencies and impulses. If he never have experience with anything but gentleness and tenderness in the people about him, the divinity within him will unfold most readily. The kindergartner would save the child his trials and tribulations by taking them upon herself, little thinking that to spare the child the results of his acts now is to heap up difficulties for him in the future. So far as I can discern, all contemporary science treating of human nature suggests the conception that the child is equipped at birth mainly with impulses which are bequeathed to him from his primitive ancestors, but which are not adapted to modern society in just the way in which they are inherited. So that the education of the individual consists in no small measure in learning to inhibit his original tendencies. He can, undoubtedly, acquire these inhibitions best by forming strong attachments for modes of conduct in harmony with existing social institutions and practices, so that in the kindergarten, as elsewhere, we must aim primarily to *win* the novice in behaviour to social and moral interests and actions. But, so far as I can discover, there has never been worked out any plan by which the child can be brought into line with his social environment without having some experience with penalties for unsocial conduct. The social lessons are not learned without a struggle, and the longer they are deferred the harder they become. If the child never suffers for non-social conduct in the kindergarten, he will be likely to make it up with heavy interest farther along. Pain is, when it results from violation of social and ethical laws, a most valuable prophylactic agent if it *come early enough*, before attitudes and ex-

pectations become established. So it has seemed to me that it would be well if the kindergarten, while preserving all of its positive methods in making the child a social being, would at the same time help the child to appreciate, as a result of vital, significant experience, that it pays in terms of pleasure and pain to meet his fellows half-way, and not to trespass on their rights for his own advantage. The kindergartner ought to help in making children appreciate that a bullying attitude leads to unhappy consequences.

#### FUNDAMENTAL CONCEPTIONS.

I come now to say a word respecting the fundamental conceptions of the kindergarten, which have been vigorously assailed by certain distinguished present-day naturalists. It is charged that the Froebelian philosophy is mystical and fanciful, and that it is not founded to any extent upon exact observation of the developing human mind. It has resulted, then, that materials and processes which are artificial and formal have found their way into the kindergarten, the doctrine of symbolism being especially faulty. The child is kept at the gifts when he ought to be in contact with Nature and doing things of genuine value. To my mind, this general criticism is merited in many kindergartens. I think all we know of the functioning of the human mind as an instrument for securing adjustment to the world, to which may be added the results of experience, testify to the fruitlessness of trying to instruct babes by means of symbols. The time devoted to this work ought to be spent in dealing at first hand with real objects in the real world environing the child. Even if the gifts be used for constructive activities, the work is still apt to be more or less artificial and trivial. The spontaneous activities of the child outside of the kindergarten are apt to be considerably more energetic and significant and effective. I have seen boys of six held to activities in the kindergarten which they had outgrown at four, or, at least, their abilities at the time were quite beyond the simple and mechanical tasks they were performing. I am confident this objection will not apply to all kindergartens, but I fear that the average orthodox one has underestimated the general dynamic needs and possibilities of most of its children, while at the same time it has very greatly overestimated the generalizing powers of the young mind. Consequently some of its processes are ill-suited to the normal child of five or six.

#### REFORMS IN PROGRESS.

I think, however, that movements are already in progress which promise to bring about needed reforms in the kindergarten. In general these reforms should make its work more natural, more closely related to the life the child lives outside of school. The kindergarten, disclaiming as it does any intention to give the child a knowledge of linguistic arts, should be chiefly serviceable in furnishing models for his spontaneous activities. It should give him suggestions to guide him in his construction and play activities, so that these may be made constantly more complex and give him increasing executive skill, self control, and social insight and co-operation. The kindergarten, as I have seen it, is doing considerable in this direction now; but it might do more if it would base all its activities upon the nature and needs of the actual child, with his primitive and motor tendencies, rather than upon the idealized and metaphysical being which the Froebelian philosophy, as popularly expounded among us, does seem to construct.

#### TRAINING OF THE KINDERGARTNER.

There is space left to say but a word respecting the current criticisms of the training of the kindergartner. There is a deep-seated conviction among the naturalists that the majority, perhaps, of the kindergarten novitiates have their intellects trained too little and their emotions stimulated too much. They are, it is said, quite deficient in the ordinary subjects of mental discipline—mathematics, history, language, science. They have very slight foundation for undertaking a study of the most intricate object in the world—the developing human mind. It follows, inevitably, then, that they get a very superficial knowledge of the true nature of the child and his educational needs. They learn the traditional phrases of the cult, but they cannot employ them to guide themselves in concrete situations. It is universally acknowledged, so far as I have been able to ascertain, that the kindergartner usually has the right general attitude towards her special work; but she lacks the understanding to particularize this attitude in special situations, and to devise the most effective means to accomplish the ends which she would attain. I think it very likely that the naturalists

have some reason for their complaint, though there are signs of improvement in this respect, too. In some training schools, at any rate, the kindergartner is well grounded in contemporary biological and psychological science as a foundation for the special study of kindergarten theory and practice.

## ASSISTANT MASTERS IN SECONDARY SCHOOLS.

### CONFERENCE AT LIVERPOOL.

THE autumn meeting of the Incorporated Association of Assistant Masters in Secondary Schools was held at the Liverpool College on August 9, Mr. G. E. S. Coxhead (Liverpool Institute) presiding.

The Chairman pointed to the gradual trend of opinion in the direction of establishing a national system of education as being undoubtedly the most important movement in education to-day, and urged on teachers in secondary schools the importance of consolidating their section of the profession, in order that it might take its proper place in a national system. It was not necessary, he said, to remind experts that secondary education was not the coping-stone of elementary education, as was too often assumed.

### THE PLACE OF SECONDARY EDUCATION.

Elementary education was in essence collectivist, with a certain amount of individualism in it, whilst secondary education was in essence individualist with a certain amount of collectivism in it. The Board of Education had recognized that difference, and had pointed out in their regulations that secondary education, equally with elementary education, could begin at eight years of age. He held that the pupil who, having previously passed through an elementary school, entered a secondary school even at the age of twelve had lost something through the absence of this four years' preliminary work in a secondary school. It was quite possible that, if the pupil was of a fine intellectual character, as he generally was (for most of such pupils entered the secondary school on a scholarship), he might make up for that loss, but he had lost something all the same. Inasmuch as they all desired that the higher intellects in the elementary schools should have an opportunity of getting secondary education, they wanted free communication between the two branches, and that free communication was being supplied—some people thought too freely supplied—by the scholarship system. What form that system would finally take did not concern them at present, but he would point out that the system was at best a means of giving bright boys an opportunity of making up the loss which they had undoubtedly sustained in not beginning in the secondary school.

### THE QUESTION OF SALARY.

Of a series of resolutions adopted by the Council of the Association the day before, embodying the policy of the Association on current questions, and now reported to the meeting, three dealt with the question of salaries. The Association heartily support the suggestion made by Mr. M. E. Sadler in one of his county reports on secondary education that joint action is desirable on the part of County and Borough Authorities as to a salary scale for teachers in secondary schools. Another resolution expresses the opinion that governing bodies should regard the augmentation of salaries where these are unduly low as the first and most necessary charge upon the grant received from the Education Authorities, and that salaries should be fixed by the governing body in consultation with the head master, and should be paid in all cases by the governing body.

### THE PLACE OF SCHOLARSHIPS.

Several other resolutions were in approval of the policy of the Board of Education. One of these was to this effect:

Believing that the improvement of secondary schools is at the present time the most important educational task that lies before the nation, this meeting highly approves of the policy of the Board of Education in diverting the funds hitherto used for providing scholarships to increasing the aid given to the schools, and in discouraging Local Authorities from undertaking large scholarship schemes before secondary schools are put in a condition of thorough efficiency and financial stability.

In commending this resolution to the Association, the Rev. J. F. Tristram said Local Authorities and private benefactors founded scholarships with the greatest good will towards the schools and the staff; but they did not always understand that an increase in the number of scholarships in itself was not

necessarily a good thing. This was seen clearly by the Board of Education, and the enlargement of the number of scholarships was being put a stop to until more serious attention had been given to the equipment of the schools themselves.

### SHOULD SECONDARY EDUCATION BE FREE?

Mr. J. V. Saunders (Hymers College, Hull) submitted a resolution in which the Council approved of the policy of the Board of Education in maintaining the desirability, in ordinary circumstances, of the payment of fees in secondary schools. Taking a broad view of European politics and the possible necessities of national defence during the next twenty years, he thought assistant masters would be living in a fool's paradise if they rested their hopes on an increase in the national expenditure on secondary education. As to local expenditure, the patience of the ratepayer was pretty nearly exhausted with his present burdens, and he did not think secondary education was going to get very much more from the rates. The only source of income they could really count on was the fees, and he maintained that here they had the most direct, the most just, and the safest way of raising the money necessary for defraying the cost of secondary education.

### INCREASED NATIONAL GRANTS.

Mr. E. G. W. Hewlett, in supporting another resolution which urged the desirability of a general increase in the grants towards secondary education, said the previous resolution on the maintenance of fees might seem to run counter to the trend of public opinion. This resolution made it clear, however, that, in the opinion of the Council, further assistance was required from Parliament. The Trade Unions Congress urged that secondary education should be provided free as well as elementary education. The Council did not think that desirable; but at the same time they did not think it practicable that secondary education should be provided at cost price. The cost was too high for that. He did not think it was for them to consider other claims on the national Exchequer as Mr. Saunders had suggested. At present the amount devoted to education was paltry in comparison with the millions spent on the Army and Navy. The Russo-Japanese War had taught us that it was of no use to pour out millions on defensive expenditure unless there was intelligence behind it, and, for his part, he believed that, even from the point of view of national defence itself, the most profitable expenditure at present would be on secondary education.

### THE VALUE OF LATIN.

Among the other resolutions reported was the following:—

That, inasmuch as it is at the present time desirable to encourage the utmost possible diversity of type in the curricula of secondary schools, equal encouragement should be given to the teaching of (1) Latin and one modern language; (2) two modern languages; and (3) in schools with a scientific curriculum one modern language.

Closely bearing on the same subject was a resolution which Mr. G. H. Clarke (Hymers College, Hull) moved as an expression of opinion on the part of the general meeting:

That this meeting deprecates the excessive importance accorded to Latin in the Secondary-School Regulations, and considers that greater encouragement ought to be given to modern languages.

Mr. Clarke, in proposing it, quoted the Regulations, in which the Board say that before sanctioning the omission of Latin from the curriculum they would require to be convinced that the omission is for the educational advantage of the school. He did not think there was much chance of convincing the Board, and the result would be that Latin would have an important place in the education of many boys who would derive no benefit from it, but who might profit from a study of English, German, or some other subject. He urged the claims of German as an alternative subject of study. Mr. J. V. Saunders, in opposing the motion, admitted that Latin in itself might not be of much use to a boy in after life, but said the great value of the study was to be found in the fact that the language possessed characteristics which made it exceedingly well adapted for conveying to boys elementary grammatical notions.

Mr. G. F. Bridge (St. Olave's School, Southwark) said that the study of Latin and Greek formed an admirable basis for the intellectual work of those who were concerned in one way or another with the study of thought, and with the expression of thought in words, such as the lawyer, the teacher, the journalist, the clergyman, and the administrator. But it had not been proved for one moment that a classical education formed a valuable basis for the work of those who were concerned with

the expression of thought in things, such as the architect, the engineer, and the doctor. It must be remembered that the proportion of men who were concerned with things, and not with words, was increasing. A number of schools did not wish to give up Latin; but they had cut the time down to two hours a week. Latin done under such conditions was of very little educational value indeed. Mr. C. Browne (Christ's Hospital), in supporting the resolution, urged that Latin ought to be a perfectly optional subject. Mr. J. Thompson (Plymouth College), whilst in substantial agreement with many who supported the resolution, thought that such a phrase as "this meeting deprecates the excessive importance of Latin" would give the public quite a wrong impression of the attitude of the Association. It would suggest that they thought the time given to Latin ought to be cut down. Such a curtailment would simply mean that the teaching would be inefficient. Mr. Clarke's motion was negatived by twenty votes to seven.

#### THE TEACHERS' REGISTER.

The following resolution, proposed by Mr. Hewlett, was agreed to:—

That this meeting deplores the unsatisfactory outlook for the Teachers' Register. It records its conviction that the system of training and registration of teachers designed in the Orders in Council on Registration are urgently necessary in the interests of secondary education, and affirms its belief that the success of the movement depends mainly on (1) the recognition of the Register by the Board of Education and other Education Authorities; (2) the provision of such salaries and the offer of such prospects as are suitable for teachers who have undergone a lengthy and expensive course of preliminary preparation for their work.

Prof. Elton, of Liverpool University, read a short paper, in which he communicated some interesting notes on the academic side of the teaching of English literature.

### THE TRADE UNION CONGRESS.

#### EDUCATION—PHYSIQUE—HOUSING.

##### THE EDUCATION QUESTION.

At the meeting of the Trade Union Congress, at Hanley, Mr. W. A. Appleton (Lacemakers, Nottingham) moved:

That this Congress condemns the educational policy of the Government as laid down in the Act of 1902 and in the subsequently issued minutes and regulations, and demands the formulation of an educational programme based upon the principle of equal opportunities for all, such programme to aim at securing

(1) That all grades of education shall be free and State-maintained. (2) That attendance in primary and secondary schools shall be compulsory, and that adequate provision be made for children to continue at school until the age of sixteen years, or until such age as the university course begins. (3) That provision be made to continue the education of capable students through the university courses. (4) That the standard of capacity shall be judged by work previously accomplished, and not by competitive examination. (5) That the education in all State-supported schools shall be secular. (6) That all State-supported schools shall be under the control of, and their affairs administered by, the directly elected representatives of the people. (7) That each educational district shall be required to train the number of pupil-teachers demanded by local needs, and for this purpose to establish training colleges, preferably in connexion with universities or university colleges. (8) That the cost of the before-mentioned reforms shall be borne by the National Exchequer out of revenue obtained through broadening the basis of taxation, and by the restoration and democratic administration of valuable misappropriated educational charities and endowments. (9) That it be an instruction to the Parliamentary Committee of the Trade Union Congress to formulate these proposals in a Bill to be laid before Parliament during the forthcoming Session. (10) That no Parliamentary candidate receive the endorsement of the Parliamentary Committee unless he is prepared to accept and promote the educational policy of the Trade Union Congress.

Mr. Appleton said that what was to be desired was such a system of education as would afford equal opportunities to the children, and the experiences of the last few years had enabled them to eliminate some of the matters about which they used to differ, and to agree upon the broad principles. First, they agreed that all education should be absolutely free and State-maintained rather than locally maintained. A child would become a more or less efficient unit of the State, and not the unit of any particular locality. Therefore the State should make adequate

provision for the education of the children. They were anxious for compulsory attendance at the primary and secondary schools, and that provision should be made for the attendance of children at university colleges. He went on to speak of each of the clauses; and, in objection to special competitive examinations, he said that the smartest child might be nervous under examination and lose the chance of progress; therefore it would be wiser to take the average work over a period of a year than to make a child's advancement dependent upon a particular examination. They claimed that education in all State-supported schools should be secular. They had been driven to that conclusion by the difficulty of shaping any form of dogmatic teaching which would be acceptable to the different denominations. No man breathing could shape such a dogmatic teaching as would be acceptable to the Roman Catholic, the Anglican, the Wesleyan, and the Jew; yet they were all ratepayers, and were entitled to have their rights protected and enjoy all the educational advantages which could be given. None wished to stand in the way of any reasonable attempt to develop character, because they were as anxious to develop character as intellect; but he did not want to be a party to assisting in the development of intellectual prigs. Further, they claimed to have the control of the education of the children and to be able to have representation on the bodies in charge of educational work. They were anxious that Congress should now inaugurate a constructive policy. So far as that Congress was concerned, most of the things they had striven for would be realized, if the people were only educated. They had plenty of force in the Labour movement, but it was latent force, lacking intelligence. If they could only awaken the strength which lay in their movement and cause it to be intelligently directed, all the reforms the movement had striven for would be brought within the region of practical politics.

Mr. J. C. Gordon (Tinsplate Workers, London) seconded. As trade unionists, he said, they should approach the question from the standpoint that the children should have the best education it lay in their power to give.

Mr. J. Stokes (Glassblowers, London) suggested that for clause 2 there should be substituted the following clause in the resolution originally presented by the Lacemakers' Society, as follows:—

That all education shall be free, and that secondary and technological education be placed within the reach of every child by the granting of bursaries or maintenance scholarships to all children whose usefulness would be enhanced by such extended education. Further, that adequate provision be made for children to continue at school until the age of sixteen years, or until such age as the university course begins.

Mr. Appleton said he would be delighted to accept the second clause of the resolution submitted by his own (the Lacemakers') Society, instead of that in the resolution.

The resolution with the substitution, which had been accepted, was then agreed to.

##### PHYSICAL DEVELOPMENT.

Mr. Will Thorne (Gasworkers' Union, London) proposed:

That, in view of the findings of the Departmental Committee on Physical Deterioration, this Congress declares in favour of the principle of State maintenance of children, and urges, as a means of checking the evils revealed in the Committee's report,

(1) That immediate provision be made for giving at least one free meal per day to all school-children; (2) that free medical advice and inspection be placed within the reach of all children; (3) that efficient physical training shall become a necessary feature of school life; (4) that the administration of the reforms indicated in the foregoing clauses shall in no way be associated with charity or the administration of the Poor Law; (5) that the Board of Education provide a statistical department charged with the collation and periodic publication of statistics relating to the health and mortality of school-children; (6) that the Parliamentary Committee place these recommendations before all municipal councils in the United Kingdom; (7) that it be an instruction to the Parliamentary Committee of the Trade Union Congress to incorporate these proposals in a Bill to be brought before Parliament during the forthcoming Session; (8) that no Parliamentary candidate receive the endorsement of the Parliamentary Committee, unless he is prepared to accept and promote the proposals contained in the foregoing paragraphs.

Mr. Thorne said that it was no doubt right that all children should be properly educated, but we must first give them a good foundation on which to build education by feeding them properly. It was not creditable to know, as was the fact, that convicts were better fed and better housed than numbers of the working classes.

He desired to impress on municipalities the absolute necessity of having medical officers to attend schools and of having every child examined, both when first admitted to school and at periodical intervals afterwards. Mr. J. O'Grady (Furnishing Trades, London) formally seconded the resolution, and it was adopted.

#### THE HOUSING QUESTION.

Mr. C. F. Davis (Compositors' Society, London) moved :

That the Congress again urges the local labour organizations to bring pressure to bear on their administrative bodies to build houses for the people requiring them, and also suggests that in every constituency the organized workers should press upon both members of and candidates for Parliament the urgency of money aid from the central Government for that purpose being given to the Local Authorities. In view of the great growth of population in our large centres of industry, and the consequent pushing out of the homes of the workers from the centre to the outskirts, which necessitates cheap and rapid transit to and from the various places of employment, it instructs the Parliamentary Committee to take such steps as may be necessary to induce Parliament to give effect to any recommendations in the report of the Select Committee of the House of Commons on the Amendment of the Cheap Trains Act as will lead to the provision of a cheaper and better service of workmen's trains on the various railways.

Bad housing, Mr. Davis pointed out, was a great factor in the physical deterioration of the people. The burden of finding funds should be placed upon the Imperial Exchequer. Local rates in many places were so heavy that the municipalities could not see their way to deal with the questions as they ought to do. Mr. H. Gosling, L.C.C. (Watermen, London), seconded the resolution. Mr. Shaw (Typographical Society, Sheffield) spoke of the serious difficulty in large towns caused by the creation of districts that would become worse slums than those that were being removed. He wished that the resolution had dealt with this difficulty, but hoped the Parliamentary Committee would do what they could to prevent the modern slum from being constructed. They would have to see that their efforts at reform were not counteracted by the land jobber and the speculative builder and people who wanted to get as much as they could out of jerry-built houses. The resolution was adopted unanimously.

#### MINUTE ON SCOTTISH EDUCATION.

##### TRAINING OF TEACHERS AND TECHNICAL EDUCATION.

A MINUTE of the Committee of the Council on Education in Scotland providing for the distribution of the sums carried to a suspense account in terms of article 3 of the minute of April 25, 1904, and article 5 of the minute of February 16, 1905, just published, bears that it was resolved that the sums carried to a suspense account in terms of the articles shall be applied towards the making of grants in aid of capital expenditure incurred for the following purposes :—

(1) In providing buildings or equipment approved by their lordships in terms of their lordships' minute of January 30, 1905, as necessary for the purpose of training teachers in accordance with the provision of the said minute.

(2) In providing buildings or equipment necessary for the purpose of giving advanced technical instruction in any recognized central institutions or in any institution devoted solely to the purpose of giving technical instruction, the benefits of which are in their lordships' opinion available for the population of a sufficiently wide area, provided that in either case the objects of the expenditure shall be approved by their lordships, and that there shall be an adequate local contribution towards the purposes for which the grant is made.

(3) In providing such initial equipment as may be required for supplying industrial training to boys and girls in the island of Lewis in accordance with the proposal contained in the reports of the Lewis Local Committee in 1903, or such other proposals of Local Authorities in that island as may be approved by the Department, and for making, subject to the approval of the Department, similar provision in such other of the districts of the Congested Districts Board as the Board may recommend.

Applications for grants under this minute should be lodged before March 1, 1906. Further applications will be considered in each year till the sum at the credit of the account is exhausted.

#### EXPLANATORY MEMORANDUM.

In an explanatory memorandum issued with the minute it is stated that the distribution of general aid grant, which repre-

sents the amount given to Scotland as an equivalent for certain new grants made to Educational Authorities in England under the Act of 1902, has been annually provided for by minutes of the Scotch Education Department. The minutes of 1904 and 1905 contained a clause providing that any balance of the grant remaining after certain specified payments had been made should be carried to a suspense account to be distributed according to further minutes of the Department. At March 31, 1905, the unexpected balance stood at £111,530, and it is estimated that a further balance of about £100,000 may be available in respect of the year 1905-6.

Under the Education Bill of this year these balances, amounting in all to about £211,000, would have been carried to the proposed Education (Scotland) Fund, first payments out of which would have been made in aid of capital expenditure incurred in connexion with advanced technical instruction as given in what are known as central institutions. Owing to the withdrawal of the Bill it has now become necessary to make other arrangements for the disposal of the balances in question. Their distribution is accordingly dealt with in the minute which will be laid before Parliament in due course. In view of the fact that the whole of the moneys thus available were derived from unexpended balances it seemed best to devote them to assisting capital expenditure. Their lordships have, therefore, after full consideration of all circumstances, decided to assign the larger part of the amount at their disposal to the purpose to which the Education (Scotland) Act Fund was in the first instance to have been applied.

In consequence, however, of the withdrawal of the Congested Districts (Scotland) Bill during the past Session, the question of making provision for industrial training in the island of Lewis and other parts of the congested districts of Scotland has become a matter of great urgency. The present opportunity has accordingly been taken advantage of to offer some measure of assistance in that direction. It will be observed that this minute relates merely to the distribution of the balance of sums already voted, and that it in no way affects or prejudices the application of the aid grant that will fall to be distributed in future years.

#### EDUCATION AND PHYSICAL CONDITIONS.

##### SPEECH BY SIR JOHN GORST.

A MEETING of the National Union of Gas Workers and General Labourers' Society was held in the Victoria Hall, Hanley (September 3), when Mr. Pete Curran (Labour candidate for Jarrow) moved, and the Countess of Warwick seconded, a resolution, which was unanimously adopted, calling upon the Government to introduce legislation to provide for the adequate maintenance of children attending State-supported schools, especially in regard to free meals and free medical attendance. Mr. Enoch Edwards (Labour candidate for Hanley), in moving a resolution dealing with the question of physical deterioration, urged that the Board of Education should extend and organize the physical side of popular education so as to secure records not only of the mental development, but also of the physical development, of children attending State-supported schools, thus providing valuable data as a basis for future reform. Sir John Gorst, M.P., seconded the resolution.

What he wanted to impress upon his audience was how much we in our collective capacity neglected the individual well-being of the population from a health point of view. While the children of the rich were carefully attended to in every respect, the children of the poor from their very birth were robbed of that real expert aid which was necessary to their being successfully reared in health and strength. The state of things had at last got so bad that it had actually attracted the attention of the Government, and inquiries were being made into the causes of the excessive rate of infant mortality. For his part, he did not believe a stop would be put to the excessive death-rate until some drastic reform was made in the habit of allowing the mothers to return too soon to work after confinement. He thought, too, that beneficial results would follow if young women were trained in the proper management of children. It was in poor, ill-fed hungry children that the seeds of tuberculosis developed, and therefore it was of the utmost importance that school-children should be provided with adequate medical examination. In Germany every child was examined when it first entered school, and this examination was repeated every year. Ailing children were so carefully attended to that in many cases they were taken to the pure air of the country in the morning and at the end of the day were brought back to the towns. In Germany, too, every man and woman was entitled to cure and relief in the hospitals without payment. How could we expect to carry on with success the

friendly rivalry in trade and manufactures existing between Great Britain and Germany unless very speedily such a social reform was carried out in this country as would put us on something like an equal footing with Germany? As a nation, we had been culpably neglectful of the health of our poor people. What we wanted was not inquiry, but action and immediate reforms, especially in the matter of poor relief. The administration of the existing law was carried out by Town Councils and boards of guardians, and, if the people let it be known that no persons should be elected who did not pledge themselves to attend to the physical wants of the people, it would be their own fault if they were not returned. At the present moment they had in Mr. Gerald Balfour a President of the Local Government Board who was very anxious to look into this question and make reforms. Let them make the best of him while they had got him—he did not think it would be for long—but while he was there he was capable of initiating a great number of reforms which his successor would be able to carry out.

The resolution was carried by acclamation, as also was one calling upon the meeting to support the trade union education programme advocating “free and secular education from the primary school to the university along with such maintenance scholarships as will place the highest educational advantages within the reach of all.”

## REVIEWS.

### HOW TO TRANSLATE HOMER.

*On Translating Homer.* By Matthew Arnold. New Edition, with Introduction and Notes by W. H. D. Rouse, M.A., Litt.D. (2s. 6d. Murray.)

Mr. Murray lays all students of Homer under obligation by republishing at a popular price and in an agreeable form Matthew Arnold's admirable essay on the problem of translation. Dr. Rouse furnishes a most interesting and thoughtful Introduction, boldly and fairly critical, and adventuring fresh suggestions on a basis of genuine study. For the most part we are in agreement with his contentions. Let us leave on one side Arnold's heresy “in championing the unity of the Homeric poems”; for this is but an incidental issue, though proper for comment by the editor; and Arnold himself advises the translator to have nothing to do with the question “whether the poet of the ‘Iliad’ be one or many,” or “whether the ‘Iliad’ be one poem or an ‘Achilleis’ and an ‘Iliad’ stuck together” (page 37). The four characteristics of the Homeric style enumerated by Arnold Dr. Rouse regards as “a quite satisfactory summary”; but he makes a tenable advance in showing that, though we cannot now say exactly how Homer's verse sounded in Greek ears, yet “we can tell even this more nearly than Matthew Arnold imagined.” As to the court of final appeal on the question of translation—whether the English reader that knows no Greek or (as Arnold holds) the scholar—Dr. Rouse decides rightly for a joint tribunal: “We ought rather to say that the translation must be judged by both, each testing that part in which he is competent”—trial by judge and jury. “The scholar,” indeed, “is the more competent of the two as a whole, but he cannot disregard the verdict of the ordinary reader.” After an instructive, and rather indulgent than severe, review of a number of translations, Dr. Rouse concludes that, “good as some of them are, they all come short, not only of the ideal, but of the possible best.” About that there can be no doubt at all. By the way, should not “that eccentric genius” be Samuel Butler, and not Mr. A. J. Butler? (Page 20.)

How, then, is a translator to attain the best possible results? “In the first place, the syntax must be simple and natural.” But, if the present age is to have its translation of Homer, is it safe to advise that “for models the student can find nothing better than the English Bible, Chaucer, Latimer, Bunyan, and other writers who have lived not amongst books but in close contact with human life and with Nature”? The degree of archaic element is a very ticklish matter; and, for a present-day translation, are there not reasonably adequate capabilities in the present-day language, if the translator only knew how to handle it? Is there not in these days, as well as in the Elizabethan age, “a vocabulary as full and rich as can be desired, without need of using words that would seem unnatural or affected”? “There is also the vocabulary of the local dialects which still survive—a vocabulary of amazing range and minute detail, especially for expressing ideas connected with country life.” There is; but how shall the translator dare to patch his page with this very special vocabulary? “A skilful use of these two

elements,” Dr. Rouse thinks, “might produce a living style, very different from the archaism of Morris or the affected medley called ‘Wardour Street English.’” Yes, but “great skill would be necessary, and no one could use such a style with effect who had not made it natural to himself by complete familiarity.” But, more than this, does not Dr. Rouse forget his jury? The translator would require not only to “make it natural to himself,” but to give preliminary instruction to his public—perhaps even to the scholar—so as to “make it natural” also to his readers and judges. Here, we take it, the ground is suspicious, if not positively unsound and dangerous; and we cannot but think that Arnold is far safer when he advises the translator “not to trouble himself with constructing a special vocabulary for his use in translation” (page 37). “A fine style, noble yet simple, is not impossible to hope for.” We will add that it is fairly attainable on Arnold's principle, and almost certainly unattainable by the amalgam recommended by Dr. Rouse, however skillful the operator.

“The real difficulty is the verse.” Dr. Rouse reviews the experiments in various metres, again indulgently; and it is well to err on the side of indulgence. “Not a Chaucer, or a Dryden, or a Chapman could do away with the check of the rimed couplet”; nor yet, we will add, with the check of the Omar Kháyyám verse, or even of the Spenserian stanza. “Not even a Milton could make blank verse go more with speed”: yet, it may be, a lesser poet than Milton might bring a more nimble spirit to the effort. We certainly do not regard blank verse as a very hopeful medium, but the instrument has not yet been tried to its capacity. There is nothing to say for “the gabble-metres,” properly or improperly treated, rimed or unrimed: Homer never “gabbles.” “There remains the question whether a new metre can be devised; or, in particular, whether it is possible to devise an English hexameter.” A recent writer in a leading literary review, if we mistake not, decided offhand against the hexameter; and undoubtedly, as Dr. Rouse says, without much exaggeration, “the usual type, which is extreme in ‘Evangeline,’ is intolerably monotonous, besides being a gabble.” Still, “Matthew Arnold quotes one or two excellent hexameters, and his own essay is not unpleasing to the ear.” We disagree entirely on this estimate of Arnold's “own essay”: his hexameters, without straining them beyond their professed and reiterated purpose, seem to us perfectly incredible if they did not in sober fact exist. But the admission that one or two excellent hexameters are to be found suggests that more might be devised, if the writer would but take the necessary trouble. The technical difficulties are varied and serious; Dr. Rouse does not deal with them at all exhaustively: yet we must hold that no other English verse has yet been devised that exhibits anything like equal capacity for Homeric translation. But then the difficulties must be seriously grappled with. Dr. Rouse, however, seems to anticipate the most hopeful results “in the metre which Mr. Worsley has devised” and exemplified (in the preface to Books XIII. to XXIV. of his “Odyssey”). We do not believe that this metre will serve: it creates an unfamiliar and hesitating rhythm, and it does not obviate the most trying obstacles. It might make an interesting poem, like Mr. Worsley's or Mr. Way's “Odyssey,” but that poem would not be Homeric in spirit. It is the development of the hexameter that alone can effect the nearest approach to an English Homer.

### ILLUSTRATIVE HISTORICAL DOCUMENTS.

*Select Documents illustrating Mediæval and Modern History.*

By Emil Reich, Doctor Juris. (21s. net. King.)

Dr. Reich's notion of what he calls “General History,” so far as we can understand it, does not seem to be any novel discovery, although his insistence upon it appears to convey some such claim. Everybody, we take it, recognizes that there are large, general, and widely influential facts, and also smaller, particular, and narrowly operative facts; and probably no historical student would disagree with his statement that “general facts are not the arithmetical sum of particular facts,” but “are, to continue the mathematical phraseology, their integration.” However, we shall, no doubt, have further light on the matter when his promised “General History” is published—a concrete exemplification of his theory. It is enough for the present that his object is “to state and account for those general facts” that, in his opinion, are “the dominating powers in all European history.” We will not furnish him the luxury of either “scolding” or “censure” for his choice; for there is no definite mark of a “principal” document, and there is not one of his series,

filling more than seven hundred pages, that we should have wished him to leave out, and it might appear ungrateful to grumble for more than he has given. His plan is this:

Given that general facts do in reality govern particular events, it was indispensable to observe in the present work the order from general to less general facts. The most general facts are the International Treaties; almost equal to them in their wide effect on the generality of white humanity is the Catholic Church, and accordingly much space has been devoted to the institutions, events, and personalities of the Catholic Church, which, it must be repeated, is still one of the world's great factors, and which, up to the first half of the sixteenth century, was of all the factors of European history the most decisive. Next to them rank, in point of general effect in the Middle Ages, the Holy Roman Empire and the Byzantine Empire, together with some institutions which were in mediæval times much more uniform than European institutions are at the present day. After these very general influences in mediæval Europe, the Italian City-states must be considered as among the most generally influential polities in the Middle Ages. After these follow the various great countries of Europe and America, the principal documents of which are likewise selected according to their degree of greater or lesser general influence on history.

Such is the plan. There are nineteen divisions or parts. Under the "International Treaties" division there are ten documents, dating from 1648 (the Treaty of Westphalia) to 1815 (Second Peace of Paris); under "Church History," more than forty, from 313 (Edict of Milan) to 1870 (Papal Infallibility Bull); under "General Institutions of the Middle Ages," a dozen, from 877 to 1312; under "Holy Roman Empire," ten; under "France," nearly thirty. England is represented by Domesday Book, Magna Carta, the Petition of Right, the Navigation Act (1651), the Habeas Corpus Act, the Bill of Rights, and the Act of Settlement—nothing later than 1700. America has six documents, and all the other countries have fewer: Holland, Hungary, Switzerland, Turkey, and Sweden-and-Russia being represented by one each. There is an appendix on "Calvin's Hierarchy and Doctrine of Predestination." In many cases, only excerpts—not the full documents—are presented; and we do not know why such sections of the Rule of St. Benedict as are given are rearranged and not set down consecutively. The very brief introductions, with a note of the source of the text and a selection of illustrative works, prefixed to each of the documents or excerpts, furnish very useful guidance.

The documents are left in their original languages—Latin, Greek, English, French, German, and Dutch; and the German and Dutch are translated, for the most part very well, though a closer adherence to the originals might have been effected in not a few cases, and in one place (the end of Section I. of "The Union of Utrecht," page 607) we lack translation of five lines of the Dutch—probably owing to an obvious and not unnatural cause of oversight. The Greek—a very limited quantity indeed—should also have been translated: technical Greek of the tenth century is more difficult than Dutch. In any case, the important thing is to have the actual document: no translation can supersede that. The volume will be very welcome to all students of history, so far as it goes. It will be a very useful companion to Dr. Ernest F. Henderson's "Select Historical Documents of the Middle Ages" in Bohn's Antiquarian Library (Bell). The two volumes may be said to be mutually complementary, so little have they in common, though both profess substantially the same purpose; that is, of course, so far as the Middle Ages are concerned. Dr. Henderson, by the way, translates all his documents—a very valuable aid, if only for suggestion—and leaves his readers to seek the originals elsewhere.

#### CO-ORDINATION OF MATHEMATICAL TEACHING.

*Arithmetic and Geometry: a Scheme for Teachers and Plea for Educational Reform.* By C. T. Millis, M.I.Mech.E. (9d. net. Educational Supply Association.)

In the capacity of Educational Principal of the Borough Polytechnic Institute, Mr. Millis has had excellent opportunities for noting many of the points in which reform is needed in the education given both in our elementary and continuation schools and in our technical institutes. We have in the volume now before us a serious attempt to remedy what experience has shown to the author to be one of the deep-seated causes of much of the difficulty encountered by institutions whose duty it is to provide for the more advanced instruction of elementary students about to train for an industrial or commercial career. He ascribes a great deal of the trouble to the want of connection in any given school between the teaching of one subject and that of others of

kindred nature, and, again, to the absence of that co-operation by which the study of a particular subject might be made as far as possible a continuous course in the schools of various grades through which an individual student is likely to pass. With much clearness, Mr. Millis points out the great advantage to be derived from the intimate association of the study of arithmetic, geometry, and mensuration, propounding a scheme of combined instruction, which is well worth the careful consideration of the teachers in elementary and continuation schools. The scheme set forth here and the preliminary "plea for reform" are already familiar to those who attended in June, 1904, the Guildford meeting of teachers, at which, by the invitation of the Surrey County Council, Mr. Millis read a paper. An outline of the scheme was also communicated by the author to an audience of fellow professionals at the London County Council Conference of Teachers. From the schedules given in the volume under review, it is not quite clear how far Mr. Millis intends position on the same horizontal line to be understood as implying concurrence of time, but it would appear probable from the tables that in the earlier stages the scheme provides for the *consecutive* teaching of allied portions of geometry and arithmetic rather than for absolutely concurrent instruction in the two subjects. It is in the more advanced work that *simultaneous* courses, each bearing on and assisting the other, are specially in evidence. We observe, too, that it is these later courses which the author has so thoroughly tested, with satisfactory results. The suggested instruction in each individual branch forms an interesting syllabus, and one of practical utility. The proposed scheme of study in its entirety constitutes the first two of the three tables in the volume. A third schedule exhibits in parallel columns the Scheme B Arithmetic as at present used in our elementary schools and the combined course of arithmetic and geometry which the author recommends. It is at once evident on comparison that the latter embraces a far wider field than the former, and that, as a preliminary training for the students whose requirements it considers, its efficiency is greater, provided (and this is essential) that the time at the disposal of teacher and pupil is sufficient to admit of equal thoroughness in either.

#### "THE WISDOM OF THE EAST SERIES." (Murray.)

Mr. L. Cranmer-Byng and Mr. S. A. Kapadia, M.D., L.R.C.P., the editors of the series, "desire above all things that, in their humble way, these books shall be the ambassadors of good will and understanding between East and West, the old world of Thought and the new of Action." There is scarcely room for doubt that their desire will be amply fulfilled. (1) *The Teachings of Zoroaster and the Philosophy of the Parsi Religion* (2s. net), by Dr. Kapadia, is a succinct and very careful exposition, with illustrative extracts judiciously chosen. (2) *The Awakening of the Soul* (1s. 6d. net) is translated by Dr. Paul Brönnle from the Arabic of Ibn Tufail. (3) *The Duties of the Heart* (1s. net) is a translation from the Hebrew of Rabbi Bachye, with introduction by Edwin Collins. (4) *The Odes of Confucius* (1s. net) are rendered, with introduction, by L. Cranmer-Byng. (5) *The Sayings of K'ung the Master* (1s. net)—that is to say, of K'ung-fu-Tzse (Confucius)—are given in selection, with introduction, by Allen Upward. (6) *The Religion of the Koran* (1s. net) is a skilled exposition, with introduction, by Arthur N. Wollaston, C.I.E. (7) *Women and Wisdom of Japan* (1s. net) consists of a brief series of extracts from the "Onna Daigaku," or the "Greater Learning for Women" (written by Kaitara Ekken, the famous moralist of Japan, who flourished some two hundred years ago), with a long and interesting introduction by Shingoro Takaishi. (8) *The Rose-Garden of Sa'di* (1s. net), selected and rendered, with introduction, by L. Cranmer-Byng. So far, then, the series presents a wide variety of ideas selected from the more prominent and influential thinkers of the Eastern world. The editors "are confident that a deeper knowledge of the great ideals and lofty philosophy of Oriental thought may help to a revival of the true spirit of Charity which neither despises nor fears the nations of another creed and colour." We should hope that all thoughtful persons among us have already advanced to this point, although it may unfortunately be that the Eastern experience of the editors has taught them differently. The little volumes are admirably edited and attractively got up, and we have no doubt that they will do good service in opening up avenues to a wider and deeper appreciation of the best thought of the ancient world of the East, and in drawing the West onwards to a better understanding of the very different attitude of the Eastern mind.

## GENERAL NOTICES.

## MATHEMATICS.

*Elementary Algebra.* By W. M. Baker, M.A., and A. A. Bourne, M.A. (With or without Answers, 4s. 6d. Or, in two Parts: Part I., with Answers, 3s.; without, 2s. 6d. Part II., with or without Answers, 2s. 6d. George Bell.)

A valuable class-book, embracing a comprehensive course in elementary algebra. The explanations are in general satisfactory, and are never dry. The beginner learns to compare algebra with arithmetic at every step. Graphs and their uses occupy an important position, and form an interesting feature of the text. The work consists of two Parts, of which the earlier deals with the subject as far as the theory of quadratics, whilst the Second Part includes amongst its later chapters sections devoted to the Exponential Series, to Interest and Annuities, and to Indeterminate Coefficients, with their application to Partial Fractions. A special teachers' edition of each part has been published, and will certainly prove attractive, owing to the convenience for use in class which has been secured by the novel arrangement of corresponding sets of questions and answers.

*Grammar School Algebra.* By David Eugene Smith, Ph.D. (2s. 6d. Ginn.)

Both for the lad who is to learn algebra merely because its methods will help him to solve practical problems and for the young student about to pursue the study of algebraic science for its own sake Dr. Smith's "Grammar School Algebra" will be an excellent guide. It teaches the first principles of the science simply and effectively, and gives a valuable minimum of theory combined with material for practice which is not only much in itself, but is also suggestive of the way to add to its quantity. The matter is arranged so as to provide for about a year's work late in the school course, the entire contents to be employed in the year, unless arithmetic is taught simultaneously, in which case the first two out of the three chapters will probably be sufficient for the twelvemonth's work.

*Heuristic Geometry.* By the Rev. George Harris, M.A. T.C.D. (9d. Meiklejohn & Holden.)

A series of simple exercises affording a useful introduction to the study of practical geometry. The value of the material composing the little book has been sufficiently proved by the success attending its use at Christ's Hospital during a period of five years. The volume is for the scholar rather than the teacher, and the author encourages independent thought and original discovery by proposing questions to which the average pupil may in a large proportion of instances himself furnish the solutions.

*A Handy Book of Logarithms.* (2s. Blackie.)

Messrs. Blackie & Son have issued a varied, compact, and carefully compiled volume. The tables of which the main portion consists are preceded by a brief description of their constitution and a helpful summary of the rules governing their use. A number of the tables are calculated to six places of decimals; the degree of accuracy adopted is, however, not always equally close. The volume also contains, in the form of a useful appendix, many leading problems in the practical geometry of the straight line, circle, and conic sections. The methods of solution are indicated, but the demonstrations are left to the reader. The mensuration of plane areas and of the surfaces and volumes of various well known solid figures is also considered. Attention should be drawn to the paragraph on page 9 in which the student is told how to find the sine or other element to odd minutes. The final line of this paragraph is either hopelessly involved or else inaccurate. Also, by a curious misprint in the third line of page 8, natural logarithms are styled Neperian. Apart from such isolated instances of error, the book appears to be thoroughly reliable, and it has the uncommon feature of furnishing six-place logarithms.

## ENGLISH LITERATURE.

*The Diary of Samuel Pepys.* Globe Edition. Edited by G. Gregory Smith. (3s. 6d. Macmillan.)

A most welcome addition to the series. Mr. Gregory Smith has bestowed much sympathetic care upon the biographical and literary introduction and upon the incidental explanation of numerous references, at the same time reproducing many of Lord Braybrooke's notes. The text follows Lord Braybrooke's fourth edition of 1854, and the reprint, "the fifth," in the same year, with two important modifications: (1) the incorporation of the corrections made by the late Mr. Mynors Bright in his revised text of 1875-79 (with permission of Messrs. George Bell & Son), and (2) the reduction of the few antique spellings to modern usage. "Intense curiosity and the sheer joy of living, these are the main elements of Pepys's character. The 'Diary' may be said to be a commentary on these; and they explain the 'Diary.'" "Speculation on his character and on the meaning of the 'Diary' will be most profitable when it leads us to see how absolutely Pepys reflects the spirit of the England of the Restoration." The type is small, but very clear; the page is divided into two columns; and, happily, there is a very full index. There are 832 pages in the volume. It is most ably edited and

admirably produced, while the price is amazingly low, even in these days of cheap literature.

*The Poetical Works of Percy Bysshe Shelley.* Oxford Edition.

Edited by Thomas Hutchinson, M.A. (Frowde.)

A handsome and tasteful volume containing all Shelley's ascertained poems and fragments of verse that have hitherto appeared in print, and "including materials never before printed in any edition of the poems." Mr. Hutchinson has worked "as far as possible on the principle of recognizing the *editio princeps* as the primary textual authority"—a principle, however, that needs to be carried out with great discretion, especially in the case of an author that was so careless of the minor and mechanical matters of literary craftsmanship as Shelley was. However, "the present text is the result of a fresh collation of the early editions; and in every material instance of departure from the wording of those originals the rejected reading has been subjoined in a footnote." The reader is thus put in possession of an adequate critical apparatus. The punctuation and the spelling occasion not a little difficulty, especially the punctuation. Mr. Hutchinson has most diligently laboured to present a complete text of every scrap of Shelley's work, and he has added textual notes of much value. The volume runs to 935 pages, and yet it is quite handy. The paper and the type are excellent, and the binding is substantial and flexible. Prefixed is a portrait of Shelley from a painting made at Rome in 1819 by Miss Curran. This will for many a day be the standard and popular edition.

Cambridge English Classics.—*The Poems of Abraham Cowley.* The Text edited by A. R. Waller, M.A. (4s. 6d. net. Cambridge University Press.)

The poems included in the present volume are: Miscellanies, "The Mistress," Pindarique Odes, "Davideis," and Verses written on several occasions. The text follows the first collected edition of Cowley's works, the folio of 1668, the year after his death. At the end of the book are placed the variations Mr. Waller has noted in a collation of the 1668 text with the 1656 folio, the 1663 volume, and the 1647 edition of "The Mistress." Mr. Waller has dealt with the text in the judiciously conservative way of his previous work in the series. All earnest students of English literature will be very grateful for this convenient and agreeable volume. A companion volume is in the press: it will contain Cowley's prose, his fugitive juvenile writings, and his English plays, and will thus complete his English writings.

## SCRIPTURE.

*The Century Bible.* (1) *I. and II. Samuel.* Edited by the Rev. A. R. S. Kennedy, M.A., D.D., Professor of Hebrew and Semitic Languages in the University of Edinburgh. (2) *Job.* Edited by A. S. Peake, M.A., Professor of Biblical Exegesis in the University of Manchester. (2s. 6d. net each. Jack.)

(1) In view of the paramount importance of Samuel for the study of early Hebrew religion and for the historical development of religious thought, it is fortunate that these books have fallen to be treated by so sound and cautious a scholar as Dr. Kennedy. The introduction is exceptionally full, frank, and instructive. It deals with the place of Samuel in the Canon, its arrangement and contents, characteristics of the older historical literature, sources (with distinctive positions of the editor's own), the Deuteronomic edition and post-Deuteronomic redaction and later additions, the text of Samuel and the value of the Greek version, the historical value and the chronology of Samuel—altogether a very careful and luminous conspectus of the results of modern scholarship. The notes are judicious and tolerably full. There are two maps—Palestine in the eleventh century and modern Jerusalem. (2) Mr. Peake devotes his able introduction to an analysis of the problems of the book, a critical examination of the contents, the questions arising on the text (regarding adversely Bickell's theory and Dillon's presentation of it in English), the date (about 400 B.C.), the art of the book and the author of it, with a selection of the literature for students. The notes are full and very instructive. Both volumes are conspicuously able and opportune contributions to the popular understanding of the critical investigations of their subjects, and throw floods of light upon the texts. They are extremely handy and delightfully got up.

*Handbook to the Pentateuch, Vol. II.* By the Rev. H. C. Batterbury, B.A. (2s. net. Rivingtons.)

Mr. Batterbury's experience as Diocesan Inspector of Schools has stood him in good stead in the expository footnotes and the lessons appended to the various chapters. To some extent the text is rearranged so as to bring kindred matters into connexion. The brief marginal notes will be helpful both for explanation and for reference. The work is thoroughly well done, and cannot fail to be very instructive, whether to examination candidates or to general readers. The maps (three), diagrams (five), illustrations (three), and ground plan of Tabernacle and court, all add to the practical usefulness of the volume.

*The Twentieth Century New Testament.* (2s. 6d. net. Horace Marshall.)

A revised edition, so thoroughly revised as to be "virtually a new translation." The translators—a committee of anonymous scholars—have rendered the Greek independently and directly from Westcott and

Hort's text into current idiomatic English. At not a few points one regrets the absence of the familiar version, but undoubtedly the general result is to bring home the meaning of the text to the modern mind with freshness and force. The work will be a valuable companion to the Authorized and Revised Versions.

## BIOGRAPHY.

*Memoir of Rosamond Davenport-Hill.* By Ethel E. Metcalfe. (2s. 6d. net. Longmans.)

A slight, but intelligent and sympathetic, sketch of the life and active career of a good and devoted woman and most useful citizen. The School Board experiences, favourable and unfavourable, occupy the largest space, and are told with considerable force, and enlivened by interesting sketches. The rest is somewhat meagre. The result, however, is a really vivid picture of Miss Davenport-Hill. There are several portraits.

Little Biographies.—*Johann Wolfgang Goethe.* By H. G. Atkins. (3s. 6d. Methuen.)

A simple popular sketch "intended to deal rather with the author's life than with his works." Still, there is necessarily considerable reference to the works. Perhaps the earlier years get more than their due share of space, but that does not diminish the general interest. The main points are well presented, and the reader will derive a very fair impression of Goethe, his surroundings, and his activity.

## ART—DRAWING—WRITING.

*The Art-Workers' Quarterly* for July (Chapman & Hall, 2s. 6d. net) has capital articles on ancient bookbindings, ornamental lettering, the art of Limoges, the exhibition of "cheap cottages" at the Garden City, &c.—a varied and interesting number, with one coloured and six supplementary plates.

A specimen plate (Dr. W. G. Grace) of *The Empire's Cricketers* (sixteen weekly parts, 1s. net each) gives promise of a characteristic and meritorious series—coloured crayons reproduced in facsimile. The artist is Mr. Chevallier Tayler, himself a cricketer; and Mr. G. W. Beldam, of the Middlesex Eleven, furnishes biographical notices. Messrs. Dawbarn & Ward publish, for the Fine Art Society.

*McDougall's Firm and Flexible Point Drawing Cards*—a series of thirty-two cards of examples, with teacher's card of hints—afford varied and useful materials for practice throughout a comprehensive course. They consist mainly of common and natural objects, with a few conventional forms and examples of lettering (2s. net).

*Bacon's Primary Drawing Copy-books* (2d. net each)—Part III., for Juniors; Part IV., for Intermediate classes—by Frank Steeley, are excellently devised and prepared.

*The Addison Series of Copy-Books* (Addison Publishing Company)—Nos. 1-14—graduated through the various standards, aim successfully at cultivating a "free flowing style." An excellent practical series.

*Chambers's Business Hand Copy-Books*—Nos. 1-12, 2d. each—are carefully graduated and well calculated to ensure "the clear legible hand so justly esteemed in business circles." Also an excellent practical series.

## MISCELLANEOUS.

*Pannell's Reference Book.* For Home and Office. (6s. 6d. net. Granville Press.)

This very comfortable yet handy volume of about a thousand small crown quarto pages is a very welcome addition to the ever useful means of ready reference. It really brings together under one cover "a series of guides to a variety of subjects hitherto treated only in separate volumes." It includes an English dictionary, aids to the English language, a medical guide, a legal guide, a social guide, an educational guide, a commercial guide, and a dictionary of general information"; together with a variety of other selected details. Such a work cannot fail to be very serviceable; and experience alone can show in what respects modification may be advisable in future issues. The type is clear, the matter is conveniently arranged and effectively displayed, and the get-up is substantial. Evidently great pains have been taken to render the work as useful as possible to all sorts and conditions of people likely to require such aid. We wish it every success.

Messrs. Watts issue for the Rationalist Press Association (1) *The Wonders of Life*, by Prof. Haeckel—"a popular study of Biological Philosophy," supplementary volume to "The Riddle of the Universe," translated by Joseph McCabe (6d.); (2) *The Fundamental Principles of the Positive Philosophy*—the first two chapters of Comte's "Cours de Philosophie Positive," translated by Paul Descours and H. Gordon Jones, with a biographical Preface by Emeritus Professor Beesly (6d.). They also publish in similar form Paine's *The Age of Reason*, with able biographical introduction by J. M. Robertson (6d.).

Very serviceable and well got up are (1) *Philips' Technical Instruction Register* for Cookery, Laundry, Dairy, Gardening, Handicraft, and Household Management Classes, ruled for 76 names (1s.), and (2) *The "Ready" Register of Attendances* for a year, ruled for 60 names (1s. net. Wigan: Platt. London: Simpkin, Marshall, & Co.).

OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

## FIRST GLANCES.

## CLASSICS.

- Livy V. Edited by E. Seymer Thompson, M.A. 8d. net. Blackie (Latin Texts).  
[Introduction has useful section on Livy's style. Text based on Luterbacher's edition (Teubner, 1887).]
- Livy XXVI. Edited by Robert Mitchell Henry, M.A. 2s. 6d. E. Arnold.  
[Fresh introduction. Map of Central Italy. Good notes.]
- Roman Education. By A. S. Wilkins, Litt.D., LL.D., (late) Professor of Classical Literature in the Victoria University of Manchester. 2s. net. Cambridge University Press.
- Rome, Old Tales from. By Alice Zimmern. 5s. Fisher Unwin.

## MATHEMATICS.

- Algebra, A Text-Book of. By A. E. Layng, M.A. Part I. 2s. 6d. Blackie.  
[“Embodying graphic and other solutions and applications to arithmetic and geometry.” Preference to subjects “which lead to some immediate practical application.” Numerous worked-out examples. Abundance of exercises and problems. Without answers.]
- Algebra, An Introduction to. By R. C. Bridgett, M.A., B.Sc., F.C.S. 1s. Blackie.  
[First year's course. Approach through arithmetic. Graphs. Numerous examples; answers.]
- Algebra, Graphic. By J. Lightfoot, D.Sc., M.A. 1s. Ralph, Holland, & Co.  
[For elementary and intermediate students. Exercises; answers.]
- Arithmetic, Macmillan's Picture. Book III. 3d.  
[Attractive and practical.]
- Arithmetic, The Primary. Part II. 6d. Clive.  
[Exercises abundant and varied. Answers.]
- Arithmetic, The Three Term. By J. W. Iliffe, M.A. Books V. and VI. 3d. and 5d. Jack (Mathematical Series).  
[Explanations clear and simple; examples abundant.]
- Arithmetic, The Winchester. By C. Godfrey, M.A., and G. M. Bell, B.A. 3s. Teacher's Edition, 6s. net. Cambridge University Press.  
[The Teacher's Edition is interleaved, with answers and model worked-out exercises on the inserted leaves opposite to the questions. Very helpful and suggestive.]
- Arithmetics, Blackie's Model: Script Figure Course B Arithmetic in three terms. Books I. and III. 1½d. and 2d.  
[Attractive, practical. Numerous examples, problems, tests.]
- Arithmetics, Chambers's "Thorough" (Scheme B). By W. Woodburn. Books IV. and V. 3d. each.  
[Practical; examples, problems, tests abundant.]
- Calculus, Integral, for Beginners. By Alfred Lodge, M.A. 4s. 6d. George Bell.  
[“Intended for students of physics and mechanics who require a good working knowledge of integration and its more simple applications.”]
- Cubic Surfaces, On Models of. By W. H. Blythe, M.A. 4s. net. Cambridge University Press.
- Geometry, Elementary Modern. Part I., Experimental and Theoretical—ch. i.-iv., Triangles and Parallels. By H. G. Willis, M.A. 2s. Clarendon Press.  
[Exercises to each proposition; harder examples to each chapter. No attempt “to follow Euclid's sequence.”]
- Number Exercises, New, Oliver & Boyd's. Books I., III., IV., and V. 2d., 3d., 3d., 4d.  
[Practical examples and problems, abundant and varied.]
- Tables and Constants to Four Figures. Compiled by William Hall, Chaplain and Naval Instructor, R.N. 3s. net. Cambridge University Press.  
[“For use in technical, physical, and nautical computation, and adapted to the requirements of junior mathematical students.” Notes on the tables and their use prefixed. Most useful.]
- Traversing of Geometrical Figures, Notes on the. By J. Cook Wilson. 6s. net. Clarendon Press.

## SCIENCE.

- Chemistry, Experimental, Elementary. By A. E. Dunstan, B.Sc.Lond., F.C.S. 2s. Methuen (Junior School Books).  
[“The subject is developed in a logical sequence, and, wherever possible, historically.” Covers ground of Oxford and Cambridge Junior Locals, College of Preceptors (Second Class), and Board of Education (First Stage) Examinations. 109 diagrams. Judicious and lucid. Excellent.]

Chemistry, Organic, Practical, A Systematic Course of. By Lionel Guy Radcliffe, F.C.S., Lecturer in Organic Chemistry, Municipal School of Technology, Manchester, assisted by F. S. Sinnatt, F.C.S., Lecturer and Demonstrator in Chemistry, in the same School. 4s. 6d. Longmans.

[“As far as possible, only such experiments in illustration of typical reactions as can be performed by a student working two consecutive periods, or in all about 5 hours a week.” Special Part for advanced students. No illustrations of apparatus. Well conceived and set out.]

Magnetism and Electricity for Students. By H. E. Hadley, B.Sc. Lond., A.R.C.S. Lond., Head Master of the School of Science, Kidderminster. 6s. Macmillan.

[For Pass B.Sc. Lond., Stages II. and III. Board of Education, and like Examinations. Omission of chapters on Dynamics, Telegraphy and Telephony, Distribution of Light and Power, and similar subjects, allows fuller treatment of Thermo-Electricity, Discharge of Electricity through Gases, Electric Oscillations, &c. Questions on chapters; answers. 378 figures. Full, clear, and effective.]

Mechanics: a School Course. By W. D. Eggar, M.A., Assistant Master at Eton College. 3s. 6d. Edward Arnold.

Mechanics, An Intermediate Course of. By Alfred W. Porter, B.Sc., Fellow of, and Assistant Professor of Physics in, University College, London. 5s. Murray.

Mining, The Physics and Chemistry of. By T. H. Byrom, Principal Analytical Chemist to the Wigan Coal and Iron Company, and Lecturer on Chemistry and on the Physics and Chemistry of Mining at the Wigan Technical College. 3s. 6d. net. Crosby Lockwood & Son.

[“An Elementary Class-Book for the use of students preparing for the Board of Education and County Council Examinations in Mining or qualifying for Colliery Managers' Certificates.” Excellent treatment from the special standpoint. Fifty-three figures.]

Science, Experimental, Elementary: an Introduction to the Study of Scientific Method. By W. Mayhowe Heller, B.Sc. Lond., Inspector and Head Organizer of Science Instruction to the Commissioners of National Education, Ireland, and Edwin G. Ingold. 2s. 6d. net. Blackie.

[“Preparation for examinations plays no part in the course of work here sketched.” Thorough, lucid; very valuable. 136 experiments; 178 figures.]

## EDUCATION.

# MR. MURRAY'S LIST.

## AN ELEMENTARY GREEK GRAMMAR FOR SCHOOLS.

BY JOHN THOMPSON, M.A.,

*Formerly Scholar of Christ's College, Cambridge; Senior Classical Master at The High School, Dublin.*

PART I., ACCIDENCE, 1s. 6d. PART II., SYNTAX, 1s. 6d. COMPLETE, WITH FULL INDEX, 3s.

The object of this book is to give in a form suitable for beginners the elements of Greek Grammar. Owing to the great importance of the appeal to the eye in the case of young students, special attention has been paid to the type and arrangement of the printed matter. Attic Greek only has been included, and the usages of poetry distinguished throughout from those of prose. Unnecessary and unusual forms have been left out, and the author has endeavoured to state all the requisite facts both of accidence and syntax in the clearest possible manner. At the same time advantage has been taken of the latest developments of modern scholarship, so that the work may be thoroughly up to date.

BY THE SAME AUTHOR.

## A GREEK GRAMMAR FOR SCHOOLS AND COLLEGES.

ACCIDENCE AND SYNTAX.

COMPLETE IN ONE VOLUME. Crown 8vo, 6s.

### Murray's History of England. 3s.

**An Outline History for Middle Forms.** From the Earliest Times to the Death of Queen Victoria. By Miss M. A. TUCKER, History Mistress at St. Felix School, Southwold. With many Coloured and other Maps, Plans, Tables, &c.

While containing all that is necessary for the Junior Examinations, this book aims at arousing the interest of the student and stimulating him to further efforts in historical study. It is very fully equipped with Maps, Plans, Tables, &c.

### History of England, Part I. 5s.

**From the Earliest Times to the Close of the Middle Ages.** By C. R. L. FLETCHER, M.A. With Coloured Maps, Plans, &c. NEW AND CHEAPER EDITION.

"We doubt whether a better historical work than Mr. Fletcher's has appeared in this country any time within the past fifty years. Certainly we never read a similar work with anything like the same pleasure and profit. The author merits our thanks as well as our congratulations, for he has succeeded in accomplishing what no previous writer to our knowledge ever before thought of attempting. He has contrived to give us not merely the pith and marrow of history, but its very spirit, its soul and essence."—*Daily Telegraph*.

### Introductory History of Greece. 2s. 6d.

By the Rev. A. S. WALPOLE. With Maps, Plans, and Illustrations. Fcap. 8vo.

An attempt to tell the history of Greece in a clear, simple, and interesting manner. Only so many names are given as will help the young reader to remember the several stories.

### Classical Atlas for Schools. 6s.

Edited by G. B. GRUNDY, M.A., D.Litt. Consisting of Fourteen Sheets (containing Thirty-eight Maps and Plans), with a Complete Index of 19 pages.

"... will undoubtedly supersede atlases now in use among schoolboys and undergraduates. It is well bound and cheap at six shillings, but, better than this, it is clearer and more legible than any similar atlas we have seen. . . . The whole is excellently edited and produced."—*Athenæum*.

### On Translating Homer. 3s. 6d.

A New School Edition of Matthew Arnold's Essay, edited, with Introduction and Notes, by W. H. D. ROUSE, M.A. Litt.D., Head Master of Perse Grammar School, Cambridge.

"... it was a happy thought to add to the resources of a sixth form teacher by editing, with introduction and notes, Matthew Arnold's Essay on Translating Homer. In this volume a boy will find set forth the first principles of translation from classical languages in a manner which he is not likely to forget, in the phrases of critics from Longinus to Matthew Arnold. Dr. Rouse's introductory essay is a valuable piece of work, characterised by breadth and grip."—*School World*.

### Practical Science, Part II. 2s.

**Mechanics, Hydrostatics, and Heat.** By J. H. LEONARD, B.Sc. Lond., and W. H. SALMON, B.A., B.Sc.

A continuation of Mr. J. H. LEONARD'S FIRST COURSE OF PRACTICAL SCIENCE. These books, together with the same author's FIRST COURSE OF CHEMISTRY, cover between them all the ground included in the Oxford and Cambridge Local Examinations, under the following heads:—Elementary Science (Juniors) and Heat (Juniors); also Heat (Preliminary, Cambridge), Elementary Mechanics (Juniors, Cambridge), and Elementary Mechanics and Hydrostatics (Juniors, Oxford).

### English Grammar. 2s. 6d.

**With Exercises and Examination Papers.** By T. D. HALL, M.A. THIRD REVISED AND ENLARGED EDITION.

The new edition has been thoroughly revised and brought up to date. The chapters on the classification of languages, sound shifting, and the historical development of English have been entirely re-written, and embody the most recent philological discoveries. The whole text has been re-set in a clear and striking type.

### Intermediate French Reader. 2s. 6d.

Edited, with Historical, Biographical, and Grammatical Notes, by MAURICE A. GEROTHWOHL, B.Phil., L.-és-L., F.R.S.L., Examiner to the Oxford and Cambridge Schools Examination Board.

### Primer of Logic. 1s. 6d.

By E. E. CONSTANCE JONES, Principal of Girton College, Cambridge. With Examination Papers, Diagrams, Tables, &c.

This is the latest addition to Mr. Murray's Series of Primers. It is an attempt to supply, at a price within the reach of everybody, a trustworthy book on the elements of LOGIC—a subject which is being more widely studied every day. Those who wish to use the book for examination purposes should find great assistance from the papers included. Other Volumes in the Series are—PHILOSOPHY, by A. S. RAPPOPORT; PHYSIOLOGY, by E. H. STARLING; and THE USE OF WORDS, by Miss KINNEAR.

### Practical Mathematics. 2s. 6d.

By A. CONSTERDINE, M.A., and A. BARNES, M.A. With Diagrams, Answers, and Index. Fcap. 8vo.

This book is intended for the use of students over twelve years of age, and especially for those who wish to make practical use of their knowledge in after life. The method adopted throughout is that the materials used for calculation shall be got for the most part from reasonably accurate measurements made by each student for himself, and that these measurements shall, as far as possible, be measurements of actual objects selected for the purpose. In this way the several branches of elementary mathematics (measurement, drawing, arithmetic, geometry, algebra) are not merely correlated, but actually fused. A companion volume—PRACTICAL ARITHMETIC—for younger students, has recently been issued. Prospectuses of both books may be obtained, post free, on application.

### Mechanics. 5s.

**An Intermediate Course.** By A. W. PORTER, B.Sc., Assistant Professor of Physics in University College, London. With numerous Diagrams.

### Nature Teaching. 3s. 6d.

**Based upon the General Principles of Agriculture.** For the use of Schools. By FRANCIS WATTS, B.Sc., and WILLIAM G. FREEMAN, B.Sc.

### A Book of British Song.

Edited by CECIL J. SHARPE, Principal of the Hampstead Conservatoire. Crown 8vo. Words and Airs only, cloth, 2s.; paper, 1s. 6d. Large 4to, Pianoforte Score and Words, 7s. 6d. net.

"We have nothing but praise for 'A Book of British Song.' . . . The songs are exceedingly well chosen, and represent the choicest of our great store of national ballads. . . . In the music of school and home nothing better than this wholesome and handy collection of national songs could be desired, and we heartily wish it success."—*Yorkshire Post*.

*Ready shortly.*

A CHEAP EDITION OF  
**CASSELL'S NEW FRENCH DICTIONARY.**

(French-English—English-French.)

Compiled from the best Authorities in both Languages. Revised and considerably Enlarged by JAMES BOÏELLE, B.A. Newly Revised by DE V. PAYEN-PAYNE, Assistant Examiner to the University of London. **3s. 6d.**

*A Prospectus will be sent on application.*

28TH THOUSAND.  
**A HISTORY OF ENGLAND.**

By the Right Hon. H. O. ARNOLD-FORSTER, M.A., M.P. Revised. Fully Illustrated. Extra crown 8vo, 816 pp., bound in cloth, **5s.**; or, handsomely bound, cloth gilt, **6s. 6d.**

NEW AND ENLARGED EDITION.  
**THE STORY OF ENGLISH LITERATURE.**

By ANNA BUCKLAND. Cloth boards, **3s. 6d.**

"A readable and wonderfully complete *résumé* of the subject."—*Guardian*.

NEW WALL SHEETS.

**CASSELL'S WILD BIRDS SHEETS.**

Selected and Edited by R. KEARTON, F.Z.S. Each Sheet is mounted on Board, with Cord Suspender, and contains Eight Examples of Familiar Wild Birds, beautifully reproduced in Colours and Varnished. Six Sheets, **1s. 6d.** each. Unmounted, **6d.** each.

*Cassell's Educational Catalogue will be sent post free to any address.*

10596. (Professor DÉPREZ.) — Soient  $a, b, c$  les côtés d'un triangle sphérique ABC;  $r$  le rayon du cercle inscrit;  $x, y, z$  les distances d'un point de ce cercle aux côtés de ABC. Démontrer la formule

$$\cos \frac{1}{2}A (\sin y \sin z)^{\frac{1}{2}} + \dots = 2 \tan r \cos \frac{1}{2}A \cos \frac{1}{2}B \cos \frac{1}{2}C.$$

*Solution by E. W. MIDDLEMAST.*

Taking OA, OB, OC as oblique axes, let  $\lambda, \mu, \nu$  be the direction cosines of the point P. Let  $n$  have its usual meaning for the triangle ABC and let  $n_1, n_2, n_3$  have similar meanings for BPC, CPA, APB, so that  $2n_1 = \sin x \sin a, \dots$ . Now, projecting OP on the perpendicular to the plane OBC,  $\sin x = \lambda \sin AD$ , where AD is perpendicular to BC; whence  $n_1 = n\lambda, \dots$ . Hence

$$n^2 = \sum n_1^2 + 2 \sum n_2 n_3 \cos a \dots \dots \dots (1).$$

If  $\lambda', \mu', \nu'$  be the direction cosines of I the in-centre,  $\lambda' = (\sin a \sin r)/2n, \dots$ . Hence

$$\cos r = \cos IP = \sum \lambda \lambda' + \sum (\mu \nu' + \mu' \nu) \cos a = \sum \lambda (\lambda' + \mu' \cos b + \nu' \cos c) = (\sin r/2n^2) \sum n_1 [\sin a + \sin (b+c)] = (\sin r/n^2) \sum n_1 \sin s \cos (s-a),$$

and, since  $\tan r = n/\sin s,$   
 $\sum n_1 \cos (s-a) = n \dots \dots \dots (2).$

From (1) and (2) it follows that

$$\sum n_1^2 \sin^2 (s-a) - 2 \sum n_2 n_3 [\cos a - \cos (s-a) \cos (s-b)] = 0$$

or  $\sum n_1^2 \sin^2 (s-a) - 2 \sum n_2 n_3 \sin (s-b) \sin (s-c) = 0$

or  $\sum \sqrt{[n_1 \sin (s-a)]} = 0;$

therefore  $-n_1 = \sqrt{[n_1 n_2 \frac{\sin (s-b)}{\sin (s-a)}]} + \sqrt{[n_3 n_1 \frac{\sin (s-c)}{\sin (s-a)}]}, \dots;$

therefore

$$-n = -\sum n_1 \cos (s-a) = \sum \sqrt{(n_2 n_3)} \left\{ \sqrt{\left[ \frac{\sin (s-b)}{\sin (s-c)} \right]} \cos (s-c) + \sqrt{\left[ \frac{\sin (s-c)}{\sin (s-b)} \right]} \cos (s-b) \right\}$$

$$= \sum \sqrt{(n_2 n_3)} \frac{\sin a}{\sqrt{[\sin (s-b) \sin (s-c)]}} = \sum \frac{\sqrt{(n_2 n_3)} \sin a}{\sin \frac{1}{2}A \sqrt{(\sin b \sin c)}}$$

$$= \frac{1}{2} \sum \sqrt{(\sin y \sin z)} \frac{\sin a}{\sin \frac{1}{2}A} = \sum \sqrt{(\sin y \sin z)} \frac{\sin a}{\sin A} \cos \frac{1}{2}A$$

$$= \frac{n}{N} \sum \sqrt{(\sin y \sin z)} \cos \frac{1}{2}A;$$

therefore

$$\sum \sqrt{(\sin y \sin z)} \cos \frac{1}{2}A = -N = -2 \tan r \cos \frac{1}{2}A \cos \frac{1}{2}B \cos \frac{1}{2}C$$

(McClelland and Preston, chap. VI., Section 78).

The signs of the radicals have to be determined with reference to the three arcs of the in-circle separated by the three points of contact with the sides. For the arc which lies nearest the vertex A the true statement will be

$$-\sqrt{(\sin y \sin z)} \cos \frac{1}{2}A + \sqrt{(\sin z \sin x)} \cos \frac{1}{2}B + \sqrt{(\sin x \sin y)} \cos \frac{1}{2}C = 2 \tan r \cos \frac{1}{2}A \cos \frac{1}{2}B \cos \frac{1}{2}C.$$

*Note on Curvature.*

*By A. W. T.*

If  $(x, fx)$  be a point on  $y = f(x),$

$$(X-x)^2 + (Y-fx)^2 = \lambda [(Y-fx) - f'x(X-x)]$$

represents a circle touching the curve at  $(x, fx);$  for it passes through the two consecutive points in which the tangent at  $(x, fx)$  cuts the point circle  $(X-x)^2 + (Y-fx)^2 = 0.$

If it pass through a consecutive point  $x+h, f(x+h),$

$$h^2 + (hf'x + \dots)^2 = \lambda \left( hf'x + \frac{h^2}{2!} f''x + \dots - hf'x \right);$$

therefore  $\lambda = 2 \{ [1 + (f'x)^2]/f''x \}$  in the limit. Hence the circle of curvature is determined. Similarly, by taking

$$(X-x)^2 - 2h(X-x)(Y-fx) + (Y-fx)^2 = \lambda [(Y-fx) - f'x(X-x)]$$

to be one of a series of rectangular hyperbolas having one-point contact with the curve, we can find the rectangular hyperbola of closest contact. Similarly with the other conics.

15828. (Communicated by K. DEVA RAO, B.A.)—A square board is divided into 16 equal squares by vertical and horizontal lines. In how many ways can 4 of these squares be painted white, 4 black, 4 red, and 4 green, without repeating the same colour in the same vertical or horizontal row?

[This familiar question is solved in a variety of ways. But the answer (576) may not be right.]

*Solution by D. BIDDLE.*

That 576 is the correct answer seems clear from the following considerations:—The colours of the top row can be arranged in  $4!,$  or 24,

different ways. Let the colours in any one of these 24 arrangements be designated by 1, 2, 3, 4 in order. Then the initial colours of the succeeding rows will be 2, 3, 4 variously arranged in  $3!,$  or 6, different ways. For any one such arrangement there are four ways of filling in the remaining squares, as represented below:—

|         |         |         |         |
|---------|---------|---------|---------|
| (i.)    | (ii.)   | (iii.)  | (iv.)   |
| 1 2 3 4 | 1 2 3 4 | 1 2 3 4 | 1 2 3 4 |
| 2 3 4 1 | 2 4 1 3 | 2 1 4 3 | 2 1 4 3 |
| 3 4 1 2 | 3 1 4 2 | 3 4 1 2 | 3 4 2 1 |
| 4 1 2 3 | 4 3 2 1 | 4 3 2 1 | 4 3 1 2 |

As we have seen, the second, third, and fourth rows can be transposed in 6 different ways, each as a whole. Therefore the total number of ways in which the colours can be arranged, according to the conditions, is

$$24 \cdot 6 \cdot 4 = 576.$$

9019. (ASPARAGUS.)—In a given ellipse is inscribed a triangle ABC of maximum perimeter ( $2s$ ): prove that, if  $\rho_1, \rho_2, \rho_3$  be the radii of curvature of the ellipse at A, B, C,

$$\rho_1 \cos^3 \frac{1}{2}A = \rho_2 \cos^3 \frac{1}{2}B = \rho_3 \cos^3 \frac{1}{2}C = s, \quad \rho_1 \rho_2 \rho_3 = 8s^3,$$

$r$  being the radius of the circle inscribed in the triangle ABC.

[For  $s$  in the last line but one read  $2s\pi \sin \frac{1}{2}A$  (*vide* Solutions).—ED.]

*Solutions (I.) by W. C. FLETCHER; (II.) by F. P. ANDERSEN and SARADAKANTA GANGULI, M.A.*

(I.) If the perimeter of ABC is a maximum, an ellipse whose foci are B, C and which passes through A will touch the given ellipse at A; *i.e.*, AB, AC are equally inclined to the normal at A; therefore the normals

at A, B, C are concurrent, and, if the tangents at A, B, C meet in P, Q, R, the latter are the escribed centres, or ABC is the pedal triangle of PQR.

Using trilinear co-ordinates and PQR as triangle of reference, the equation to the ellipse is

$$\alpha^2 \cos^2 P + \beta^2 \cos^2 Q + \gamma^2 \cos^2 R - 2\beta\gamma \cos Q \cos R - \dots - \dots = 0.$$

Transform this to Cartesian co-ordinates referred to AR, AP as axes by writing  $y$  for  $\alpha,$

$$h \cos R - x \sin R - y \cos R \text{ for } \beta, \text{ and } h \cos Q + x \sin Q - y \cos Q \text{ for } \gamma,$$

and it reduces to the form  $ux^2 + vxy + wy^2 - \lambda y = 0,$

where  $u \equiv \sin^2(Q+R), \quad \lambda = 4h \cos P \cos Q \cos R.$

But  $\rho,$  the radius of curvature at A, is  $\lambda/2u = 2h \cos P \cos Q \cos R/\sin^2 P,$  where  $h = AP;$  therefore

$$\rho \sin^3 P = 2h \sin P \cos P \cos Q \cos R = \frac{1}{2}D \sin 2P \sin 2Q \sin 2R,$$

where D is the diameter of the circle PQR. But the diameter of the circle ABC =  $\frac{1}{2}D$  and  $A = \pi - 2P, \dots;$  therefore

$$\rho \cos^3 \frac{1}{2}A = R \sin A \sin B \sin C;$$

therefore  $\rho_1 \cos^3 \frac{1}{2}A = \rho_2 \cos^3 \frac{1}{2}B = \rho_3 \cos^3 \frac{1}{2}C = R \sin A \sin B \sin C.$

This, however, is not equal to  $s;$  as stated.

That the problem as stated is incorrect may be seen by taking the case of a line ellipse. In this case the triangle of maximum perimeter is a line, not a point, triangle; therefore  $s$  does not vanish. But, as  $\rho_1$  may be the radius of curvature at the end of the line,  $\rho$  may vanish; so agreeing with the result  $R \sin A \sin B \sin C,$  but not agreeing with the stated result  $s$  or  $4R \cos \frac{1}{2}A \cos \frac{1}{2}B \cos \frac{1}{2}C.$

A simple solution of the correct part of the problem is as follows:—The centre of the ellipse is the intersection of the lines through P, Q, R bisecting BC, CA, AB respectively; *i.e.*, the symmedian point whose co-ordinates are  $\sin P : \sin Q : \sin R.$  But, using the conventional lettering of geometrical conics,  $\rho = CD^2/PF = a^2b^2/PF^3;$  therefore

$$\rho_1 : \rho_2 : \rho_3 = 1/\sin^3 P : 1/\sin^3 Q : 1/\sin^3 R = 1/\cos^3 \frac{1}{2}A : 1/\cos^3 \frac{1}{2}B : 1/\cos^3 \frac{1}{2}C.$$

Lastly,  $\rho_1 \rho_2 \rho_3 = R^3 8 \sin^3 \frac{1}{2}A 8 \sin^3 \frac{1}{2}B 8 \sin^3 \frac{1}{2}C = 8r^3.$

[Rest in Reprint.]

15792. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Sum to  $n$  terms the series  $1 + 24 + 162 + 640 + 1875 + \dots$

*Solutions (I.) by R. W. D. CHRISTIE; (II.) by JAMES BLAIRKIE, M.A., KELA DEVA RAO, B.A., and F. W. REEVES, B.A.*

(I.) The general term of the given series is  $\frac{1}{2} [n^4 (n+1)] = \frac{1}{2} (n^5 + n^4).$  Consequently the sum is  $\frac{1}{2} (\sum n^5 + \sum n^4).$  Now, using the method I gave in

Knowledge, 1889, and in Vol. XLIX., *Educational Times*, we have, starting from  $\Sigma n^3 = \left\{ \frac{1}{2} [n(n+1)] \right\}^2 = \frac{1}{4} (n^4 + 2n^3 + n^2)$ , the following rule:—Multiply by index of the highest power 4; then integrate and finally equate to unity when  $n$  is unity: thus  $\int (n^4 + 2n^3 + n^2)$  becomes  $\frac{1}{5}n^5 + \frac{1}{2}n^4 + \frac{1}{3}n^3 - \frac{1}{30}n = \Sigma n^4$ .

Again  $\int (n^5 + \frac{5}{2}n^4 + \frac{5}{3}n^3 - \frac{1}{6}n)$  (after multiplying by index 5) becomes  $\frac{1}{6}n^6 + \frac{1}{2}n^5 + \frac{5}{12}n^4 - \frac{1}{12}n^2 = \Sigma n^5$ .

Consequently the required sum is

$$\left[ \frac{1}{2} (\Sigma n^5 + \Sigma n^4) \right] = \frac{1}{12}n^6 + \frac{7}{60}n^5 + \frac{1}{24}n^4 + \frac{1}{6}n^3 - \frac{1}{24}n^2 - \frac{1}{60}n.$$

$$(II.) 1 + 24 + 162 + \dots = \frac{1}{2} (2 + 48 + 324 + \dots) \\ = \frac{1}{2} (1 + 16 + 81 + \dots) + \frac{1}{2} (1 + 32 + 243 + \dots) \\ = \frac{1}{2} (\Sigma n^4 + \Sigma n^5),$$

which is known.

15826. (J. A. C., M.A.) — Solve, in integers,  $x^2 + y^2 = 5z^2$ ; and generally solve  $x^2 + y^2 = Az^2$ , where  $A$  is not a square number.

Solutions (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.; (II.) by ALEXANDER HOLM, M.A.

(I.) Take the general case  $x^2 + y^2 = Az^2$  first. The possibility of this requires that  $\tau^2 - Av^2 = -1$  should be possible, and the actual solution  $(x, y, z)$  requires that  $\tau, v$  should be known. Take  $y', z'$  so that  $y'^2 - Az'^2 = x^2$ . The general solutions of this Diophantine are known to be of two kinds:

$$y' = \frac{1}{2}(t^2 + Au^2), \quad z' = tu, \quad x = \frac{1}{2}(t^2 - Au^2) \dots\dots\dots (i.); \\ y' = t^2 + Au^2, \quad z' = 2tu, \quad x = t^2 - Au^2 \dots\dots\dots (ii.).$$

Here in (i.)  $t, u$  must be both odd or both even integers; whilst in (ii.)  $t, u$  may be any integers. Also  $(y'^2 - Az'^2)(\tau^2 - Av^2) = -x^2$ , i.e.,

$$(\tau y' \mp Avz')^2 - A(\tau z' \mp vy')^2 = -x^2 = y^2 - Az^2,$$

whence  $y = \tau y' \mp Avz', z = \tau z' \mp vy'$  [ $y', z'$  as in (i.) or (ii.) above]. These are the general solutions [using both +, or both -, signs in above].

Example.—Take  $A = 5$ ; then  $2^2 - 5 \cdot 1^2 = -1$ ,  $\tau = 2, v = 1$ . The general solution is  $y = 2y' \mp 5z', z = y' \mp 2z'$ , where  $y', z', x$  are given by either set of

$$y' = \frac{1}{2}(t^2 + 5u^2), \quad z' = tu, \quad x = \frac{1}{2}(t^2 - 5u^2) \dots\dots\dots (i.); \\ y' = t^2 + 5u^2, \quad z' = 2tu, \quad x = t^2 - 5u^2 \dots\dots\dots (ii.),$$

$t, u$  being integers as above stated.

(II.) Assuming  $x$  and  $y$  to be prime to one another, the solution in integers of  $x^2 + y^2 = Az^2$  is possible only when  $A$  is a square or the sum of two squares. For,  $A$  being a factor of  $x^2 + y^2$ , the sum of two prime squares must be a square or the sum of two squares (Fermat). Taking  $A = a^2 + b^2$ , we have  $x^2 + y^2 = (a^2 + b^2)z^2$ ; therefore

$$a^2 - b^2z^2 = a^2z^2 - y^2 \quad \text{or} \quad (x + bz)(x - bz) = (az + y)(az - y);$$

therefore

$$(x + bz)/(az + y) = (az - y)/(x - bz) = \text{ratio of two integers} = m/n \text{ (say);}$$

therefore

$$nx - my + (-am + bn)z = 0 \quad \text{and} \quad mx + ny - (bm + an)z = 0;$$

therefore

$$x/[a(2mn) + b(m^2 - n^2)] = y/[b(2mn) - a(m^2 - n^2)] = z/(m^2 + n^2) = l \text{ (say).}$$

This might be deduced from the solution in integers of  $x'^2 + y'^2 = z^2$ . For then we would have

$$(a^2 + b^2)(x'^2 + y'^2) = (a^2 + b^2)z^2 \quad \text{or} \quad (ax' + by')^2 + (bx' - ay')^2 = (a^2 + b^2)z^2.$$

In the particular case  $a = 2, b = 1$ .

13986 & 15797. (13986.) (Professor NANSON.) — If  $t_1, t_2, \dots, t_m$  are the  $m$  tangents and  $n_1, n_2, \dots, n_{m+1}$  are the  $m + 1$  normals from any point to the curve  $y^m = ax^{m-1}$ , prove that  $m^m n_1 n_2 \dots n_{m+1} = at_1 t_2 \dots t_m$ .

(15797.) (Communicated by M. V. A. SASTRY, B.A.) — If  $n_1, n_2, n_3, n_4$  be the lengths of the four normals and  $t_1, t_2, t_3$  the lengths of the three tangents drawn from any point to a semi-cubical parabola  $ay^2 = x^3$ , then will  $27n_1 n_2 n_3 n_4 = at_1 t_2 t_3$ . [An elegant solution wanted.]

Solution by Professor NANSON.

The points of contact of the tangents and the feet of the normals from

$$\xi\eta \text{ to} \quad x^{m+n} = a^m y^n \dots\dots\dots (1)$$

$$\text{lie on the conics} \quad (m+n)y(x-\xi) - nx(y-\eta) = 0 \dots\dots\dots (2),$$

$$(m+n)y(y-\eta) + nx(x-\xi) = 0 \dots\dots\dots (3),$$

respectively. To find the lengths and directions of the tangents and normals, let  $\rho = z - \zeta$ , where  $z = x + iy, \zeta = \xi + i\eta$ . Thus (1), (2), (3) become

$$i^n x^{m+n} - a^m (\rho + \zeta - x)^n = 0 \dots\dots\dots (4),$$

$$mx^2 - [m(\rho + \xi) + (m+n)\zeta]x + (m+n)(\rho + \zeta)\xi = 0 \dots\dots\dots (5),$$

$$mz^2 - [2(m+n)\rho + m\xi + (m+n)\zeta]z + (m+n)(\rho + \zeta)(\rho + \xi) = 0 \dots\dots\dots (6).$$

By substituting for  $x$  in (4) the two roots of (5) or (6) and multiplying the results, we get an equation of the form  $P_s \rho^s + \dots + P_0 = 0$  for the determination of the  $\rho$  of a tangent or normal. Now, since (5), (6) are

identical when  $\rho = 0$ , it follows that  $P_0$  is the same in the two cases. To find  $P_s$  we take  $\rho$  infinite. The values of  $x/\rho$  given by (5) are then 1 and 0. Hence for the eliminant of (4), (5) we have

$$P_s \rho^s \equiv i^n \rho^{m+n} (-a^m \rho^n);$$

and therefore  $s = m + 2n, P_s = -a^m i^n$ . Again, when  $\rho$  is infinite the two values of  $x/\rho$  given by (6) are finite both ways and their product is  $1 + n/m$ . Hence for the eliminant of (4), (6), we have

$$P_s \rho^s = i^{2n} \rho^{2(m+n)} (1 + n/m)^{m+n};$$

and therefore  $s = 2m + 2n, P_s = i^{2n} (1 + n/m)^{m+n}$ . Hence, if  $T_\rho, N_\rho$  are the products of the  $m + 2n, 2m + 2n$  values of  $\rho$  given by the two eliminants,

$$T_\rho : N_\rho = (1 + n/m)^{m+n} : (-1)^{m-1} i^n a^m.$$

Now, amongst the values of  $\rho$  given by each eliminant are  $n$  values drawn to the origin because the conics (2), (3) each cut (1) in  $n$  points at the origin. Hence, if  $T, N$  are the products of the  $m + n$  tangents and the  $m + 2n$  normals drawn to ordinary points of (1), then

$$(1 + n/m)^{m+n} N = a^m T.$$

Also, if  $\tau, \nu$  are the sums of the angles made with the axis of  $y$  by the tangents and normals respectively, then  $\nu - \tau = (4k + m + n - 2) \frac{1}{2} \pi$ , where  $k$  is an integer. Taking  $m = 1$ , we get 13986; taking also  $n = 2$ , we get 15797; whilst  $n = 1$  gives well known results for the common parabola.

15832. (Professor NEUBERG.) — Le centre  $A$  d'une sphère de rayon constant  $R$  parcourt une droite donnée  $d$ . Trouver (1) l'enveloppe du plan polaire  $\pi$  d'un point fixe  $P$  par rapport à la sphère mobile  $A$ , (2) la surface engendrée par la circonférence suivant laquelle le plan  $\pi$  coupe la sphère.

Solution by S. C. BAGCHI, B.A., and C. M. ROSS.

The centre of the sphere has a single degree of freedom. Its variability in position will, therefore, be expressed by the presence of a single parameter in its equation. Take the origin  $O$  coincident with one point of  $d \equiv OZ$ . Now the polar plane will contain a variable parameter in the second degree. Therefore the envelope itself will be a surface of the second degree.

(1) The sphere is given by

$$x^2 + y^2 + z^2 - 2az - R^2 + a^2 = 0 \dots\dots\dots (b).$$

The polar plane with regard to  $P(\xi, \eta, \zeta)$  is

$$x\xi + y\eta + z\zeta - a(z + \zeta) + (a^2 - R^2) = 0 \dots\dots\dots (a).$$

The condition that (a) may have two equal roots in  $a$  is given by

$$(z + \zeta)^2 = 4(x\xi + y\eta + z\zeta - R^2),$$

which is the envelope required, a parabolic cylinder.

(2) The surface engendered by the circle is a tubular one which is obtained by eliminating  $a$  between (a) and (b). It has for its equation

$$(x^2 + y^2 + z^2 - x\xi - y\eta - z\zeta)^2 \\ = (\zeta - z) [2z(x\xi + y\eta + z\zeta - R^2) - (z + \zeta)(x^2 + y^2 + z^2 - R^2)].$$

A short way of finding the Recurring Decimal Fraction equal to a given Vulgar Fraction.

By W. D. ROSS.

Let  $m/n$  be a fraction such that  $n$  is not a multiple of 2 or of 5. Find, by inspection,  $x$  and  $y$  such that  $nx = 10y - 1$ . Then

$$m/n = mx/(10y) + mx/(100y^2) + mx/(1000y^3) + \dots \text{ ad inf.}$$

This gives a practical rule. The first figure of the decimal will be the highest integer less than  $mx/y$ . Multiply the remainder by 10 and add the first figure, and divide the sum by  $y$ . The highest integer less than this quotient will be the second figure of the decimal fraction, and so on. Divide always by  $y$ , e.g.,  $\frac{3}{19}$ . Here  $m = 3, n = 19, x = 1, y = 2$ . Hence  $\frac{3}{19} = .157894736842105263$ . Each figure is got by dividing by 2, not as in the ordinary method by dividing by 19.

We can, with equal ease, start from the right-hand figure. This figure is  $mx$ , or, if  $mx$  is greater than 10, it will be the unit figure of  $mx$ . Divide the remaining part (if any) of  $mx$  by 10, add in the right-hand figure, and multiply the sum by 10. The product, or the unit figure of the product, will be the second figure of the decimal (counting from the right-hand), and so on. Multiply always by  $y$ , e.g.,  $\frac{3}{7}$ . Here  $m = 3, n = 7, x = 7, y = 5$ . Hence  $\frac{3}{7} = .428571$ .

These processes are much simpler in practice than they look when described abstractly. When the numbers are large the method saves much labour, especially when the denominator ends in 1 or in 9. Such a fraction as  $\frac{153}{99}$  can be written with ease to as many places as are wanted:  $x = 1, y = 9$ —

$$\frac{153}{99} = .1460674157\dots$$

or, from the end,

$$\dots 2696629213483.$$

15780. (D. BIDDLE.) — PQ is a chord of a given circle; LOM is an intercept of the ellipse which, having P, Q as its foci, passes through O,

the centre of the circle, L, M being on the circumference. (1) Find the position of PQ when the equal triangles PQL, PQM are maxima; and their area, as such. (2) Consider similarly the cases in which the ellipse cuts the circumference in S, T as well, on the opposite side of P, Q, and in which (for the limited range) PQS, PQT exceed in area PQL, PQM, the corresponding triangles previously considered.

*Solution by L. ISSERLIS.*

(1) Draw ONC at right angles to PQ, LM.

$a$  = radius of circle,  
 $b$  = OC.

Then  $PC^2 = a^2 - b^2$ ,  
 $LN^2/a^2 + CN^2/b^2 = 1$ ,  
and  $LN^2/a^2 + ON^2/a^2 = 1$ ;  
therefore

$$\begin{aligned} CN &= (b/a) ON \\ &= (b/a)(b - CN) \\ &= b^2/(a + b); \end{aligned}$$

therefore  
(area of  $\Delta PQL$ )<sup>2</sup>  
=  $PC^2 \cdot CN^2 = [(a - b)/(a + b)] b^4$   
= maximum.

Therefore, differentiating logarithmically,  $1/(a - b) + 1/(a + b) = 4/b$ ;  
therefore  $2b^2 + ab - 2a^2 = 0$ ; therefore  $b = \frac{1}{2}(\sqrt{17} - 1)a$  when the area is a maximum, and area =  $\sqrt{[(a - b)/(a + b)] b^2}$ .

$$\begin{aligned} (2) CN &= (b/a) ON \\ &= (b/a)(b + CN) \\ &= b^2/(a - b); \end{aligned}$$

therefore  
 $PC^2 \cdot CN^2 = [(a + b)/(a - b)] b^4$ ,  
giving similarly

$$\begin{aligned} 2b^2 - ab - 2a^2 &= 0 \\ \text{or } b &= \frac{1}{2}(\sqrt{17} + 1)a, \end{aligned}$$

and area =  $\sqrt{[(a + b)/(a - b)] b^2}$ .

15803. (Professor NEUBERG.)—ABCD étant un rectangle donné, trouver sur le côté AD un point X tel que les volumes engendrés par le triangle ABX et le trapèze BCDX tournant autour de la droite BX aient un rapport donné  $k$ .

*Solution by A. M. NESBITT, M.A.*

The volumes of the solids generated respectively by the revolutions of the triangles ABX, BCY, XDY about BY are proportional to the cubes of AX, BC, XD.

Hence, if  $AX = x$ ,  $AD = a$ ,

we have at once

$$x^3 = k[a^3 - (a - x)^3],$$

yielding the quadratic

$$x^2(1 - k) + 3kax = 3a^2k.$$

The positive root gives the value sought for  $x$ .

15811. (R. CHARTRES.)—From a variable point within a triangle perpendiculars are drawn to the sides. Find (1) the maximum value. (2) the mean value of the product of the perpendiculars, and (3) the mean value of the area of the triangle formed by joining the feet of the perpendiculars. [Elementary proof.]

*Solution by the PROPOSER.*

Let the triangles BPC, CPA, APB be denoted by  $\alpha, \beta, \gamma$ .

(1) Since  $\Delta = \alpha + \beta + \gamma$ ,

therefore the maximum value of  $(\alpha\beta\gamma)$  is when  $\alpha = \beta = \gamma$  or the maximum value of  $xyz$  is at the centroid.

(2)  $\Delta^3 = (\alpha + \beta + \gamma)^3$ , having ten terms; therefore

$$M(\alpha\beta\gamma) = \frac{1}{60}\Delta^3;$$

therefore

$$M(xyz) = \frac{1}{60}\Delta^3 \cdot \frac{1}{8}abc = \frac{2\Delta^3}{15abc}.$$

(3)  $\Delta^2 = (\alpha + \beta + \gamma)^2$ ; therefore

$$M(\beta\gamma) = \frac{1}{12}\Delta^2;$$

therefore  $M(RPS) = \frac{1}{2}(\sin A) Myz = \frac{1}{12}(\Delta \sin^2 A)$ ,  
or  $M(QRS) = \frac{1}{12}\Delta \cdot \Sigma(\sin^2 A)$ .

QUESTIONS FOR SOLUTION.

15841. *Correction.*—In line three from the bottom, "their speed" should read "Jack's speed."—PROPOSER.

15858. (W. J. DOBBS, M.A.)—A piece of lattice work is formed of laths of equal breadth jointed together in the usual manner. When it is pulled out so that the laths cross at right angles it is 2 ft. high and extends horizontally for a length of 10 ft. Determine the height of the lattice when its length is 6 ft., and, to the nearest degree, the angle at which the laths then cross. If it is 2 ft. long when quite shut up, show that it cannot be pulled out to a greater length than 14 ft., and, if there are ten joints on each complete lath, including one at each end, show that the breadth of each lath is rather more than 1 in., and that the total length of the laths is about 127 ft.

15859. (A. E. MITCHELL.)—When a coin is thrown at random a number of times in succession it is well known that "runs" or sequences of heads and tails of various lengths occur. Find the mean (or average) value of all the sequences in an infinity of throws. ["Head" preceded and followed by "tail" is to be considered a sequence of 1, and so also with "tail" preceded and followed by "head."] N.B.—A rough experimental determination (300 throws) gave approximately 1.83 for the mean value.

15860. (Professor NANSON.)—If  $a, b, c$  be the roots of the cubic  $x^3 - px^2 + qx + r = 0$ ,

prove that the quotient of the determinants

$$\frac{\begin{vmatrix} 1 & (b+c)^2 & b^2c^2 \\ 1 & (c+a)^2 & c^2a^2 \\ 1 & (a+b)^2 & a^2b^2 \end{vmatrix}}{\begin{vmatrix} 1 & b+c & bc \\ 1 & c+a & ca \\ 1 & a+b & ab \end{vmatrix}}$$

is  $pq + r$ .

15861. (ALEXANDER HOLM, M.A.)—If  $x = p, y = q$  is any particular integral solution of  $x^2 - Cy^2 = \pm D$ , where  $C$  is a positive integer not a perfect square, and  $D$  any integer, then all the integral solutions are furnished by  $x - y\sqrt{C} = \pm(p - q\sqrt{C})(r - s\sqrt{C})^n$ , where  $n$  is any integer positive or negative, and  $x = r, y = s$  any particular integral solution of  $x^2 - Cy^2 = +1$ . [Note.—This theorem will often enable one to dispense with Lagrange's chain of reductions for the case when  $D > \sqrt{C}$ .]

15862. (F. N. MAYERS, M.A.)—Discuss the possibility or otherwise of the congruence  $2^{p-1} \equiv 1 \pmod{p^2}$ .

15863. (D. BIDDLE.)—Find integral values for  $N_1, N_2, N_3, N_4$  to satisfy the following triple equation:—

$$\begin{aligned} 500(N_1^2 - N_2^2) + r(N_1 - N_2) &= 500(N_3^2 - N_4^2) + r(N_3 - N_4) \\ &= 500(N_3^2 - N_4^2) + r(N_3 - N_4), \end{aligned}$$

where  $r$  is a selected integer (of sufficient magnitude), by preference an odd number.

15864. (ROBT. W. D. CHRISTIE.)—Prove that the Pellian equation  $X_n^2 - PY_n^2 = 1$  can be put into a trigonometrical form, and give the general solution. *E.g.*,

$$\begin{aligned} X_3 &= \cos 3\theta = 4 \cos^3 \theta - 3 \cos \theta = 4x^3 - 3x, \\ Y_3 &= \sin 3\theta = (4 \cos^2 \theta - 1) \sin \theta = 4x^2y - y, \end{aligned}$$

$x$  and  $y$  having integral or fractional values.

15865. (J. J. BARNIVILLE, B.A., I.C.S.)—Having

$$\begin{aligned} A &= 0, 1, 4, 15, 56, 209, \dots; & B &= 1, 2, 7, 26, 97, 362, \dots; \\ C &= 1, 3, 11, 41, 153, 471, \dots; & D &= 1, 5, 19, 71, 265, 989, \dots, \end{aligned}$$

the scale of each series being  $x^2 - 4x + 1$ , prove that

$$\begin{aligned} b_n^2 &= 3a_n^2 + 1, & d_n^2 &= 3c_n^2 - 2, \\ b_{2n} &= a_n^2 + 1 = 3c_n^2 - 1, & b_{2n-1} &= 2b_n^2 - 1 = 6a_n^2 + 1, \\ a_n^2 + a_{n+1}^2 &= 2c_n^2 - 1, & a_{n+1}^2 - a_n^2 &= c_n a_n. \end{aligned}$$

15866. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—If the series

$$\frac{1}{1^2} + \frac{1}{2^2} + \frac{1}{3^2} + \dots, \quad \frac{1}{1^4} + \frac{1}{2^4} + \frac{1}{3^4} + \dots$$

be denoted by  $S^{-2}, S^{-4}$  respectively, show that  $5S^{-4}/3S^{-2} = (\frac{2}{3}\pi)^2$ .

15867. (Professor SANJANA, M.A.)—Factorize completely  $54^{18} + 1$  and  $65^4 + 1$ . (Suggested by Lt.-Col. Allan Cunningham's Question 15481.)

15868. (Professor NEUBERG.)—On permute les lettres du mot *éducatif* de toutes les façons possibles. On demande (1) le nombre des permutations où se rencontre *duc*; (2) celui des permutations où 3 voyelles, et seulement 3, se suivent; (3) celui des permutations où 3 consonnes, et seulement 3, se suivent; (4) celui des permutations qui sont terminées en *al*.

15869. (Professor NANSON.)—Given four planes and two points, the four quadric cones which pass through the points and through the meets of three of the planes pass also through a twisted cubic, and the five

twisted cubics so determined by five given planes pass through two fixed points.

15870. (Professor NEUBERG.)—On donne deux plans  $P, P'$  qui se coupent, et un point  $A$ . Une droite quelconque menée par  $A$  coupe  $P$  en  $B$  et  $P'$  en  $B'$ . Sur cette droite on prend le segment  $B'M = AB$ . Étudier la surface lieu du point  $M$ .

15871. (Professor SANJANA, M.A. Suggested by Question 15748.)— $A, B, C$  are three fixed points on a conic, and from another fixed point  $K$  a chord is drawn terminated by the curve at  $P$  and  $Q$ . Find the locus of the intersection of  $AQ$  and  $BP$ , and investigate when it is of the first degree.

15872. (W. H. L.)—To find the radius of curvature of a conic by Euclid, Books I., II., and III.

15873. (A. M. NESBITT, M.A.)— $EF$  is a common tangent to two circles  $ADBE, ADCF$ ;  $CDB$  is drawn parallel to  $EF$ , and  $G$  is the harmonic conjugate of  $D$  with respect to  $BC$ . If the circles  $GDA$  and  $EDF$  cut in  $H$ , then  $DH$  is perpendicular to  $BC$ .

15874. (N. PARAMESWARA MENON.)— $ABC$  is a given triangle; through  $A, A_1B_1$  is drawn parallel to the perpendicular from  $B$  on  $AC$ ; through  $B, B_1C_1$  is drawn parallel to the perpendicular from  $C$  on  $AB$ ; and through  $C, C_1A_1$  is drawn parallel to the perpendicular from  $A$  on  $BC$ . Find (i.) the area of the triangle  $A_1B_1C_1$  in terms of that of the triangle  $ABC$ ; (ii.) the circum-radius of the triangle  $A_1B_1C_1$ ; (iii.) the area of the pedal triangle of  $A_1B_1C_1$  in terms of that of the pedal triangle of  $ABC$ ; and (iv.) show that, if  $A_1B_1$  cut the circum-circle of  $ABC$  in  $A_3$ , and  $B_3, C_3$  are the two other points obtained in the same way, the triangle  $A_3B_3C_3$  is identically equal to the triangle  $ABC$ .

15875. (Professor COCHEZ.)—Construire un triangle connaissant le côté  $a$ , la somme  $b+c$  des deux autres côtés et la somme  $m_b + m_c$  des médianes issues de  $B$  et  $C$ .

#### OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10319. (Professor RAMASWAMI AIYAR.)—The density at any point of an arc of a logarithmic spiral varies inversely as the distance of the point from the pole. Determine the centroid of the arc geometrically.

10386. (Professor MORLEY.)—Prove that all maximum triangles in a given ellipse have equal Brocard-angles.

10392. (ARTEMAS MARTIN, LL.D.)—A coin of unknown radius is

dropped horizontally into a circular box, radius  $r$ ; find the probability that the centre of the bottom of the box is covered by the coin.

10458. (D. BIDDLE.)—Prove that the proper angle at which to cross a street when a person wishes to continue his course on the other side, and the roadway is  $n$  times as muddy as the pavement, is that of which the sine is  $(n^2 - 1)/(n^2 + 1)$ .

10641. (MORGAN BRIERLEY.)—A boy's top of given dimensions is set spinning at such a rate that it stands perfectly upright, and, as boys say, "sleeps." Supposing it to be an indefinitely small weight heavier on one side than on the other, what will be its rate of speed when it begins to oscillate in its revolution?

11051. (Professor HUDSON, M.A.)—The density of a fluid varies from point to point: considering directions proceeding from a given point, prove that (1) the density varies most rapidly along the normal to the surface of equal density containing the point; and (2), of directions in the tangent plane to this surface, the tangents to its principal sections are those in which the rate of variation of density is greatest and least.

#### NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

MISS CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

*Vol. VII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

### CAREY'S "GRADUS AD PARNASSUM,"

WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, STATIONERS' HALL, LONDON.

**KOH-I-NOOR**  
**PENCILS**

*Best in every Way.*

Many firms have tried to make a better pencil than L. & C. Hardtmuth's. Years and years they have tried. But it hasn't been done yet. Ask the artist. Ask the student. Ask the photographer. Ask any one who uses a pencil. "Best"—the laconic unanimous answer, meaning

**HARDTMUTH'S.**

IN SEVENTEEN DEGREES for all Pencil Purposes.

**IS YOUR PENCIL A  
KOH-I-NOOR,  
OR IS IT AN IMITATION?**

## Board of Education New Geographical Schemes for Secondary Schools.

MESSRS. THOMAS NELSON & SONS specially invite the attention of Teachers in Secondary Schools to the exceptionally complete List of Teaching Material published by them and pre-eminently suited to meet the requirements of the **New Geographical Schemes for Secondary Schools** just issued by the Board of Education.

Illustrated Prospectuses and Specimens of the following will be sent to Head Teachers upon application:—

**Royal Wall Atlases—A Series of Combined Teaching and Test Maps.**

**Royal Wall Maps. Geographical Text-Books.**

**Geographical Readers. Text-Books on Physical Geography, Physiography, &c.**

**THOMAS NELSON & SONS,**  
35 & 36 Paternoster Row, London, E.C.  
EDINBURGH, DUBLIN, and NEW YORK.

**THE HOLBORN PARSING AND ANALYSIS BOOKS.**

By Rev. G. LITTING, M.A., LL.B., and GEORGE HOME.

Large Post 4to Books, containing 36 pages of good paper, specially ruled, with printed headings. Bound in thick nonpareil covers.

|                       |   |                           |

**THE OXFORD AND CAMBRIDGE ANALYSIS BOOK.**

**THE PRACTICAL ANALYSIS BOOK.**

Large Post 4to Books, each containing 40 pages of good paper, specially ruled and printed, and bound in coloured covers.

Published Price 4d. each.

**THE VIADUCT ANALYSIS BOOK.**

Foolscap 4to, bound oblong, containing 24 pages of good paper, specially ruled, with printed headings, and bound in paper covers.

Published Price 2d. each.

For Specimens of any of the above Books, post free, apply as below.

**THE VIADUCT SAFETY COMPASS.**

This Patent Compass has a bow head, which can be detached and screwed over the steel point, making it perfectly safe to carry in the pocket or the satchel. It is fitted with the patent Helix pencil-holder, so that it can take a full-sized pencil, and holds it rigidly.

Price 6s. 6d. per dozen net.

Specimen Compass post free on application.

**FOR THE LOCALS.**

THE  
"CAMBRIDGE" BOXES  
OF  
ENGLISH-MADE  
INSTRUMENTS.

Suitable for

Geometrical Drawing.

Containing every Instrument required by Candidates entering for the Local Examinations:—

No. 10A.—A Strong, Sliding, Cloth-covered Box, 6½ inches by 3½ inches by ¾ inch, containing:—

- 1 Patent Brass Bow Pencil Compass to take any size of Pencil up to full size.
- 1 Black Lead Pencil ("H") and 1 Compass Pencil.
- 1 6-inch Boxwood Rule and Protractor Combined, graduated in inches, tenths of an inch, centimetres, and millimetres.
- 1 Nickel Set Square (unbreakable), 45°.
- 1 Nickel Set Square (unbreakable), 60°.

Price 1s. 9d. per Box. { Price for orders of 6 dozen, 1s. 7½d. per Box ;  
" " " " 12 dozen, 1s. 6d. per Box.

No. 11A.—Containing Instruments identical with above, but in a Strong, Polished Wood Box fitted with divisions.

Price 2s. 3d. per Box. { Price for orders of 6 dozen, 2s. 1½d. per Box ;  
" " " " 12 dozen, 2s. per Box.

Every Instrument in these Boxes is thoroughly reliable, having been specially made, and the Compass is a patent one.

A Specimen Box will be sent post free on receipt of stamps for the advertised price.

**THE EDUCATIONAL SUPPLY ASSOCIATION, LTD.,  
42 HOLBORN VIADUCT, LONDON, E.C.**

Now ready. For Oxford Junior and Preliminary Examination, 1906, Cambridge Junior and Preliminary Examination, Dec., 1905, and the College of Preceptors Examination.

**CUSACK'S EDITION**

OF

**SCOTT'S LAY OF THE LAST MINSTREL.**

Besides the Text in clear type, it includes about 50 pages of Explanatory Notes, Introductory Chapters of 82 pages, including the Life of Scott, explanation of all the Architectural, Military, and Heraldic Terms used in the Poem, and over 100 Pictorial Illustrations, besides a large Map of the scene of the incidents of the Poem.  
2s. net; post free, 2s. 2½d.

CITY OF LONDON BOOK DEPOT, 6 WHITE STREET, MOORFIELDS, E.C.

**EXAMINATION PAPER**

AS USED BY THE

**COLLEGE OF PRECEPTORS.**

In strict accordance with the College requirements, and each Sheet bears their Watermark.

Packed in Reams of 480 Sheets ... .. per Ream, 2s. 6d.  
" " " " 960 " " " " " " 5s. 0d.

Bookkeeping Paper, ruled for Ledger, Cash Book, and Journal, 1s. per 100 Sheets.  
Music Paper, 1s. per 100 Sheets.

Remittance should accompany Order.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

*Principal*—H. R. REICHEL, M.A., LL.D.

The Session began October 3rd, 1905. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the subjects for the B.A. and B.Sc. Degrees of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional fee for ordinary Arts Course, £11. 1s.; ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students; fee, Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses apply to

JOHN EDWARD LLOYD, M.A.,  
*Secretary and Registrar.*

## ROYAL HOLLOWAY COLLEGE (UNIVERSITY OF LONDON).

The LENT TERM begins on January 13th, 1906.

The College prepares Students for the London Degrees in Science and Arts, and for the Oxford Honour Examinations.

TEN ENTRANCE SCHOLARSHIPS, from £50 to £60 a year, tenable for three years, will be offered for competition in July, 1906.

For further particulars apply to the SECRETARY, Royal Holloway College, Englefield Green, Surrey.

## WESTFIELD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON),

FINCHLEY ROAD, HAMPSTEAD, N.W.

ENTRANCE SCHOLARSHIPS of the value of £40 to £50 a year for 3 years will be offered for competition at an Examination to be held in May, 1906. Candidates must not be under 18 years of age, and must have passed the Matriculation Examination of the University of London, or an Examination which is accepted by the University as an equivalent. The successful Candidates will be required to come into residence in October next, and to read for a Degree in Arts or Science to be approved by the Council.

Entrance forms and full particulars may be obtained from the Secretary, Miss S. M. SMEE.

## CHERWELL HALL, OXFORD.

A TRAINING COLLEGE FOR WOMEN TEACHERS.

A RESIDENTIAL COLLEGE providing a year's Professional Training for Secondary Teachers.

The Course includes preparation for the Oxford Teachers' Diploma and the Cambridge Teachers' Certificate, and the Teachers' Diploma of the University of London.

For instruction in the Theory and History of Education, the Students attend the Lectures of the University Reader in Education. The practical work in Teaching in Schools and Demonstration Lessons, &c., is under the supervision of the Principal and Staff of the Hall.

Particulars as to qualifications for admission, Scholarships, &c., may be obtained by application to the Principal, Miss CATHERINE I. DODD, M.A., Cherwell Hall, Oxford.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS

provides a Course of Professional Training in preparation for Work in Secondary Schools or in Families.

The Students attend the University Lectures on the Theory, History, and Methods of Education, and have systematic practice in Class Teaching in Schools.

Apply for further particulars to the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

## KING'S COLLEGE (UNIVERSITY OF LONDON).

Free Saturday Morning Lectures for Teachers.

The following Courses will, subject to sufficient applications being received, be given in the Lent Term, commencing on January 13th, 1906:—

1. The Teaching of Mathematics, by Prof. A. F. S. WHITE, M.A., at 10 a.m.
2. The Teaching of English History, by Prof. J. K. LAUGHTON, D.Litt., at 11 a.m.

As the number of places is limited, early application should be made to the SECRETARY, King's College, Strand.

## BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON),

YORK PLACE, BAKER STREET, W.

The Half Term begins on Monday, November 13th. The College provides instruction for Students preparing for the University of London Degrees in Arts, Science, and Preliminary Medicine; also instruction in subjects of General Education.

There is a Training Department for Teachers, a Hygiene Department, and an Art School. Students can reside in the College.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

*Head of the Department*—Miss M. MORTON, M.A.

Students are admitted to the Training Course in October and January.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge held annually in December.

A Course of Lectures on School Hygiene is held on Saturday mornings.

Full particulars on application to the PRINCIPAL.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

*Principal*—Miss H. L. POWELL,

late Scholar of Newnham College (Hist. Tripos, Class I.), late Head Mistress of the Leeds Girls' High School.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge.

## DATCHELOR TRAINING COLLEGE FOR TEACHERS,

CAMBERWELL GROVE, S.E.

*Principal*—Miss RIGG.

*Mistress of Method*—Miss CARPENTER.

Other Teachers and Lecturers.

Provides a practical course of Professional Training for Teachers in Secondary Schools, with abundant opportunity for class teaching in the DATCHELOR (420 pupils) and other Schools.

STUDENTS PREPARED FOR THE CAMBRIDGE TEACHERS' CERTIFICATE AND LONDON TEACHING DIPLOMA.

FREE STUDENTSHIP awarded annually to a University Graduate. Also

A KINDERGARTEN DIVISION preparing for the EXAMINATIONS OF THE NATIONAL FROEBEL UNION.

Also A PREPARATORY DIVISION preparing for LONDON B.A. or CAMBRIDGE HIGHER LOCAL HONOURS.

Fees: £15 to £20 a year for Non-residents. A comfortable HALL OF RESIDENCE. Terms moderate.

Also Special Courses of Training for Teachers of Piano and Class Singing.

THE INCORPORATED

## FROEBEL EDUCATIONAL INSTITUTE.

TALGARH ROAD, WEST KENSINGTON, LONDON, W.

Recognized by the Board of Education as a Training College for Secondary Teachers.

*Chairman of the Committee*—Sir W. MATHER.

*Treasurer*—Mr. C. G. MONTEFIORE, M.A.

*Secretary*—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

*Principal*—Miss E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

*Head Mistress*—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union, and for the University of Cambridge Teachers' Examination, and Special Classes are held in subjects required for the Cambridge Higher Local Examinations.

TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.

Prospectuses can be obtained from the PRINCIPAL.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, Private Schools' Association, and Welsh County Schools' Association.)

*Address*—74 GOWER STREET, LONDON, W.C.

*Registrar*—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m.

Hours for interviews—10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m. Saturdays until 3 p.m.

## BIRKBECK COLLEGE, BREMAS BUILDINGS, CHANCERY LANE, E.C.

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to  
**THE CLERGY AND THEIR RELATIVES.**

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, **£4,194,485.** Annual Income, **£398,982.**  
Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

## IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

## PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

## Teach Shorthand!

At every up-to-date School this subject is taught nowadays.

### GREGG SHORTHAND

(The Popular American System)

Is rapidly becoming universally adopted by Teachers everywhere. It is easier to learn and less complicated than other systems; hence its popularity.

### GREGG SHORTHAND

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL PROBLEMS IN CLASS TEACHING.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Principal of the University of London Training College.

The Second Course of Lectures (Thirty-third Annual Series) commenced on Thursday, September 28th, at 7 p.m.

The purpose of the Course is to present the theory of teaching in the way most suited for application to the ordinary work of a class. In the ultimate resort, every teacher must apply for himself the theory of his profession, but he may be greatly helped by observing how others have dealt with the problems that he must face. To this end the lectures will be very copiously illustrated throughout by references to the teaching of all the subjects of the ordinary school course, while particular attention will be given to those subjects that must be taught by all teachers who are not specialists. The Lecturer will base his suggestions on the state of things actually existing in schools.

SYLLABUS.

I.—*Class Management.* Nature of a class. Difference from a group of individuals. Sympathy of numbers. Fallacy of "the average." Common and peculiar qualities. The class as unit. Class leaders. Laws of interaction of the elements of the class. Troublesome elements and their treatment.

II.—*Class Teaching.* Contrasted function of private coach and class teacher. Class must be taught as a whole; yet may be taught through individuals. Advantages and disadvantages of teaching by types. The intellectual lowest common denominator of a class. Teacher's duty to brilliant and to dull pupils. Different class-standing of pupils according to subject. The average boy.

III.—*Art of Exposition.* Nature and function of exposition. Often regarded as the whole of teaching. Distinction from "telling." Essentially a process of analysis followed by synthesis. Relation between content of pupil mind and teacher mind. Law of consecutive clearness. Stages in the process. Rhythm of concentration and diffusion of attention. Place of integration and re-integration.

IV.—*Lecturing.* Unipolar form of exposition. Cause of its popularity. Where successful it is bipolar. Suitable where material has been gathered, but not arranged. Room for it all through school course, but size of lecture-unit should increase directly as the stage of advancement of the pupils. University rank. Note-taking in school work, and its relation to the lecture and the text-book.

V.—*Socratic and Heuristic Teaching.*—Both essentially dialectic. Applicable to all subjects, though perhaps specially to science. They differ in aim and in process. The *Zielangabe*. Difference of application of *interest* in the two methods. The Socratic irony and the torpedo shock. Heuristic stimulus. Limitations of the methods, and illustrations from common school subjects.

VI.—*Concentric Method and Correlation.* The concentric method in relation to the "rapid impressionists." Illustration from geography teaching. The test of a good "concentric" text-book. In ultimate analysis all teaching is concentric. Correlation is the complement of the concentric method. Selection of "core" subjects. Extravagances of correlation. Illustrations from American school syllabuses. Results of actual experiments in the application of correlation.

VII.—*Art of Illustration.* Nature and function. Psychological bases. Analogy. Kinds: (a) Verbal, as figures of speech, exemplification, types, the attendant circumstance; (b) Material, as actual objects, models, pictures, diagrams. The point of view. Appeal to the preferred sense. Dangers of illustration.

VIII.—*The Use of the Blackboard.*—Appeal to sense. Writing as important as drawing in connexion with form. Distinction between rough and slovenly drawing and writing. Blackboard *pictures v.* diagrams. Mechanical aids. Coloured chalks. The optics of the blackboard. Eye-strain, and how to prevent it. Extensive use.

IX.—*The Mother Tongue.*—The art of intercourse. The three vocabularies of the individual. Analysis *v.* synthesis of sentences as educational processes. Place and function of grammar. The fundamental principle in teaching composition. The elimination of self-consciousness. Forms of composition exercise—narration, description, letter, paraphrasing, essay. Suggested subjects.

X.—*The Mechanism of Reading.* Purpose for which art of reading is acquired. Visual and audile elements in reading. The place of reading aloud and silent reading. Various methods of teaching to read. The resulting powers of reading as an acquirement. Various degrees of "block" reading.

XI.—*Spelling and Dictation.* Different purposes of spelling and dictation as school exercises. Static and dynamic elements. Oral spelling easier for audiles, written spelling for visuals. Dangers of the "awful example." Classification of errors in dictation—graphic, phonetic, psychic—causes and treatment of each.

XII.—*Arithmetic.*—Counting and calculating. Cornical arithmetic. Essential distinction between arithmetic and algebra. Importance of the imagination and clearly imaged ends. Elimination of the units in calculation means the turning of fact into faculty. Disturbing power of consciousness. Formulæ, as in simple interest. Donaldson's reduction of all arithmetic to the equation.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\*\* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Courses of Lectures.

C. R. HODGSON, B.A., Secretary.

THE

**School World.**

A MONTHLY MAGAZINE OF EDUCATIONAL  
WORK AND PROGRESS.

EACH NUMBER CONTAINS EIGHTY COLUMNS  
OF READING MATTER.

PRICE 6d. VOLUME VI., 1904, 7s. 6d. NET.

The aim of THE SCHOOL WORLD is to provide  
information of **practical and permanent value** to School-  
masters and Schoolmistresses. To this end all important  
changes and developments affecting any branch of the work  
of teachers in secondary and other schools are dealt with by  
**leading authorities and experienced teachers.**

The Magazine has become indispensable to all who  
desire to keep in touch with modern and effectual methods  
of education.

MACMILLAN & CO., Ltd., LONDON.

**JUST PUBLISHED. Price 1s. 6d.**

With 12 Illustrations and 5 Maps and Plans.

**PREPARATORY CAESAR.**  
**De Bello Gallico,****BOOK II.**

BY

**FRANK RITCHIE,**

AUTHOR OF

**"FIRST STEPS IN CAESAR," &c.,***Examiner (1900-1905) Oxford Locals.*

LONGMANS, GREEN, &amp; CO., 39 Paternoster Row, London, E.C.

*The "Preparatory" method, which has proved successful in FIRST STEPS IN CAESAR, has been here applied to the Second Book of the DE BELLO GALLICO. The method in question is described thus in the Preface to FIRST STEPS IN CAESAR:—*

*"Among the difficulties experienced by beginners in the translation of Caesar the most serious is probably that caused by the great length of many of the sentences. In this book an attempt has been made to reduce this particular difficulty by breaking up Caesar's long periods into a series of short sentences, and by presenting this Preparatory matter side by side with the text."*

**THE  
"EURĒSO"  
MARK  
BOOK**

AND

**PREPARATION  
BOOK**

FOR

**Private and  
Public  
Schools.**

COPYRIGHT.

Compiled by

**CHARLES M. PARKS,  
B.A.**

**T**HIS book has been specially planned to satisfy a long-felt want for a thoroughly systematic and concise Mark Book.

The "Eureso" Mark Book and Register will enable Head Masters, without consulting the Form Master, to see at a glance the progress which each pupil is making, and to discover where his weak and strong points lie, as far as it is possible to do so from marks alone.

It will further afford a permanent record of the daily, weekly, and termly status of every pupil in the school, to which reference can be made at any time.

The price of the Mark Book is 2s. 6d. net, and the Preparation Book 4s. per dozen.

The cost of both is entirely covered by making a small charge to each pupil for the Preparation Book.

The following are extracts from letters from Head Masters:—

"An excellent system for Marks and Reports: a comprehensive record of the pupil's school course and character. It enables a master to see at a glance what progress a boy is making, and where he needs extra attention."

"Most comprehensive and workable. I congratulate you."

"I shall welcome your Mark Book next term."

"The best book I have yet seen to help a master to lessen that ever-present difficulty of marking."

"I am very pleased with the copy of Mark Register which you have been good enough to forward me. I have examined it with much care, and am so pleased with the system that I intend to adopt the same at once. It will be a saving both of time and labour."—W. E. DANGERFIELD, M.A., Milton House, Watford.

"I have examined your book critically, and consider it excellent in every way."

"For both books I have nothing but praise; the Preparation Book is an excellent idea."

**RELFE BROS., Ltd.,**

6 Charterhouse Buildings, Aldersgate, London, E.C.

**A UNIQUE BOOK FOR SCHOOL PRIZES**

*The great object in selecting a reward for a scholar—particularly for one just leaving school—should be to find an article that will be useful in after-life, and that for this purpose*

**Pannell's Reference Book**

is unrivalled.

**PANNELL'S REFERENCE BOOK** is a complete Reference Book in one volume, and includes—

**An English Dictionary—A Commercial Guide—A Medical Dictionary—Aids to the Study of English—A Social Guide—A Guide to Education—A Legal Guide—A Business and Professional Guide—A Dictionary of General Information.**

**PANNELL'S REFERENCE BOOK** consists of 984 large pages (9 ins. by 6½ ins.) excellently printed on superior paper, strongly bound, and is issued at the

**Phenomenally Low Price of 6s. 6d. net.**

Archdeacon SINCLAIR writes:—"It is difficult to express my strong appreciation of the extraordinary amount of apposite and useful information which you have put together. It is really a compendium of all kinds of books of information on an almost indefinite number of subjects. . . . In addition to this the work is so interesting that it may be taken up and read simply for amusement at any time."

Universally pronounced by the Press the most complete, the most reliable, and the cheapest Reference Book ever yet published.

**A splendid Gift and Prize Book, particularly in the editions specially bound for this purpose:—**

**THE GRANVILLE PRESS, LTD., 27 Fetter Lane, London, E.C.**

# CAMBRIDGE UNIVERSITY PRESS.

**THE ELEMENTS OF SOLID GEOMETRY.** By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham. Crown 8vo, 2s. 6d. net. [Immediately.]

*Now Ready. Second Edition, Revised.*

**ADVANCED EXERCISES IN PRACTICAL PHYSICS.** By ARTHUR SCHUSTER, Ph.D., Sc.D., F.R.S., Langworthy Professor of Physics and Director of the Physical Laboratories in the University of Manchester, and CHARLES H. LEES, D.Sc., Lecturer in Physics and Assistant Director of the Physical Laboratories in the University of Manchester. Second Edition, Revised. Demy 8vo, 8s.

**AN INTRODUCTION TO GEOLOGY.** By J. E. MARR, Sc.D., F.R.S., President of the Geological Society, Fellow of St. John's College, Cambridge. Crown 8vo, 3s. net.

## Cambridge Physical Series.

*Now Ready. Second Edition, Revised and Enlarged. Pp. xiv + 580.*

**RADIO-ACTIVITY.** By E. RUTHERFORD, D.Sc., F.R.S., F.R.S.C., Maedonald Professor of Physics, McGill University, Montreal. Second Edition. Demy 8vo, 12s. 6d. net.

EXTRACT FROM PREFACE.—“The rearrangement is so extensive as to constitute almost a new work.”

**THE THEORY OF EXPERIMENTAL ELECTRICITY.** By W. C. D. WHETHAM, M.A., F.R.S., Fellow of Trinity College, Cambridge. Demy 8vo, 8s. net.

*THE TIMES ENGINEERING SUPPLEMENT.*—“This series has the merit of being written by scholars who have taken the trouble to acquaint themselves with modern needs as well as with modern theories. . . . Mr. Whetham has written exactly the kind of book to inspire a student with appreciation of what has been achieved by physicists, and to suggest paths of research which might be followed with reasonable probability of further discoveries.”

**A TREATISE ON THE THEORY OF SOLUTION, including the Phenomena of Electrolysis.** By W. C. D. WHETHAM, M.A., F.R.S. Demy 8vo, 10s. net.

**A TREATISE ON THE THEORY OF ALTERNATING CURRENTS.** By ALEXANDER RUSSELL, M.A., M.I.E.E., late Scholar and Assistant Lecturer of Gonville and Caius College, Cambridge, Lecturer in Applied Mathematics, and Superintendent of the Testing Department, Faraday House, London. Demy 8vo, 12s. net.

**ELECTRICITY AND MAGNETISM.** An Elementary Text-Book, Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S., Director of the National Physical Laboratory. Crown 8vo, 7s. 6d.

**HEAT AND LIGHT.** An Elementary Text-Book (Theoretical and Practical) for Colleges and Schools. By R. T. GLAZEBROOK, M.A., F.R.S. With numerous Figures. Crown 8vo, 5s. And separately: **Heat**, 3s.; **Light**, 3s.

**MECHANICS AND HYDROSTATICS.** An Elementary Text-Book (Theoretical and Practical) for Colleges and Schools. By R. T. GLAZEBROOK, M.A., F.R.S. Crown 8vo, 8s. 6d. Also in separate Volumes. Part I., **Dynamics**, 4s.; Part II., **Statics**, 3s.; Part III., **Hydrostatics**, 3s.

**CONDUCTION OF ELECTRICITY THROUGH GASES.** By J. J. THOMSON, D.Sc., LL.D., Ph.D., F.R.S., Fellow of Trinity College, and Cavendish Professor of Experimental Physics. Demy 8vo, 16s.

**ELEMENTS OF THE MATHEMATICAL THEORY OF ELECTRICITY AND MAGNETISM.** By J. J. THOMSON, M.A., D.Sc., LL.D., Ph.D., F.R.S. Third Edition. Crown 8vo, 10s.

**THE STUDENT'S HANDBOOK TO THE UNIVERSITY AND COLLEGES OF CAMBRIDGE.** Fourth Edition, Revised to June 30, 1905. Crown 8vo, 3s. net; postage, 4d.

The Handbook contains necessary information relative to Admission to the University, Expenses, Scholarships, Exhibitions, Prizes, Examinations, and Degrees, together with other details concerning subsidiary matters likely to be of use to the Student.

**THE RELIGION OF ISRAEL.** An Historical Sketch. By R. L. OTTLEY, Canon of Christ Church, and Hon. Fellow of Pembroke College, Oxford. Crown 8vo, 4s.

EXTRACT FROM THE PREFATORY NOTE.—“This book is intended to supplement the ‘Short History of the Hebrews’ (published in 1901), in which the writer was unable to deal particularly with the development of *religion* in Israel.”

*ATHENÆUM.*—“We are able to commend it as an earnest and serious contribution to a perplexing and deeply interesting problem.”

## Works on Educational Science.

**ROMAN EDUCATION.** By A. S. WILKINS, Litt.D., LL.D., Professor of Classical Literature in the Victoria University of Manchester. Crown 8vo, 2s. net.

*ATHENÆUM.*—“We know no other work to which one would go for so complete and accurate an exposition of what is known about Roman education.”

**PIONEERS OF MODERN EDUCATION, 1600-1700.** By JOHN WILLIAM ADAMSON, Professor of Education in King's College, London, Examiner in Pedagogy in the University of London. Crown 8vo, 4s. 6d. net.

The first volume to be published, though number three in the chronological order, of a new series of educational writings, entitled **CONTRIBUTIONS TO THE HISTORY OF EDUCATION**, to be edited by Professor WOODWARD.

**THE EDUCATION OF THE YOUNG, in the “Republic” of Plato.** Translated into English, with Notes and Introduction, by BERNARD BOSANQUET, M.A., LL.D. Crown 8vo, 2s. 6d.

**ARISTOTLE ON EDUCATION.** Being Extracts from the Ethics and Politics. Translated and Edited by JOHN BURNET, Professor of Greek in the United College of St. Salvator and St. Leonard, St. Andrews. Crown 8vo, 2s. 6d.

*GUARDIAN.*—“In this unassuming little volume Professor Burnet has performed a real service for students of pedagogics. His book should be read by them as a companion and sequel to Professor Bosanquet's on Education in the Republic of Plato.”

**THE MAKING OF CHARACTER: Some Educational Aspects of Ethics.** By JOHN MACCUNN, M.A., LL.D. Crown 8vo, 2s. 6d. Cloth extra, gilt top, 3s. 6d.

**DESIDERIUS ERASMUS. — CONCERNING THE AIM AND METHOD OF EDUCATION.** By W. H. WOODWARD, Professor of Education in the University of Liverpool. Crown 8vo, 4s. net.

**VITTORINO DA FELTRE AND OTHER HUMANIST EDUCATORS.** Essays and Versions. An Introduction to the History of Classical Education. By W. H. WOODWARD. Crown 8vo, 6s.

**JOHN AMOS COMENIUS, Bishop of the Moravians.** His Life and Educational Works. By S. S. LAURIE, A.M., LL.D. Sixth Edition. Extra fcap. 8vo, 3s. 6d.

**STUDIES IN THE HISTORY OF EDUCATIONAL OPINION FROM THE RENAISSANCE.** By S. S. LAURIE, A.M., LL.D. Crown 8vo, 6s.

**THE TRAINING OF TEACHERS AND METHODS OF INSTRUCTION.** Selected Papers. By S. S. LAURIE, A.M., LL.D. Crown 8vo, 6s.

**THEORY AND PRACTICE OF TEACHING.** By the Rev. EDWARD THRING, M.A. New Edition. Extra fcap. 8vo, 4s. 6d.

**EDUCATIONAL AIMS AND METHODS.** Lectures and Addresses by Sir JOSHUA G. FITCH, M.A., LL.D. Crown 8vo, 5s.

**LECTURES ON TEACHING,** delivered in the University of Cambridge during the Lent Term, 1880. By Sir JOSHUA G. FITCH, M.A., LL.D. New Edition. Crown 8vo, 5s.

*A List of New and Standard Books for Schools will be sent on application.*

London: CAMBRIDGE UNIVERSITY PRESS WAREHOUSE, Fetter Lane. C. F. CLAY, Manager.

The Educational Times.

Private Schools.

LAST month, in noting Prof. Sadler's reports, we reserved the question of private schools for a separate article. These reports

enable us not only to see "tanquam in speculo" their present condition, but also to read, as it were, their future prognosticated by an expert crystal-gazer.

No objection can be taken to the "common form" with which Prof. Sadler prefaces his several reviews. Private schools are of various types and of very different grades of efficiency. Some are of high excellence, several do meritorious work; others, again, are an element of weakness in our educational system.

Likewise, all save a few individualist doctrinaires will agree that the supply of secondary education cannot be left wholly to private enterprise. The State is ultimately responsible, and has now acknowledged its responsibility, for every grade of education. If the provision of secondary education were relegated to private enterprise, poor and scattered districts would be left out in the cold. Moreover, private schools are, in the nature of things, lacking in permanence, and continuity is an essential element in the full and vigorous life of a school.

From these premisses it might be argued that private schools should be gradually superseded by public foundations and condemned to painless extinction as a survival of an unlettered and uncivilized age; but it is needless to say that so rash a conclusion, warranted neither by history nor by philosophy, is not drawn by Prof. Sadler. "It is expedient to preserve every efficient form of private enterprise and of varied initiative in our national education."

We have dwelt, perhaps, too long on generalities; but our object was to show that Prof. Sadler approaches the problem in a very different spirit from that of the Board of Education and other public bodies that might be named. He lays down at starting as axiomatic that, in point of curriculum, secondary education should not be all of one mould; that different temperaments and different types of mind have a natural affinity for different courses of study; that the

multiplication of secondary schools of the present grammar-school type will not satisfy present needs; that the widened range of professional, commercial, and industrial life calls for a greater variety of schools than in the past to suit special localities and special circumstances. These are sound principles; but their virtue lies in the application, and we cannot do better than take the report on Hampshire to see how they are applied over a large area.

There are in Hampshire 79 secondary private schools (not counting 10 where the education is pronounced to be mainly elementary) containing 2,598 pupils—1,530 boys and 1,068 girls. Three-fourths of the boys and five-sevenths of the girls above the elementary stage are in private schools.

With the preparatory schools for Winchester and other public schools we are not here concerned. They are highly commended, and the only fault found with them is that they are hampered in their teaching by the conservative curriculum of the public schools. These schools are, in fact, extra-territorial, and as little affected by any action of the County Authorities as Winchester itself. As to the remaining private schools of the county, not only has Prof. Sadler taken account of them in his purview, but he recommends that they should, where possible, be utilized for the public supply of secondary education, and in other cases be recognized under certain conditions and to a limited extent be subsidized. Thus, at Andover, it is recommended that a private girls' school be taken over by the County Council, enlarged, subsidized, and run as a County High School under its present head mistresses. In another case it is suggested that the head mistress of a private girls' school be invited to transfer her pupils to a school to be established in the town by the County Council, in which she would be offered an assistant mistress-ship and the headship of a boarding house. In either case it is urged that there is not room for two girls' schools, and that competition would be both unfair and impolitic.

These are exceptional instances, and we cannot help thinking that more than two schools out of seventy-nine might have been selected as suitable and worthy to be offered the option of serving as County schools. But our chief interest lies in the proposed treatment of private

schools which retain their present name and character. In order that they may be recognized by the County Authority, Prof. Sadler lays down two conditions: (1) that they must submit to public sanitary inspection, (2) that they must give evidence that their staff are properly qualified to teach. If they satisfy these conditions, they are offered in return (1) public recognition, *i.e.*, they will be included in the educational directory which the County Council will issue annually; (2) they will be entitled to receive pupil-teachers and scholars selected by the Council; (3) we may add, from the report on Exeter, the loan of books, apparatus, &c.

This appears to us a fair bargain, and we regret to learn from Prof. Sadler that very few of the private schools of Hampshire have, so far, availed themselves of the County Council's offer to share the expenses of a University or Board of Education inspection.

There has, it is true, been in the past sufficient excuse for declining inspection. Apart from the cost, it has been often unsympathetic and, in a few cases, unjust and inquisitorial. Now that secondary inspection has been organized as a branch of the public service, and that half the expense (in some cases the whole) is borne by the Local Authorities, these objections are fast disappearing, and it is not reasonable for those who still maintain (as did the great public schools till within the last year) that an Englishman's school is his castle to expect any grace or favour.

We will conclude with an excerpt from Mr. Holland's able report on Monmouth, pointing out what, in his opinion, is the proper sphere for private schools in the future. His statistics show that the development of Intermediate Schools has not, as was anticipated, killed private enterprise in Wales. But with present standards it is no longer possible for a small school without endowment to educate pupils of any age from eight to twenty. "It is mainly in the capacity of preparatory schools to the intermediate that the private schools will come into the sphere of the Education Committee."

In England private schools have, and will continue to have, a far wider sphere; but they must recognize, as all the best of them already do, that to submit themselves for inspection, whether by the Board of Education or the universities or the College of Preceptors, involves no sacrifice of their private liberties or their powers of initiative.

### NOTES.

LORD LONDONDERRY, speaking the other day at Bradford, incidentally resuscitated the Charlottenburg question. He is reported to have said:

Then there was a very important question affecting the higher education of those who had to take prominent part in the commercial and other interests of the country. All educationists had long realized that there ought to be in this country a college of the character of that at Charlottenburg, in Germany. He had carefully considered this question and a large amount of money had been voluntarily contributed for the work of such a college. A committee was dealing with the matter, and he believed the time was now not far distant when England would have a college on the Charlottenburg system to provide the highest class of education for those who were bound to bear the great commercial responsibilities of the country.

It is difficult to discern anything fresh in this deliverance.

We should have been more reassured if Lord Londonderry had spoken not of "a college on the Charlottenburg system," but of a college bearing the relation to the English educational system and English educational needs that the German institution bears to the German educational system and German educational needs. As we have already seen, too, the utmost importance attaches to the process of fitting the new college into the system of the University of London. It is good to hear of large voluntary contributions of money to the project; but have there been any such windfalls (except £20,000 a year from the Treasury) since the meagre preliminary report of the Committee, on which we had something to say in our August number? The Commissioners of the 1851 Exhibition offer a site, but what of the other half-dozen conditions of success enumerated by the Committee?

THROUGHOUT Sir William Anson's address at Leeds University there was a persistent recurrence of the distressful note of impecuniosity. Scholarships are excellent; but we want an ample variety of secondary schools to hold the scholarships at; and "the sum spent in secondary education is out of proportion and ridiculously small in comparison with the sum spent in elementary education." "Since the Education Act came into force, there has been great financial pressure": "more would be done if there was the money to bestow." So Sir William had copious laments for his pecuniary limitations, and inexpensive sympathy for the needs of education; and he could discern no help for it but to hope for relief of the "financial pressure." Then, indeed, we may expect something. It may occur to educationists, however, that secondary education is thus placed in the position of the rustic that sat down on the river bank to wait till the water ran past. The "financial pressure" is permanent where education is concerned. If it were the Army or the Navy, the money would soon be found: the expenditure on these two services has been more than doubled in the last ten years; in the last six years no less than £23,000,000 a year of increase has been provided out of taxation. Yet secondary education, which would be happy with a twentieth part of the sum, is helplessly told to wait for the passing of the "financial pressure," as if its national importance were less than a twentieth of the necessity for military expenditure. It is not money that is lacking: what is lacking is capacity to administer the money. And even that rarity might be discovered by adequate educational pressure on the authorities.

MEANTIME Sir William Anson, speaking on the same day at the Saltaire Institute, Shipley, put the fundamental question: "What do we want the school to do for the boy or girl?" His answer was this:

My view of the school is: how can we make the boys and girls love learning, understand its value, and leave the school with the desire and capacity to increase their store of learning, and that we should endeavour to fit the teachers for their great profession by inspiring them with a sense of its dignity and value, and giving them such instruction as can be given—and I am afraid it is of very limited character—in the art and mystery of the teaching profession.

The first object is of the very last importance, but the attainment of it is dependent on two things: first, the

character and qualification of the teacher; and, secondly, the liberty and opportunity of the teacher to deal with the particular pupils. The first consideration partly involves the second of Sir William's objects—the training of the teacher, which must wait till the “financial pressure” is relieved. The second consideration has been already recognized, and probably, as teachers rise in official estimation, the red tape will be further relaxed, so that they may do their best in the circumstances, which they inevitably appreciate much better than a casual Inspector that has almost certainly never had any such personal experience. We are pleased to note that Sir William recognizes “that too much is expected of the school”—that the extra-school life of the pupil may not only not second the teacher's efforts, but even in varying degrees counteract them. It is difficult enough for Inspectors to measure these adverse influences, but no doubt Sir William will instruct them to keep such elements of the case in careful recollection.

MR. A. C. BENSON, writing in the *Speaker*, from the standpoint of one who “has had twenty years' experience of teaching in a classical school, who began to teach with a firm belief in the virtue of the classics, and who has sadly convinced himself by observation that we are on the wrong tack altogether,” says he would like to see a trial of the experiment of making French the linguistic staple of boys' education:

Then I would teach the boys, as thoroughly as I could, the history of England in the last two centuries; and the history of Europe, in less detail, for the same period. I should try to give them a very general idea of the course of history before that time, but only in the barest outline. I should teach them arithmetic very carefully, and see that every boy could calculate with rapidity and accuracy. I should try to give all boys, by popular lectures, some general conception of science; and I should instruct them in the simple outlines of Biblical religion. I should also teach them in careful detail the geography of the World; and I should make English a very important subject, trying to acquaint them, not philologically or grammatically, but with a view to literary appreciation, with the masterpieces of English, and to train them to use their own language with ease and precision. I do not think that this would be an impossible curriculum, and I have no sort of doubt that a boy trained on these lines would have a very good chance of being a well educated man. He would be well equipped for practical life; he would have some intellectual interest.

THE scheme does not carry instant conviction. True, it eliminates things that are not obviously of direct utility—if that be necessarily an advantage. But, after all, do we not really still lack a damnatory analysis of the classics as a subject of school work? If the classics cannot stand on their merits, away with them; but the condemnation of them ought not to rest upon demerits that are accidental and not inherent in the subjects. Mr. Benson is just the critic that might be expected to analyze the question. May we not venture to assume that it is worth while to teach the classics to some students at least? Well, now, what students should be taught classics, and what students had better be taught something else instead? Then, how should classics be taught to those students, and at what age? We cannot resist the impression that, if classics, or at least Latin, were taught to the right students at the right age and on rational methods, there would be ample room for them (or it) and for French (or another modern language)

as well. Do we discern in Mr. Benson's handling of the other subjects a certain concession to modern clamour in point of thoroughness or of scope? Moreover history, as history is written for schools, has its pitfalls for all but the very exceptional teacher, and is, perhaps, not a fundamental educative subject; and a training in the use of English with ease and precision will probably involve difficulties of its own as well as difficulties not dissimilar to those that the classics suffer from, although that is no reason why the attempt should not be made in good earnest.

THE Governments of France and Prussia, having recently developed the idea of attaching young masters in English secondary schools to certain of their own secondary schools for a year or so, are now, according to a Board of Education Circular (No. 615), “most anxious to extend the scheme, and to find similar opportunities in suitable English secondary schools for young graduates who would afterwards be employed in their State schools.” The Board of Education like the idea, and believe that, under careful arrangements, “the presence of such teachers on the staff of a school might add materially to the effectiveness of the modern language teaching.” Very much, we take it, depends upon the quality of the modern language masters. The Board's view is that the main usefulness of the foreign youth “will lie in the direction of immediate contact with the boys in order to develop their powers of conversation”; that the “conversation-groups” should be limited to half-a-dozen pupils generally over fourteen; that attendance should be “quite voluntary and regarded as a privilege, and in some measure as a reward for good progress in the ordinary class work”; and that “the chief object is to induce the boys to talk rapidly on subjects within their grasp in a manner which is not possible in the class-room.” Very well; “soluitur ambulando.” But it does seem difficult to understand why boys should not talk as rapidly in the class-room as out of it, whether there be half a dozen or a whole dozen of them; or why the master could not be in as “immediate contact” as the foreigner; or why there should be any question of reward or privilege in the matter. Either the master knows his business or he does not. If he does not, he must, we suppose, submit to being supplemented.

IN a farewell address to the Directors of Public Instruction at Simla, Lord Curzon expatiated very soundly on the vital importance of education, and declared that “in a country like India in its present state of development it is perhaps the most clamant necessity of all”; indeed, “the man in India who has grasped the education problem has got nearer to the heart of things than any of his comrades, and he who can offer to us the right educational prescription is the true physician of the State.” Undoubtedly. But where is the use of the prescription unless the medicine be prepared and administered? We have had the great despatch of 1854, the great Commission of 1882, and Lord Curzon's own prescription. Yet four out of every five Indian villages are without a school; three out of every four Indian boys grow up without education; and perhaps

one girl in a hundred and fifty gets elementary instruction. Why is this? How is burning zeal for education to be reconciled with such beggarly, not to say scandalous, results? Lord Curzon speaks of "a deplorable lack of co-ordination," "a vagueness as to fundamental principles," the creeping in of "slakness," "standards depreciated," and so forth; but he denies "deliberate or conscious neglect." If this is not easuistry, we should like to know what the educational officers have been doing and why their shortcomings have been overlooked by their superiors. Lord Curzon himself set everybody by the ears by making the universities annexes of the Government, and by disrupting and discouraging private—almost the only—enterprise in higher education; and, while he has given "a very large permanent annual grant of 35 lakhs" (something over £233,000—just over 1½d. per child of school age!) for primary education, we have high official authority for the statement that the first result of financial pressure is a reduction of the Education Estimates. Efficient education in India is an extremely simple question of policy—and of fearless discharge of the plainest duty.

### SUMMARY OF THE MONTH.

A COMMITTEE has been appointed to inquire into the expenditure on public education in England and Wales from Exchequer grants, local rates, and other sources, with a view to ascertaining the various causes for the existing diversity in the amount of rate levied for education by Local Authorities and the varying relations which this amount bears to the total local rates in each area. The following are the members of the Committee:—Sir Henry Primrose, K.C.B., Chairman of the Board of Inland Revenue (Chairman); Mr. W. Blain, Treasury; Mr. G. H. Tripp, Home Office; Mr. J. Bromley, C.B., Accountant-General, Board of Education; Mr. W. F. Sheppard, Board of Education; Mr. T. Pitts, C.B., Local Government Board. Mr. G. L. Barstow, of the Treasury, will act as secretary to the Committee.

LORD LONDONDERRY, President of the Board of Education, wrote (October 6) to Lieut.-Colonel Pryce-Jones, M.P.:

In answer to your query, I can certainly say without hesitation that there is a serious misapprehension if those who, as you tell me, are talking of closing the Council elementary schools in Montgomeryshire are doing so in the belief that the discontinuance of those schools will prevent the Board of Education from making use of the Default Act as hitherto for the continued maintenance of voluntary schools which the Montgomeryshire Authority declines to maintain. It is our duty to provide for the maintenance of the voluntary schools if the Montgomeryshire County Authority unfortunately refuses to carry out its duties in this respect, and we shall continue to do so under the Default Act should the need arise; so a refusal on the part of the Montgomeryshire Authority to do its duty in respect of the Council schools will not hamper the Board of Education in this regard. If their motive or their aim in thinking of discontinuing the Council schools be as is suggested, they will indeed be failing in a very serious manner to carry out their duties for the education of the children in the county without even attaining the particular purpose which, as I understand, it is suggested they hope for.

THE *Times*, discussing the Regulations of the Board of Education for Secondary Schools, says:

Both for special and for general reasons the need is urgent for a large increase of public aid to secondary education, and it is satisfactory that both the President and the Parliamentary Secretary of the Board of Education have expressed their sympathy with this opinion. It is surprising that the *personnel* of the Interdepartmental Committee to inquire into the finance of education in relation to local rates should be restricted to public officials. The special knowledge of one or more representatives of Local Education Authorities would certainly have been of value to the Committee. Both the qualifications of the members of the Committee and the published terms of reference suggest that the Committee's deliberations will be confined to questions of rating rather than to wider educational questions. It is to be hoped that the Committee will interpret the terms of reference in a liberal sense, so that such important questions as the relation between the amounts contributed by Parliament

to elementary, secondary, and technical education will not be excluded. It seems anomalous that the Board should expend about £10,000 a year in aid of evening classes in the single subject of shorthand, whereas the total grant to secondary schools is only about £200,000. And it may be questioned whether, in view of the new conditions created by the recent Acts, the annual expenditure of nearly a quarter of a million on the inspection and examination of schools is fully remunerative.

THE Board of Education have issued circulars to public libraries and Local Education Authorities recommending the aims and methods of the National Home-Reading Union. Since its foundation in 1859 one of the principal aims of the Union has been to encourage children to read books for themselves under competent guidance. Its efforts have thus been directed to broadening, prolonging, and confirming the influence of school education. The sympathetic co-operation of library and Education Authorities with the Union would, accordingly, be viewed with approbation by the Board of Education. The Union has briefly outlined the methods of such co-operation. Librarians, on payment of 10s. 6d. a year, become honorary members of the Union, receiving gratis the selected list of books, &c. Most of the books are, as a rule, already stocked by the libraries. The card supplied by the Union should be displayed in the library, and the librarian might organize "reading circles." Teachers in elementary schools and pupil-teacher centres might become members on payment by the Local Education Authorities of 1s. 6d. per annum, and might then form "home-reading" circles under their supervision. The selected books of the Union might be adopted as class readers, children being allowed to take them home. The experiment deserves every encouragement, and it is to be hoped that the Board of Education's circular will have the desired effect. The secretary of the National Home-Reading Union (Surrey House, Victoria Embankment, W.C.), Mr. Vere Collins, is open to confer with librarians and education officers as to the best means of bringing the work of the Union into relation with the needs of their particular districts.

At the half-yearly meeting of the Joint Scholarships Board, held at the College of Preceptors, Sir Philip Magnus, Chairman of the Board, in the chair, the reports of the Examination Committee showed a large increase in the number of candidates for the various scholarships offered by the Local Authorities throughout the country. The report of the Minor Scholarships Committee indicated a decrease in the proportion of candidates who reached scholarship standard, adding that: "This unsatisfactory result is to be attributed largely to the want of judgment shown in entering candidates (the majority girls) entirely unfit for such a test, many failing in every subject at the preliminary, and several not scoring a single mark throughout."

PROF. JUDD, distributing the medals and prizes of the past session at the Royal College of Science (October 5), acknowledged the uniform courtesy and consideration he had received from colleagues and students alike during his forty-five years' experience in connexion with the school. Nearly two-thirds of that period had been spent in the position of one of the teachers. He congratulated them on the expansion and development which was now promised, and expressed the hope that the change would lead to even greater successes in the future than had been attained in the past. Mr. R. L. Morant, Permanent Secretary of the Board of Education, in moving a vote of thanks to Prof. Judd, said that Lord Londonderry had asked him to express his regret at his inability to be present. He thought the successes of the past were only an earnest of that which would be done in the future under the new organization. The Board of Education was deeply indebted to Prof. Judd for his work in connexion with the college and school, and for all that he had done in the furtherance of science itself.

IN view of the rapid increase in the number of openings for the work of properly qualified women teachers in theology, the Archbishop of Canterbury is inaugurating a scheme for the training and testing of such teachers. The Archbishop has decided to institute a diploma or licence in theology (L.Th.) to be conferred upon such candidates as satisfy the three-fold test of (1) systematic study, (2) proficiency as shown by examination or otherwise, and (3) teaching capacity. His Grace has commissioned the Bishop of Gibraltar to supervise the testing of the candidates, and has nominated a committee of highly qualified ladies to take charge of the details under his direction. The

scheme will come into operation as soon as possible, and all information respecting it may be obtained from Miss Beran, 61 Egerton Gardens, London, S.W., who has undertaken to act as hon. secretary to the committee.

MANCHESTER is steadily working its educational ladder. Sir James Hoy, the Chairman of the Manchester Education Committee, on the occasion of the recent distribution of certificates of free admission to the five higher elementary schools of the city to 251 children attending the ordinary elementary schools, said this particular scheme linked up the work of the elementary school with the first stage of what was part of the higher education scheme of the Committee.

The whole of those who were to receive certificates were between the ages of ten and twelve. There had been a selection before the examination which was a part of this portion of the scheme, by the teachers in the ordinary elementary schools, of those who were likely to be able to pass the examination, which was of a simple character and which could in no sense be considered a strain upon young children. The number of candidates was 401, and of that number 251 had been accorded free admissions. As the scheme had not been in force in its present form more than two years, the whole of the places were not yet filled up. More certificates could have been given if the scholars who were sent forward had been able to pass the examination. It might be said without exaggeration that the scholars present were the cream of the elementary schools, and the gathering was of special interest because the children would carry away certificates which showed that they had in their first little struggle obtained a position which in their future lives could not but be of the greatest benefit to them. In passing this examination it was expected that the parents and guardians of the children would enter into an agreement that the children would work out their time up to the age of fifteen in the higher elementary schools free of charge. They could, however, enter into competition for any of the scholarships that were offered, and they were likely to be more successful than those who had not made so good a start.

Sir James Hoy pleaded that a wider interest should be taken in the affairs of the Education Committee, and that there should be a fuller appreciation of the educational advantages that were provided.

An important meeting was held at Birmingham (October 5) to consider proposals for establishing a Birmingham and Midland Counties Branch of the Classical Association of England and Wales. The Bishop of Birmingham (Dr. Gore), who presided, spoke strongly in favour of the double object of the Association—the object of maintenance and the object of reform. The resolution for the establishment of a local Branch was proposed by Mr. Cary Gilson and seconded by Prof. Postgate, an Old Edwardian, and it was vigorously supported by the Rev. S. R. James (Malvern). Sir Oliver Lodge recalled how Mason College was opened a quarter of a century ago by Prof. Huxley as a purely science college—a condition that did not last long; and he said that, while they did not wish to make everybody take classical studies, yet they wished to have such studies available for those that could receive them. The resolution was carried unanimously, and details of the constitution of the local Association were arranged. The Bishop of Birmingham was appointed president, Mr. E. A. Measures hon. secretary, and Mr. C. D. Chambers hon. treasurer.

SIR OLIVER LODGE presided over an important conference on the higher education of workpeople at the Midland Institute on October 14. The conference was convened by the Association to promote the Higher Education of Working Men, and was attended by representatives of universities, Education Authorities, co-operative societies, trade unions, trade councils, adult schools, friendly societies, and branches of the Association. Mr. Richard Bell, M.P. for Derby and General Secretary of the Amalgamated Society of Railway Servants, moved, and the Bishop of Birmingham (Dr. Gore) seconded, the following resolution:—

That the higher education of workpeople in the Midland districts of England will be best furthered by joint action on the part of the universities, educational and working-class organizations, and that a committee, consisting of representatives from the following bodies, with power to add to its number, be convened by the Association to promote the Higher Education of Working Men, and charged with the duty of making recommendations to a conference to be called hereafter:—the Universities of Oxford, Cambridge, and Birmingham, the University College of Nottingham, the Midland section of the Co-operative Union (Limited), the National Home-Reading Union, the Midland Co-operative Educational Committees' Association, the Trades Council of Birmingham, Ruskin College, the Leicester Working Men's College, the National

Union of Teachers, the Birmingham and Midland Association of Adult Schools, the Women's Trade Union League, the Midland Institute, and the Birmingham Sunday Lecture Society.

A lady representing the Wolverhampton Co-operative Society, said that from reading the resolution before the meeting one might imagine the British Empire was populated only by men and boys. She proposed that the words "and women" be added to the name of the Association. In education, as in other matters, men and women must rise or fall together. The Chairman agreed to add the words "and women," and the resolution was carried unanimously.

THE members of the Cardiff and District Teachers' Association discussed (October 14) the attitude of Principal Griffiths towards elementary-school masters, and criticized his remarks at a recent meeting of the Cardiff Education Committee on the value of teaching experience in schools compared with the value of a university degree. Mr. F. W. Pepperell, who presided, observed that Principal Griffiths, among other things, said that years of experience, so far from being a qualification, were often a disqualification. Mr. Pepperell said that these ideas, excusable in the principal of a college, to whom a university training might appear to be the most perfect means of education, were strangely narrow and unsuitable in one who sat as an educational expert upon a body which had been created for the purpose of controlling and co-ordinating all grades of education. They did not seek to discourage the taking of a university degree. But, with beautiful contradiction, Principal Griffiths himself declared that it was not the degree itself which he valued, but the qualities—mental ability and perseverance. There were many ways in which teachers exercised those qualities. Was it wise, right, or fair that only one of those ways should be recognized or rewarded? In order to mark their disapproval of Principal Griffiths's action, he moved:

This Association again records its opinion that in the formation of any promotion list for teachers the essential qualifications of candidates should be the possession of the First Teaching Diploma and experience in teaching. It condemns the action of Principal Griffiths in seeking to belittle the value of years of service in schools and to magnify the value of a university qualification, and is of opinion that his attitude on this question evinces a lack of acquaintance with the system of elementary education.

Mr. A. Sampson seconded, and the resolution was carried by 31 votes to 5.

At a meeting of the Irish Association of Women Graduates and Candidate-Graduates held in Dublin (September 29), Dr. Mulvany in the Chair, the following resolution was passed unanimously:—

That the Committee of the Irish Association of Women-Graduates and Candidate-Graduates desire to express their satisfaction with the announcement that the Bishops of the Catholic Church have established University scholarships for men and women students, to be held at University College and the Women's Colleges of Loreto and St. Mary's. They trust that the lectures of the Fellows of the Royal University delivered at University College will be open to the women scholars, as otherwise their scholarships would not give them the benefit of University education in the fullest sense.

After discussion of the results of the recent Intermediate Examinations, the following memorial was drawn up to be laid before the Intermediate Board:—

That the Committee of the Irish Association of Women Graduates deprecate the want of encouragement given to girl students taking the classical and mathematical courses in the Intermediate Examinations, as shown by the limited awards in exhibitions or prizes given to the best students in these courses in the present year. It is obvious that the "main objects" in these courses are educationally more valuable and much more difficult than in the remaining courses. Further, they are essential for women who are proceeding to the Universities. As an illustration of this lack of encouragement we beg to direct your attention to the case of . . . This Association, watching the interests of University education of women, feels bound to appeal to the Board not to discourage unduly the study of the subjects required for University education.

THE suggestion to establish a University College at Sunderland has aroused considerable interest amongst those who are anxious to see the educational facilities of the town developed to the highest possible point, and, although the Committees concerned do not appear to have yet definitely adopted the idea, there is a general hope that the scheme will be brought to a successful issue. The fact that the proposal has been made,

taken in conjunction with the recent steps in the direction of a day training college and the movement for higher commercial education, proves that the educational authorities are, at any rate, alive to the requirements of the town, and fully realize the direction in which they ought to move. It is not anticipated that the proposal could be carried out immediately, but the Education Committee will no doubt shape their policy in this direction, so that when the College is decided upon it can be fitted without difficulty into their educational scheme.

PRINCIPAL BEBB reports on St. David's College, Lampeter, that the average number of students in residence last year was 116, which is less than in the previous year. The number of students who joined the college was 40, 25 taking the three years' course for the B.A. and 15 the two years' course. In number and in quality the year has proved somewhat lean, though in both respects the prospect is brighter for the immediate future, there being at the present time no less than 62 candidates for admission. The external examiners testify to the general "excellence of the teaching and to the great amount of solid, conscientious work done throughout the college." In particular, they have noticed that there are no failures among the candidates for the B.A. degree, which they call a "very noticeable fact." For the first time for some years there has been an honour course in Welsh, in which, according to the examiner's report, the work done reflects credit on pupil and teacher.

At the October meeting of the Worcestershire Education Committee, which consists of all the members of the County Council and a score of educational experts, including women, a Special Sub-Committee on Higher Education recommended that each secondary school include boys and girls. This was agreed to. It was also proposed

That in schools established or aided by the Council, subject to any existing scheme, as far as possible, the principal teacher shall in all cases be a man, and the first assistant a woman.

Counsellor Joseph Malins opposed the recommendation, and hoped the ladies present at least would join him in voting against it. He did not believe those termed the weaker sex should be handicapped in the race. There were many women who were greatly gifted, and, on the other hand, there were lots of men who were "old women." Alderman Tomkinson (Kidderminster) said he did not see why such a disability should be thus laid down, and he would support it being left open for the Committee to have a free choice. The Chairman, Mr. Willis Bund, expressed his willingness for the Committee to be able to decide each case on its merits, and the recommendation was struck out.

THE Lancashire Education Committee have had before them the proposals of the Scholarships Sub-Committee, whereby 250 junior scholarships will be offered, restricted to children in attendance at public elementary schools, together with 100 junior open exhibitions. Last year only 120 exhibitions were given. Although 350 seems a large number, it is only one exhibition for every thousand children in attendance at the elementary schools. Special scholarships are offered to women for Domestic Economy and Midwifery.

PROF. DARROCH, in his introductory lecture to the Class of Education in Edinburgh University, said that Rector Mulcaster, the first Head Master of the Merchant Taylors' Company School in London more than three hundred years ago, had insisted on the great importance to the community of an efficient body of teachers, and had advocated the university training of teachers. Mulcaster declared that this was of importance, since teachers were the men "to make or mar the whole pay of the State," and on account of the fact that the teaching profession, in numbers and in necessity to the community, were of equal value with the other professions. Mulcaster's reforms, translated into terms suited to our modern conditions, would involve—(1) that every teacher should first of all be required to pass through a course of university study qualifying him for graduation in arts and science; (2) that a separate college or faculty should be established in each university for the training of teachers; (3) that the professional training of the teacher should be undertaken only after he had completed his general education. Prof. Darroch held that it was upon the lines so clearly laid down by Mulcaster that we must proceed in the future. But in carrying out such a reform there were many difficulties. In the first place, it was doubtful whether, under modern conditions, it was possible or

advisable to have every teacher trained at the universities, although it was expedient that as large a number as possible should enter the universities and go forward to a degree. Meantime, we could do two things for the betterment of the teaching profession. By shortening the term of apprenticeship, by lessening the practical work of the teacher during that period, and by bettering the means for his education, we could strive to increase the number and quality of those fitted to enter upon a university course. But, if this was to be effected permanently, it could only be accomplished, as Mulcaster said clearly, by increasing the reward of the teacher, or by the general social recognition of the worth and dignity of the teaching profession to the community. We could also abolish the untrained teacher, and insist on the necessity of some measure of training for all entering upon the work of teaching.

PROF. MAIR, in his introductory lecture to the Greek class in Edinburgh University, maintained that, if Greek were decadent, then the chief fault must lie in the prevalent methods of Greek teaching. He was not surprised that Greek was crowded out of school curricula, but he believed this was because Greek was badly taught, and because the school was overwhelmed with useless teaching. He had no hesitation in saying that at present quite one half of a boy's school time was unmitigated waste. A favourite subject of educationists to-day was geography. In his opinion, it was time enough to learn geography when you wanted to get to a particular place. He remembered learning in his youth the entrancing rhyme "Edinburgh, Leith, Portobello, Musselburgh, and Dalkeith." Well, to-day he had not the least idea where Portobello was; but he knew where to find a Portobello car, and that was enough. Nowadays commercial geography was a pet subject. That seemed to him based on the assumption that we are all to be tobaccoists or the like. Similarly in history. He had met a gentleman at Killiecrankie who knew that "twelve miles north of this Dundee fell," but had no notion where "this" might be, who Dundee was, or what induced him to fall. If he were teaching history, he would teach chiefly of heroes and of battles. The modern idea of constitutional history was quite useless for young minds. Bad teaching was not so much due to bad teachers as to wrong demands by ignorant Boards. Nor were His Majesty's Inspectors free from blame. He had been told of a school Inspector who entered a school in Aberdeenshire, and, after hearing a lesson on the bee, asked his infant class: "What is the meaning of the verb 'to be'?" Whereon an infant said: "Cogito; ergo sum." Languages rightly taught could be picked up in no time. Enough Hebrew for the B.D. degree could be learned—in deference to clerical members of the audience—in six weeks. In teaching Greek, modern Greek had been strangely overlooked. (But, if you can learn it in no time, why not wait till you are taking the car to Athens?)

MISS FLORA STEVENSON, LL.D., who has just died at the age of sixty-five, had been, since the passing of the Scottish Education Act of 1872, continuously a member of the Edinburgh School Board. In 1900 her unanimous election to the chairmanship of the Board was a striking tribute to her educational zeal and her administrative ability, and she remained chairman till her death. For many years she also represented the School Board on the governing body of George Heriot's Trust. She had a good deal to do with the passing of the Industrial Schools Act of 1893; in 1894 she was appointed to the Departmental Committee on Habitual Offenders and Juvenile Delinquents; in 1898, by the desire of Lord Balfour of Burleigh, she served on the Departmental Committee to consider the rules for inebriates' reformatories. Miss Stevenson took a deep interest in all questions affecting the working classes, and was a director of the Royal Blind Asylum and School, and Vice-President of the Women's Free Trade Union and of the National Union of Women Workers. She was an honorary Fellow of the Educational Institute, a member of the Edinburgh Educational Trust, and a Director of the Edinburgh Philosophical Institution. Two years ago the University of Edinburgh conferred on her the honorary degree of LL.D.; and in April last she received the freedom of the city of Edinburgh—an honour never conferred on any other lady, except the Baroness Burdett-Coutts.

THE Berlin correspondent of the *Daily Telegraph* reports:

Teachers in the grammar schools in Mecklenburg-Schwerin who enjoy the title of *Professor* are swollen with pride at the publication of a Government rescript which permits them on State occasions to wear a

brilliant uniform. This consists of a bright blue coat with crimson collar and cuffs, embroidered with gold. Both coat and waistcoat have gold buttons ornamented with the crown and initials of the Grand Duke. The trousers are white, with a broad gold stripe down the sides. On his head the Mecklenburg schoolmaster will wear a cocked hat, with the cockade in the colours of the Grand Duchy, from which a gold tassel will depend. Finally, as a finishing touch, he will carry a rapier with a gold hilt. As the Mecklenburg teachers are the worst paid in the Fatherland, many of them not earning more than £20 per annum, permission to wear this brilliant uniform may smooth away much of the existing discontent. I had almost neglected to add that, should the professor be of noble birth or extraction, he may wear, in addition, a pair of heavy gold epaulettes.

## UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

WE came back to find Oxford little changed externally. There have not been many additions to our buildings. The new house for the Warden of Merton is only in its initial stage, and some time will elapse before the new President of Corpus will move from his old home into College. The bridge between University College and its new buildings, over Logic Lane (the lane over which there was so expensive a legal dispute between the College and the City Fathers), is now an accomplished fact, but the City, having in the case a right to accept or refuse, has now definitely decided against the Hertford Bridge of Sighs, and, while some approve, many think that the bridge of Mr. Jackson's designing would have added to our architectural beauties.

The Vacation has robbed us of another Head of a House, and in Dr. Monro (he had received his Doctorate on the occasion of Lord Goschen's installation as Chancellor) the University has lost a scholar of European reputation. His successor, Dr. Shadwell, is a man of affairs as well as legal learning, and has served many offices in the University, and takes no small interest also in civic affairs. His knowledge of finance will, at any rate, do something to remove the impression that the Fellows of Oriel are—to use Mr. Cecil Rhodes's remark—children in finance.

We must also lament the death of Captain (and Professor) Montagu Burrows. It is not often that a sailor becomes a professor and so distinguished in his subject. Furthermore, there seems no doubt now that Mr. Simcox, of Queen's, has lost his life, though how and under what circumstances remains to be discovered.

Just before term we had two interesting meetings, both held at New College. The former was for astronomical discussion, and we had visitors—experts in their subject—from almost every European country, to say nothing of America. The latter was the annual New College Gaudy, made memorable on this occasion by the visit and speech of Lord Milner, a Fellow of the College. The key-note of his speech was a plea for instruction in constructive “political theory.”

Just before term, too, arrived the latest batch of Rhodes scholars, the number now reached being nearly one hundred and fifty. From some places no candidates came, as there were either none competing or none with the necessary qualifications. The list of their “home states” is interesting reading, and Oxford becomes cosmopolitan.

The *Oxford Magazine* has not yet published its annual list of the “previous performances,” schools, &c., of the candidates successful in the last Civil Service Examination, but there is no doubt this year that, even if we can claim thirty-six from the total number, our performances are much less noticeable than they have been in some previous years, while Edinburgh covers itself with honour by monopolizing the three first places.

Such other information as may be of interest falls rather into disconnected items. There are first the appointments in College. Mr. Sedgwick (son of his father) is the new Fellow of University, and as, besides his two classical firsts and three mentions for the Craven, he obtained a First in Mathematical Mods., there is no question of his inherited ability. Mr. Murray, of Christ Church, is the selected of Merton. Mr. Tiddy (already a Prize Fellow of University) has been translated as a Tutorial Fellow to Trinity, while Mr. Streeter has been restored by Pembroke to Queen's. Next we have the establishment of the Indian Forestry Department here, and a course of instruction has already been arranged by Dr. Schlieb and Prof. Fisher. The candidates who have already come to us from Coopers Hill have, we believe, completed their “practical forestry” at Windsor, but new candidates will have their teaching here. Just at the present moment

there seems rather a dearth of candidates. Then, again, we have the appointment as Lecturer in Military History of Sir F. H. Cunliffe, better perhaps known without his title as one of the best bowlers the University has had. When All Souls elected Mr. Cunliffe a Fellow some years ago there was a certain amount of outside comment, but the election has been fully justified by the results.

It seems—to continue the items—that we may regard the abolition of horse trams in the streets as certain to happen within a couple of years. At first there was a chance that the rails would be removed, and motor buses substituted for tram-cars; now, apparently, the decision is to have electric trams, but in the main thoroughfares the surface contact system is to be adopted, and we are not to have iron standards and overhead wires.

Lastly—though in due order it should appear first—it is a pleasure to record that the fears that the Vice-Chancellor, Dr. Merry, would find the cares of his office too arduous for long performance have been belied by facts. Indeed, Dr. Merry “vires acquirit eundo,” and in his speech at the beginning of the academical year he showed himself the same vigorous master of epigrammatic phrase.

(From our own Correspondent.)

THE appointment of Dr. Chase to the Bishopric of Ely was duly foretold in these notes, and is now, as all the world knows, an accomplished fact. A large concourse of Cambridge friends journeyed to London by special train to witness the consecration of the new Prelate. The new Bishop came up to Cambridge thirty-three years ago, and, with one break of three years, during which he was at Sherborne, has spent the whole of his time in residence among us. It was peculiarly fortunate that he happened to be Vice-Chancellor at the time of the King's visit to Cambridge, when, in the absence of the Chancellor, the honours had to be done by as fitting a person as ever represented our University.

The Vice-Chancellorship of Mr. Beck continues for another year; but, according to ancient usage, the usual valedictory address was given at the termination of the first year of office. One passage is so striking that no apology is needed for its reproduction here. *A propos* of the Greek question:

If we have charge of the treasures of the past and of the accumulating discoveries of the present, we have also a yet graver responsibility. We are the guardians not only of the ablest, but of all who come to us for life and light. We are the guardians of the young minds that shall mould the future. We dare not starve them on one food. Your single-food product is apt to become an intellectual freak and a barbarian. But the mind and soul of man is too fine an organism. It cannot live on physical facts alone. Its nurture must also be the spiritual ambitions, the memories of the race, forgiveness, pathos, humour, some sympathy, at any rate, with some of the best of those influences which through the ages have made it what it is. We have not yet said that men must choose between the two halves of a mutilated education. Our aim is, and ought to be, to give, preserve, and transmit some intelligent notion of a complete education, and some sympathy with the idea of it.

We have a record entry of Freshmen; Trinity, of course, heads the list with about two hundred, while Pembroke and Emmanuel have the very respectable totals of 76 each. Caius is once more encouraging medical students, and has 87 new names on its books in consequence. Downing has a very remarkable list, but the 39 names contain some which indicate an Oriental origin. There is still the same unhealthy craving after numbers. Over and over again has it been pointed out in these notes that it is beneath the dignity of an ancient foundation to encourage entries merely for the sake of the accompanying fees. The system of allowing college officers to marry has resulted in two things: firstly, that there has been a stagnation in the flow of promotion; and, secondly, quantity and not quality has been attracted to the place. It is doubtful whether with our numerical superiority over Oxford we are any the richer in mental or moral material.

There is a vacancy on the Council; this has been patent to us all for some time.

Nothing has yet leaked out as to who is to be the new President of Queens', the appointment is far from being a plump one, and no one without private means or a professorship could think of accepting it. In case the electors think fit to go outside the college they might do worse than choose Mr. Boughey, of Trinity, who has proved himself acceptable to all men of his college both as tutor and Dean. Canon Parry, of the same college, is also mentioned in connexion with the post, but, in the

end, it is probable that Dr. Wright, of Queens', will be induced to accept the Presidency.

The Examiners for the General last June were abnormally severe in one paper—Mechanics. A new schedule wrought havoc with the candidates, and the grumbling is loud and deep. The perfunctory lectures delivered at some colleges doubtless had much to do with the disaster, but the despised coaches are indulging in a quiet chuckle. The new scheme was invented to defeat cram; it has done so.

Many of our residents have come back from their trip to South Africa with the British Association, much refreshed in mind and body. Cambridge people, above all others, require to be taken out of the rut, as under modern conditions residence up here is rapidly tending to become continuous.

It is proposed that the University should grant a Diploma in Forestry. At present, probationers for the Indian Forest Service have to enter at Oxford, spending two years at that University and a year on the Continent learning the practical side of their profession. A Cambridge graduate would, if selected, have five years at least of University life, and if the new scheme is adopted the time would probably be shortened. At any rate, there is no reason why Cambridge should not be put on an equal footing with the sister University in respect of this matter.

The vacancy in the Trinity tutorship caused by the resignation of Mr. Rouse Ball has been filled by the election of Mr. Walter Morley Fletcher. Mr. Ball was extremely popular among his pupils, and he will be much missed. Mr. Fletcher, being himself a distinguished athlete, still able to show the way to any member of the College over hurdles, will command a certain amount of respect for this alone, and his high scientific acquirements will make him a really valuable adviser to his side. The last three appointments at Trinity have been eminently successful, Mr. Duff, Mr. Sedgwick, and Mr. Fletcher all being men to command the respect and admiration of the undergraduate. It is not thus everywhere else.

Our athletic prospects are not as bad as the sporting papers would make out. Never before have we had so many promising recruits from the public schools in the various departments of sport. It is true that our Rugby football team has suffered defeat on three occasions, but it is inevitable with university teams that they should not shake together early in the season. Tubbing goes on merrily on the river, and the weather is all in favour of the promising freshmen going on with the game they have selected. Our golf team, aided by the amateur champion, A. G. Barry, and his brother, will be abnormally strong.

The place is alive with motor buses, noisy, but withal convenient.

The politicians are waking up, but it is hoped they will postpone their larger meetings till the Vacation. A mass meeting is the undergraduates' opportunity.

Mr. W. Durnford, late of Eton, and now of King's, is the new Mayor of Cambridge.

At a meeting of Convocation, Sir Edward H. Busk in the chair, a communication was considered from the University College Transfer Commission, inquiring whether Convocation was desirous of making any representations to the Commissioners in reference to the business devolved upon them by the University College (London) Transfer Act, 1905. After a statement by the chairman, it was resolved that the communication be referred to the Standing Committee for consideration and report, with power to confer with the Senate or any Committee thereof.

The House also passed the following resolutions:—

That Convocation would welcome the formation of a University Union on the lines of those existing at Oxford and Cambridge, and desires the Standing Committee to consider what steps can be taken towards the inauguration of such a society.

That Convocation welcomes the formation of the society which it is proposed to call the University of London Musical Society, as tending to increase that corporate spirit amongst members of the University which it has been the aim of Convocation to foster and develop.

Under arrangements made with the Westminster Hospital Medical School the students of that school have been transferred to King's College for their preliminary and intermediate medical studies; and under arrangements made by the University of London with University and King's Colleges a number of the students of St. George's Hospital Medical School have also entered King's College for the same purpose. These students will, on the completion of their intermediate course, return to their own medical schools for their advanced studies. In order

to assist the University in thus beginning the concentration of the earlier medical studies the Council of King's College have spent a considerable amount of money during the long vacation in extending and further equipping the laboratories.

The Goldsmiths' College at New Cross was opened by Lord Rosebery, who discoursed on the new attitude towards the University question during the past twenty years, as seen in the newer Universities. University education has been decentralized and brought into close and organic relation with Local Authorities. By all means let the practical be the essential aim, but let it also be recognized that this aim can only be achieved by means of the breadth and clearness of vision that a liberal education ensures.

The Bishop of Exeter delivered the inaugural lecture of the Michaelmas term of the Women's Department of King's College in the Jehanghir Hall of London University—a most interesting lecture upon the life and writings of Richard Hooker. Last session closed with 516 students on the rolls, representing 2,733 entries, of which 2,171 were in the Faculty of Arts, 276 in the Faculty of Science, 95 in the Art School, 96 in music, and 95 for additional subjects. The totals exceed those of any other year, a fact of great satisfaction, since, lacking endowment, the college depends to a great extent upon students' fees. The Department is free from debt, and in this boasts a unique position among women's university colleges. Recently the grant allotted by King's College to the Women's Department was increased from £200 to £500, but, in view of the proposal of the Chancellor of the Exchequer to again augment the grant to university colleges, it is hoped that a still further increase may soon be obtained. Special plans which this increase would affect are the provision of a large students' hall and special additions to the library.

At an informal meeting of the University to Manchester. discuss the desirability of instituting courses of University Extension lectures for ex-pupil teachers and others who are unable to obtain places in training colleges, the Secretary of the University Extension Committee (Mr. S. Waterlow) stated that he had reason to believe that any well considered scheme by which the University should undertake the instruction and subsequent examination of uncertificated teachers in certain subjects, such as English language and literature, history and geography, in lieu of the corresponding subjects in the Certificate Examination of the Board of Education, would be favourably considered by the Board. Mr. Cann (Principal of the Bolton Pupil-Teacher Centre) expressed the opinion that the problem of the instruction of uncertificated teachers was a very pressing one; at the present moment few opportunities were put in their way of making themselves better qualified, and he had no doubt that any scheme to remedy this defect would be welcomed by Education Authorities. Other speakers emphasized the importance of maintaining the link which had hitherto existed between pupil-teacher centres and the University.

THE inaugural address for the session was delivered by Prof. Henry Jones, of Glasgow.

Speaking on "The Function of the University in the State" as it concerns the Principality, he said there were many reasons which indicated that the conversion of the Welsh University and the national Colleges into State institutions might be easy of fulfilment. They were comparatively small, were not rooted in ancient traditions (as were some of the English universities), and were also much more democratic in character. Above all, the Welsh people, in reference to secondary education in particular, had given an impressive example to the rest of the Empire of their willingness to be taxed for these public purposes. During the last twenty-five years they had offered a practical demonstration, unsurpassed in its clearness, of their readiness to pledge themselves to educational ends, and it seemed to him a warranted inference that, if Wales had the power to do as it had the will, one of its first legislative acts would be to place the National Colleges on a proper financial basis, to bring the strength of the whole people to their support. He believed that on the part of the Welsh people there would be raised something like a unanimous cry for the liberty and the power to impose upon themselves, if they so pleased, obligations to support the National Colleges similar to those which had secured for them their admirable system of secondary schools.

Belfast—  
Queen's.

THE REV. DR. HAMILTON, the President of Queen's College, in a letter to the press in reference to Sir Donald Currie's offer of £20,000

for the better equipment of the College, provided that an equal sum be contributed before Christmas, says: "The response to my appeal has been most gratifying. It has been truly delightful to see the high place which Queen's College evidently has in the confidence and affections of our community. From all sorts and conditions of people offers of help have come. Some of the letters have been very touching. One from the venerable Lord Kelvin, the most eminent of living scientific men, ought, I think, to be mentioned. He is keenly interested in the effort to equip more fully this seat of learning in the city which gave him birth, and with his very warm wishes sends a solid proof of his good will. It is almost pathetic to see how two old Belfast men—Lord Kelvin and Sir Donald—who lived here long before most of us were born, and have conferred undying lustre upon our city by the eminence to which they have risen, look back in the evening of life upon the home of their childhood and seek before they leave the world to help Belfast to obtain better equipment for that higher education the value of which both have proved in their own long experience."

### THE UNIVERSITY OF WALES.

#### THE LINE OF ITS GROWTH.

ADDRESS' BY PROF. HENRY JONES, LL.D., D.LITT.

THE inaugural meeting of the Cardiff Cymmrodorion and the Cardiff Educational Society (October 3) was distinguished by a long and able address delivered by Prof. Jones, of Glasgow University, on the future policy and administration of the University of Wales. Prof. Jones pleaded for peaceful evolution instead of violent changes.

#### THE QUESTION OF THE "WORKING HEAD."

These considerations seemed to him to apply to the question of appointing a Principal, Dean, or Rector of the University, to perform, amongst others, the function now entrusted to the Principals of the colleges, acting in rotation, as Vice-Chancellors. In this matter the authorities of the University were given the choice between a radical change in the administrative structure of the University and, on the other hand, an unpretentious attempt at a readjustment of certain duties. No clear distinction had been drawn between difficulties that are temporary and in a manner accidental and those that are permanent and intrinsic to the situation. In a recent description of the present state of the University he had read: "To-day we have the anomalous, and not by any means dignified, spectacle of a University whose atoms of management (so to speak) are scattered to the four winds of heaven. The Senior Deputy-Chancellor is the Principal of a Newcastle Science College. The Junior Deputy-Chancellor is a Registrar of the University of London. The Vice-Chancellorship is a triennial office without fixed and permanent abode, resting three years in Cardiff, three in Aberystwyth, and three in Bangor." It was obvious that the first of these evils, if evils they be, are quite temporary: they had simply to appoint other Deputy-Chancellors. They might resolve that in future residence out of Wales or official connexion with other Universities should be held to disqualify—provided they were so unwise as to create disabilities and limit the range of their own future choice. The argument was rhetorical and frivolous. There was substance, however, in the contention that disadvantages accrued from imposing the duties of the Vice-Chancellorship on the Principals of the Colleges, but he believed that the office of Principal, Dean, or Rector of the University was entirely unnecessary, and that the difficulties of the present situation could be met in another and much simpler way. They were actually met in another way in all the other Universities that he knew. Vice-Chancellors had not the monopoly of intelligence and reliability, as the Welsh regulations seemed to imply. The greater part of the duties now devolving upon the Vice-Chancellors could be performed better by the Registrar and his clerks, and the remainder by the Principals of Colleges, and by professors specially appointed for such particular purposes as presiding over the several examining boards. Once these details of management were placed in the proper hands the administrative situation would be relieved. The very attempt to appoint a "working head" of the University would bring serious dislocation. The truth was that the conception of a "working head" would not bear close analysis or practical investigation. It seemed to him that something like German barm has been "working" in the "heads" of those who projected it. The proposal was ill-considered, unnecessary, wasteful, and mischievous, and would meet with the fate it deserved. It was too soon to pull to pieces the administrative methods of the University, which were the product of prolonged conference and of the most loving care of some of the best minds of the Principality. No doubt the difficulties of administration were real, but they could in by far the greater part be removed by the simple methods of readjustment.

#### CYMRU'N UN.

The promoters of this change had raised the cry of "Cymru'n Un," but they were employing the wrong methods by promoting an academic

scheme which would neither improve the University nor make for a united Wales. It would not promote unity within the University itself. This attempt at greater centralization would disturb the balance of the federated constituents, and tend to the disruption of the University. Each of the parts of the Principality, jealous for the rights and privileges of its own college, would rally in its defence, and the result would be, not a "Cymru'n Un," but a country divided on one issue more. His critics had accused him of being in favour of this disruption—of having advocated the breaking up of the University of Wales into three Universities. "I admit," continued the speaker, "that a scheme which involves Universities at Cwmsewt and Pentrecagal and Llanbabo is very absurd. But, all the same, it is not mine. I cannot expect that all my critics will allow me to state my own motives; but they will perhaps permit me to state my own opinions. And my opinion is that the University of Wales, so far as its constitution is concerned, should be left for the present precisely as it stands. I deprecate all such tampering with it, because it requires time to develop whatever possibilities lie within it. In the second place I venture to believe that, if, and in so far as, its possibilities of development are great, that development will be in the direction of converting its colleges into relatively independent Universities. Absolutely independent, however, they would not be, any more than are the Universities of Manchester, Liverpool, and Sheffield. They would have common preliminary examinations, uniform regulations as to the number of academic years requisite for graduation, as to their post-graduate policy, and so on. In the third place I condemn this particular scheme for increased centralization because it not only forestalls the question of the future development, but either tends to determine that development in a false direction, or, as is more likely, to break up the University prematurely and by violent methods. The time for

#### THREE UNIVERSITIES IN WALES

has not come. But neither has the time for changing its constitution with the view of greater centralization, either academic or political. What the time calls for is peace; peace for the University to make its power felt and the reputation of its degrees more widely recognized; peace for the colleges to erect their buildings, and to strengthen their staffs: peace for its professors to give freely their best powers to the education of the youth of Wales, and to make themselves and their University renowned for extending the boundaries of human learning. But, given this peace for quiet labour and continued growth, I believe that the time may arrive when the conversion of the three colleges into three Universities will be the next natural step in their evolution. The change will come, not as the result of disruption, but with the matured consent of the whole people, as unconstrainedly as the falling dew." The ideal of three Universities, he continued, was not at war with the ideal of "Cymru'n Un." Could they point to any country in the world whose unity was endangered by having more than one University? Had the peace of Lancashire been broken by the substitution of Universities for federated colleges? Or would the unity of Scotland be deepened if the Universities of St. Andrews, Glasgow, Aberdeen, and Edinburgh were bound to one another and subjected to a "working head"? He thought not. Wales to-day would be religiously and educationally more united were it more free. There was a unity sometimes which was the result of constraint, and which was of little value, and eventually unstable; and there were bonds which did not unite, but irritated—a truth sometimes forgotten by the advocates of artificial centralization.

#### AN OBJECT-LESSON FROM FRANCE.

Napoleon converted the Universities of the provinces into "faculties" in the University of France, but in 1896 the French Government completed the process of converting them back into independent Universities. And what was the result? Under the law of 1896, fifteen of the former faculty groups had been organized into independent Universities. They registered 29,377 students in 1900, an increase of 11,772, or 68 per cent. above the number enrolled in the faculties in 1888. The increase in the number of students had taken place in every one of the Universities, and before they were thus made independent more than one-half of the Universities of France contained fewer students than the College of Cardiff did that day. He did not, however, cite those facts as a reason for immediate change. He advocated no immediate change. He pleaded against a change, and especially against a change which militated against the natural evolution of their institutions for higher learning and involved the sacrifice of an ideal of which he believed Wales would yet prove itself worthy.

#### CIRCULAR TO THE GUILD OF GRADUATES.

A circular has been sent to the members of the Guild of Graduates of the University of Wales drawing attention to the burning questions of the administration and development of the University. The signatories are Sir T. Marchant Williams; Prof. Edward V. Arnold, Bangor; Mr. Charles Morgan, Penarth; Prof. Thomas Rees, Brecon; Prof. A. H. Trow, Cardiff. The circular says:

There appear to be two questions which involve the principal issues:

- (1) Should there be appointed a working head of the University?  
 (2) Should the administration of the University be so regulated as to lead up, in course of time, to a dissolution of the University and its replacement by three separate Universities?

The first of these questions is of immediate importance, and we deprecate its subordination to the comparatively remote issue suggested by the second.

With regard to the working of the University, we suggest that the main points to be kept in mind are simplicity and efficiency. We do not think that the machinery of the University has broken down, that vital provisions of the Charter need to be reconsidered, or that the freedom at present enjoyed by the Colleges ought to be restricted. We would draw your attention to considerations of a strictly practical kind. The administration of the University is at present centred in the Vice-Chancellor, that is, in an officer whose immediate duty is to the College which has appointed him, and who cannot devote continued attention to the affairs of the University without being distracted from his proper work. Further, no Vice-Chancellor holds office for more than two years in every six, and therefore the continuity of administration is frequently broken. The University, it is true, has many other officers, but they are all honorary officers having other important duties, mostly at a great distance from Wales. The only exception is the Registrar, whose status and duties are so defined (Charter, xix.) as to indicate that they are intended to be strictly formal and impersonal. It is admitted on all hands that the growing work of the University is carried on under an increasing sense of strain. Under the circumstances we think it very natural that public opinion should look to the example of the University of London, which, having a constitution and a Charter almost identical with our own, has resorted to the appointment of a Principal of the University. We therefore hope that the suggestion of a working head for the University of Wales will receive fair consideration from the Court. . . .

The dissolution of the University has of late been advocated as a high ultimate ideal which should be a guiding light to our present action. We are not concerned to deny that future generations may look upon such a proposal with different eyes from our own, and may find it possible to reconcile it with the principle of *Cymru'n un*. On the other hand, we are not prepared lightly or frivolously to part with an ideal which to a large extent has been actually realized by the efforts of the generation whose work is our inheritance—that of the educational unity of Wales, a stimulus to progress and a check upon waste. . . .

In placing these considerations before you we do not desire to form a party or to crystallize a programme. We invite you to join with us in order to secure the enlightened discussion of these questions and to raise them above the personal and local issues with which they have been so unhappily entangled.

### A NATIONAL SYSTEM OF EDUCATION.

At the Thirteenth Annual Conference of the National Federation of Assistant Teachers, held at Hull (Sept. 29–30), Mr. F. W. Goldstone moved a resolution expressing the opinion of the Conference that a satisfactory solution of the education question in accordance with sound constitutional and educational principles can only be found in such an amendment of the law as shall secure for the country a national system of education based upon popular control, and freed from all tests but those of character and capacity.

The resolution, he claimed, justified them in the contention that, though they were class teachers, they were also educationists who were allying themselves with a national movement in education. They could not put primary education in a water-tight compartment, and keep it apart from secondary education; and they could not keep secondary education apart from University education. They must have a pyramid whose base was primary education, tapering to University education at the top. They desired a basis of education which would permit a well qualified teacher in a primary school to pass on to a secondary school, and that it should not always be necessary to have the hall-mark of the University as distinct from the hall-mark of ability and culture. There should be no class distinction. The day of denominationalism was gone, and the time had come when they must make provision that would satisfy the Jew, the Unitarian, and every type of denominationalists. If they did not accept that, there was one alternative, and that was that the State must finance all, and must make such provision that every scholar's parents might have the choice. It was either the State recognition of all or the State recognition of none. They looked for a change in the present Act which should make those that pay control the things they pay for. If a national scheme of education was to come, it must be not only by equalizing the opportunities for children, but by equalizing the cost to the ratepayers. To do that they would have to increase the amount drawn from the national Exchequer, as it seemed to him they could equalize things better through taxes than through rates. They were distinctly against any system of education which would tend to localize the teacher. As long as there was a big margin of local cost expended in the training of teachers, the training

district had the first call on the teachers they trained. They must also abolish the system which allowed promotion to go to those who were prepared to call themselves by a particular faith. That was a direct incentive for men to call themselves things they were not, and he thought the irreligious would be prepared to give themselves a denominational ticket in view of promotion that might come.

Mr. Carr seconded the motion, which was unanimously adopted.

Alderman Sir Alfred Guelder, Chairman of the Hull Education Committee, speaking at the Conference dinner, referred to this resolution, and thought they must have carried it unanimously. (Cries of "We did.")

He thought that was a very wise resolution. They were only asking that justice and fair play should be meted out to them in their profession. No teacher should be penalized for his religious convictions. Coercion, wherever it had been tried, had never been a success. It had often made hypocrites, but it had never produced men or women. Why should there be tests in their profession which there were not in others? Why, even in the National Church there was very little of tests! A clergyman might be an extreme Calvinist on the one hand, or a Ritualist bordering on Rome on the other hand, and yet not be excluded from his calling. They were told the results might produce a Godless education. He had sufficient faith in the teachers of the country to know they would not betray their trust, or teach the child anything which was detrimental to its highest and noblest and best interests. He would not speak to them as a party man, but would take a broader aspect. Politics had done more to injure the prospects of teachers than any other consideration. He said: Perish politics, and even perish party, and even suppress creeds, so long as the truth was taught, so long as nobility of character was inculcated in the minds of the children. The Churches and the Sunday schools would be the more ready to do their work when they felt the great responsibility of the religious life of the country rested upon themselves. There was no evidence in America or Scotland that the best interests of Christianity had suffered in any sense, and he did not think they would in this country, by the abolition of tests.

Concluding, Sir Alfred said that, in his opinion, teaching was equal to the noblest profession, and the teacher had even more to do with making empires than those who had gone to other shores to increase the domains of the British Crown.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on the 21st October. Present: Dr. Wormell, President, in the Chair; Prof. Adams, Mr. Barlet, Mr. Baumann, Rev. Canon Bell, Mr. Bowen, Mr. E. A. Butler, Mr. Charles, Miss Dawes, Mr. Easterbrook, Mr. Eve, Mr. Hawe, Mr. Holland, Dr. Lawrence, Rev. G. E. Mackie, Mr. Millar Inglis, Bishop Mitchinson, Dr. Moody, Mr. Morgan, Miss Punnett, Mr. Rule, Rev. Dr. Scott, Mr. Starbuck, Rev. J. Stewart, Mr. Storr, Rev. J. Twentyman, Mr. Vincent, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

Diplomas were awarded to the candidates who had passed the required examination (see List, page 472). The Prize of £5 for Natural Sciences was awarded to Mr. W. E. Whitehouse.

The report of the Finance Committee was adopted.

The report of the Examination Committee was adopted.

The present position of the Federation question was considered, and the further consideration of a proposal for the formation of a Joint Committee was deferred to the next meeting of the Council.

The following persons were elected members of the College:—

Miss E. O'M. Jeffkins, A.C.P., Marrowells, Springfield, Chelmsford.

Mr. T. P. Oakley, B.Sc. Lond., L.C.P., The Square, Bromyard, Worcester.

Mr. G. C. Rogers, Christ Church School, Bhusawal, Bombay.

Mr. S. E. Baynes-Smith, B.Sc. Lond., L.C.P., Holmo Leigh, Riddington, Notts.

The following books had been presented to the Library since the last meeting of the Council:—

By THE AGENT-GENERAL FOR NEW SOUTH WALES.—Annual Report of the Department of Mines, New South Wales, for the year 1904.

By EDWARD ARNOLD.—Henry's Livy, Book XXVI.

By G. BELL & SONS.—York Reader, Book IV.

By THE CLARENDON PRESS.—Herbertson's Junior Geography.

By W. B. CLIVE.—Matriculation Directory, No. XLI., September, 1905.

By METHUEN & Co.—Whiteley's Elementary Text-book of Inorganic Chemistry.

By RIVINGTONS.—Benbow's First Book of Latin Verse Unscens; Hartog's

Merimée's Mateo Falcone, &c.; Longland's Easy Latin Unscens, Book I.; Martin and Jones's Three Years' Course of Practical Chemistry (First and Second Years);

Prior's French Exercises; Ransome's Primary History of England.

Calendars of the University of Leeds, London School of Economics, University of Aberdeen, Victoria University, University of Birmingham, Royal College of

Surgeons of England.

Incorporated Accountants' Year-Book.

COLLEGE OF PRECEPTORS. TEACHERS' DIPLOMA EXAMINATION.

SUMMER, 1905.

THE Summer Examination commenced on the 29th of August and was held in London and at the following Local Centres:— Birmingham, Bourke (New South Wales), Bristol, Colchester, Hankow (China), Leeds, Liverpool, Manchester, Middelburg (Transvaal), Newcastle-on-Tyne, Oyo (West Africa), Plymouth, Sierra Leone, South Molton, West Hartlepool.

The total number of candidates examined was 400.

The following are the names of the candidates who passed in the various subjects: (*hon.*) attached to a name, or to a letter denoting a subject, indicates that the candidate obtained Honours in the subject:—

## REMUNERATION AND TENURE CONDITIONS OF TEACHERS IN SECONDARY SCHOOLS.

### MEMORANDUM BY THE TEACHERS' GUILD.

THE Council of the Teachers' Guild have, for some time past, viewed with anxious concern the short supply of men and women now entering the teaching profession, especially of those who possess good academic qualifications; and being convinced that this evil, if unchecked, is likely to carry with it serious consequences to the nation at large, they desire to invite attention to the following statement:—

#### INSUFFICIENT SUPPLY OF QUALIFIED TEACHERS.

It is in secondary schools that this deficiency in the supply of qualified teachers is most grave. The number of University graduates with good qualifications who offer themselves for vacant posts in these schools is wholly insufficient. The career of the teacher does not hold out adequate inducements to men and women of energy and intellectual capacity; the former, in an ever-increasing degree, are diverted into other professions which offer better and more assured prospects. There is a real danger that the shortage in the supply of teachers will be met by the acceptance of a lowered standard of intellectual equipment and general culture. Two main causes are, in the opinion of the Council, responsible for this state of things.

#### SALARIES ARE TOO LOW.

First, the salaries paid at present are too low as compared with the remuneration which prevails in other professions. Those who by a long, and in many cases expensive, course of preparation have been fitted for the responsible and exacting duties of the teacher, and upon whom great and growing demands are made both in the way of intellect and of character, may reasonably look for a life of modest comfort. But with the existing rates of payment even this prospect is too often absent; while any provision for the future is almost, if not altogether, beyond their means.

The Council accordingly suggest that the rates of salary should, as soon as possible, be the following:—

(1) For men, registered, or qualified for registration, in Column B of the Register of Teachers, and teaching in secondary schools,

an initial salary (non-resident) of £150, rising to a maximum of from £250 to £350.

(2) For women, correspondingly qualified, and teaching in secondary schools, the initial salary should be not less than £120, rising to a maximum of from £200 to £250.

Teachers with special qualifications, or occupying posts of special responsibility, should receive salaries on a higher scale. In fixing the salary of any teacher, previous experience should be taken into consideration. In the opinion of the Council these are the lowest terms that should be offered if teachers are to be found who will be fitted to carry out their responsibilities in the immediate future.

The Council are further of opinion that the salaries of assistant teachers should, in all cases, be fixed and paid directly by the governing body; also that when salaries are not paid by the term, or half-term, the contracts should be so drawn that the teachers should not suffer any detriment thereby, *i.e.* they should in all cases receive at the rate of a third of the annual salary for a term's work.

Provision should also be made for retiring pensions, both for heads of schools and for assistants, in all cases by joint contributions from teachers and governing bodies.

#### TENURE IS HIGHLY UNSATISFACTORY.

But, in the second place, it is not only the rate of remuneration, but also the conditions of tenure which are highly unsatisfactory. Under this head the Council hold to the views which they have already published. They are of opinion that, for the dignity and general welfare of the profession, and in recognition of the fact that an assistant teacher works for the community rather than for an individual, it is desirable that he or she should be *selected* by the head master or head mistress of a school for one (or two) years of probation, and, if recommended by the head master or head mistress for a permanent appointment, should be *elected* to it by the governing body of the school. Dismissal should be at the hands of the same body, and an appeal should lie either to the local educational body or to the Board of Education. An appeal should also lie to one or other of these bodies in the case of the dismissal of a head master or head mistress. The Council hold that, in all cases, both heads and assistants should be engaged under written and stamped agreements. Finally, they are of opinion that the clauses in the schemes of endowed schools whereby heads and assistants are dismissible "at pleasure" are objectionable, and that in their place should be substituted clauses designed to carry out the views already expressed by the Council.

# AN EDUCATIONAL TRIUMPH

The most comprehensive Text-Book of General Knowledge of To-day

## HARMSWORTH

## SELF-EDUCATOR

Complete in 48 Fortnightly Parts at 7d. each.

The importance of *practical* education is at length becoming more widely recognized. This is indeed fortunate, and none too premature. The great possibility of our being outstripped in intellectual advancement and commercial prosperity by other nations may yet be happily averted, for we have but to do what they have long since done—establish our educational system on a practical basis, so that it shall be adaptable to the pressing needs of modern business life.

It was with this purpose clearly in mind that the publishers of the HARMSWORTH SELF-EDUCATOR began their unprecedented task—to produce a monumental work of instruction in every known science, in every branch of general knowledge.

The need of a work such as this has long been felt. for the comprehensive studies now obligatory in the teaching profession have rendered the purchase of countless expensive text-books a matter of real difficulty. In whatever branch of study a teacher needs *authoritative* information, it will be found exhaustively treated in the HARMSWORTH SELF-EDUCATOR. It is

### THE SUM TOTAL OF THE WORLD'S KNOWLEDGE,

and, if regarded as a SUPPLEMENT TO OFFICIAL TEXT-BOOKS, will be found of real service; for, whereas these in many cases must fall short of *up-to-date accuracy*, every subject in the HARMSWORTH SELF-EDUCATOR embodies the *latest and most minute developments* of Industry and Commerce, Art, Science, Literature, &c., the whole of the work having been written within three months of its going to press.

By constant reference to the HARMSWORTH SELF-EDUCATOR, teachers will find a constant source of real freshness in their studies; it will stimulate their interest, and sustain their power of application—because it is an educational work that is absolutely in touch with the activities and life of to-day.

Space forbids a detailed list of the great specialists engaged in the production of the HARMSWORTH SELF-EDUCATOR. It must suffice to mention the name of JUSTIN MCCARTHY as author of *The World's History*, and that of Prof. SILVANUS THOMPSON, who deals with *Electricity*, and to say that the writers on every subject are of equal authority and repute.

All who have the interest of education at heart are strongly urged to avail themselves of this comprehensive, up-to-date, and scholarly work, which is within the reach of every one for the cost of  $\frac{1}{2}d.$  a day.

*A bright and stimulating Booklet describing the "Self-Educator" will be sent to every household in Great Britain on receipt of a post card, addressed—Publisher, 2 Carmelite House, London, E.C.*

### PART I. ON SALE EVERYWHERE.

BUY IT TO-DAY, and order the Parts to be delivered regularly.

# MACMILLAN & CO.'S LIST.

FOURTH EDITION, REVISED AND ENLARGED. NOW READY.

## ELEMENTARY TRIGONOMETRY.

By H. S. HALL and S. R. KNIGHT. Globe 8vo, 4s. 6d.

This edition is adapted to all the modern requirements. In particular, it contains Graphs of the Trigonometrical Functions, and Examples of their use. A special feature is the large number of Examples in illustration of Four-figure Tables. Tables of Logarithms, Antilogarithms, Natural and Logarithmic Functions (specially compiled) are given at the end of the book. \*\*\* The old edition is still on sale.

NEW BOOK BY SIR OLIVER LODGE.

## EASY MATHEMATICS: Chiefly Arithmetic.

Being a Collection of Hints to Teachers, Parents, self-taught Students, and Adults, and containing a Summary or Indication of most things in Elementary Mathematics useful to be known.

By SIR OLIVER LODGE, F.R.S., D.Sc., Principal of the University of Birmingham. Crown 8vo, 4s. 6d.

SEVENTH EDITION. REVISED AND ENLARGED.

THE ELEMENTARY PART OF

## A TREATISE ON THE DYNAMICS OF A SYSTEM OF RIGID BODIES.

Being Part I. of a Treatise on the whole Subject.

By EDWARD JOHN ROUTH, Sc.D., LL.D., F.R.S., &c. With numerous Examples. 8vo, 14s.

## ELEMENTS OF QUANTITATIVE ANALYSIS.

By G. H. BAILEY, D.Sc., Ph.D. Globe 8vo.

[SHORTLY.]

A NEW SERIES.

## Siepmann's Classical French Texts.

FIRST VOLUME READY SHORTLY.

LES CARACTÈRES OU LES MŒURS DE CE SIÈCLE. Par LA BRUYÈRE. Adapted and Edited by EUGÈNE PELLISSIER. Globe 8vo.

# BOARD OF EDUCATION NEW REGULATIONS.

## GEOGRAPHY FOR SECONDARY SCHOOLS.

Ready immediately. Globe 8vo.

AN INTRODUCTION TO PRACTICAL GEOGRAPHY. By A. T. SIMMONS, B.Sc., Associate of the Royal College of Science, London, and HUGH RICHARDSON, M.A., Senior Science Master of Bootham School, York.

\* \* \* The Exercises in this book include the practical work suggested in the New Regulations issued by the Board of Education.

PHYSIOGRAPHY. By T. H. HUXLEY. Revised by Prof. R. A. GREGORY. 4s. 6d.

SCOTT'S THE TALISMAN. Abridged. Edited by F. JOHNSON. [Shortly.]

TALES FROM SPENSER. Chosen from "The Faerie Queen" by SOPHIA H. MACLEHOSE. School Edition, with Introduction, Notes, &c. 1s. 3d.

A BOOK OF GOLDEN DEEDS. Of all Times and all Lands. Gathered and Narrated by CHARLOTTE M. YONGE. A Selection, Edited, with Introduction, Notes, Glossary, &c., by HELEN H. WATSON. Part I. 1s.

MACAULAY'S ESSAY ON SIR WILLIAM TEMPLE. With Introduction, Notes, &c., by G. A. TWENTYMAN, B.A., Assistant Master at Manchester Grammar School. 1s.

MACAULAY'S ESSAY ON ADDISON. Edited by R. F. WINCH, M.A. [Shortly.]

Others to follow.

EDUCATION.—"We greet this excellent series with hearty welcome. It satisfies a distinct and long-felt want, and is adapted in every way for the purposes of securing a first-hand acquaintance with the works of great authors. . . . We have no hesitation in adjudging this the best series at present on the market."

MACMILLAN & CO., LIMITED, LONDON.

## Elementary Greek Grammar

FOR SCHOOLS. By JOHN THOMPSON, M.A., formerly Scholar of Christ's College, Cambridge; Senior Classical Master at The High School, Dublin.

PART I., ACCIDENCE, 1s. 6d. PART II., SYNTAX, 1s. 6d. COMPLETE, WITH FULL INDEXES, 3s.

The object of this book is to give in a form suitable for beginners the elements of Greek Grammar. Owing to the great importance of the appeal to the eye in the case of young students, special attention has been paid to the type and arrangement of the printed matter. Attic Greek only has been included, and the usages of poetry distinguished throughout from those of prose. Unnecessary and unusual forms have been left out, and the author has endeavoured to state all the requisite facts both of accidence and syntax in the clearest possible manner. At the same time advantage has been taken of the developments of modern scholarship, so that the work may be thoroughly up to date.

## School History of England 3s.

An Outline History for Middle Forms. From the Earliest Times to the Death of Queen Victoria. By Miss M. A. TUCKER, formerly Marion Kennedy Student at Newnham College, Cambridge. With many Coloured and other Maps, Plans, Tables, &c.

"... boldly printed and equipped as a durable and handsome volume of convenient size. The author... seems to have kept well in mind the praiseworthy ideal of stimulating the student's curiosity, instead of adopting the ambiguous view or the dogmatic manner of most text-books of this class. She covers her periods from before the Roman invasion to the end of the Victorian era with a sense of proportion and a strain of excellent prose, and the armory of index, genealogical tables, and chronological lists at the end completes a shapely and very worthy piece of work."—*Pall Mall Gazette*.

## English Grammar 2s. 6d.

With Exercises and Examination Papers. By T. D. HALL, M.A. THIRD EDITION, REVISED AND ENLARGED.

The new edition has been thoroughly revised and brought up to date. The chapters on the classification of languages, sound shifting, and the historical development of English have been entirely re-written, and embody the most recent philological discoveries. The whole text has been re-set in a clear and striking type.

"The work of revising this new edition has been well done."—*School World*.

## A Primer of Logic 1s. 6d.

By E. E. CONSTANCE JONES, Mistress of Girton College, Cambridge. With Examination Papers, Diagrams, Tables, &c.

This is the latest addition to Mr. Murray's Series of Primers. It is an attempt to supply, at a price within the reach of everybody, a trustworthy book on the elements of LOGIC—a subject which is being more widely studied every day. Those who wish to use the book for examination purposes should find great assistance from the papers included. Other Volumes in the Series are—PHILOSOPHY, by A. S. RAPPOPORT; PHYSIOLOGY, by E. H. STARLING; and THE USE OF WORDS, by Miss KINNEAR.

## Mechanics 5s.

An Intermediate Course. By A. W. PORTER, B.Sc., Assistant Professor of Physics in University College, London. With Examples, Examination Papers, and numerous Diagrams. Crown 8vo.

## Practical Arithmetic

An Introduction to Elementary Mathematics. For Scholars between the ages of Nine and Twelve. By A. CONSTERDINE, M.A., and S. O. ANDREW, M.A., Head Master of Whitgift Grammar School, Croydon. Fcap. 8vo, complete, 2s. Part I., 1s.; Part II., 1s. TEACHERS' EDITION, with Answers and Index, 2s. 6d.

"We... welcome most cordially this volume on Practical Arithmetic... We are convinced that, if this method is adopted, the teacher will find greater interest aroused among his pupils, and a firmer grasp of the principles. This is no surmise, but the outcome of actual experience."—*Preparatory Schools' Review*.

"... quite a new book among new books."—*Education*.

THE RUDIMENTS OF

## Practical Mathematics 2s. 6d.

By A. CONSTERDINE, M.A., and A. BARNES, M.A. With Diagrams, Answers, and Index. Fcap. 8vo.

"... is a very excellent treatise, intended more particularly for students above twelve years of age who are preparing for industrial pursuits... is well adapted to its purpose, and its wide adoption would have a very beneficial effect."—*Nature*.

JOHN MURRAY, ALBEMARLE STREET, W.

Situations Vacant and Wanted—30 words or under, 2s.; each additional 10 words, 6d. (For 1s. extra, Replies may be addressed to the Publishing Office, and will be forwarded post free.)

### CURRENT EVENTS.

At the Members' Meeting of the College of Fixtures. Preceptors, on November 15, at 7.30 p.m., Mr. Francis Storr, B.A., will give a lecture on the following subject:—"To whom shall we teach Latin and Greek, and how shall we teach them?"

\* \* \*

M. L'ABBÉ MARGUERÉ will address the Société Nationale des Professeurs de Français en Angleterre on "Lacordaire" at the College of Preceptors, on November 25, at 4 p.m.

\* \* \*

MEETINGS of the Parents' National Education Union will be held: November 13 (3.30 p.m.), at 49 Harley Street, when Lady Campbell will read chapters from "Home Education"; and November 23 (5 p.m.), at 77 Gloucester Place, when Dr. Savage will lecture on "Backward Children."

\* \* \*

THE Teachers' Guild will discuss "What is the Educational Effect of Fairy Tales and Legends?" at a Central Guild meeting on November 17; and will continue the discussion of the question, "Should Infant Schools be continued as a compulsory section of Education?" at 74 Gower Street on November 28.

\* \* \*

At an ordinary meeting of the Sociological Society, at the School of Economics and Political Science (Clare Market, W.C.), on November 20, at 8 p.m., Mr. A. E. Crawley will lecture on "The Origin and Function of Religion." At a research meeting on November 23, at 4 p.m., Dr. J. L. Tayler will discourse on "The Study of the Individual."

\* \* \*

THE lectures and discussions arranged by the Childhood Society and the British Child-Study Association, to be delivered in the Parkes Museum, Margaret Street, W., during the month, are: November 2 (8 p.m.), "A Quantitative Study: Children's Attitude toward History," by Prof. Earl Barnes, M.A.; November 9 (8 p.m.), "Speech Training of Feeble-minded Children," by M. Friederberger, Ph.D.; November 16 (8 p.m.), "Physiological Child Life," by Prof. W. D. Halliburton, M.D., F.R.S.; November 30 (8.15 p.m.), "Training of Teachers for the Care of the Feeble-minded," by Francis Warner, M.D., F.R.C.P.

\* \* \*

THE Moral Instruction Circle (19 Buckingham Street, Strand, W.C.) will hear a Moral Lesson (subject, "No!") by F. W. Rowe, on November 13 (7 p.m.); and will hold a conference on Mr. E. H. Griggs's book "Moral Education," on November 27 (7 p.m.).

\* \* \*

THE L.C.C. free popular Saturday (4 p.m.) lectures for the month at the Horniman Museum (London Road, Forest Hill, S.E.) will be: November 4, "Domestic Life of Animals," by Mr. F. Slade; November 11, "Mimicry and Protective Odours in Animals," by Mr. F. Slade; November 18, "Man and his Relations," by Dr. Harrison; and, November 25, "Mountains and their Plant Life," by Mr. E. Lovett. Tickets, limited to about 60 each lecture, to be obtained at the Museum entrance after 2 p.m. on lecture day, and 2-9 p.m. on day preceding.

PROF. DAVID EUGENE SMITH, Ph.D., of Honours. Teachers' College, Columbia University, has received the degree of LL.D. from Syracuse University in recognition of his services in improving the teaching of mathematics in America.

"Prof. Smith [says the *School Journal*] is librarian of the American Mathematical Society, and is a member of the committee of publication of the English Mathematical Association and of the German Mathematiker-Vereinigung. He is also mathematical editor of the new 'International Encyclopedia.' He is deeply interested in the historical side of the science. Recently he purchased the library of Prof. Ferdinando Jacobi, of Venice, which he has added to his own collection for the use of his students. He has also made available for study a rare collection (the largest of its kind) of portraits and manuscripts of celebrated mathematicians. It includes letters of Leibniz, Euler, the Bernoullis, Legendre, Laplace, Monge, and many others of equal rank, together with a brief manuscript of Newton." He has written numerous textbooks and treatises, "The Smith Arithmetics" being very widely used.

\* \* \*

MR. CECIL BENDALL, M.A., Professor of Sanskrit in the University of Cambridge, previously Professor of Sanskrit in University College, London, and some time assistant in the Oriental Department of the British Museum, has been elected to an honorary Fellowship of Gonville and Caius College, Cambridge.

\* \* \*

SIR H. ISAMBARD OWEN, M.A., M.D., F.R.C.P., Principal of Armstrong College, Newcastle-upon-Tyne, Senior Deputy Chancellor of the University of Wales, &c., has received the honorary degree of D.C.L. from the University of Durham.

#### Endowments and Benefactions.

MR. T. H. YATMAN, M.A., Bournemouth, has founded at Gonville and Caius College, Cambridge, an exhibition of about £30 a year, for a student for holy orders. It is not to be awarded by competitive examination.

\* \* \*

THE Council of University College, Dundee, have declined Mr. J. K. Caird's gift of £16,000 for the erection of a Physical Laboratory on the College grounds, judging Mr. Caird's conditions to harmonize neither with the needs of the College nor with the general plan of building construction.

\* \* \*

MR. CARNEGIE has given 25,000 dollars towards a fund of 100,000 dollars for establishing a Chair of Political Economy in Western Reserve University in memory of the late Mr. Mark Hanna.

\* \* \*

THE late Dr. Goburreck, a German medical man, has left 250,000 marks (£12,500) to assist women students of medicine. The interest is to be lent free.

#### Scholarships and Prizes.

A COMBINED examination for 62 entrance scholarships and various exhibitions will begin at Pembroke, Gonville and Caius, King's, Jesus, Christ's, St. John's, and Emmanuel Colleges, Cambridge, on December 5 next. Pembroke: 2 scholarships of £80, 3 of £60, and 4 of £40. Gonville and Caius: 2 scholarships of £80, 3 of £60, and 5 of £40. King's: 2 scholarships of £80, 2 of £60, 3 exhibitions of £40, and 5 Eton Foundation Scholarships, open to all candidates receiving education at Eton School, whether on the foundation or not. Jesus: 2 scholarships of £80, 2 of £60, and 4 of £40. Christ's: 1 scholarship of £80, 3 of £60, and 3 of £40. St. John's: 3 scholarships of £80, 5 of £60, and 3 of £40. Emmanuel: 1 scholarship of £80, 3 of £60, 4 of £40, and 2 subscholarships (no age restriction). Candidates must be not over 19 on October 1, 1905. Forms of application and

further information from Mr. W. S. Hadley (Pembroke), the Master (Christ's and Emmanuel), Mr. W. H. Macaulay (King's), Mr. A. Gray (Jesus), Rev. J. W. Cartmell (Christ's), Dr. Donald MacAlister (St. John's).

\* \* \*

EMMANUEL COLLEGE, Cambridge, offers a studentship of £150 for research in any branch of study, open to graduate members of the University not over 28 on January 1, 1906. Apply to the Master by November 20.

#### Appointments and Vacancies.

DR. CHARLES LANCELOT SHADWELL, D.C.L., honorary Fellow, has been elected Provost of Oriel College, Oxford, in succession to the late Dr. Monro.

Dr. Shadwell, who is a grandson of the late Vice-Chancellor Shadwell, was a Queen's Scholar of Westminster and a student of Christ Church; took his degree in 1863, First Class in Moderations and in Finals; and became a Fellow of Oriel in 1864. On resigning the Fellowship, he was made an honorary Fellow of the college. He was for a number of years Law Lecturer and Treasurer of the college, and was Proctor in 1875. He was called to the Bar in 1872. He is a Fellow of Winchester College, Controller of University Lodging Houses, Delegate of the Press, Curator of the University Chest and of the Botanic Garden. He is the author of numerous publications, among them "Select Titles from the Digests" (edited with Professor Holland), "Registram Oriense," and a verse translation of the "Purgatorio" of Dante, and has edited various works of his friend the late Mr. Pater. Dr. Shadwell is an alderman of the city of Oxford.

\* \* \*

THE Council of King's College have made the following appointments to fill up vacancies and to increase the staff:—The Rev. H. J. White, M.A., Fellow of Merton College, Oxford, to be Professor of New Testament Exegesis, in succession to Canon Knowling; Mr. E. P. Harrison, Ph.D., B.A., and Mr. H. S. Allen, M.A., B.Sc., Assistant Lecturers in Physics; Mr. C. F. Russell, B.A., Assistant Lecturer in Mathematics; Mr. L. Hinkel, Assistant Demonstrator in Chemistry; Mr. W. Woodland, Demonstrator in Zoology; Mr. O. S. Sinnatt, B.Sc., and Mr. R. Wolfenden, B.Sc., Demonstrators in Engineering; Mr. J. E. S. Frazer, F.R.C.S., transferred from St. George's Hospital to King's College as Demonstrator in Anatomy.

\* \* \*

AT Manchester University, Mr. C. G. Hewitt, B.Sc. Man., has been appointed Assistant Lecturer and Demonstrator in Zoology; and Mr. A. Stephenson, B.Sc. Wales, Lecturer in the Technical College, Sunderland, Assistant Lecturer in Mathematics.

\* \* \*

AT University College, Cardiff, the following appointments have been made:—Lecturer in Political and Commercial Science, Mr. Thomas Jones, M.A., Glasgow; Assistant Lecturer in Latin, Mr. G. A. P. Davies, Universities of Wales and Oxford; Assistant Lecturer in English, Mr. Arnold W. Smith, University of London; Assistant Lecturer in the Normal Department, Mr. C. Birchenough, B.A. Oxford; Assistant Lecturer in History, Mr. E. Hughes, University of Wales; Assistant Lecturer in French, M. Maurice Lenoire, University of Bordeaux; Assistant Lecturer in Zoology, Mr. G. H. Berlind, B.A., Universities of Cambridge and London; Administrator and Assistant Lecturer in Geology, Mr. A. Longbottom, University of Cambridge.

\* \* \*

SIR J. HALLIDAY CROOM, M.D., has been appointed to the chair of Midwifery in the University of Edinburgh, in succession to Prof. Simpson.

\* \* \*

THE REV. C. A. B. BROCKWELL, M.A. Oxon., Curate of Cheshunt, has been appointed to the new Alexandra Professorship of Divinity in the University of King's College, Nova Scotia.

MR. A. E. CHAPMAN, LL.D., M.A., has been appointed Lecturer in Law in the University of Leeds.

\* \* \*

MR. J. M. ANGUS, M.A. Cantab., Professor of Latin and Comparative Philology in the University of Wales, Aberystwyth, succeeds Mr. Ivor James as Registrar of the University of Wales.

\* \* \*

MR. A. G. COOKE, M.A., Head of the Electrical Department, Battersea Polytechnic, has been appointed Principal of the Paddington Technical Institute.

\* \* \*

DR. ALEXANDER MCKENZIE, M.A., D.Sc. St. Andrews, Ph.D. Berlin, Lecturer and Senior Demonstrator in the University of Birmingham, has been appointed Head of the Chemical Department at the Birkbeck College, in succession to Dr. John E. Mackenzie, D.Sc. Edin., Ph.D. Strassb., who has accepted the appointment of Principal of the Technical Institute, Bombay.

\* \* \*

MISS ALICE B. REID, B.A. Lond., of Cheltenham Ladies' College, has been appointed Head Mistress of the High School for Girls, Glasgow, in succession to Dr. Milligan.

Miss Reid was educated at the North London Collegiate School, and at Bedford College, London, was a mistress in the Bromley High School (Girls' Public Day School Company), and was a lecturer in the Darlington Training College before passing to Cheltenham.

\* \* \*

SIR FOSTER H. E. CUNLIFFE, Bart., M.A., Fellow of All Souls', has been elected Lecturer on Military History in Oxford University.

\* \* \*

MISS ROBERTS, who has had six years' experience at the Physical Training College, Halesowen, Worcestershire, and the South-Western Polytechnic, London, has been appointed Warden of the College Hostel, Dumfermline.

\* \* \*

MISS A. M. FERGUSON, Edinburgh, has been appointed Organizing Inspector of Domestic Subjects under the Somerset Education Committee.

\* \* \*

REV. F. A. HIBBERT, M.A. (Cantab.), Head Master of Worksop College, has been appointed Head Master of Dentstone College.

\* \* \*

MR. G. H. CLARKE, M.A. (Cantab.), second master at Hymers College, Hull, has been appointed Head Master of Acton County School.

\* \* \*

MR. T. R. BURNETT, B.Sc. (Viet.), Ph.D. (Basel), assistant master at Lincoln Grammar School, has been appointed Head Master of Kirkby Lonsdale Grammar School, Westmorland.

\* \* \*

MR. R. S. W. HAYDON, M.A. (Cantab.), second master at Dewsbury Grammar School, has been appointed Head Master of Helston Secondary School, Cornwall.

\* \* \*

MR. R. NORWOOD, B.A. (Dublin), assistant master at Isleworth County School, has been appointed Head Master of Lutterworth Grammar School.

Literary Items. *Het Schoolblad* (Groningen) of October 3 has a very interesting supplement containing the full official report of the proceedings of the sixtieth General Meeting of the Netherlands Teachers' Association (*Handelingen der Zestige Algemeene Ver-*

*gadering van het Nederlandsch Onderwijzers-Genootschap*) held at Amsterdam, July 24, 25.

\* \* \*

MR. HENRY FROWDE, of the Oxford University Press, has taken over "The World's Classics"—a series of 65 volumes, and is preparing to add largely to the number. He has also acquired "The Boys' Classics" and "The Parson's Handbook" series.

\* \* \*

MESSRS. A. & C. BLACK issue a fresh volume of Indian travel—"India of To-day," by Mr. Walter Del Mar.

\* \* \*

IN connexion with the Trafalgar Centenary, Messrs. Sampson Low, Marston, & Co. are re-issuing a 6d. edition of the late R. D. Blaekmore's "Springhaven," a tale of the great War.

\* \* \*

MR. FISHER UNWIN is publishing a series of German Classics, with introduction and notes, in neat and attractive form: Goethe in 16 volumes, Schiller in 8, Heine in 7. To be sold in sets only.

\* \* \*

"THE Country Press" (17 and 19 Ball Street, Kensington, W.) has been established with the special object of publishing moderately priced volumes "on all matters relating to the country and to country pursuits." The first publication will be a reissue of Mr. Francis George Heath's "The Fern Paradise"—an "author's edition"—in less expensive form.

\* \* \*

THE "Harmsworth Self-Educator" is spaciously designed "to provide courses of instruction in every conceivable branch of useful knowledge." "All knowledge and industry is divided into 29 groups," each with numerous subdivisions; and "each subject, or each section of a subject, is the work of an expert." The list of contributors contains many names of eminence; yet nothing in the work is to be "above the head of the average man." It is to be issued in 48 fortnightly parts.

\* \* \*

"LIFE at Loretto School" is excellently illustrated in the *October Captain*.

General. THE London County Council are opening classes this session for the teaching of Irish Lace-making and Design at the Central School, 316 Regent Street, W., and at the Hammersmith School of Arts and Crafts, as well as at the Royal Female School of Art, 43 Queen Square, Bloomsbury.

\* \* \*

PROF. CASE, the new President of Corpus Christi College, Oxford, is rebuilding partially his official residence. "A learned quip," says an Oxford correspondent of the *Manchester Guardian*, "is going the round of Oxford, as from the President of Magdalen, to the effect that Dr. Case was beginning, as a Professor of Moral and Metaphysical Philosophy very properly should, 'by constructing Major Premises.'"

\* \* \*

WE bring together two paragraphs from the *School Journal*. September 16: "More than forty of the Chicago women teachers were married during vacation." September 23: "The Jersey City (N.J.) Board of Education has rescinded the rule that forbids the employment of married women as teachers in the city schools. This was done because of the growing lack of competent teachers in the public schools."

\* \* \*

THE number of boys at Eton this term under the new Head Master, it is stated, is greater than ever before.

### THE MAP IN THE CLASS-ROOM.

At the Evening Meeting of the members of the College of Preceptors on October 18, Mr. JAMES WILSON, M.A., in the Chair, Prof. J. W. ADAMSON, B.A., read a paper on "The Map in the Class-Room." He said:

A well known book on teaching asserts that "in reading and writing there is at least a sequence of difficulty, in grammar and arithmetic a philosophical sequence, and in history the sequence of chronology; *but in geography there is no sequence at all.*" With this dictum of a popular authority may be compared the belief, sometimes expressed and very frequently acted upon, that geography is taught to assist learners in the reading of newspapers. Views such as these sanction a casual sort of instruction not quite destitute of value, but where they direct practice there can be no real teaching of geography.

The proper place for this desultory kind of work is in a stage preliminary to geographical teaching, and its purpose is to touch imagination and to arouse a sympathetic curiosity concerning the men and the lands "beyond the mountains." The staple of it will be made of stories of travel, descriptions of foreign customs, of striking examples of the operation of natural forces; everything being vivified by pictures and the like illustrations. Whether this is work for the school depends on circumstances. Obviously it is best done *obiter* and in the home. But some homes just as obviously afford neither inspiration nor material for intelligent intercourse of this kind; and such homes are not confined within narrow social limits. For the children who come from them, there is the desultory teaching, the imaginary journeys, and the benevolent, loquacious uncle of the "Geographical Reader"; but such divagations are not geography, and they are suitable only for the younger pupils.

#### THE FUNCTION OF THE MAP.

It is the map which makes true geographical teaching possible, which gives sequence, coherence, and unity to the instruction. For what is to be learned from a good map, beyond the position and size of a country and such of its political divisions as are of significance in the pupil's education? A good map depicts the configuration of the surface, the characteristic slopes and their allied water-systems, the physical character of the sea-coast or of the land-frontier, the distribution of population and the direction of the lines of communication between one centre and another. Even climate, natural productions, industries, and commerce are foreshadowed, though not stated. The good map displays the morphology of a region; and mastery of the morphology, with the corollaries as to human activity, make up the study of geography. The good map is the best of geographical texts, to which the ordinary text-book can only be subsidiary. For the most part, the text-book is best employed when it is used as a succinct re-statement of what has been learned elsewhere; those are text-books above the ordinary level which throw light upon problems raised in the course of a close study of the map. In short, his map is to the geographer what his "subject" is to the anatomist: the dissection of maps is in a large measure the study of geography.

In comparison with this use of the map, the mere discovery of names on its surface is a triviality. The point was thus expressed long ago by a great geographer: "I am convinced that no German child of ten, after a two years' course in physics and geography, is in a position to find his way by means of a plan without losing himself in his father's garden; yet these are the learned little people who know where lie Pekin, Ispahan, Mexico, and all the countries of the world."

#### THE KINDS OF MAP REQUIRED.

The term "the good map" does not mean that one kind of map will meet all requirements. For school purposes maps may be divided into three great classes, each being distributed into such sub-classes as physical, political, historical, economic, &c. The first great class would consist of topographical wall maps for the use of the more advanced pupils, the second of wall maps prepared for a more elementary stage, and in the third class would be included sketch maps and similar diagrammatic representations made by the teacher, with "blank" or outline maps ("dumb maps" as foreign teachers call them) which are filled in as occasion demands.

The well known work on method quoted at the opening of this paper has probably done much harm to the teaching of geography through its ill-considered statement that "the best

maps are outline maps on a large scale without names; and best of all those which are drawn in outline by the teacher himself on a blackboard and filled in item by item." The author, perhaps, did not expect that his statement would be taken absolutely. But there is evidence that his words encourage a belief in the transcendent value of hastily improvised maps and a neglect of the indispensable good topographical map, which, of course, cannot be improvised. The map which serves best for teaching represents physical features with fulness: given such a representation, it is a mere exercise for the pupils to infer much that is set down in their text-books. But these exercises are only possible for those pupils who habitually regard a map as a conventional mode of representing a region, not in two dimensions, but in three: not only length and breadth, but height also, are read by these pupils, with scarp and counterscarp and the relative steepness of different parts.

How best to awaken this consciousness of relief is one of the difficult problems of the school map maker. Experiment seems to show that the most satisfactory solution is found in the adoption of different devices for different classes of map. Taking the three great classes just enumerated, for the earlier stage of geographical teaching the map is best when it most nearly resembles a model in relief. This form may be secured either by means of a photograph of an actual relief, or by colour arranged to show average elevation, all ground whose height is, for example, between 1,000 and 1,500 ft. being painted one colour, and so on. Both plans are now fairly familiar in our class-rooms. But such representations of contour are not sufficiently accurate nor detailed for the more advanced work which has been called "dissection." The maps required at this later stage should convey the impression of relief by means of contour lines, as is done in the maps of the Ordnance Survey. It is possible, of course, to combine in the same map the use of contour lines and of light and shade representing configuration. The fine Federal map of Switzerland by Kümmerly is a triumphant example of this combination, which is also a feature of the Siegfried atlas so popular amongst Alpine climbers. Some of the maps recently issued by the Ordnance Survey for school use show the same combination.

Sir Archibald Geikie has condemned the use in junior classes of maps which mark differences of elevation by change of tint, on the ground that they are "so glaringly diagrammatic"; on the other hand, he thinks that they "are useful in teaching more advanced pupils who have already learnt the meaning and use of the map." Whoever ventures to differ from Sir Archibald on such a point must do so with great diffidence. But it is important to regard the matter from the boy's standpoint. His eye must be trained from the first to see in the map not only length and breadth, but height or depth also; and this is so important that it should be secured even at the cost of some early mistakes consequent on exaggerations of uniformity in level inseparable from the diagrammatic coloured map. The severe method of contour lines is in itself too abstract in its conventions to appeal to the younger pupil, in spite of the fact that it is truer to Nature than is the other method. Here, as always, the teacher does well to be content with a stage of less precision at the outset, provided no glaring perversions follow. On the other hand, it would seem superfluous to engage the attention of the pupil who has "already learnt the meaning and use of the map" with the less exact coloured type.

The two classes of map so far described are wall maps, the work of professional cartographers. In such maps the use of thick black lines to indicate mountain-ranges is greatly to be deprecated, as these hard lines only confirm the erroneous notions of those who are unfamiliar with regions of great altitude. But in the third class of map, the sketch by teacher or pupil on blackboard, or paper, the thick line may be employed to represent the watershed, when the pupils are advanced enough to appreciate its abstract character. Caterpillars or herring-bones masquerading as *hachures* only confuse when used in sketch maps.

#### SKETCH MAPS.

Not everything which belongs to the geography of a region should be crowded into one and the same map. A map of Germany, published in Berlin, employs thirty-five colours, or arrangements of colour, and thirty-eight different marks showing differences in towns, rivers, &c. The intention is to convey information concerning the agriculture, industry, and commerce of the country: the effect must, in many cases, be bewilderment only. Thus, each of the classes of map enumerated must have

its sub-classes, and the sketch map, highly diagrammatic and, therefore, unsuited to young learners, is justified as a means of emphasizing a particular group of facts for older pupils. But, inasmuch as physical features are the basis of the study, all varieties of map should at least indicate configuration, even though roughly. A railway map which omits every token of rising ground belongs to a type radically bad for the class-room. Adherence to this rule will limit the employment of improvised blackboard maps. What is needed is a supply of prepared outline and configuration maps, the work of teachers and pupils, or of publishers, in which the sketch can be drawn in chalk and kept or erased as occasion may require.

#### COLOURING.

It should be the aim of the colouring to bring out the physical rather than the political facts: the contrary is a peculiarity of British practice. The true map of our islands is unfamiliar to English schoolchildren, because it lies concealed beneath the elaborate tinting of the county divisions, whose boundaries are often of more historical than geographical significance. A complete contrast to this kind of map is the Federal map of Kümmerly already mentioned.

To these *desiderata* of a good map may be added this, that every published map should bear the date of the survey on which it is founded, as well as the date of its publication or reprint. The maps of the Ordnance Survey now carefully supply such details.

It will be objected that maps such as described are not supplied by the publishers, and that the Ordnance Survey maps do not include foreign lands. But whose fault is it that publishers do not furnish the best apparatus for geographical teaching? A country, we are often told, has the government, or the system of education, or the newspaper press, which it deserves: teachers get from publishers the maps which they demand. Once convince the publishers that such and such maps are really required in schools, and the maps will be produced. The extraordinary improvement in road maps to meet the demands of cyclists is sufficient proof of this; how great the improvement which will follow the demands of the motor driver can scarcely be guessed. The truth is that teachers themselves must accept the responsibility for the badness of the average school map.

What have been named above two great classes of school maps correspond with two great stages in the pupil's progress. In the first the aim is to get boys and girls to understand maps; in the more advanced stage, or geography proper, maps are dissected. The elementary stage begins in home geography, it being understood that the preliminary appeal to sympathy and imagination is also maintained. What should form the material of the lessons in home geography is, of course, a very familiar consideration. The local configuration, with its dependent water-system, elementary notions concerning the measurement of time (day, month, season), of weather and climate; according to circumstances, the distribution of inhabitants, buildings, vegetation, fauna; the local occupations, means of communication by river, canal, road, rail. Throughout the course, the employment of direct observation of Nature is the cardinal principle, and many geographical ideas are thus gained at first-hand.

#### HOME GEOGRAPHY AND ANALYSIS OF MAPS.

The making of plans, always with an eye on the locale, is the beginning of the pupil's study of maps; and of plan-making the three chief notions to be acquired by the school boy are the difference between a plan and a picture, the ideas of scale and of direction. Some out-of-doors work is essential, not only to note changes in surface-level, but also to observe the Sun's apparent movement and to practise the use of the compass. The narrow range of the playground scarcely gives scope enough; the open country is the best field of operation. Most Londoners are within reach of Hampstead Heath or Epping Forest or the Surrey or Kentish commons, and it is the town-bred child whose attention most requires to be fixed upon the Sun's movements, or to be shown what a serviceable thing a pocket compass is.

The general practice seems to be to commence with plans, so-called, of the schoolroom and school premises, passing on to the immediate surroundings of the school-house. The practice may be defended as one which assists children in grasping the notion of a plan; but, since neither class-room nor school-house is a geographical fact, no more time than is absolutely necessary for this purpose should be expended upon their representation, and the approach to the map form should be hastened. The true

benefit of this kind of work is only secured when the ground covered by the plan extends some little distance from the school as centre, but not so far as to lie beyond easy walking distance. Much of the early plan making will be done upon the blackboard, teacher and pupils collaborating in setting down the results of their observations out of doors. Drawing by the scholars will be less frequent. These exercises will provide opportunities for learning the meaning of the conventional signs most commonly used in maps.

As the ground represented becomes more extensive, these blackboard drawings become rough maps of the district; they will be the better adapted to the purpose of this stage of the teaching if they delineate not a mere administrative area, but a miniature geographical region. A rough map of the basin of a small stream and its affluents will teach a great deal more geography than can one of a local government district, which either exhibits the minimum of topographical change or is made up of scraps of several different geographical "units."

This would seem to be the point at which children may with profit first be introduced to the rough model in relief which sometimes makes a premature appearance in the class-room. The knowledge of the topography which they have acquired out of doors, and the practice in delineating it in their plans, will give an actuality to the relief, provided the disparity between its horizontal and vertical scales be not too great; on the other hand, the making of a model, or watching its making, will, in these circumstances, prove helpful to the scholar in his attempts to understand the meaning of a map. But moulding little sugar-loaves and making a mess with watering-pot and sand-tray without reference to anything outside the schoolroom never yet conveyed a geographical idea to any one, though they have, no doubt, hindered many.

So soon as the pupils can appreciate the rough map, the time is ripe for the introduction of the Ordnance map of the district, which should thenceforth largely replace the less accurate representation. Sir Archibald Geikie suggests that the teacher whose scholars are ready to make the transition from plan to map should bring before them in succession the 25-inch parish map, the 6-inch county map, and the 1-inch general map, attention being fixed upon the shrinkage of the parish area as the scale gets smaller. The suggestion is realized in an atlas, very popular in Swiss schools, which by means of a dozen drawings on one page shows this particular effect of the diminution of the scale. First is shown the immediate neighbourhood of a well known Zurich school on a scale of 1 in 2,500, then follow town plans on scales of 1 in 10,000, 1 in 25,000, 1 in 50,000, in the last of which the school and its environment cease to be separable. Then come eight small maps whose scales run from 1 in 100,000, where we have Zurich and the lower end of its lake, with roads in the country and the main arteries of the city, up to 1 in 40,000,000, where Zurich is but a dot in Central Europe.

In the earlier steps it will be advisable occasionally to place the class-room map in a horizontal position, and it is a good thing to orient it by the compass; both devices are matters of course in the open-air lessons which, it is assumed, are still continued. The close conning of the map in association with observation of the country mapped is the fruitful soil of later geographical study.

With the county Ordnance map, or some of its sheets, or with the Ordnance general map, the pupils should become thoroughly acquainted, learning the import of such of the more generally employed signs as they did not learn from their plan-making, giving particular attention to the manner in which differences of altitude are shown, working simple exercises and little problems involving a knowledge of the meaning of the scale and other conventions. For variety's sake, such exercises as these may be used with maps on smaller scales and with maps of foreign lands.

Supposing that the pupils begin their lessons on home-geography about the age of seven, and continue those lessons for some two years, the stage thus described, in which they learn to read a map, will occupy them between the ages of nine and eleven, or later. The more advanced stage, in which maps are dissected with the aim of discovering the geography of the region mapped, is best taken after the age of twelve, and work of this sort may be prolonged beyond the schoolroom to the studies of the university. Still, the getting to understand a map and the application of that understanding to the dissection of maps are stages which easily coalesce, and it is, therefore, inadvisable to attempt a strict demarcation. It is assumed that map reading and the analysis of maps are supplemented by

lessons in descriptive geography, the use of reference books and, in the advanced stage, the study of physiography or, at least, of so much physics and chemistry as will make physical geography intelligible.

#### DISSECTION OF MAPS.

To pass to the more advanced stage at which the map becomes a true geographical text. The pupil who has learned to read his map will readily recognize so striking a feature of a region's relief as the direction and steepness of its chief slopes. Knowing the latitude and altitude, the general character of the crops under cultivation becomes largely a question of the aspect, north or south, or a point between, of these chief slopes; and around the staple cultivation of a region clusters a congeries of facts, social and economic as well as physical. With the slopes the water-systems are necessarily associated; from a good topographical map the pupil may learn the character of the rivers, the rapidity of their descent, their freedom, or otherwise, from falls and cataracts, their volume, and navigability; in favourable circumstances, he may even hazard a guess as to the clearness or foulness of the water, and the chances of good fishing in the streams. In noting the varying altitudes of the relief, he will have an eye for the engineering possibilities of the country; the position of its roads, railways, canals, and bridges will be perceived as determined by the configuration. Only those who have tried them can believe how surprised uninstructed children are to learn that a map can exhibit so much good sense. The same consideration of cause and effect will lead the pupil to study the distribution of population as indicated by the conventional signs upon his map, where he will also discover the facts which determine the situation of great sea-ports, or forbid their creation, with other similar illustrations of the dependence of man upon geographical conditions.

Necessarily there will be much use of the scale to realize horizontal distance if the relief is to be duly appreciated. Special scale exercises are scarcely needed at this stage. Neither are these pupils likely to lose the significance of latitude and longitude, since they will be expected to make inferences as to climate and to work exercises in the variation of local time and problems arising out of astronomical phenomena. Both these last belong to that wrongly neglected art of the old-fashioned ladies' school—"the use of the globes."

#### PROFILES.

The elder and abler of the pupils here in question will require maps which set forth topography in greater detail; for them relief is, perhaps, best signified by means of contour lines, which their previous experience has helped them to apprehend more thoroughly. The drawing of vertical sections of country—"profiles" as they are sometimes called—is a mode of dissecting such a map which compels close attention to the relief and gives greater exactness to all the details previously studied. Two points in a map being selected, the straight line joining them is the range of the profile; the map indicates the varying heights of the surface along this straight line. A piece of paper ruled with parallel straight lines, the distance between any two of which represents a given vertical height of so many hundred or thousand feet, furnishes the ground of the profile. Reading from the map the heights marked along the course of the straight line, these heights are inserted, according to scale, as points on or between the parallel lines of the prepared paper. By joining the points, a vertical section of the country is made, which is the more exact the greater the number of points inserted—that is, the greater the detail as to contour furnished by the map—and the closer the identity of the vertical and horizontal scales of the profile itself. Where the region delineated has great differences of elevation within a short range, it is possible to make use of one scale for both dimensions. The Swiss school atlas already mentioned shows a profile having a range of about 35 kilometres (say 21 miles) from a point N.W. of Interlaken to the other side of the Bernese Alps, and including the summit of the Wetterhorn and the bottom of the Lake of Brienz; the same scale (1 in 200,000) measures the vertical and the horizontal distances. Where the elevations are not so considerable a compromise is necessary. Sometimes the horizontal is to the vertical scale as 1 to 3, sometimes as 2 to 5. Where the gradients are trifling over a long stretch of country the "profile" is indistinguishable from a horizontal line; but nothing is gained by attempting a vertical section of such a region.

It is obvious that the drawing of these profiles very materially

assists a boy to realize the three dimensions portrayed in a good map, and makes more actual his grip over the topographical details of the region he is studying. Where there is great disparity between the vertical and horizontal scales, and consequent exaggeration of height, there is, of course, a limit to these advantages, and a risk that the pupil may forget the diagrammatic character of his profile. To many parts of the Earth's surface profile-drawing may be applied with confidence, and the advantages are so many that it seems worth while to trust, in other cases, to the correcting power of the pupil's "map sense," whose establishment is the aim of this kind of instruction.

It is a far cry from the bald relief of the map to the rich detail of a landscape. But a study of the topographical and geological maps in close association will prepare pupils to whom the leading conceptions of physiography are known for the appreciation of such books as Lord Avebury's "The Scenery of England and the Causes to which it is due," or Mr. Marr's "Scientific Study of Scenery." Their later study of maps must necessarily be enriched by such reading.

#### MAPS AND HISTORY.

But neither at this advanced stage nor at any other need the analysis of maps be confined to purely physical considerations, to the neglect of the human aspect of geography. The connexion between these two sides is necessarily close and continuous, and there will, therefore, be very many opportunities in the course of map reading for suggesting new and fruitful lines of thought. For example, the teaching which began in tracing the directions of existing engineered roads as determined by relief will, in due course, reveal to the boy who is reading history the fact that the great migrations of men have followed the lines of least resistance which might be styled "natural roads," and that along them the invading armies have marched to victory or defeat. The study of a river basin as shown on the map explains, in striking fashion, the existence of towns of ancient foundation at the confluence of a tributary with the main stream, or near the tidal limit of the latter; topographical study gives the best explanation of the strength of a natural fortress and its consequent occupation from early times, just as the map best demonstrates the accessibility of a sea-coast and accounts for the long history of the settlements made upon it. In similar fashion, close attention to a good map gives the reasons for the distribution of population in a particular region, whether the explanation be safety from attack, facility for trading or for manufacture, and so on. There is a well known passage in Geikie's "Geography of the British Isles" showing the extremely advantageous position for commerce on the great scale of Great Britain, and of London particularly; others than schoolboys and schoolmasters might reflect that it is possible to read "Antwerp" for "London" in that passage without greatly damaging the argument. Practical consequences of a kind very important to London might be expected to follow if that reflection were carried from the geographical to the historical sphere, so actual and serviceable a thing is the analysis of a map. Our supposed thinker would remember that Antwerp was once London's superior as a trading centre, and that it then suffered for some three centuries from political disabilities which have been removed within the last fifty years: these thoughts would give a new meaning to the fact that to-day Antwerp is outdoing London in its accommodation for the berthing of modern ships of great draught. The union by canal of Bruges with the sea is another recrudescence which the geographer, at least, is not likely to pooh-pooh because all the guide-books say that ancient city is dead.

The connexion between history and geography is vital, and the invariable presence of a map or maps in the history lesson should be a sign of that fact. History can only be taught where maps are used. But the studies are not everywhere coterminous. Those who most strongly insist that history and geography should be taught in association are apt to sacrifice the latter study altogether as a distinct entity: the "assimilation" is so complete that, as in the case of the lady and the tiger, one traveller only is seen to return. The independent study of good maps makes impossible this as well as other forms of desultoriness.

#### "REGIONS" AS GEOGRAPHICAL UNITS.

Another safeguard of the independence of the study lies in the selection of a true geographical region, rather than a purely political division, as the unit, so to say; the configuration, hydrography, climate, soil, industries, and lines of internal and external communication of a region throw mutual light one upon

another which is obscured or lost when the area is taken as a whole "country," or other politically determined portion of territory which may contain more than one geographical region or parts of such. From the map teacher and pupils work out at blackboard and desk the several details of the region as the result of analysis. It is not always advisable, or even possible, to keep political divisions in the background; but there is no doubt of the need of keeping them in due perspective. Many of us find it exceedingly difficult to marshal the geography of Germany before our minds because of the prominence which was given to the complicated political divisions in the years before the German Empire of to-day was constituted. The chaos of principalities, duchies, kingdoms, &c., may or may not have remained with us; but a clear picture of Germany as Nature made it is wanting.

#### PUPILS' MAP DRAWING.

Nothing has been said so far about the maps drawn by the pupils, although it has been assumed that profiles, sketch-maps, and other geographical diagrams will be made by them as well as by their teacher. The barrenness, viewed as geographical study, of the full-dress maps executed by scholars is now pretty generally recognized, and boys and girls no longer waste time in elaborating them. It may be expected that in due course it will also be agreed that the "outline" is not the sole nor even the chief thing in a map which calls for accuracy in drawing. Again, in a geography lesson of any kind, whether it be map drawing or not, the first consideration is geography, and it must not be displaced by inopportune æsthetic considerations, or regard for that fetich of the schoolroom, neatness. No time should be wasted in the selection and working up of harmonious tints, nor on "printing" or "framing," since these are not geographical phenomena. Maps need not, as a corollary to this argument, be hideous, though the colouring of some foreign maps of recent date deserves that reproach, so crude and sharply contrasted are the colours used to indicate relief.

The practice of requiring pupils to draw maps from memory has suggested several devices intended to serve both as construction lines when the pupil is copying the map, and also as a scheme of associations by whose help he may recall its features when attempting to reproduce it from memory. The lines of latitude and longitude would seem to be, by virtue of their proper function, the natural construction lines; but the exaggerated importance attached to accuracy of mere outline and harmony of colour has thrust purely geographical merits into the background, and latitude and longitude are very frequently ignored in pupils' own maps. The fact is also to be accounted for by the difficulty of accurately drawing the curves which these lines take in some maps and on some projections. It has been recommended that all maps reproduced by pupils should follow Mercator's projection, in which the lines of latitude and longitude become straight lines. Others would discard these co-ordinates altogether in favour of a different system, while some use but one meridian and one parallel in each map, referring all positions to these. The last seems a feasible compromise with much in its favour.

Some teachers cover a map with a more or less arbitrary network intended to serve as construction lines, the outline of each country thus being made to approximate to a particular geometrical figure, or to some other definite shape. The form is associated in the pupil's mind with one map only; when he is asked to draw that map, he begins by drawing the figure, by whose suggestions he recalls the different features to be reproduced. Of all devices which dispense with lines of latitude and longitude, the most accurate is that associated with the name of Matzat. He argues that the astronomical and mathematical conceptions involved in the system of meridians and parallels are too difficult for all but the most advanced pupils to use intelligently, and he would substitute a system which arises naturally from the first exercises in plan-making during the study of home geography. That is, he bases his map upon the ideas of direction and relative distance, just as the plans or first rough maps were constructed by teacher and pupils with the help of a compass and the knowledge of the distances of places from the school or other fixed point. The pupil associates such a point with all maps which he is required to draw, and, taking that point as a centre, he draws several concentric circles, whose radii stand for ascertained distances. On these circles he notches such landmarks as coincide with points on their circumferences, orienting them by reference to their compass-bearings; from these standards of reference he gradually builds his map.

These various modes of teaching pupils to draw maps bring out the fact that, for due understanding, lessons in cartography are needed. Of course, all attempts to read or otherwise to interpret a map involve something of the art, and much of it would be picked up casually by scholars taught in the fashion which has been described. But mere teaching, by the way, will not do much to make a boy comprehend the difficult subject of projection, in which systematic lessons are necessary. Such lessons must naturally be postponed till he has mathematical equipment to follow them.

#### THE GLOBE.

No class-room is properly furnished for lessons in geography unless it has a terrestrial globe, which should be regarded as the close ally of the map. Leaving aside the very practical exercises, partly geographical, partly astronomical, which this apparatus makes possible, even young pupils must frequently be referred to the globe in order to correct the confusion with respect to the relative size of countries engendered by looking at maps drawn to varying scales. Pupils much more advanced than these do not always remember that a map is a conventional representation in the flat of what is, in truth, a curved surface; and there is no better corrective than the globe for this, as for the many other errors flowing from the failure to understand projection.

#### "WALL" MAPS.

In conclusion, it may be said that one of the correct uses of the map in the class-room is in due course to take it out of the class-room. The name, "wall map," must not be suffered to mislead. A map is not necessarily decorative; very few are so, and all lose whatever comeliness they once possessed after the wear and tear of use or the dust accumulated in idleness. There does not seem much ground for the belief that they will be impressed upon the pupil's memory if they are always before his eyes, much less if they are hanging at his back. He remembers that to which he attends. A wall map to which he gives no geographical attention is almost geographically non-existent, though it may be a great eye-sore. Therefore a map not in use is best ensconced in a map-stand or rolled up carefully in a cupboard, and a bare wall, if clean, is a more engaging prospect than a tattered demoralizing company of maps and diagrams. One exception should be made on the score of its perennial usefulness: the Ordnance map of the district ought always to be accessible to members of the school, even though the consequent wear and tear and cost of renewal be noticeable.

The CHAIRMAN, in expressing his entire agreement with the views of the lecturer, said that young children had considerable difficulty in understanding what a map really was. This difficulty was largely due to the necessity of reproducing on a flat surface a space of three dimensions, and he thought that the present improved and more general teaching of model and perspective drawing would help children to understand the way in which heights and profiles were represented on a flat surface. It was also important that the pupils should understand what was meant by the scale of a map. There must, of course, be gradation in these studies, and it would be wise to begin with a very simple map and not to burden the pupils with things they could not understand. With regard to the connexion between history and geography, Dr. Arnold was a great advocate of teaching the two together, and Richard Cobden had expressed a wish to found a Professorship of Geography at the University. The latter had pointed out that ignorance of geographical problems had led English statesmen into great errors.

Mr. BAKER said the only point on which he was not in accord with the lecturer was the question of the object from which the pupils should learn to understand contour. He had himself derived very valuable help from the simple apparatus described by the lecturer. The proper order of progress was from the object to the contour, from the contour to the profile. Great care must be taken to see that the children were able to interpret the map correctly, and it was therefore advisable to begin with the object itself and then pass on to the map. In teaching geography, much might be done by combining the study of a geological map with that of an Ordnance survey map.

Mr. ORCHARD was much pleased with the idea mentioned by the lecturer of orienting the map by compass, and he thought all would agree with Prof. Adamson's remarks as to the connexion between history and geography. History could not be taught without the map, nor could geography be properly taught without history. At the same time, he thought the lecturer had rather overrated the function of the map in the teaching of geography: the map should not supersede the text-book, and it might easily be made too complex. He did not think

it desirable for very young pupils to begin with drawing to scale and making reliefs. It was necessary that they should have good models, and, if possible, illustrations from Nature, and it was important that they should first obtain a correct understanding of the meaning of geographical terms, and be made to draw examples of islands, capes, peninsulas, and the like.

Prof. ADAMSON having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

### EDUCATION IN NORTHERN EUROPE.

#### THE STATE AND THE PRIVATE SCHOOL.

By J. S. THORNTON, B.A.

THE quinquennial School Meeting of teachers of every grade from the four countries in the North of Europe, which was held five years ago in Christiania (*The Educational Times*, October, 1900), was held for the ninth time last August in Copenhagen. It was more numerous than ever, there being more than seven thousand teachers present, as against five thousand in 1900. The increase was the more surprising because it was feared that the differences between Norway and Sweden would lead to many abstentions on the part of Swedish teachers: it had, indeed, been proposed that the meeting should be deferred until another year. The absence of eight or ten of the men and women whose names come first to the mind when one thinks of education in Sweden could not fail to be felt; but it seemed as though those of a more democratic way of thinking, who, if they did not actually welcome the action of Norway, yet regarded it as inevitable, by their numbers made up to some extent for the loss of weight and dignity caused by the absence of their distinguished countrymen.

To the general account given five years ago of the composition, methods, aims, and results of such a meeting there seems no necessity to make any addition now. One such meeting is very like another. But at this ninth meeting Copenhagen had in Tivoli a series of halls and gardens more than usually adapted to the needs of such a huge gathering. Of the papers and discussions there will appear at the end of the year a full authoritative report. In the meantime, with the help of one document already issued—"A Compendious Account of School Affairs in the Northern Lands from 1900-1905"—I propose to give some account of educational progress in the four lands since the previous meeting five years ago, confining myself for the most part to secondary schools, and glancing only at the salient features.

#### EDUCATIONAL PROGRESS IN NORWAY.

Of Norway and Finland there is not much to tell. It is not in such unhappy times as Finland has experienced since 1900 that important educational developments can take place. And, with regard to Norway, the secondary-school development in the previous five years had been so radical, so startling, that it becomes just impossible that in the next five years there can be anything to record at all approaching in importance thereto. By the new law of 1896, (1) an organic connexion was established between the primary and secondary schools; (2) co-education (with some trifling exception) Latin were relegated to the University; and (4) Sloyd became an obligatory subject in secondary schools to the age of fifteen. Developments of this kind and degree are of importance not only for Norway, but also for their influence on legislation first in Denmark and then in Sweden. But before leaving Norway it may be well to note two features in the new law which, notwithstanding the great majorities by which it was passed, have remained practically a dead letter. The law, whilst making the first year of the secondary school continuous with the fifth year of the elementary school, still left it theoretically possible for the pupil to pass from the seventh or last year of the elementary school to the third year of the secondary school. In this way the organic connexion between the two schools would have been complete; and the situation would have been almost exactly similar to that which was created in certain English higher-grade schools when four ex-standard classes were erected (contrary to the law as expounded by Mr. Justice Wills) on the top of the seventh standard. But before such a step can be taken in Norway a School Board has to satisfy the Department (which in such matters always confers with the Consultative Committee or *Undervisningsraad*) that the two highest classes of the elementary school are able to do work that corresponds in quality to that of

the first two classes of the State secondary school. Otherwise it was felt that the new law, instead of lifting the elementary school to a higher level, would only pull down the secondary school to its own. The consequence has been that, with one exception of a very special character, every such attempt has failed. The exception is to be found in the capital, where the social democrats are exceedingly strong. Here a very interesting free school has been erected by the municipality upon the seventh or last year of the elementary school. It serves as a reward school for the brighter children in the elementary schools. But it is very costly; and it has moreover had a most prejudicial influence on—indeed, has almost led to the extinction of—one large private school of six or seven hundred pupils, hitherto aided both by State and municipality, which has achieved within its limits a greater amount of success than any other school, public or private, in the country. It is a poor kind of progress that destroys as much as it creates. Mr. John Morley somewhere says "Democracy is spendthrift." It certainly is so in Christiania.

The other part of the law that remains a dead letter refers to Landsmaal, as the special Norse language, artificially developed out of the western dialects, is called. By a law passed in 1885 the Storting determined by a majority of more than two to one that this Landsmaal should be put on entire equality with the Norse-Danish, which had been the usual medium of intercourse amongst educated people for five hundred years. To be able to read the beautiful lyrics and idyls written in Landsmaal is the duty of every patriotic Norseman, and should, therefore, be included in the work of every school; but to put it on a footing of equality with the established Norse-Danish is another thing. The Storting might as well ordain that on certain set occasions water should flow uphill. Accordingly, when by the new law pupils are allowed to write the essay either in Landsmaal or in the ordinary Norse-Danish, we are not surprised to find that hardly 1 per cent. of the candidates choose the former.

#### THE PRIVATE SCHOOL IN DENMARK.

In 1902 the yearly contribution of the State to the Danish *Folkehøjskoler*, all of them private, was increased from 300,000 kr. to 430,000 kr. Englishmen, last year and this, are visiting these schools in much larger number than before, to see for themselves whether what they have read of them is true. But, fortunately, no humdrum legislator, no routine administrator, was among their number. The shock might have been fatal! When told that liberal supplies of history and literature to working folks have actually increased the productiveness of labour they might, perhaps, have survived. But when assured in the next breath that large grants of public money were given to schools that claimed and received absolute freedom from control and an undivided responsibility they must have had an apoplectic fit. But wisdom is justified of her children. Even dear, sleepy, honest old John Bull, *if you will give him time*, may think there is something after all in these schools when, by slow degrees, it dawns on him that nine-tenths of the managers of the 1,100 co-operative dairies in Denmark and one-third of the members of Parliament in the Upper and Lower Houses have imbibed literature and history in these boarding schools for adults that cost their students for board, lodging, and instruction some nine shillings a week!

In the same year the State grants to the private recognized secondary schools were increased 50 per cent.; and a pension fund for teachers in these schools was set on foot, to which the State, the teachers, and the school each have to make contributions, participation in the fund being one of the conditions of State recognition. But, perhaps, my readers are aghast at such payments to private schools, and ask how any State can bear such a drain on its resources. Well, let us see. A training college for elementary teachers is not very different in its range of subjects from a secondary school for boys or girls. And in Denmark (and Norway) there are recognized private training colleges, just as there are recognized private schools. And in 1902 the 4 State seminaries sent out 88 young schoolmasters, whilst the 13 private seminaries passed 127 men and 89 women, the privately trained teachers occupying positions at the examinations slightly higher than the others—that is, the private seminaries passed 71 per cent. of the entire number (all the women and more than half the men), at an expense to the State of 51,000 kr.; whilst the 29 per cent. cost the State 145,000 kr. And such examples may easily be multiplied. The State-recognized private school or training college is, in fact (as some of our legislators are beginning to acknowledge), at once the

most efficient and the most economical instrument the statesman can employ.

#### NORWEGIAN INFLUENCE ON DANISH EDUCATION.

In 1903 another secondary-school law was passed, of a broader and more general character, and here the influence of Norway was distinctly felt. The preliminary inquiry in Norway by the Royal Commission had been so thorough and searching as almost to suffice for Denmark also. So at any rate it would seem. For the Bill embodying in the main the same four changes as in Norway seems to have been somewhat rushed (at any rate, in comparison with the pace in the two sister countries) through the Houses of Parliament.

It is only the first of the four proposed changes that needs to be dealt with here at any length—the attempt to graft as much as possible of the secondary school on the primary. Various rearrangements were devised (the Landsting prevented them from going quite so far as was designed) by which it became much easier than before to erect four stories on the top of the elementary school; and pressure from the Department was sometimes brought to bear upon the municipalities in order to make these first four years of the secondary school as free from fees as the elementary school. Some moderate increase of municipal activity in the direction of cheaper secondary education can be of good service, if it be at the expense of the weaker, unrecognized, somewhat irresponsible private schools, which in Denmark are four times as numerous as in Norway, though the population is not much greater. But it may also be at the expense of the recognized private schools, which are obliged to charge a fee not much less than the prime cost, and to which, far more than to any other agency, is due the enormous increase in the number of secondary-school pupils during the last twenty-five years. But even the most ardent advocates of greater municipal activity in Denmark acknowledge that in the face of free secondary schools the grants to private recognized schools must become correspondingly greater than before.

#### SECONDARY SCHOOLS IN SWEDEN.

Sweden, in 1904, was the last of the three countries to put her secondary schools in order. Her Commissioners, appointed late in 1899, reported at the end of 1902; and their recommendations, practically without alteration or diminution, were embodied in legislation in the spring of 1904. The Commissioners are therefore to be congratulated above those of Norway (where the Storting made some dramatic changes), above those of Denmark (where the solution arrived at by a committee, not to be dignified by the name of a Commission, has left people at loggerheads), above those of England (where after ten years there seems no immediate prospect of the Commissioners' recommendations being carried out in their entirety), on the closeness with which their recommendations have been followed, on the speed with which they have reached their goal, on the far-reaching and beneficent effect of their reforms, and on the unanimity (all things considered) with which their findings have on all hands been received.

Sweden has, at last, followed the example of her two neighbours on the west in instituting an intermediate State leaving-examination for those going out into the business of life at the age of fifteen or sixteen. And so the secondary school now consists of a six years' *Realskola*, in which no dead language is taught; and of a four years' *Gymnasium* (ten years altogether), where the student has the option of three different lines—a Latin and Greek line, Latin without Greek, and a modern line with neither (a much less hard and fast solution than that reached by Norway).

It will be convenient to indicate most of the other reforms under the same four heads we considered under Norway:—(1) With regard to the organic connexion between primary and secondary school, great care has always been taken that the first class of the secondary school should be continuous with a certain clearly defined class in the elementary school. But no attempt has been made to graft any portion of the secondary school on the primary, if only for the very good reason that the fees at the State secondary school are almost nominal, perhaps not more than one fourth of those in Norway and Denmark. A corollary of this is that when the State recognizes a private secondary school its subvention is on a much handsomer scale than in the sister countries.

(2) The State in Sweden for the first time accepts the principle of co-education, but applies it less widely than her neighbours. Nineteen State *Samskolor* are to be created in places where there

are only just enough boys and girls together to make one good secondary school, from which it will be seen that it is only the economical reason for co-education which has had much weight with the Commissioners.

(3) With regard to Greek and Latin, they are not extruded from the secondary school, but (as in Denmark) delayed to a later age. Latin is begun in the first year of the *Gymnasium*, Greek two years later.

(4) Sweden is regarded in England as the home of *Sloyd par excellence*. But in secondary schools there is much less of it than in Norway and Denmark. Provision is made for it in many schools; but it is pursued as a hobby out of school hours. It is on the one hand as voluntary as Otto Salomon would desire; but no special pains are taken to make it attractive to boys.

One further beneficent change, very late in the making, is that the Bishop and his Consistorium are replaced, as the inspecting and appointing authorities, by an *Öfverstyrelse*, specially constituted of able salaried experts, who are appointed for five years at a time, and may then return to the posts they previously occupied in the State schools.

The ninety-one recognized higher girls' schools in Sweden, with a total of about twelve thousand pupils, have increased in the five years to one hundred and fourteen. Not one of them is a State school, but all are aided by the State and some Local Authority in equal measures. Some of them are private schools, some company schools, and some municipal. The earliest, the largest, and the most important are the property of individuals. The State does not make it a condition of help that they shall all take on one type—that private and company schools shall divest themselves of their proprietary character. As the State finds them, so they remain. The same set of regulations is found sufficient for all alike. Is the school efficient?—that is the only question the State cares to ask. It may be presumed that neither the Board of Education nor the Girls' Public Day School Company, in the negotiations of last year that are now resulting in the quite needless and possibly mischievous transformation of the Company, knew of these experiences, now thirty years old, that have been accumulating for their benefit in Sweden.

There is one truth that lies on the surface in all these countries—that new ideas and developments and needed reforms come in almost entirely through the private schools. This is only another way of saying that the private school is needed even more for the sake of the public school than for its own. It is just as much a truth in our own country, but it can hardly be said to lie on the surface. Though it is not possible to make a general statement with regard to four different countries that shall be true in the same degree of each, this at least may safely be said: It is the private school that gives guarantees, and reaches a prescribed standard, but yet is allowed as the essence of its existence and the condition of its success to retain as much as possible of its freedom, which in Denmark and Norway, in Sweden and Finland, has won the chief educational triumphs in the last fifty years.

#### OBITUARY—THOMAS WETHERHERD SHARPE.

At the Midsummer General Meeting of members of the College of Preceptors the death was announced of the Rev. Thomas Wetherherd Sharpe, C.B., late President of the College of Preceptors and formerly Senior Chief Inspector of the Board of Education. The announcement was received with expressions of appreciation of his life's labours and of deep regret at his death.

Mr. Sharpe was born in 1829, his father being the Rev. Canon Sharpe, Vicar of Doncaster. He received his school education at Rossall at a time when that school was rapidly rising in repute. He passed on to Trinity College, Cambridge, and gained the Bell Scholarship. He graduated in 1852 as a double First, being twelfth Wrangler in a very strong year, and eleventh in the First Class of the Classical Tripos. He was immediately elected to a Fellowship at Christ's, where he remained as tutor and lecturer for six years. He was ordained deacon in 1853 and priest in 1854. In 1857 he was appointed one of H.M. Inspectors of Schools, and in this position he advanced in influence and favour until he became Chief Inspector, specially charged with the inspection of training colleges for men, and then in 1890 Senior Chief Inspector. He retired in 1897.

As an Inspector of schools and colleges he was always welcomed by teachers, scholars, and managers. His cheery countenance and florid complexion indicated a cheerful and kindly tempera-

ment, and first impressions of his generous and genial inclinations were more than confirmed on closer acquaintance. He was made Companion of the Order of the Bath by recommendation of Lord Rosebery, and was understood to be the only clergyman in the whole country bearing this honour.

Although elementary education necessarily absorbed most of Mr. Sharpe's time and energy, he often found time to lend a helping hand to secondary and higher work, and his broad sympathies led him to become associated with many movements. In 1893 he allowed himself to be named as the Principal of Queen's College, Harley Street, and brought his geniality and experience very heartily to bear on the work of the Council.

For twenty years he was a member of the College of Preceptors, and often laboured to secure for the College that recognition in official quarters which, in his opinion, the College had earned. He joined in 1885, became a member of the Council in 1899, was elected President in 1902, and re-elected in 1903. He gave several evening lectures, and in 1835 and 1836 he gave complete courses of lectures to teachers on the Practice of Education.

It is not possible for any one outside the official Department duly to estimate the influence of his counsels, but it is well known that many important changes and advances followed speedily on the receipt of his recommendations, and he is reputed to have been the author of some of the broadest and best improvements in the methods and curricula of training colleges, in the modes of inspecting schools, and in the aims and conditions of the pupil-teacher system, in connexion with which he is thought to have taught Mr. Morant how to produce a revolution. In all these respects it was given to him to see the fruits of his labours and the partial realization of most of his high ideals.

### SIR W. ANSON ON SECONDARY SCHOOLS.

SPEAKING at the distribution of awards of county scholarships in connexion with the West Riding County Council, at the University of Leeds (September 28), Sir W. Anson said that in regard to secondary education they were all agreed as to the end at which they should aim. A large scheme of scholarships was an excellent thing, but it was not all, because they had not yet got that which they hoped to have—an ample variety in the number of secondary schools at which those scholarships might be held. It was very true that more money was wanted for help to the secondary schools from the Board of Education, which was charged with parsimony in not giving larger grants. He admitted that the sum spent in secondary education was out of proportion and ridiculously small in comparison with the sum spent in elementary education. But since the Education Act came into force there had been great financial pressure, and when the income tax was a shilling in the pound or more it was not easy to get money for any purpose. As soon as the financial pressure was over, the first claims on the Treasury would be the demands of the secondary schools and assistance towards the training of pupil-teachers. He maintained that the grants made were given to better purpose than formerly. A definite course of study and a higher character and aim than that of the elementary school were kept in view. The object was to give a generous and liberal education, and the object of the Board was to strive to restore the balance in regard to the school in receipt of the "A" or science grants, and to see that no schools should be placed on that footing hereafter unless special circumstances justified it.

There must be many schools and children to whom the study of foreign languages was more important than the study of science; and it was hoped that, by enabling the schools to develop in the two directions—on the lines of science and the lines of languages, the schools would be rendered more useful. One result had been that the number of schools coming in for grants had been nearly trebled, and the amount of the grants to the beginning of this year had doubled. More would be done if there was the money to bestow.

The Education Committee had recommended the Board to insist that teachers in secondary schools should be placed upon the Register of Teachers before the school they represented was entitled to Parliamentary grants. That was a matter requiring serious consideration. The Register of Teachers was not in the working order they would like to see it. Another suggestion was a reduction in the number of examinations. He was not one of those who would "call" examinations, and say they were an injury to education. They were useful in their way, but he agreed with the Education Committee that the examinations

should be largely diminished in number. He was sure the Board would second any efforts in that direction. It had always seemed to him that the future of a boy or girl should not depend upon the result of a single examination or performance, but that a certain period of time should be looked at. If he thought that the withdrawal of the contributions to the scholarships would go to the withdrawing of a single penny that the Board spent on secondary education, he should oppose it to the utmost of his power; but, if they had the money to spend on secondary schools, it was considered it could be used to better advantage in improving the condition of the school. He felt great sympathy with the demands made for larger contributions from the Treasury towards the training of teachers. This seemed to him a subject which should be largely taken up by the Exchequer and the Central Authority.

## REVIEWS.

### A NEW HISTORY OF ENGLAND.

*The Political History of England.* In Twelve Volumes. Vol. X.: 1760-1801. By William Hunt, M.A., D.Litt., President of the Royal Historical Society. (7s. 6d. net. Longmans.)

There is abundant room for this bold and fresh enterprise in the improvement and popularization of historical study. We have, indeed, countless works on the history of England on various scales and of various quality, many of them excellent, yet the more notable of them appealing chiefly to professed historical students, while the schools are too often served by scrappy compilations not always drawn from the best sources or framed in the historical spirit. The names of the general editors of the present work—the Rev. William Hunt, D.Litt., President of the Royal Historical Society, and Mr. Reginald Lane Poole, Ph.D., editor of the *English Historical Review*—furnish an adequate guarantee that the contents will be in close relation with the original authorities. The distribution of the labour among a dozen specialists in the different periods provides a further assurance of really competent treatment: indeed, such co-operation is not only advisable, but practically necessary, in consequence of the vast number and extent of the authorities in print and in manuscript. The primary aspect is political—the evolution of events and the conduct of affairs of a State or body politic; but the complexity of national life involves also the presentation of the religious, social, intellectual, and economic forces in constant and important action. While reasonable fullness and substantial accuracy in the record of objective facts are to be expected, there will necessarily be occasions of difference of interpretation, and here will lie the real test of the historical capacity of the writers. It may be answered that the writers are all selected for the very reason that their historical capacity is tried and proved; and in a sense that is true, but the answer is not complete, nor conclusive within its limits. Only the field of interpretation must be left so far open: we cannot all think precisely in the same grooves, and a certain degree of reasoned difference must be admitted. The enterprise is most praiseworthy. The volumes are in handy form, demy octavo, about 500 pages each, and each is to have its own good index and two or more maps. The publishers furnish forth the work in a style wholly worthy of their great reputation.

The first volume issued is the tenth, covering the forty odd years from the accession of George III. to the close of Pitt's first administration (1760-1801). The writer is Dr. Hunt, one of the general editors; and accordingly the volume may be regarded as representing the standard in the minds of the projectors. In the general view, it rises ably to the conception suggested by the editorial statement of objects. The narrative is lucidly disposed, presented in proportionate and adequate fullness, and written in a clear, scholarly, and attractive style. The useful list of authorities appended, the occasional footnote references, and the silent internal evidences of the text all point to laborious first-hand work both on published treatises and documents and on sources unhappily still lying in manuscript. Dr. Hunt has striven very strenuously to get at the positive facts of his period: we make no account of an occasional slip—like November 7 (page 61) for October 7, 1765, as the date of the New York Congress on the Stamp Act. While he has placed some of the leading men in English political life in a more critical light than usual—for example, Pitt and Fox—we should have liked a more decisive opinion on Clive and Hastings, and a far more stringent handling of Burke, especially as to his egregious performances

in the trial of Hastings. With regard to the quarrel with America, the analysis seems to indicate what might almost be called prejudice against the colonists: the colonial case is by no means adequately set forth, and the treatment of Samuel Adams in particular does not satisfy our sense of justice. It may be that sooner or later the quarrel must have come; yet it may not be. We think it adventurous to say that "the spirit which underlay it can be traced with growing distinctness since 1690." It no doubt was "a spirit of independence, puritan in religion and republican in politics, impatient of control, self-assertive, and disposed to opposition"; but it required extreme and persistent folly to work it up to open revolution. The dissatisfaction for some three-quarters of a century after 1690 appears susceptible of ample explanation on grounds far removed from ideas of separation. At the present day we have a miserable analogy in the conditions of our government of India—"Absit omen!" An official historian of India would trace Indian dissatisfaction to revolutionary motives; an independent historian would probably find adequate causes in the action of the Government, and pronounce any revolutionary appearances as counsels of despair. Consider, also, our recent differences on the Boer War. It is so difficult to do justice to the other side when one's patriotic feelings are engaged as in some real sense parties to the opposing contention. But when the case has gone into history for more than a century the patriotic bias should be at a minimum. The handling of this great episode is the chief count we have against Dr. Hunt. The case of the "fearful conflict" with France is somewhat similar, though not quite so open to dissent. Pitt, we are told, "was called on to give England what was infinitely more important than liberal measures—the preservation of its constitutional and social life from the danger of revolution." That statement gives the underlying principle of interpretation; but the actual conditions in England and the subsequent changes might have induced a grave doubt as to its validity. However, the Continental involvements of the country and the views of the governing classes have to receive due weight, whatever may be thought of the Government policy from the point of view of the period or from the point of view of the present day. The "insolence" of France was certainly irritating, and Pitt had undoubtedly been patient and reluctant, though Grenville had been anything but prudent. We do not accept the justice of the censure implied in saying that Fox "was one of those—in England there are always such—who rate the cause they love above their country's cause": the first allegiance is to the justice of the case, and Fox had ample grounds for an honest belief in his attitude, however reckless he may have been in expression. That England, after all, proved "finally the saviour of Europe" is an extremely disputable proposition. The treatment of Irish questions, in like manner, leaves a sense of inadequate probing; but Ireland we always have with us, just for that reason.

The points we have indicated are, of course, points on which Dr. Hunt will probably have the majority with him. In any case, they constitute elements of inevitable dispute: you must take one side or the other. The volume, on the whole, must be regarded as the best now available on its period; and, if it be rather expansive for a text-book, it ought to be in the school library, ready to extend and clarify the ordinary history. Students will require no compulsion to read it once they have dipped into it; and to the general reader it will be most welcome. There are three excellent maps—(1) Great Britain, showing the Parliamentary representation of Great Britain at the time; and (2) and (3) the United States of America, northern and southern sections, illustrating the War of Rebellion and the Treaty of September 3, 1783.

#### "HELLENISM."

*The Progress of Hellenism in Alexander's Empire.* By John Pentland Mahaffy, C.V.O., D.D., D.C.L., some time Professor of Ancient History in the University of Dublin. (5s. Chicago: University Press. London: Fisher Unwin.)

By Hellenism Dr. Mahaffy means, not (as Grote means) the high culture of Athens, but (as Droysen means) "that diffusion of Greek speech and culture through Macedonia and the nearer East which, while it extended the influence, could not but dilute the purity, of Hellenic civilization." Perhaps, he says, he should have coined "Hellenicism," to correspond to "Hellenistic." He should; though, after all, the comparison would be maintained by "Hellenist." However, he specifies clearly what he means, and that should obviate the whole difficulty. The customary

dating of the origin of this Hellenism (or Hellenicism) from the reign of Alexander he regards as a superficial view, and he devotes the first of his six lectures—lectures delivered in the University of Chicago—to show that "it began from the moment that Athens ceased to be the dominant centre of Greece in politics as well as in letters." In this first lecture he treats of Xenophon as the precursor—the Attic bee that gathered honey, "not merely from the thyme of Attica and the cistus of the Peloponnese, but from the rose gardens of Persia and the sun-flowers of Babylonia"; and through a series of details he supports his contention that, "in the main features of his life and teaching, Xenophon represents the first step in the transition from Hellenedom to Hellenism" (that is, from Hellenism to Hellenicism). The most important point he dwells on is Xenophon's firm belief in the expansion of the Hellenic race.

It was, however, to Alexander that the first great spread of Hellenism was directly due. The customary date of origin therefore fixes the substantial rise of the movement, and, in going back to Xenophon, Dr. Mahaffy only seems to indicate the most striking of the earliest tendencies, which the ordinary chronology might fairly be taken to presume, such events as Alexander's Eastern expedition not occurring without preliminary. Perhaps, indeed, it is well to point out the first traces explicitly, and, in any case, the lecture on Xenophon is fresh and attractive, presenting a familiar figure in a less familiar attitude. If Alexander had fallen in his first *mêlée* at the Granikos, "the whole history of Hellenism would have been changed, and its progress delayed till some other organizing and conquering genius had arisen." True; and what is this but further emphasis on the ordinary date of commencement of the period? How far, and in what ways, the history would have been changed, and how long the genius would have been in arising, is futile speculation; but it seems somewhat contemptuous of Alexander's generals to assume that none of them would have had the pluck, the capacity, and the ambition to carry forward the plan of conquest. In any case, it is surprising that Dr. Mahaffy should turn aside to stigmatize as absurd "the now somewhat fashionable theory that national movements are everything and individuals nothing in history"—a theory, if there be such a theory, that needs more careful statement or else deserves no notice whatever. But Dr. Mahaffy is an outspoken hero-worshipper, who does not shrink from justifying even "tyrants"—at least, when they are Greek—and has no patience with a dominant power that is weak enough to permit any such "nonsense" as home rule, or any such "mere fooling" as talk of liberty, or with politicians that argue "that present legislation should direct itself to the atonement of hypothetical crimes committed against the mythical ancestors of imaginary descendants." "If you knew how powerful a factor this social question has been in the modern difficulties of Ireland with England, you would attach great weight to this remark." And, moreover, if you knew some other sides of the question, you would attach great weight to certain very different remarks that Dr. Mahaffy has not made. Yet, in spite of the Irish colouring of Macedonian and Greek relations, Dr. Mahaffy's sketch of the Antigonids and the government of Greece by Macedonia is remarkably vivid and instructive.

The history of Egypt as a Hellenistic kingdom is less complicated, but not less important, and Dr. Mahaffy deals with it mainly upon the social and intellectual side. "Think what we owe to Alexandria!"

First of all, the Greek version of the Old Testament. Secondly, the development of pure mathematics and of mechanics, which led the way for the great men of Europe—Descartes, Pascal, and Leibniz—when they set out upon that great voyage of discovery in science which has revolutionized modern life, and of which the immortal Euclid is still the first great name. Thirdly, that first great essay in really religious philosophy which, under the name of Neo-Platonism, passed to the Mystics of the Middle Ages, and has been the parent of the deepest and purest elements in all our modern religions, humanly considered.

As for literature, "the influence of Alexandria was of a very peculiar kind: indirectly, enormous and permanent; directly, you might well think it an epoch of decadence but for the idylls of Theocritus." Yet "it is most melancholy, and very curious, that we have not a single picture of social and literary life at Alexandria all through its great period." And, as for the general influences, "it was the Ptolemies who became Egyptian, not the Egyptians who became Hellenistic." The external policy of the Ptolemies is also briefly, but pointedly and interestingly, described. The sketch of the heterogeneous and misnamed

kingdom of Syria, of the Seleucid and the Attalid kings, though necessarily disconnected, is yet an integral part of the picture. The last two lectures—general reflections on Hellenism, and Hellenistic influences on Christianity—are striking examples of lucid compression and vivid presentation. They sum up worthily the results of twenty years' special study, and are full of suggestion, as well as instruction. The volume is indispensable to the student of the period, and it will send the general reader to wider supplementary studies.

#### A BRILLIANT MATHEMATICAL MONOGRAPH.

*Kummer's Quartic Surface.* By R. W. H. T. Hudson, M.A., D.Sc. (8s. net. Cambridge University Press.)

In approaching the consideration of this work, a thought of Milton's "Lycidas" arises unbidden in the mind, and something more than a passing sense of the pathetic is awakened by the circumstances which preceded the appearance of Dr. Hudson's brilliant contribution to the store of mathematical literature. By his untimely death, the young author left unpublished, though fortunately not unfinished, the manuscript of this, his most important written work. The treatise professes to be a dissertation on a special geometrical surface, but the many-sided mode of treatment calls for the discussion of portions of the theory of various mathematical subjects more or less directly related to the principal theme. The marked skill with which each new point is handled bears abundant testimony to the high order of the writer's mathematical ability as well as to the width of his reading; and the thought suggests itself that in all probability much important literary work in the field of mathematics would, under normal conditions, have been the fruit of mature years. The opening chapter is introductory to the discussion of the 16-nodal quartic surface. Here the reader is first occupied with a brief description of some of the chief properties of the pair of tetrahedra formed by properly combining the twelve diagonals of the faces of the simple cube. The *proper* method of combination is perhaps not made sufficiently obvious in the text, but it consists in selecting for the edges of either tetrahedron six diagonals such that the pair derived from parallel faces of the cube are not themselves parallel. The two figures thus obtained are shown to imply the existence of a third, and the three together constitute a desmic system, a configuration important in the theory of quartic surfaces and possessing remarkable characteristics, amongst which may be noted the property that any two of the three figures are in fourfold perspective. Next follows a definition and short account of what is to be understood by a *group* of operations. Such *groups* play an important part in algebraic analysis, and many of them are capable of geometrical interpretation: the one discussed by the author is fundamental in its bearing on the theory of the configuration with which his treatise is concerned. It is in the second chapter that Dr. Hudson turns to the theory of the quartic surface proper, and enters on a most interesting investigation, in which, after a few preliminary remarks respecting the general surface, he institutes a detailed inquiry into the 16-nodal variety, viewing it from a geometrical and from an analytical standpoint. In the successive chapters of the work the main theme is ably treated, and there are, in addition, very interesting digressions of varied character, all introduced for the sake of completeness. It would obviously be impossible within the limits of a brief review to follow in detail the contents of the many chapters and sections; we must be content to call attention to the intrinsic value and interest of the volume and to dwell on the special importance attaching to a connected treatise on a subject the literature of which exists to so large an extent only in memoirs scattered through the principal English and foreign mathematical periodicals.

## GENERAL NOTICES.

### CLASSICS.

*Greek Reader, Vol. I.* By E. C. Marchant, M.A. Oxon. (2s. Clarendon Press.)

The text is selected from the "Griechisches Lesebuch" prepared by Prof. von Wilamowitz-Moellendorf, acting for a committee appointed in 1900 by the Prussian Minister of Education. The original choice of passages "was guided solely by consideration of the interest and importance of their subject-matter." They make excellent reading for beginners, and they are adequately explained by the introductory remarks and the appended notes. This will be an attractive and serviceable reading-book, no doubt; the Greek is good enough, and

the complaints of the purists may safely be neglected. But we do not agree with Mr. Marchant in his denunciation of the parasangs of Xenophon or in his estimate of the youthful incomprehensibility of the feelings of Euripides.

We welcome the second edition of *Septem Psalmorum Pœnitentialium Versio Elegiaca*, by R. Johnson Walker (5s. net; to be had of the Bursar of St. Paul's School). It has the Hebrew and the Latin on opposite pages, and it is very tastefully got up.

Mr. Fisher Unwin publishes a cheap edition of *Augustus*, by E. S. Shuckburgh, M.A., Litt.D. (5s. net)—a substantial piece of work (as we have already seen), deserving to be widely studied by classical students.

### MATHEMATICS.

*An Introduction to the Calculus.* By George A. Gibson, M.A., F.R.S.E. (3s. 6d. Macmillan.)

Many students find the ideas of the differential and integral calculus difficult to assimilate. To these more especially, though not by any means to them alone, Mr. Gibson's new work will be a very acceptable text-book. Its pages unfold the theory of the subject in a manner so closely allied to that in which a teacher might explain it orally that the beginner is materially assisted in the effort to realize the meaning of each fresh principle as it is introduced. The initiated reader also will, we are sure, form a high opinion of the instruction given and of the mode of exposition, and will be ready to accept without demur the statement of the preface that courses on similar lines used by the author in his own large classes of evening students have stood well and repeatedly the test of experiment. Whilst engaged on the first half of the volume, the reader is occupied merely with algebraic functions and the more elementary applications of the calculus, and has, therefore, every facility for becoming conversant with the first principles of the subject of study itself before he is called upon to attack it in its relation to trigonometrical and exponential series. There appears to be much force in the argument advanced by the author in favour of the order selected, namely, that often the trouble experienced by the student of the ordinary text-book when the above named series are discussed arises from a defective knowledge of trigonometry rather than from the difficulties of the calculus itself. The writer dwells on the necessity for thorough familiarity with trigonometry before it is considered in connexion with the calculus. Mr. Gibson uses graphs freely, but he employs the method of limits as the basis of his work throughout. The value of independent effort is duly recognized by the frequent introduction of sets of exercises, and the many fully worked examples give the necessary insight into the principles generally valuable in an attempt to solve any problem.

*The Elements of Trigonometry.* By S. L. Loney, M.A. (3s. 6d. Cambridge University Press.)

The author's treatise on "Plane Trigonometry" (now in its sixth edition) is sufficiently well known to both teachers and students of mathematics. The contents of the present volume are culled from the larger work, and include all those simpler portions of it that are requisite in order to produce a text-book suitable for the beginner. Some variations of sequence have been made, principally with a view to distributing the difficulties that would tend to hamper progress if met with in close succession. It is, perhaps, as well to direct notice to the tables of four-figure logarithms given at the end of the book, and to call attention to the fact that they are reproductions of those used by the Cambridge Local Examinations Syndicate for their examinations.

Mr. Henry Frowde (Clarendon Press) issues a second edition of *An Elementary Treatise on Pure Geometry* (9s. net), by John Wellesley Russell, M.A., Mathematical Lecturer of Balliol and St. John's Colleges, Oxford, sedulously revised and improved; and a third edition of *An Experimental and Theoretical Course of Geometry* (2s.), by A. T. Warren, M.A., second master at the William Ellis Endowed School, N.W., with useful additions. Both works are thoroughly practical and efficient.

Messrs. Longmans publish a second enlarged edition of *Higher Mathematics for Students of Chemistry and Physics*, with special reference to practical work, by J. W. Mellor, D.Sc. (15s. net). We had a very high opinion of the first edition, and are glad to note the searching revision that it has undergone for its further improvement. "The subject-matter has been re-written, and many parts have been extended in order to meet the growing tendency on the part of physical chemists to describe their ideas in the unequivocal language of mathematics."

### FRENCH.

(1) *The Moscow Expedition* (Thiers), edited by Hereford B. George, M.A. (5s.)—(2) *Voyage aux Pyrénées* (Taine), edited by William Robertson, M.A. (2s. 6d.)—(3) *Une Ténébreuse Affaire* (Balzac), edited by Marie A. Péchiné, B.A. (2s. 6d.) (Clarendon Press.)

(1) Mr. George's selection recalls the late Mr. E. E. Bowen's four admirable Napoleonic volumes, and may be placed by their side. Omitting the earlier portion of the campaign, Mr. George begins with the eve of Borodino. The expedition "has a dramatic unity and complete-

ness that has scarcely a parallel in history, and it is narrated by Thiers with a vividness which might well make less eventful history attractive." The narrative occupies 258 pages; the notes about 50, explaining the matter and furnishing many historical corrections, the work being "rather a prose epic than sober history." There are six opportune and excellent maps. (2) and (3) are new volumes of the Oxford Modern French Series, both presenting the excellent qualities that we have already noted in their dozen predecessors.

The 57th edition of the *New Grammar of French Grammars*, by Dr. V. de Fivas, M.A., F.E.I.S. (2s. 6d., Crosby Lockwood & Son), shows a most thorough revision, with considerable enlargement, some 80 additional pages being due to the fresh insertion of 258 graduated French preparatory texts in prose and verse, one before each of the original exercises, for use in reading and translation. The work thus presents a very adequate combination of theory and practice. It is beautifully printed, and agreeably and substantially got up. Its new lease of life will be a very long one.

#### ENGLISH LANGUAGE AND COMPOSITION.

*Elementary Guide to Literary Criticism.* By F. V. N. Painter, A.M., D.D., Professor of Modern Languages in Roanoke College. (3s. Ginn.)

Prof. Painter first treats briefly of the nature of criticism, the relation of the author to his work, and the æsthetic principles underlying literary art, presenting main facts and principles with a view to giving "a clearer and deeper insight into the nature and processes of criticism." It may be that teachers will prefer to take this section last. The second Part deals with rhetorical elements—words, sentences, paragraphs, figures of speech, and style. The third Part considers the nature, structure, and kinds of poetry, and the nature and forms of prose, with more particular reference to essays, oratory, and fiction. Appended to each chapter is a selection of review questions, and of illustrative and practical exercises. The exposition is lucid and simple, but we should have liked more practical direction on important points: the treatment of the sentence seems very inadequate, and the generalities upon narration should have been supported by detailed consideration of the particular means of attaining the desired results. Indeed, we are inclined to think that Prof. Painter should have taken for granted the subjects of his second and third Parts, and handled the matters pertinent to literary criticism independently and much more fully. At the same time, the volume gives a clear and sensible general sketch of the three departments in an agreeable form. It is nicely printed and tastefully got up.

*A Grammar of Late Modern English.* By H. Poutsma, English Master in the Vierde Hoogere Burgerschool met Driejarigen Cursus, Amsterdam. Part I.: The Sentence. Section 1: The Elements of the Sentence. (Fl. 2.75. [say 4s. 6d.] Groningen: P. Noordhoff.)

Mr. Poutsma has read his English authors with minute and critical diligence, and with full understanding: the only qualification we care to add is that he makes no serious attempt to discriminate between different authors in point of authoritative value. Derivation, word formation, and phonetics lie outside his programme; and he draws no line of separation between accident and syntax. His object is "to give a survey of the most striking features of Late Modern English, as it presents itself to Continental—especially Dutch—students who have passed the elementary stage." By Late Modern English he means the English of the last two hundred years, but "it is especially the literature of this and the previous generation that has been subjected to closer investigation." He lays out his subject on a well considered system, and illustrates in detail by an immense collection of examples. The work cannot but be extremely useful to Continental students; and there is not enough Dutch in it—there is none at all except for occasional comparison—to deter English teachers from taking advantage of its abundance of illustrative matter.

#### HISTORY AND GEOGRAPHY.

*Regional Geography.* (1) *The British Isles.* (2) *Europe and the Mediterranean Region.* By J. B. Reynolds, B.A. (2s. each. Black.)

The purpose is to give a good grasp of the physical facts and principles, and at the same time to show the special bearing of these upon the scenery of the countries and the life of the peoples. Questions and suggestions are appended to the various sections. In (1) there are 20 maps and diagrams and 65 illustrations; in (2) some 60 maps, diagrams, and tables, and 17 illustrations. The outlines are clearly presented, and details are furnished in judicious selection. The illustrations are sometimes more pictorial than geographical; but the maps and diagrams are always pertinent and instructive. An able and useful work.

The *Ninetieth* (Memorial) Edition of Cornwell's *School Geography* (Mathematical, Physical, Commercial, and General), revised by Ben Jonson and edited by J. Cornwell Round, M.R.C.S., is beyond the praise or the blame of the critic. It maintains the well known form, and includes 51 coloured maps (physical and political), 6 star maps, 94 maps in black and white, and 64 diagrams (3s. 6d. Simpkin,

Marshall, & Co.). So we need but mention the *Seventieth* edition of Cornwell's *Geography for Beginners*, revised, edited, and published by the same hands (1s. 9d.). The vitality of these geographies, old-fashioned as they may seem, implies a sound original constitution and continuous and discriminating supervision.

Mr. Murray has just issued a second and cheaper edition (5s.) of Mr. C. R. L. Fletcher's fresh and vigorous *Introductory History of England*, from the earliest times down to the close of the Middle Ages.

#### MAPS—CHARTS—DIAGRAMS.

Messrs. Ruddiman Johnston & Co. have issued an admirable *Map of the British Empire* on Mercator's projection (18s., including a descriptive handbook, which is published separately at 6d.). It measures 72 × 63 inches, and is varnished and mounted on strong linen and rollers. While the British Empire is coloured red, each European country (with its foreign possessions) is also indicated by a distinctive colour; so that the map is printed in eleven colours. The map shows the present extent of the British Empire, and marks the comparative areas of the different portions; two inset maps give for comparison the extent as at 1760 and 1860; and a corner is provided for a considerable collection of well chosen information as to the magnitude and wealth of the Empire—area, population, imports, and exports. The mountain chains and other physical features are represented; and special attention has been given to the great mercantile ports, British and foreign, the principal sea and railway routes connecting them (the distances being often noted), the positions of the more important submarine cables, the naval stations (with the disposition of the various squadrons of the fleet), the naval and mercantile coaling stations, &c. The workmanship is excellent, and the map ought to prove exceedingly useful as well as attractive.

Messrs. W. & A. K. Johnston's *Simplex Wall Atlas of the British Empire* (21s.) contains six sheets, 30 × 40 inches, mounted on cloth, with metal rimming at the bottom to prevent curling up, the whole securely fastened, in ornamental covers, to one roller, with suspenders for the blackboard. The subjects are disposed thus: (1) Central and South Africa, (2) Australia, (3) New Zealand, (4) Canada and the West Indies, (5) India, and (6) the British Empire in 1837, and again in 1903 (showing means of communication). The physical features are strongly marked, and the colouring is bold and attractive. Only important names and features are delineated, the names being visible to the teacher only. The series is capitally executed. The same publishers have also produced an excellent *Commercial Library Map of Scotland* (6s.), showing the main roads, steamer routes, railways, and all railway stations, compiled from the latest Survey, eight miles to one inch. In corners are specially given the environs of Glasgow and of Edinburgh, and the Orkney and Shetland Islands. The names are extremely full, but also extremely clear; and the map is remarkably cheap.

Messrs. Philip have provided a new edition of their *Chart of Geographical Terms*, illustrating clearly and simply the initiatory steps in the study of geography. It has, in fact, been entirely redrawn, and is thus greatly improved. It is available either in a single sheet, 64 × 54 inches, mounted on cloth, with rollers, and varnished, or, if preferred, as a wall-atlas (Philips' Comparative Wall-Atlas, Set I.) in four sheets, each mounted on cloth, with wooden ledge to turn over (14s. in either form). The four sheets show (1) a historical landscape, illustrating graphically the chief features—land and water; (2) a map corresponding with the landscape and illustrating geographical terms, political and physical; (3) pictures and plans of school and neighbourhood; and (4) elements of mathematical geography (picture illustrating method of ascertaining direction by the Sun, map of the World illustrating the points of the compass, map of the World showing divisions of land and water, zones, &c., and the World in space). The design is comprehensive, and it is worked out agreeably and effectively. The workmanship is thoroughly good. The Chart (or Wall-atlas) will form a very attractive and efficient introduction to the study of geography.

Messrs. Asher & Co. publish Schröder and Kull's *Biological Diagrams for the Teaching of Zoology* (3s. each plate; or, mounted on rollers and varnished, 5s.). No. 1, the Common Squirrel, is variously exhibited in characteristic surroundings and attitudes double life size, and round the margin are shown, also on double scale (in two cases, four times life size), the more important parts. The plate is 34 × 42 inches, and is designed, reproduced, and coloured very artistically. It ought to prove very serviceable as "an object-lesson in the truest sense of the word."

#### ART—DESIGN—DRAWING.

Messrs. Thomas Nelson & Sons have now published Stage V. of their *New Drawing Course*, consisting of ten sheets (20 × 25 inches) printed on both sides—one side outline, the other in colour—on stout cards in strong cloth portfolio (15s.). The course aims at furnishing a complete series of examples in (1) Outline Drawing from Nature and Objects, (2) Brush Drawing from Nature with adaptations to Pattern, (3) Clay Modelling, (4) Mechanical Drawing, and (5) Cardboard Modelling, and treats all the branches in correlation, not separately. Each sheet

provides work covering a definite period in all the branches. An accompanying Handbook deals very fully with the educational and practical side of each subject, with abundant illustrations. The preceding four Stages (with Handbooks), we understand, have been adopted by the L.C.C. Education Committee, and Stage V. is worthy to keep them company. The whole series is admirable. The author, Mr. J. Vaughan, was formerly an Art Master under the London School Board, and is now Director of Drawing and Manual Training under the School Board of Glasgow.

Messrs. Blackie & Sons offer *A Complete Course of Free-Arm and Industrial Drawing*, by J. W. Topham Vinall, A.R.C.A. Lond., Art Specialist to the L.C.C. Education Committee and Inspector of Drawing (12s. 6d. net). There are 52 plates, many of them elaborately coloured, ranging from simple exercises, adapted to children of three to five, up to work suitable for pupils of fourteen and upwards. The plates are very fully described, with ample directions, cautions, &c. The Introduction deals with the equipment of the art side of secondary schools, and particularly with the equipment of a drawing class-room for 25 secondary-school pupils, with free-hand, memory drawing, apparatus, ambidexterity, &c. The work is not intended merely to supply a set of drawing copies: "its appeal is direct to the teacher; it is, in short, a text-book and guide to enable class teachers to know how best to translate modern drawing schemes into practical lessons, how best to use the charts, how to devise their own copies to meet certain emergencies, how to deal with Nature drawing—what, in a word, should be the aim of the teacher in each given lesson." The examples have been thoroughly tested in London schools by the author and by teachers that have attended his lectures. The work has been thought out and worked out with great ability and much labour.

*Blackie's Brush Drawing Sheets*, by J. W. Nicol, Art Master at the Hanson Higher Grade School and School of Science, Bradford, are in three sets, each set containing 15 sheets (12s. 6d. per set). The sheets measure 28 x 30 inches, and they are graduated with marked care and beautifully coloured. They afford a thoroughly well conceived and executed course of varied and progressive work in a most attractive form. Set I. is suitable for Standards I. to III.; Set II., for Standards IV. and V.; and Set III. for Standard VI. and higher classes.

## CHRISTMAS BOOKS.

### I.

#### HISTORICAL TALES.

In *Smouldering Fires, or The Kinsmen of Kinthorns* (5s., Nelson), Miss Evelyn Everett-Green presents her sixteenth annual romance of history. She works the story of a bitter family feud—"the feud betwixt Red and White"—into the catastrophic events that occurred in Martinique at the time of the eruption of Mont Pelée. She acknowledges her indebtedness for the main part of the facts and descriptions in the story to M. Angelo Heilprin's book on "Mont Pelée and the Tragedy of Martinique" (Lippincott). M. Heilprin visited the island twice—"once immediately after the first eruption in May, 1902, and again in the summer of that year, making his ascent on the very day of the second eruption, and narrowly escaping from the death-blast that same evening." The local colour is strong, and the story is told with Miss Green's habitual charm. Six coloured illustrations by E. Shepard.

*Red Dickon*, by Tom Bevan (2s. 6d., Nelson), is a stirring narrative of the period of Wat Tyler's rebellion. Red Dickon's father was unjustly condemned to death by the Abbot of St. Albans and duly executed; so the hero soon found himself in a camp of outlaws, and in the company of John Ball, Wat Tyler, and like malcontents. Adventures follow briskly, including the insurrection in the home counties. Eventually King Richard does justice at St. Albans, and even exhibits generosity; and all is well that ends well. The story is written with vividness and spirit, and will give a good idea of the time and circumstances. Two coloured illustrations by Walter G. Grieve.

*His most Dear Ladye*, by Beatrice Marshall (5s., Seeley), is a charming story of Mary Countess of Pembroke, sister of Sir Philip Sidney, "the most gracious and sweetest of great ladies." Many references to well known men of the time and to the literature of the period are deftly interwoven with the personal narrative. A delightful book, beautifully printed and illustrated, and attractively got up.

*A Goodly Pearl*, by Mary H. Debenham (2s. 6d., National Society's Depository), tells "the story of the Queen and Saint whom England gave to Scotland," and whom her contemporary biographer calls a "precious Pearl." While displaying the benign influence of a good woman, the story is full of brisk interests, and conveys a very fair idea of the life and conditions of the period. Miss Debenham is becoming voluminous, but the book implies long and patient and careful work.

#### STORIES OF ADVENTURE.

*The Blue Adventure Book* and *The Black Adventure Book*, both edited by A. T. Quiller-Couch (5s. each, Cassell), contain a series of stories from

"The World of Adventure," with a profusion of illustrations and half a dozen plates apiece. You may trust the editor's taste for the selection: it is amply varied, and there is not a dull page in either volume. Indeed, what boy or girl ought not to read both volumes from one end to the other? Only give them the chance.

Mr. Fisher Unwin's "popular edition" of *The Voyages and Adventures of Ferdinand Mendez Pinto, a Portugal* (3s. 6d.), in the "Adventure Series," may well serve as a modest Christmas gift-book. The veracious Pinto records "his travels for the space of one-and-twenty years in the kingdoms of Ethiopia, Tartaria, Cochinchina, Calaminham, Siam, Pegu, Japan, and a great part of the East Indies, with a relation and description of most of the places thereof—their religion, laws, riches, customs, and government in the time of peace and war—where he five times suffered shipwreck, was sixteen times sold, and thirteen times made a slave." The book is an abridgment of Henry Cogan's translation of 1663 (by omission of the less interesting matter), the most adventurous and curious passages of Pinto's narrative being retained and forming a thick volume of well on to five hundred pages. Prof. Vambéry furnishes an introduction, and there are six illustrations from Linschoten.

*Archibald's Amazing Adventure, or The Tip-Top Tale*, by Harry Rountree and S. H. Hamer (1s. 6d., Cassell), if probably less historical than Mendez Pinto, will be more to the minds of smaller folk. Its fun tends to be riotous, and perhaps that will not tell against its popularity with irresponsible youth. There are four coloured plates, and illustrations galore.

#### YARNS OF THE SCHOOL.

In *The Schoolboy Abroad* (5s., Black), Ascott R. Hope proceeds on a fresh line of exceptional interest. He takes his readers abroad, and introduces them to the multifarious aspects of the school life of Europe. It is not by any means so easy as it may look at first blush to find the necessary materials, but Mr. Hope has patiently and indefatigably pieced together connected and very engaging descriptions, chiefly from autobiographies in different languages. "Most of the matter," he says, "must bear the reproach of being matter-of-fact"—as it ought to be; but the play of invincible humour sparkles over every page, and the book will be found to be quite as amusing as if it had been a formal story. "Some of it," he thinks, "might prove instructive not only to schoolboys, but even to such schoolmasters as are not above instruction or amusement." Certainly; and even schoolmasters will miss it at their proper peril. The matter is extremely varied, and everywhere interesting and instructive, and the style is free, genial, and delightfully humorous. Rare indeed are such verve and buoyancy, such healthy play of humour in the presentation of facts, and such wide accomplishments borne "lightly as a flower" in the adornment of the narrative. In point of literary quality, as well as of fresh and abounding interest, here is one of the very foremost books of the season.

Two of Andrew Home's school stories—*From Flag to Monitor, or Fighting to the Front* (3s. 6d.), and *Exiled from School, or For the sake of a Chum* (2s. 6d.)—are reissued by Messrs. A. & C. Black, each with eight illustrations in colour, by John Williamson. They will be quite as good as new to fresh readers, and they deserve their new lease of popularity.

#### MARVELS OF SCIENCE.

*The Romance of Insect Life*, by Edmund Selous (5s., Seeley), offers most interesting descriptions of strange and curious inhabitants of the insect world, sure to excite inquiry and to foster observation. There are ants white and yellow, locusts and cicadas, bees and butterflies, spiders and beetles, scorpions and cockroaches—and especially ants—with a really scientific investigation of their wonderful habits, not in dry detail, but in free and charming exposition and narrative. An admirable book to put in the hands of a boy (or a girl) with a turn for natural science—and whether or not. Twenty-one capital illustrations by Lancelot Speed and Carton Moore Park; and very attractive get-up.

*The Romance of Modern Mechanism*, by Archibald Williams (5s., Seeley), in like manner gives most interesting non-technical descriptions of wonderful machinery and mechanical devices, marvellously delicate scientific instruments, and so forth. There are watches and chronometers, calculating machines, workshop tools and other furniture, engines used for the most diverse purposes and worked by various means, motors by land and by water, the machinery of ships, of agriculture, of commerce, of dairying, of lifts and elevators, of diving and of raising sunken objects, of ropeways and cableways, pneumatic mail tubes, sculpturing machines, and what not. A book of absorbing interest for the boy with a mechanical turn, and, indeed, for the general reader, written in simple and lucid style, furnished with thirty excellent illustrations, and most agreeably got up.

*The Romance of Modern Electricity*, by Charles R. Gibson, Associate of the Institute of Electrical Engineers, similarly describes in non-technical language what is known about electricity and many of its interesting applications, with thirty-four illustrations and eleven diagrams (5s., Seeley). Mr. Gibson inquires what electricity and magnetism are, explains how we came to know about electricity and how it is related to magnetism, tells about the telegraph and how it is worked, and follows out the applications of electricity in railways, in coal-mines,

in the observatory, in medical practice, in chemistry, and in many other practical applications; and he looks forward to still more developments in the service of man. An exceedingly interesting and instructive volume for general reading as well as for boys that look to some branch of electrical work as a profession.

*Nature through Microscope and Camera*, by Richard Kerr, F.G.S., F.R.A.S., with sixty-five photo-micrographs by Arthur E. Smith (6s. net. Religious Tract Society), is a striking revelation of wonders of Nature—exquisite forms set forth with minute accuracy and with exceptional skill in the use of the instruments. The subjects are judiciously selected from a wide range, and, as Prof. Sims Woodhead says in his appreciative introduction, "any one who will take the trouble to examine a single one of the photographs will be anxious to cover the whole ground." The descriptions and explanations of the plates, though concise, always go to the point. An extremely interesting and suggestive volume.

*Familiar Wild Flowers*, figured and described by F. Edward Hulme, F.L.S., F.S.A., has been extended to an eighth series (3s. 6d., Cassell). It contains some forty additional plants, beautifully represented in colour and described in popular terms, with a scientific summary prefixed. The treatment, as in the preceding volumes, is attractive and instructive, and the get-up is tasteful and agreeable.

#### HISTORICAL AND DESCRIPTIVE.

In their "Silver Library" Messrs. Longmans issue new impressions of (1) *Selections from the Writings of Lord Macaulay*—historical, literary, miscellaneous, and poetical—edited, with occasional notes, by the Right Hon. Sir George Otto Trevelyan, Bart., and (2) *Selections from the Writings of James Anthony Froude*—historical scenes, historical portraits, historical sketches, miscellaneous—edited by P. S. Allen, M.A. (3s. 6d. each). The volumes are substantially and tastefully got up, and the matter is of permanent interest and value.

Mr. Fisher Unwin publishes a second impression of *Rome and Pompeii: Archaeological Rambles*, by Gaston Boissier, of the French Academy, translated by D. Havelock Fisher, with eight maps and plans, at the astonishing price of 2s. 6d. net. The reprint is complete, and the get-up is tasteful. This delightful and instructive work should have a very wide circulation in the present form.

*Short Lives of Great Men*, by W. F. Burnside and A. S. Owen, Assistant Masters at Cheltenham College (3s. 6d., Edward Arnold), consists of forty-five biographies from English history—from King Alfred down to Gordon. The selection is determined by the figures filling a reded erected in Cheltenham College Chapel in memory of the Old Cheltonians that fell in the South African War; but the sketches ought to be generally read, and to be available in secondary schools to accompany the history text-book. They are well and interestingly written. Eight very good illustrations.

*Oxford*, by Andrew Lang, M.A. (6s., Seeley), appears in a new edition, with 50 fine illustrations, representing very fairly the aspects of greater interest. The descriptions, according to Mr. Lang's disclaimer, "do not profess to sketch the outlines of a history of Oxford: they are merely records of the impressions made by this or that aspect of the life of the University as it has been in different ages." All the same, they will serve very well to begin with, or for the general instructed reader. They are charmingly written, with the affectionate allegiance of a distinguished son of the University.

*Oxford*, again, this time described by Robert Peel and H. C. Minchin (6s., Methuen), is not meant to compete with existing guide-books, for "it is not a guide-book in any formal or exhaustive sense." The object is "to show forth the chief beauties of the University and City, as they have appeared to several artists, with such a running commentary as may explain the pictures and may indicate whatever is most interesting in connexion with the scenes which they represent." There are 100 excellent illustrations in colour, all reproduced from the paintings of living artists, with the exception of six, which come from Ackermann's "Oxford." The work is most interesting pictorially, and the letterpress is convenient for explanation. A very attractive volume.

#### THE BATTLE AND THE BREEZE.

There will no doubt be vast interest in *Trafalgar Refought*, by the late Sir William Laird Clowes and Alan H. Burgoyne (6s., Nelson). The object of the authors has been "whilst losing none of those subtle touches of history which have made the Trafalgar campaign such entrancing reading to all Britons, to produce a vivid picture of likely happenings at sea had Nelson lived in this present year of grace." The work is ably done. Yet we confess to a feeling that history and fancy should not be mixed up, and that the modern conditions of naval warfare had better have been embodied in scenes independently imagined. The voracious boy, however, will scarcely stay to consider the sanctity of history, and so we fancy the volume will be overwhelmingly popular, as it is distinctive and picturesque. There are twenty vigorous full-page plates and several plans.

*The Nelson Navy Book*, by J. Cuthbert Hadden (6s., Blackie), tells the stirring story of the development of the sea-power of the country down through the centuries. Mr. Hadden describes the achievements

(Continued on page 490.)

## OXFORD UNIVERSITY PRESS.

**A PRIMER OF CLASSICAL AND ENGLISH PHILOLOGY.** By WALTER W. SKEAT, Litt.D. Fcap. 8vo, cloth, 2s.

**ANGLO-SAXON PRIMER.** By HENRY SWEET, Litt.D. With Grammar and Glossary. Eighth Edition, Revised. Extra fcap. 8vo, limp cloth, 2s. 6d.

**MA PREMIÈRE VISITE À PARIS.** Par A. E. C. Crown 8vo, cloth, with 26 Illustrations. Being an Elementary French Reading Book. 1s. 6d.

*Scotsman.*—"For the acquisition of a serviceable, conversational, and grammatical knowledge of the language, this volume can be recommended."

**BALZAC'S LES CHOUANS.** Edited by C. L. FREEMAN. Crown 8vo, cloth, 3s. [*Oxford Modern French Series.*]

*Glasgow Herald.*—"The story is a thoroughly interesting one, and all that was wanted to adapt it for class use and to suit it to young readers has been very ably done by the editor."

**A COMBINED GERMAN READER, WRITER, AND GRAMMAR.** By H. G. SPEARING, M.A. Demy 8vo, cloth, 3s.

**A MEMORY TEST BOOK** for use with the above. Crown 8vo, paper covers, 6d. net.

**HORACE, SELECTED ODES.** Edited by E. C. WICKHAM. Second Edition. Fcap. 8vo, cloth, 2s.

**CLASSICAL ARCHAEOLOGY IN SCHOOLS.** With an Appendix containing list of archaeological apparatus. By P. GARDNER and J. L. MYRES. Second Edition. 8vo, paper covers, 1s. net.

*School World.*—"We are glad to welcome a second edition. . . . This is a most useful pamphlet, which should be in the hands of every classical teacher."

**THE JUNIOR GEOGRAPHY.** By A. J. HERBERTSON, M.A., Ph.D. (*The Oxford Geographies*, Vol. II.) Crown 8vo, cloth, with 166 Illustrations, 2s.

*Manchester Courier.*—"It consists of an infinity of maps—the expression is hardly too strong—parcelled out into shaded and non-shaded areas, to show not only physical features, but temperatures, density of population, distances by rail, distribution of food, of sheep and cattle, and so on. . . . The text is admirably concise and carefully written."

**THE WEST INDIES.** By C. P. LUCAS, C.B. Second Edition. Revised and brought up to date by C. ATCHLEY, I.S.O. ("A Historical Geography of the British Colonies," Vol. II.) Crown 8vo, cloth, 7s. 6d.

**EXPERIMENTAL AND THEORETICAL COURSE OF GEOMETRY.** By A. T. WARREN. With or without Answers. Third Edition, thoroughly Revised. Crown 8vo, cloth, 2s.

**AN ELEMENTARY TREATISE ON PURE GEOMETRY.** With numerous Examples. By JOHN WELLESLEY RUSSELL, M.A. New Edition, Revised. Crown 8vo, cloth, 9s. net.

**ELEMENTARY MODERN GEOMETRY. Part I.** Experimental and Theoretical (Ch. I-IV). Triangles and Parallels. By H. G. WILLIS, M.A. 8vo, cloth, 3s.

**ELEMENTARY CHEMISTRY.** Progressive Lessons in Experiment and Theory. Part I. By F. R. L. WILSON, M.A., and G. W. HEDLEY, M.A. 8vo, cloth, 3s.

*School World.*—"The authors have produced a satisfactory course of experimental work introductory to the study of chemistry, which teachers of the subject who are not already provided with a good laboratory manual would do well to examine. . . . The book is attractively printed and illustrated."

COMPLETE CATALOGUE POST FREE ON APPLICATION.

LONDON: HENRY FROWDE,

OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

of the Navy with simplicity and directness, without unnecessary technical details, and with a keen eye for legitimate dramatic effect. Several final chapters explain the naval organization of to-day in main aspects. There are five coloured plates and thirty-two black-and-white plates. No book of the season deserves to be more popular. It is a companion volume to the "Red Army Book" of two years back.

#### FOR CHILDREN.

*Three Little Cooks*, by Lucy Crump (2s. 6d., Edward Arnold), tells the story of Ophelia, Thomas, and Heidi, and how they pursued the practice of cookery with the doll's-house stove. It is a charming and suggestive narrative, with an appendix of "a bundle of receipts." Eight illustrations by Gertrude M. Bradley.

*Uncle Boo*, by Evelyn Everett-Green (1s., Nelson), tells how Uncle Dick looked after the family when father went out to the Boer War as a C.I.V. How he got his euphonious name shall not be revealed, though the original plays a prominent part in the story. One way and another the youngsters—Jack and Jill and Babs and Bobs—"had an awfully splendid time of it," and no doubt so will young readers. The echoes of the war are heard from time to time, and not always pleasantly. Father came home again, of course, though many another didn't.

Messrs. Jack provide an excellent "Told to the Children" Series, which will be read with delight all the year round as well as at Christmas. We have half-a-dozen of them: (1) *Stories of Robin Hood*, by H. E. Marshall, with pictures by A. S. Forrest; (2) *Stories of King Arthur's Knights*, by Mary Macgregor, with pictures by Katharine Cameron; (3) *Stories from Chaucer*, by Janet Harvey Kelman, with pictures by W. Heath Robinson; (4) *Stories from "The Faerie Queene,"* by Jeanie Lang, with pictures by Rose Le Quesne; (5) *Uncle Tom's Cabin*, abridged by H. E. Marshall, with pictures by A. S. Forrest; and (6) *Robinson Crusoe*, abridged by John Lang, with pictures by W. B. Robinson. The stories are presented in very simple form and language, the points of interest to children being specially selected and kept in prominence, and somewhat of the air of the original being carefully preserved. The volumes are beautifully printed in antique type on pure rag paper, and daintily got up (1s. 6d. or 1s. each net). Each volume has eight pictures in colour. Already half-a-dozen more are announced.

Messrs. Nelson furnish a very attractive variety of new coloured picture-books for children: (1) *Jack Frost and other Merry Sprites* (3s. 6d.), with twenty clever full-page pictures in colour by Ruth Cobb and verses by Edward Shirley; (2) *Our Diary, or Teddy and Me* (2s. 6d.), a quaint description of "the jolliest holiday ever we had," with numerous capital illustrations in colour by John Hassall; (3) *John Gilpin—His Diverting History*, in large quarto, with bold illustrations by Bret Story (1s.); (4) *The Railway Alphabet*, with a great variety of illustrations, mostly coloured; (5) *The Piggy-Wiggy's A B C*; and (6) *The Baa-Lamb's A B C*, both plentifully illustrated (6d. each). The designs are of high quality, and the workmanship is excellent throughout.

#### HARDY ANNUALS.

*The Girls' Realm Annual* (8s., Bousfield) makes a very handsome volume of over a thousand pages, with more than thirteen hundred illustrations of high quality. The matter is very suitable and agreeably presented—the inevitable story, the interesting biography or interview, the sketch of literary or scientific matters, and, indeed, the general girlish interests of the time. The journal is conducted with marked ability and discretion, and the publishers furnish it forth with praiseworthy liberality.

*Chums* (8s., Cassell) maintains its attractions not only with serial stories that hold the juvenile mind, but also with articles of more substantial quality (literary, biographical, historical, &c.), and papers on the various subjects that youth takes more special delight in. Then there are the bold, if rather rough, illustrations in great plenty, with a number of full-page pictures of higher workmanship in colour. Recently, with the commencement of the new volume, the weekly number was permanently enlarged to twenty pages; so next year the volume will be of still ampler proportions. *Chums* has not ceased growing. Twelve coloured plates and over a thousand other illustrations.

*Little Folks* is as bright and interesting as ever, with plenty of illustrations, including six full-page coloured plates (3s. 6d., Cassell). It is always presenting fresh forms of entertainment for young readers, and the new volume will rivet the bonds of their willing allegiance.

*Bo-Peep* (2s. 6d., Cassell) provides the usual tale of stories and verses by well known writers for children in simple language. It is printed in bold type, with abundance of charming illustrations, including four full-page coloured plates. This year it is also issued as three separate volumes—*Tiny Tales*, *Merry Hours*, and *Our Picture Book* (1s. each)—each containing two coloured plates and other illustrations. These will all be favourites in the nursery.

*Tiny Tots* (1s. 6d., Cassell) is tastefully and attractively got up, with suitable reading matter in much variety, and with abundance of capital pictures. It will be one more delight in the nursery.

## EYRE & SPOTTISWOODE'S

To Members of the College the price is 1s., or 1s. 6d. free by post.

## THE CALENDAR

OF

## THE COLLEGE OF PRECEPTORS

FOR THE YEAR 1905:

CONTAINING

All information respecting the objects and operations of the College, Lists of Officers, Examiners, and Members, the Regulations of the various Examinations, &c., with an Appendix containing the following Examination Papers:—

1. Papers set at Examination of Teachers for Diplomas, Midsummer, 1904.
2. Do. do. do. Christmas, 1904.
3. Papers set at Examination of Pupils for Certificates, Midsummer, 1904.
4. Do. do. do. Christmas, 1904.
5. Papers set at Professional Preliminary Examination, March, 1904.
6. Do. do. do. September, 1904.
7. Papers set at Lower Forms Examination ... .. Midsummer, 1904.
8. Do. do. ... .. Christmas, 1904.

\* \* Nos. 3, 4, 5, and 6 may be had separately, price, free by post, 7d. each set. Nos. 7 and 8, price, free by post, 4d. each set.

FRANCIS HODGSON, 89 FARRINGTON STREET, LONDON, E.C.

MATHEMATICS.

Editorial Note.

In our last issue we published an interesting theorem connected with recurring decimals and from the pen of Mr. W. D. Ross. The theorem, we find, must be added to the list of those which from time to time have been discovered independently by more than one mathematician, for Mr. R. W. D. Christie writes that the same theorem appeared as one of a series which he contributed to *Knowledge*, "Some Properties of Numbers," Feb. 1, 1890. Cf. *Reprint*, 1st Series, Vol. LXIX., p. 104, &c.

15787. (W. J. DOBBS, M.A.)—Show how to resolve a given force into three forces of given magnitudes acting respectively through three given points situated in one plane with the line of action of the given force.

Solution by the PROPOSER.

If the given force is reversed, it forms with the other three a system in equilibrium. The problem therefore is equivalent to the following:—Four co-planar forces P, X, Y, Z are in equilibrium. The force P is represented by a given line AB and acts along a given line ab. The forces X, Y, and Z are of given magnitudes and act through given points H, K, and L respectively. It is required to determine the directions of X, Y, and Z.

Suppose that BC, CD, and DA represent X, Y, and Z respectively, so that the lengths of these three lines are given. Divide AB in X, so that AX/XB = the ratio in which HL is divided by the straight line ab. Then the force P is equivalent to AX at L and XB at H. The system of four forces is therefore equivalent to DX at L, XC at H, and CD at K, and it is sufficient for equilibrium that straight lines XO, CO, and DO, parallel

respectively to LH, HK, and KL, should be concurrent at O. The point X being known, the straight line XO can be drawn parallel to LH, and in it can be taken any point O'. Then O'C' can be drawn parallel to KH to meet the circle centre B and radius X in the point C'. This gives two possible positions of C', marked C'1 and C'2. Draw O'D' parallel to LK, taking C'D' equal to Y. This gives four possible positions of D', marked 1D'1, 2D'1, 1D'2, and 2D'2. By varying the position of O' we can construct the locus of D'. It is marked — · — · — · — in the figure. The position of the point D is determined by the intersection of this locus with the

circle centre A and radius Z. This apparently gives eight possible positions of D, of which in the case taken six are real, marked D1, D2, D3, D4, D5, D6. The figure is then easily completed, and the directions of X, Y, and Z determined.

15274. (A. J. MURPHY.)—I, Ia, Ib, Ic are the centres of the in- and ex-circles of a triangle ABC, and these circles touch the side BC in X, Xa, Xb, Xc respectively. The internal and external bisectors of the angle A meet the circum-circle in T and S respectively, and SI, SIa, TIb, TIc meet the circum-circle in L, La, Lb, Lc respectively. Show that LX, LaXa, LbXb, and LcXc meet on the circum-circle and determine the position of the point of concurrence. Show also that L, La, Lb, Lc are the points of contact of the circum-circle with the four circles that can be described to touch the circum-circle and the sides AB, AC.

Solution by C. E. YOUNGMAN, M.A.

Transform the figure by symmetric inversion from A, that is, first invert with centre A and radius  $\sqrt{bc}$ , and then reflect the result in the

bisector AITLa. This changes B into C, and C into B, and therefore the circle ABC into the line BC; and S into the point D, where AS meets BC. The circle BICIa will remain unchanged, because it must still go through B and C and cut AT orthogonally; therefore I becomes Ia. The line SIL therefore becomes the circle ADIa; and this cuts BC again at Xa, because IaXaD = 90° = IaAD; therefore Xa is the inverse of L. But BC touches at Xa one of the circles which touch AB, AC, and BC; therefore the circle ABC touches at L one of the circles that touch AC, AB, and the circle ABC. Also AT bisects the angle LAXa. Similar reasoning holds with X and La, Xb and Lc, Xc and Lb.

In the circle ABC draw the chord AA' parallel to BC. Then the triangles A'CB, ABC are equal, and

$$\angle BA'Xa = \angle CAX = \angle BALa = \angle BA'L_a;$$

therefore A'XaLa is a straight line; and similarly A'XL, ... Indeed, so long as points x, x' on BC are equidistant from its mid-point, the lines joining each to the inverse of the other must meet at A'. Also the circle Axx' evidently goes through A'; therefore the line ll', joining the inverses of x, x', cuts BC at a fixed point. Further, the circles ABx, ACx' meet again on the median from A; therefore Cl, B'l' meet on the symmedian.

15843. (OTTO MEISSNER.)—Required to show, by a single trial, that 20857 is a prime.

Solutions (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.;  
(II.) by the PROPOSER.

(I.) It is not quite clear what is meant by "a single trial." The following solution requires very little tentative work. Since

$$N = 20857 = 8 \cdot 3 \cdot 11 \cdot 79 + 1 = 7 \cdot 9 \cdot 331 + 4,$$

therefore (if N be prime)  $\pm 2, \pm 3, \pm 7, \pm 11$  are 2-ic residues of N; therefore  $\pm 8 \cdot 3 \cdot 7 \cdot 11 = \pm 1848$  is a 2-ic residue of N; therefore N is expressible in form  $(t^2 + 1848u^2)$ . On trial it is found that

$$N = 65^2 + 1848 \cdot 3^2,$$

and that  $u \neq 1, 2$ , and cannot be  $> 3$ , so that this is the only partition of this kind. Hence N is prime (because 1848 is one of Euler's idoneal numbers, i.e., is such that, if N have only one partition of the kind, it cannot be prime, or a power of a prime).

$$(II.) \quad 2^{53} + 1 = (2^{11} + 1)(2^{22} - 2^{11} + 1) = 2049 \cdot 4192257 \\ = 3 \cdot 683 \cdot 3 \cdot 1397419.$$

The last factor has no other divisors but such of form  $66x + 1$ , that is 67, 199, ... We have now  $1397419 = 67 \cdot 20857$ , and therefore 20857 is prime, because it is not divisible by 67 and the next divisor, 199, is  $> \sqrt{20857}$ , which lies between 144 and 145.

15842. (C. BICKERDIKE.)—Three motorists start from three different towns and meet at a junction and, on comparing notes, find that the sum of the distances travelled was a minimum, the distance of the places from each (as the crow flies) being  $a, b, \text{ and } c$  miles respectively. Find the speed of each car, all starting and meeting at the same time, the time from starting to meeting being  $n$  hours.

Solution by R. CHARTRES.

Let  $d = x + y + z = a$  minimum ;  
then F is Fermat's point, and  
 $d = \sqrt{[\frac{1}{2}(a^2 + b^2 + c^2) + 2\sqrt{3}\Delta]}$ ,  
and  $x = (b^2 + c^2 - a^2 + 4\Delta/\sqrt{3})/2d, \dots$   
Divide by  $n$  to get the speed per hour.

15805. (A. H. BELL.)—Is 9462853 a prime number?

Another Solution by Professor E. B. ESCOTT.

The number may be written  $3133^2 - 594^2 = 3727 \cdot 2539$ . These factors are prime.

15852. (M. V. A. SASTRY, B.A.)—The normals at the points P, Q, R, S of an ellipse pass through the same point O and cut the ellipse again at P', Q', R', S'. If these points be concyclic, show that O lies on a hyperbola which cuts orthogonally all conics passing through the extremities of the axes of the ellipse.

Solutions (I.) by W. J. GREENSTREET, M.A. ; (II.) by K. S. PATRACHAN.

(I.) Let O be  $(\alpha, \beta)$ , P  $(x_1, y_1)$ , P'  $(\xi, \eta)$ . The ellipse is  $x^2/a^2 + y^2/b^2 = 1$ .  
 $x_1 = (\xi + \lambda\alpha)/(1 + \lambda), y_1 = (\eta + \lambda\beta)/(1 + \lambda)$ .

Eliminating  $x_1, y_1$ , and  $\lambda$  from these equations, and from  $x_1^2/a^2 + y_1^2/b^2 = 1, c^2x_1y_1 + b^2\beta x_1 - a^2\alpha y_1 = 0$ ,

we obtain the relation

$$2\alpha\beta(x^2 - y^2) + [c^2 - (c^2 + b^2)(a^2/a^2 - \beta^2/b^2)]xy + \dots = 0,$$

an equilateral hyperbola through P', Q', R', S'. The general equation of a conic through these points is

$$K(b^2x^2 + a^2y^2 - a^2b^2) + 2\alpha\beta(x^2 - y^2) + [c^2 - (a^2 + b^2)(a^2/a^2 - \beta^2/b^2)]xy + \dots = 0.$$

If this represents a circle, the coefficient of  $x, y$  vanishes, and we have

$$(a^2 + b^2)(a^2/a^2 - \beta^2/b^2) = c^2;$$

so that the locus of O is  $b^2x^2 - a^2y^2 - a^2b^2c^2/(a^2 + b^2) \dots \dots \dots (1)$ ,

an equilateral hyperbola with axes parallel to those of the given ellipse, and cutting orthogonally the conics stated.

The Apollonian hyperbola  $c^2xy + b^2\beta x - a^2\alpha y = 0$  has centre given by  $c^2y + \beta b^2 = 0, c^2x - a^2\alpha = 0$ ;

so that, if P', Q', R', S' are concyclic, the locus of this centre is a concentric and coaxial ellipse  $c^2(a^2 + b^2)(b^6x^2 - a^6y^2) = a^6b^6$ . The equation  $c^2xy + b^2\beta x - a^2\alpha y = 0$ , with the condition  $a^2/a^2 - \beta^2/b^2 = c^2/(a^2 + b^2)$ , gives for determining the envelope of the Apollonian hyperbola

$$b^2x(d\beta/d\alpha) - a^2y = 0, d\beta/d\alpha = b^2\alpha/a^2\beta, b^4x\alpha = a^4y\beta,$$

whence the envelope is the quartic  $a^6y^2 - b^6x^2 = c^2(a^2 + b^2)x^2y^2 = 0$ .

This problem appeared some years ago, I think in *Mathesis*, or in the *Revue de Mathématiques Spéciales*.

[Rest in Reprint.]

15848. (R. F. DAVIS, M.A.)—Solve the equations

$$(x^3 - 3acx)^2 = 4a^3c^3, a^3x^6 + (b^3 - 3abc)x^3 + c^3 = 0 \dots \dots (i., ii.).$$

Solutions (I.) by JAMES BLAIKIE, M.A. ; (II.) by R. J. WHITAKER.

(I.) The first equation may be written  $x^6 - 6acx^4 + 9a^2c^2x^2 - 4a^3c^3 = 0$ . The left side breaks up into the factors  $(x^2 - 4ac)(x^2 - ac)^2$ . Thus the roots are  $\pm\sqrt{ac}$  and  $\pm 2\sqrt{ac}$ . The second equation may be written

$$a^3x^6 + b^3x^3 + c^3 - 3abcx^3 = 0 \text{ or } (ax^2)^3 + (bx)^3 + c^3 - 3(ax^2)(bx)c = 0.$$

As is well known, this breaks up into the terms

$$(ax^2 + bx + c)(ax^2 + \omega bx + \omega^2c)(ax^2 + \omega^2bx + \omega c),$$

where  $\omega$  satisfies the equations  $\omega^3 - 1 = 0, \omega^2 + \omega + 1 = 0$ . The second and third factors may clearly be written in the form

$$a(x/\omega)^2 + b(x/\omega) + c, a(x/\omega^2)^2 + b(x/\omega^2) + c.$$

If, then,  $\alpha = [-b + \sqrt{(b^2 - 4ac)}]/(2a), \beta = [-b - \sqrt{(b^2 - 4ac)}]/(2a)$ ,

the roots of  $ax^2 + bx + c = 0$ , the roots obtained from the other factors are  $\omega\alpha, \omega\beta, \omega^2\alpha, \omega^2\beta$ .

(II.) (i.) becomes  $x^6 - 6acx^4 + 9a^2c^2x^2 - 4a^3c^3 = 0$ ,

$$i.e., (x^2 - ac)^2(x^2 - 4ac) = 0;$$

therefore  $x = \pm\sqrt{ac}$  or  $\pm 2\sqrt{ac}$ .

(ii.) may be written  $x^6 - [(3abc - b^3)/a^3]x^3 + c^3/a^3 = 0, i.e.,$

$$x^6 - (a^3 + \beta^3)x^3 + \alpha^3\beta^3 = 0,$$

$\alpha, \beta$  being the roots of  $ax^2 + bx + c = 0$ ; therefore

$$x = \alpha, \omega\alpha, \omega^2\alpha, \beta, \omega\beta, \omega^2\beta,$$

$\omega, \omega^2$  being the imaginary cube roots of unity.

Note.—If  $b$  be substituted for  $x$  in (i.), the result is the condition that (ii.) may have pairs of equal roots.

15854. (The late R. TUCKER, M.A.)—ABC is a triangle; D, E, F are the points of contact of the ex-circles with the sides BC, CA, AB. Find (i.) area of DEF, (ii.) the Brocard angle of DEF. Prove also that the equation to the circle DEF is

$$2\Sigma\alpha\beta\gamma = \Sigma\alpha\alpha\Sigma\left(\frac{a\cos^2\frac{1}{2}A - (b+c)\sin^2\frac{1}{2}A}{s-a}a\right).$$

Solution by C. M. ROSS and others.

Since  $BD = s - c, CD = s - b; CE = s - a, AE = s - c;$

$$AF = s - b, BF = s - a,$$

the sum of the areas of the triangles DCE, EAF, BFD

$$= \frac{1}{2}[(s-a)(s-b)\sin C + (s-b)(s-c)\sin A + (s-c)(s-a)\sin B]$$

$$= \frac{1}{2}(\sin C/c)[a(s-b)(s-c) + b(s-c)(s-a) + c(s-a)(s-b)].$$

(i.) Therefore the area of the triangle DEF

$$= \frac{1}{2}ab\sin C - \frac{1}{2}(\sin C/c)[\Sigma a(s-b)(s-c)]$$

$$= \frac{1}{2}ab\sin C[1 - (\sin^2\frac{1}{2}A + \sin^2\frac{1}{2}B + \sin^2\frac{1}{2}C)]$$

$$= \frac{1}{4}ab\sin C(\cos A + \cos B + \cos C - 1)$$

$$= \frac{1}{2}ab\sin C(2\sin\frac{1}{2}A\sin\frac{1}{2}B\sin\frac{1}{2}C)$$

$$= \frac{1}{2}ab\sin C[2(s-a)(s-b)(s-c)/abc]$$

$$= \Delta(2\Delta^2/sabc) = \Delta r/2R,$$

where  $r, R$  are in- and circum-radii of ABC.

(ii.)  $\cot \omega = (EF^2 + FD^2 + DE^2)/4\Delta_1$  (Nixon's *Trigonometry*, p. 266)

$$= (EA^2 + AF^2 - 2EA \cdot AF \cos A + FB^2 + BD^2$$

$$- 2FB \cdot BD \cos B + DC^2 + CE^2 - 2DC \cdot CE \cos C)/4\Delta_1$$

$$= [\Sigma(s-a)^2 - \Sigma(s-b)(s-c)\cos A]/2\Delta_1$$

$$= [\Sigma(s-a)^2 + \Sigma(s-b)(s-c) - 2\Sigma(s-b)(s-c)\cos^2\frac{1}{2}A]/2\Delta_1$$

$$= [\Sigma(s-a)^2 + \Sigma(s-b)(s-c) - 2\Delta^2(a+b+c)/abc]/2\Delta_1$$

$$= [3s^2 - 2s(a+b+c) + \Sigma a^2 + 3s^2 - 2s(a+b+c) + \Sigma bc - 2\Delta^2(a+b+c)/abc]/2\Delta_1$$

$$= [-\frac{1}{2}(a+b+c)^2 + \Sigma a^2 + \Sigma bc - 4s\Delta^2/abc]/2\Delta_1$$

$$= (\frac{1}{2}\Sigma a^2 - s\Delta/R)2\Delta_1 = \Sigma a^2/4\Delta_1 - s\Delta/2R\Delta_1$$

$$= R\Sigma a^2/2r\Delta - s/r,$$

which is the magnitude of the Brocard angle of the triangle DEF.

[Rest in Reprint.]

15827. (ROBERT W. D. CHRISTIE.)—Factorize 9,702,044,791, and show the principle is general for a certain class of numbers.

Solution (I.) by the PROPOSER; (II.) by H. L. LITTLE.

(I.)  $A$ . Let  $N = (10^n x + a)(10^n x + b) = 10^{2n}x^2 + 10^n x(a+b) + ab$ .

Assume  $a+b = 10^n$ ; therefore  $N = 10^n x[10^n x(x+1)] + ab$  where  $n, a+b, ab$  are supposed given. In the proposed example we have

$$N = 9702044791;$$

thus  $10^n x[10^n x(x+1)] = x^2 + x = 9702, a+b = 10^n = 10^3 \dots (1, 2),$

and  $ab = 044791 \dots \dots \dots (3)$ . (1) is an ordinary quadratic giving  $x = 98$ ; (2) and (3) find  $a = 593, b = 047$ . Consequently the factors are

$$10^n x + a = 10^3 \cdot 98 + 953 = 98953 \text{ and } 10^n x + b = 10^3 \cdot 98 + 047 = 98047.$$

Various aids and devices may be used to shorten the work.

$B$ . Or thus:

$N = (10^n x + a)(10^n x + b) = [10^n \frac{1}{2}(a+b)] - [\frac{1}{2}(a-b)]^2 = N^{\frac{1}{2}} - \text{remainder}$ , and the factors are  $[10^n x + \frac{1}{2}(a+b)] \pm \frac{1}{2}(a-b)$ , i.e., sum of square root and root of remainder. Here

$$N = 9702044791 = (10^3 x + a)(10^3 x + b)$$

$$= (10^3 x + 500)^2 - [\frac{1}{2}(a-b)]^2 = N^{\frac{1}{2}} - \text{remainder} = 98500^2 - 453^2.$$

Thus, since  $a+b = 1000$  assumed and  $\frac{1}{2}(a-b)$  found, we have  $a = 593$  and  $b = 047$ , whence the factors are  $10^3 x + a = 10^3 \cdot 98 + 953$  and  $10^3 \cdot 98 + \dots + 047$  as before.

(II.) Now there must be at least two factors, one of which is prime. Let  $6n \pm 1$  represent the prime factor, and then  $6(n+d) \pm 1$  will represent the other factor, i.e.,  $z$  and  $z+6d$  will represent the two factors; therefore  $z(z+6d) + 9d^2 = z^2 + 6zd + 9d^2 = 9702044791 + 9d^2 = \square$ . Hence it remains to find two squares whose difference is 9702044791. These square numbers are (by the Diophantine analysis) easily shown to be  $(98500)^2$  and  $(453)^2$ . Hence the factors are  $(98500 + 453)(98500 - 453)$ , i.e., the required factors are 98953 and 98047, which are primes. Also one factor

at least must have 1 or 3 for the units digit in the above. The rule is of general application.

10693. (Professor LAMPE, LL.D.)--Find all the values of  $x$  that satisfy the equation  $64 \sin^2 x \sin^2 2x \sin^2 3x = 7$ .

Solution by A. H. BELL.

Bringing the factors to the same arc,

$$\begin{aligned} \sin^2 2x &= 4 \sin^2 x \cos^2 x = 4 \sin^2 x (1 - \sin^2 x) \dots\dots\dots (1), \\ \sin 3x &= 2 \sin x \cos 2x + \sin x = 3 \sin x - 4 \sin^3 x. \end{aligned}$$

Squaring,  $\sin^2 3x = 16 \sin^6 x - 24 \sin^4 x + 9 \sin^2 x \dots\dots\dots (2)$ .

The given equation may therefore be written

$$4 \cdot 16 \cdot 64 \sin^{12} x - 4 \cdot 40 \cdot 64 \sin^{10} x + 4 \cdot 33 \cdot 64 \sin^8 x - 4 \cdot 9 \cdot 64 \sin^6 x + 7 = 0 \dots\dots\dots (3)$$

Let  $\sin^2 x = y$ ; then

$$4096y^6 - 10240y^5 + 8448y^4 - 2304y^3 + 0 - 0 + 7 = 0 \dots\dots\dots (4)$$

$\frac{1}{4096}, \frac{1}{10240}, \frac{1}{8448}, \frac{1}{2304}, \frac{1}{4}, \frac{1}{16}, \frac{1}{7}$ , is a geometric series.

Putting  $y = \frac{1}{4}z$ , equation (4) becomes

$$z^6 - 10z^5 + 33z^4 - 36z^3 + 7 = 0 \dots\dots\dots (5)$$

Since  $\frac{1}{4}z = y$ , therefore  $\frac{1}{2}\sqrt{z} = \sin x$ . The law of the signs would indicate three positive roots for equation (5): one is

$$z = 2.445 +, \quad \sin x = 0.7818 +, \quad \text{arc } x = 51^\circ 26'$$

nearly. One or more roots are between  $z = 0$  and 1, balance  $z = 2$  and 4; no negative roots.

15825. (B. C. WALLIS, F.C.P., B.Sc.Econ.)--What are the general formulæ to express the relationship between the lengths of the sides of a right-angled triangle in terms of one number  $n$ ? *E.g.*, when the smallest side is an even number of units long the formula  $(n+1)^2 = (n-1)^2 + 4n$  holds when  $n$  is a perfect square; also when the smallest side is an odd number of units long the formula  $n^2 = (n-1)^2 + (2n-1)$  holds when  $n$  is such that  $2n-1$  is a perfect square. These two formulæ enable us to write down a table showing the lengths of the sides when the short sides are the consecutive numbers beginning with 3.

Solutions (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.;

(II.) by ALEXANDER HOLM, M.A.

(I.) Let  $x, y, z$  be the sides of a right-angled triangle, so that  $z^2 = x^2 + y^2$ . The general solutions of this Diophantine are known to be of two kinds.

$$\begin{aligned} x &= \frac{1}{2}(t^2 - u^2), \quad y = tu, \quad z = \frac{1}{2}(t^2 + u^2) \\ &[t, u \text{ both odd or both even integers}] \dots\dots\dots (i), \end{aligned}$$

$$x = (t^2 - u^2), \quad y = 2tu, \quad z = t^2 + u^2 \quad [t, u \text{ any integers}] \dots\dots\dots (ii).$$

Dividing through by  $u^2$ , and writing  $x/u^2 = \xi, y/u^2 = \eta, z/u^2 = \zeta, t/u = n$ . Then  $\xi, \eta, \zeta$  may be taken to represent the sides, and are given by either

$$\xi = \frac{1}{2}(n^2 - 1), \quad \eta = n, \quad \zeta = \frac{1}{2}(n^2 + 1) \dots\dots\dots (i),$$

$$\text{or} \quad \xi = n^2 - 1, \quad \eta = 2n, \quad \zeta = n^2 + 1 \dots\dots\dots (ii).$$

(II.) If the sides are  $x, y, z$ , then  $x^2 = y^2 + z^2$ ; therefore  $x^2 - y^2 = z^2$  or  $(x+y)(x-y) = z^2$ ; therefore

$$(x+y)/z = z/(x-y) = \text{a rational number} = n;$$

therefore  $x+y-nz = 0$  and  $-nx+ny+z = 0$ ; therefore

$$x/(n^2+1) = y/(n^2-1) = z/2n,$$

where  $n$  is any rational number.

15795. (S. C. BAGCHI, B.A.)--The picture of a system of latitude and longitude obtained by orthogonal projection on one of the polar-tangent planes is the same as that (on any plane) obtained by inversions from properly chosen centres.

Solution by the PROPOSER.

The system may be regarded as made up of a sphere, a set of co-axial diametral planes, and a set of parallel planes. Now invert with respect to a sphere whose centre is on the given sphere. We get a plane into which the given sphere inverts, a system of spheres touching at a point into which the parallel planes which determine the circles of latitude invert, and a system of co-axial spheres, these being the inverses of the diametral planes determining the longitudes. Thus for the inverse figure we get a system of co-axial circles together with another system of co-axial circles passing through the limiting points of the former. Now inverting with respect to one of these limiting points, we get a system of concentric circles and concurrent diameters.

2664. (T. COTTERILL, M.A.)--(1) Five points (no three in the same line, and no four in the same plane) determine, by the lines and planes through them on a plane, a system of ten points and ten lines, the points lying in threes on the lines and the lines passing in threes through the points (Cayley). Show that the figure is its own polar reciprocal to a conic; and that, if a conic and triangle in its plane are given, the rest of the figure can be constructed. (2) A quadric through the five points cuts the plane in a conic containing triangles conjugate

to the fixed conic. There is a quadric passing through the fixed conic, to which one of the five points and the plane are pole and polar, the remaining four points forming a self-conjugate tetrahedron.

Solution by Professor NANSON.

The ten coefficients of the point equation of any quadric through five points 1, 2, 3, 4, 5 are connected by five linear equations, and therefore the six coefficients  $a, b, c, f, g, h$ , say, of the point equation of the section of the quadric by a fixed plane  $w = 0$  are connected by one linear equation. Denoting this linear equation by

$$Aa + Bb + Cc + 2Ff + 2Gg + 2Hh = 0,$$

it follows that the section in question is harmonically circumscribed about a fixed conic whose tangential equation is  $(ABCFGH)(\xi\eta\zeta)^2 = 0$ . Now the plane through the points 1, 2, 3 and an arbitrary plane through the points 4, 5 form a quadric through the five points. If, then, we denote the meets of  $w$  with the plane through 1, 2, 3 and the line through 4, 5 by 123, 45 respectively, it follows that the line 123 is conjugate, with respect to the fixed conic, to any line through 45 in the plane  $w$ . Hence, then, 123 is the polar of 45 to the fixed conic. Thus, then, the system of ten points and ten lines is such that any point or line is the pole or polar of the complementary line or point, *i.e.*, the system is its own polar reciprocal with respect to the fixed conic.

Given the conic and a triangle with vertices 14, 24, 34 and sides 234, 314, 124, the polar triangle with sides 235, 315, 125 and vertices 15, 25, 35 is known. The points 23, 31, 12 are then given as the collinear meets of corresponding sides, and the lines 145, 245, 345 are given as the concurrent joins of corresponding vertices, the line 123 being the axis and the point 45 the pole of the homology.

There is one quadric  $Q_5$  self-conjugate to 1, 2, 3, 4 which has 5 for the pole of the given plane  $w$ . The meet of  $w$  with the plane through 1, 2, 3 is clearly the polar line of the join of 4, 5 with respect to  $Q_5$ . Hence the point 45 has the line 123 for polar with respect to the conic in which  $Q_5$  cuts  $w$ . Since the points 15, 25, 35 similarly have given polars in regard to the conic  $Q_5w$ , that conic must be identical with the fixed conic.

15740. (S. C. BAGCHI, B.A.)--Supposing that  $\phi(\xi_1, \xi_2, \dots, \xi_n)$  gives the most probable value of a magnitude which is observed to have values  $\xi_1, \xi_2, \dots, \xi_n$  for  $n$  different observations successively such that  $\xi_2 - \xi_1 = \delta_2, \xi_3 - \xi_1 = \delta_3, \dots, \xi_n - \xi_1 = \delta_n$ , show that a particular solution of the general differential equation for  $\phi$  satisfies

$$n(\phi - \xi_1) = (n+1) \sum_{r=2}^n \delta_r.$$

Solution by the PROPOSER.

Adopting the method of Gauss, we represent by  $\phi(\delta) d\delta$  the probability that an error should lie between  $\delta$  and  $\delta + d\delta$ . Hence in the present case the most probable value of  $\phi$  will be that which will render maximum the product  $\psi(z - \xi_1) \psi(z - \xi_2) \dots \psi(z - \xi_n)$ , if  $z$  be the value of the magnitude measured, and  $\psi(\delta)$  denotes the function of  $\delta$  which is proportional to the error  $\delta$ . Thus after certain easy reductions we get the differential equation

$$\partial\phi/\partial\xi_1 + \partial\phi/\partial\xi_2 + \dots + \partial\phi/\partial\xi_n = 1,$$

and we see a particular integral of this evidently satisfies

$$n(\phi - \xi_1) = (n+1) \sum_{r=2}^n \delta_r,$$

if we take the function in the general solution to denote a summation only.

15793. (Professor NANSON.)--Eliminate  $x, y, z, x', y', z'$  from

$$lx + my + nz = 0, \quad lx' + my' + nz' = 0;$$

$$(abefgh)(xyz)^2 = 0, \quad (abefgh)(x'y'z')^2 = 0, \quad (abefgh)(xyz)(x'y'z') = 0.$$

Solution by the PROPOSER.

The first four equations show that  $x : y : z, x' : y' : z'$  are the two sets of values of  $X : Y : Z$  given by

$$(abefgh)(XYZ)^2 = 0, \quad lX + mY + nZ = 0 \dots\dots\dots (1, 2).$$

Now, eliminating  $X$  from (1), (2), we get  $CY^2 + BZ^2 - 2FYZ = 0$ , where  $A, \dots, F, \dots$  are the co-factors of  $a, \dots, f, \dots$  in the bordered discriminant  $\Delta$  of (1) and (2). Hence

$$xx : yy' : zz' : yz' + yz' : zx' + z'x : xy' + x'y = A : B : C : 2F : 2G : 2H;$$

and therefore, from the fifth given equation,

$$Aa + Bb + Cc + 2Ff + 2Gg + 2Hh = 0.$$

Since the first member is  $2\Delta$ , the required result of elimination is  $\Delta = 0$ , and this is geometrically obvious, since two points of a conic cannot be conjugate unless they coincide.

QUESTIONS FOR SOLUTION.

15876. (D. BIDDLE.)--A rotary chandelier, suspended from the ceiling, has three equal gas-jets, the horizontal distance of each from the axis (around which they are uniformly arranged) being 1 foot. A blotting pad, at which a person is writing, is 2 feet 6 inches below the level of the jets, and its centre is 4 feet from the axis. Supposing the jets to remain at their present level, find how to place them so as to cast most light on the pad. Also, this position being assumed to be fixed, draw an isophotal line around the axis at the given level.

15877. (P. E. B. JOURDAIN.)—If  $T$  represent the kinetic energy of a material system,  $q_1, q_2, \dots$  are the generalized co-ordinates, and the rectangular co-ordinates  $(x_r)$  of the system may contain  $t$  explicitly, then

$$2T = \sum_r m_r \dot{x}_r (\partial x_r / \partial t) + \sum_n \dot{q}_n (\partial T / \partial \dot{q}_n).$$

15878. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find some examples of  $\varpi(x) \mp \varpi(y) \equiv 0 \pmod{p}$ , where  $\varpi(x)$  denotes 1.2.3.5.7... $x$ , and  $x, y, p$  are unequal primes, and  $x, y$  non-adjacent primes.

15879. (C. E. YOUNGMAN, M.A.)—Four persons about to play whist draw for partners, high  $v.$  low. Find the probability ( $a$ ) that the first drawing settles it; ( $b$ ) that three of the party draw equal cards, and then (without putting these back) draw fresh cards which, with the fourth already drawn, prove decisive.

15880. (Professor NANSON.)—Prove that

$$\begin{vmatrix} y+z-2x & x^2-yz & 2xyz-x^2(y+z) \\ z+x-2y & y^2-zx & 2xyz-y^2(z+x) \\ x+y-2z & z^2-xy & 2xyz-z^2(x+y) \end{vmatrix} = 0.$$

15881. (ROBERT W. D. CHRISTIE.)—Solve generally, in integers, the Diophantine equation  $y^2 = ax^2 + ay + 1$  when  $a$  is arbitrary: e.g.,  $a = 11$ ; then  $155^2 = 11 \cdot 13^2 + 11 \cdot 13 \cdot 155 + 1$ .

15882. (ALEXANDER HOLM, M.A.)—Prove that the sides of a rational right-angled triangle can be represented in the most general way possible by  $(m^2+1)/n, (m^2-1)/n, 2m/n$ , where  $m$  and  $n$  are positive rational numbers,  $m$  being  $> 1$ .

15883. (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Sum to  $n$  terms the series  $1 + 4 + 19 + 52 + 109 + \dots$

15884. (J. J. BARNVILLE, B.A., I.C.S.)—Having  $u_n + u_{n+1} = u_{n+3}$ , prove that

$$\frac{1 \cdot 1 \cdot 4}{1 \cdot 2 \cdot 2 \cdot 3} + \frac{2 \cdot 2 \cdot 6}{1 \cdot 3 \cdot 3 \cdot 5} + \frac{2 \cdot 3 \cdot 7}{1 \cdot 3 \cdot 4 \cdot 6} + \frac{3 \cdot 3 \cdot 10}{2 \cdot 5 \cdot 5 \cdot 8} + \dots = \frac{8}{3},$$

$$\frac{1 \cdot 3 \cdot 3}{1 \cdot 2 \cdot 4 \cdot 5} + \frac{1 \cdot 3 \cdot 4}{2 \cdot 3 \cdot 5 \cdot 6} + \frac{1 \cdot 5 \cdot 5}{2 \cdot 3 \cdot 7 \cdot 8} + \frac{2 \cdot 6 \cdot 7}{3 \cdot 5 \cdot 9 \cdot 11} + \dots = \frac{7}{12}.$$

15885. (W. F. BEARD, M.A.)—If

$$\frac{a}{b-c} + \frac{b}{c-a} + \frac{c}{a-b} = 0 \dots\dots\dots (a),$$

then  $\frac{a}{(b-c)^3} + \frac{b}{(c-a)^3} + \frac{c}{(a-b)^3} = \frac{a+b+c}{(b-c)(c-a)(a-b)} \dots\dots\dots (i),$

$$\frac{a^2}{(b-c)^3} + \frac{b^2}{(c-a)^3} + \frac{c^2}{(a-b)^3} = \frac{2(bc+ca+ab) - a^2 - b^2 - c^2}{(b-c)(c-a)(a-b)} \dots\dots\dots (ii).$$

15886. (Professor NANSON.)—The planes through  $O$  perpendicular to  $OA, OB, OC, OD$  meet the corresponding faces of  $ABCD$  in lines which are generators of a hyperboloid.

15887. (Professor F. ROGEL.)—To find directly the common tangents of two conic sections having a common focus.

15888. (W. AUSTIN SLEIGH, B.A. Suggested by Question 15801.)—PK cuts the major axis in G. Prove, geometrically, that the circum-circle of the triangle NGK touches CK.

15889. (SARADAKANTA GANGULI, M.A.)—From any point in the plane of a parabola, normals are drawn to it. Show that the locus of the centroid of the triangle formed by joining the feet of the normals is the axis of the parabola.

15890. (Professor NEUBERG.)—Sur les côtés d'un triangle ABC on construit trois rectangles quelconques BCDE, CAFG, ABHK. Démontrer: (1) que les triangles EGK, DFH ont même centre de gravité; (2) que  $(EG)^2 + (GK)^2 + (KE)^2 = (DF)^2 + (FH)^2 + (HD)^2$ ; (3) que pour tout point M on a  $(ME)^2 + (MG)^2 + (MK)^2 = (MD)^2 + (MF)^2 + (MH)^2$ .

15891. (Professor SANJANA, M.A.)—P is any point in the plane of two parallel straight lines X and Y: construct an isosceles triangle having a given vertical angle at P with its base resting on X and Y. Also solve the problem when P is not in the plane of X and Y. Are there any limits to the magnitude of the vertical angle?

15892. (Professor COCHEZ.)—Construire un triangle, connaissant la hauteur  $h_a$ , la bissectrice  $a$  issue de A et le rapport  $b/c$  des côtés comprenant A.

15893. (Communicated by A. E. DAVIES.)—An army is 25 miles from van to rear, and marches 50 miles in one day (number of hours not necessary). A man starts from the rear with a message to the front and reaches the rear again just as the army has completed its 50 miles. How many miles has that man walked?

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

7867. (Professor SYLVESTER, F.R.S.)—If  $x, y, z$  be positive quantities connected together by the equation  $x^3 + y^3 + z^3 + \mu x^{\frac{1}{2}} y^{\frac{1}{2}} z^{\frac{1}{2}} = 0$ , show that the ratio of the greatest of them to the one next in order of magnitude cannot exceed a certain limit (a discontinuous function of  $\mu$ ), and give rules for determining the value of this limit as  $\mu$  passes from positive to negative infinity.

7884. (ALPHA.)—If  $ay = \lambda z$ , prove that

$$\int_0^\infty \frac{\cos^n y}{\lambda^2 + y^2} e^{a \cos z} [\lambda \cos(ny + a \sin z) - y \sin(ny + a \sin z)] dy = \frac{1}{2^{n-1}} \frac{\pi}{\lambda}.$$

7926. (Professor HAUGHTON, F.R.S.)—If a cylindrical vessel contains a given mass of air, which revolves round its axis with a uniform angular velocity, find (1) the density at any point, and (2) the whole pressure on the curved surface of the cylinder, neglecting the effect of gravity.

7927. (Professor MINCHIN, M.A.)—The axes of three coplanar screws of pitches  $p_a, p_b, p_c$  form a triangle whose sides are  $a, b, c$  respectively; prove that the pitches of the two screws (other than that perpendicular to their plane) that can be drawn reciprocal to them through any point  $O$  in their plane are the roots of the equation

$$ap/(x+p_a) + bq/(a+p_b) + cr/(x+p_c) = 0,$$

where  $p, q, r$  are the perpendiculars from  $O$  on  $a, b, c$  (reckoned all positive when  $O$  is inside the triangle).

7983. (HUGH MCCOLL, B.A.)—Three random points P, Q, R are taken in the perimeter of a square. Find the respective chances of the straight lines PQ, QR, RP forming an acute-angled triangle, an obtuse-angled triangle, or no triangle.

8079. (The late Professor CLIFFORD, F.R.S.)—Using the definition

$$gd u = -i \log \tan(\frac{1}{4}\pi + \frac{1}{2}ui),$$

prove that

$$am(x, k') = gd am(ix, k).$$

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

MISS CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. VIII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

Best in every Way.

Many firms have tried to make a better pencil than L. & C. Hardtmuth's. Years and years they have tried. But it hasn't been done yet. Ask the artist. Ask the student. Ask the photographer. Ask any one who uses a pencil. "Best"—the laconic unanimous answer, meaning

HARDTMUTH'S.

IN SEVENTEEN DEGREES for all Pencil Purposes.

IS YOUR PENCIL A KOH-I-NOOR, OR IS IT AN IMITATION?

# **A UNIQUE 20th CENTURY DICTIONARY.**

JUST PUBLISHED.

A CHEAP EDITION,

**Price 3s. 6d.,**

OF

# **CASSELL'S NEW FRENCH DICTIONARY**

Compiled from the best Authorities in both Languages. Revised and considerably Enlarged by  
**JAMES BOÏELLE, B.A. (Univ. Gall.)**

 This Cheap Edition has been newly Revised by

**DE V. PAYEN-PAYNE, ASSISTANT EXAMINER TO THE UNIVERSITY OF LONDON.**

**CASSELL'S NEW FRENCH DICTIONARY**, which was originally published at 7s. 6d., is now placed within universal reach by its issue at a popular price. The New Dictionary contains upwards of 1200 pages—a large increase on the number of pages in the previous edition. Extra crown 8vo, strongly bound in cloth, price 3s. 6d.

### **SPECIAL FEATURES OF THIS GREAT WORK.**

1. It is set in a new type specially selected for its clearness.
2. It consists of over 1,200 pages, and is beautifully printed on paper of excellent quality.
3. Many thousands of new words and phrases, idioms and idiomatic expressions, and hundreds of proverbs with their English equivalents, have been selected and included after extensive research.
4. The latest classical, general, scientific, commercial, and naval and military terms are incorporated.
5. The pronunciation of words where necessary is carefully indicated.
6. In the English-French part the notation of words has been carefully marked throughout.
7. The different prepositions affixed to verbs have been printed in bold clarendon type.
8. The list of geographical names of countries and places has been largely increased.

### **WHAT THE PRESS SAYS.**

“The present re-cast edition represents four and a half years' solid work. The most marked improvement is in type—the head words now stand out in black—and the prepositions affixed to verbs. **A large number of idioms and idiomatic phrases that we missed in the first edition have been added, and in other cases more idiomatic renderings substituted.**”—*Journal of Education.*

“This new work forms an admirable testimony to the industry, accuracy, and learning of its editor, who has been known for many years as an authority on the French language. The whole is set in new and remarkably clear type, and is justly entitled to very considerable praise as probably the best French dictionary of moderate compass issued in this country.”—*School Guardian.*

“One can rely on finding in the new dictionary almost every word and phrase, or the meaning thereof, which is in actual use, and thousands of idioms have been added. . . . This edition is the best French-English dictionary, of an ordinary size, at present in existence.”—*Weekly Critical Review (Paris).*

### **AN OFFER TO SCHOOLMASTERS.**

Readers of this journal desirous of receiving a specimen copy of the NEW FRENCH DICTIONARY with a view to its introduction for school use will be supplied with a specimen at half the published price on receipt by the Publishers of the appended Form, duly filled up and addressed to “‘DICTIONARY,’ MESSRS. CASSELL & COMPANY, LTD., LA BELLE SAUVAGE, LONDON, E.C.,” not later than November 30, 1905.

### **FORM.**

To MESSRS. CASSELL & COMPANY, LTD.

Will you kindly send me a Specimen Copy of your NEW FRENCH DICTIONARY, which I wish to see, with a view to its introduction into . . . . . School.

I enclose a remittance for 1s. 9d. for the Dictionary, together with 5d. to cover cost of carriage.

Name . . . . .

Address . . . . .

**A Prospectus of Cassell's New French Dictionary will be sent post free on application.**

**CASSELL & COMPANY, LTD., LONDON, PARIS, NEW YORK, AND MELBOURNE.**

# THOMAS NELSON & SONS' NEW PRIZE BOOKS.

With Coloured Illustrations.

The **HEAD TEACHER** says:—"The Prize and Gift Books of this (T. Nelson & Sons) firm are deservedly popular. The *Writers* by experience can be depended upon to arouse the keenest interest in their works, and the *Public* can be sure that *sound and wholesome reading* will be found in them. Needless to say, the *Printing, Binding, and Illustrations* are all that can be desired."

COVER DESIGN.

6/- By SIR W. LAIRD CLOWES and ALAN H. BURGOYNE. 6/-

A New Book about the Navy.  
With 20 Illustrations in Monochrome.

## TRAFALGAR RE-FOUGHT.

A splendid book for lads, who will find in it a fund of thrilling excitement, whilst gaining much information about the Navy. All the knowledge of a great naval expert has been concentrated on the effort to depict a magnificent sea-fight fought under steam, and with the tremendous weapons and murderous possibilities of to-day.

COVER DESIGN.

At 5/-

EVELYN EVERETT-GREEN'S New Volume.

### SMOULDERING FIRES.

This, the sixteenth annual addition to a long list of charming romances of history, is a tale of the terrible catastrophe at Martinique, which became historical so recently as 1902. Six Coloured Illustrations by E. SHEPARD.

New Story by E. L. HAVERFIELD.

### THE GHOST OF EXLEA PRIORY.

A capital story, telling of the trials and troubles of a little girl at school, the tradition of the Priory "ghost" adding a touch of romance and leading to a pleasant *dénouement*. Six Coloured Illustrations by Miss N. TENISON.

A New and captivating Historical Romance by C. W. WHISTLER.

### A KING'S COMRADE.

The author's talent for making events of long past history live again is brought to bear on this story with the usual happy results. Six Coloured Illustrations by A. F. SKINNER.

By GERALDINE MOCKLER.

### THE HEIRESS OF AYLEWOOD.

A story that will captivate girls. Six Coloured Illustrations by Miss N. TENISON.

At 3/6

By ELIZA F. POLLARD.

### SOLDIERS OF THE CROSS.

The brilliant colours of Spanish life in the picturesque days of Ferdinand and Isabella form the background to an entralling story of adventures with the warlike Moors. Four Coloured Illustrations.

COVER DESIGN.

At 1/-

By EVELYN EVERETT-GREEN.

### UNCLE BOO.

Miss Green has produced a most charming tale of child life. Two Coloured Illustrations.

By HAROLD AVERY.

### UNDER PADLOCK AND SEAL.

Two Coloured Plates and Illustrations in black and white.

Brighter than ever. Beautiful Coloured Cover.

### THE CHILDREN'S TREASURY.

This well-known Annual forms a treasure-house of miscellaneous reading for children, with abundance of pictures.

At 9d.

By JANE H. FINDLATER.

### ALL THAT HAPPENED IN A WEEK.

Two Coloured Illustrations.

COVER DESIGN.

At 3/6

A New Historical Tale by EVELYN EVERETT-GREEN.

### IN NORTHERN SEAS.

Four Coloured Illustrations.

By EDWARD STEP.

### A NATURALIST'S HOLIDAY.

A thoroughly interesting and instructive description of animal life in the sea and on the rocks. Profusely Illustrated.

At 2/6

By TOM BEVAN.

### RED DICKON, THE OUTLAW.

A title that will whet the imagination of a boy, and lead him to expect a thrilling tale of "red rebellion," outlawry, and wild adventure, in none of which particulars Mr. Bevan's story will disappoint him. Two Coloured Illustrations by WALTER GRIEVE.

By M. KIRLEW.

### FAMOUS SISTERS OF GREAT MEN.

Henrietta Renan, Dorothy Wordsworth, Mary Lamb, and Fanny Mendelssohn.

At 1/6

By H. ROBERTON.

### JOHN KNOX'S BAIRNS.

A most seasonable reward book for this the year of the Great Reformer's quatercentenary. Two Coloured Illustrations by WALTER GRIEVE.

\*\* Write for Illustrated Catalogue, post free on application.

T. NELSON & SONS, 35 & 36 Paternoster Row, London, E.C.; Edinburgh, Dublin, and New York.

# THE EDUCATIONAL TIMES, AND Journal of the College of Preceptors.

Vol. LVIII.] New Series, No. 536.

DECEMBER 1, 1905.

{Published Monthly, price, to Non-Members, 6d.; by Post, 7d.  
Annual Subscription, 7s.

## COLLEGE OF PRECEPTORS.— EXAMINATIONS, 1906.

1. **DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the **1st of January, 1906.**

2. **PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.**—The next Practical Examination will be held in **February, 1906.**

3. **CERTIFICATE EXAMINATIONS.**—The Midsummer Examination for Certificates will commence on the 26th of June.

4. **LOWER FORMS EXAMINATIONS.**—The Midsummer Examination will commence on the 26th of June.

5. **PROFESSIONAL PRELIMINARY EXAMINATIONS.**—These Examinations are held in March and September. The Spring Examination in 1906 will commence on the 6th of March.

6. **INSPECTION AND EXAMINATION OF SCHOOLS.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

### PRIZES.

*Diploma Examination.*—The following Prizes will be offered for competition:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5. The Doreck Scholarship of £20 will be awarded on the results of the Christmas Examination.

*Certificate Examination.*—Prizes will be awarded as follows, subject to the conditions stated in the Regulations:—

*First Class.*—Four Prizes for General Proficiency; two each for Classics, Mathematics, Modern Languages, Natural Sciences, and English subjects; one for Scripture History.

*Second Class.*—Four Prizes for General Proficiency.

*Third Class.*—Four Prizes for General Proficiency.

Two Medals will also be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

## PROFESSIONAL PRELIMINARY EXAMINATIONS.

—The COLLEGE OF PRECEPTORS will hold an Examination for Certificates recognized by the Board of Education, the Scotch Education Department, the Incorporated Law Society, the General Medical Council, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, on the 6th, 7th, and 8th of March, 1906.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Cardiff, Leeds, Liverpool, Manchester, Newcastle-on-Tyne.

Examination Fee, 25s. A local fee is payable by candidates examined at Provincial Centres.

Regulations and Entry Forms may be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

## UNIVERSITY OF ST. ANDREWS.

### L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A., LL.D.

The Session began October 3rd, 1905. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the subjects for the B.A. and B.Sc. Degrees of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional fee for ordinary Arts Course, £11. 1s.; ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students: fee, Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

## COUNTY OF LONDON.

### THE LONDON COUNTY COUNCIL

requires the services of EXAMINERS in connection with the competitions for the award of various Technical and Advanced Scholarships, which will be held during the months of March, April, and May, 1906.

The subjects for the various Examinations include the following:—

|                                                                   |                                             |
|-------------------------------------------------------------------|---------------------------------------------|
| Arithmetic.                                                       | Machine Construction.                       |
| Biology.                                                          | Mathematics (Pure and Applied).             |
| Brickwork.                                                        | Manual Training (Wood-work and Metal-work). |
| Building Construction.                                            | Metallurgy.                                 |
| Electricity & Magnetism.                                          | Mineralogy.                                 |
| English.                                                          | Needlework.                                 |
| Chemistry.                                                        | Mechanics (including Experimental).         |
| Drawing (Freehand, Geometrical, Model, Workshop, and Mechanical). | Pattern-making.                             |
| Elementary Experimental Science.                                  | Physics.                                    |
| Geography.                                                        | Plastering.                                 |
| Geology.                                                          | Plumbing.                                   |
| German.                                                           | Spanish.                                    |
| Heat and Light.                                                   | Steam.                                      |
| Italian.                                                          | Upholstery.                                 |
| Latin.                                                            |                                             |

The remuneration will be, as a rule, £2. 2s. 0d. for each paper set, and 1s. 0d. for each paper examined, but in some subjects the remuneration is less. There is a special scale of remuneration for practical examinations.

Further particulars can be obtained from the CLERK OF THE COUNCIL with regard to the number of entries in previous years, and the amount that has been paid for work of a similar character.

Preference will be given to persons with good educational qualifications, who have had experience both in conducting Examinations and in Teaching, who have a knowledge of London Candidates, and who reside in or conveniently near London.

No applications can be entertained from persons engaged in any School or Institution submitting candidates.

Forms on which to apply may be obtained from the CLERK OF THE COUNCIL, Education Offices, Victoria Embankment, London, W.C., and must be filled up and returned by 9th December, 1905.

Written applications for these should be accompanied by a stamped and addressed envelope.

G. L. GOMME,  
Clerk of the London County Council.

## BIRKBECK COLLEGE,

**MESSRS. TRUMAN & KNIGHTLEY,**

Educational Agents,

6 HOLLES STREET, CAVENDISH SQUARE, LONDON, W.

**ASSISTANT MISTRESSES**

wishing to be notified of

**JANUARY VACANCIES**

in Public and Private Schools

should apply to MESSRS. TRUMAN &amp; KNIGHTLEY without delay.

N.B.—No charge of any kind is made to applicants unless an engagement be secured through this Agency, when the terms are most reasonable.

Among a large number of Vacancies, MESSRS. TRUMAN & KNIGHTLEY have been instructed to select and put forward candidates for the following:—

**English Mistress** for Public High School, with good French and general subjects. Degree or equivalent. Experience or training. Non-res., £100 to £120.—A 7786.

**Second Mistress** for Public High School, to teach English, with History and Latin. Degree and experience essential. Churchwoman. Res., £70 to £80.—A 7761.

**Head English Mistress** for high-class Private School in London. Good similar experience essential. Res., £70 to £80.—A 7588.

**English Mistress**, with good Literature and History and Games, for County School. Degree and experience. Non-res., £100 to £110.—A 7852.

**Classical Mistress** for Public School. Good degree and experience. Res., £80 to £90.—A 7631.

**Mistress**, to teach Classics and elementary Mathematics in important High School. Degree with experience or training. Non-res., from £100.—A 7910.

**Mathematical Mistress** for important Public School. Mathematical Honour Degree. Res., £80.—A 7818.

**Mathematical Mistress**, with some Science, for Public Secondary School. Non-res., £100 to £110.—A 6807.

**Language Mistress** for Public High School, to teach thorough French. Degree or equivalent and experience. Non-res., £100.—A 7654.

**Assistant Mistress**, with German (acquired abroad), for good London School. Good qualifications and experience. Res., £50 to £60.—A 7636.

**Science Mistress** for Public School near London. Degree, experience or training, and Churchwoman. Non-res., £120 to £130.—A 7920.

**Upper Third Form Mistress** for London High School. General subjects with Mathematics. Degree or equivalent, and experience. Non-res., £100 to £110.—A 7908.

**Mistress**, to teach Latin, Mathematics, and Science in high-class London School. Non-res., £90.—A 7926.

**Art Mistress** for Public High School, to teach Drawing and Painting and some other subjects. Churchwoman. Non-res., £100 to £110.—B 7372.

**Organist and Teacher of Voice Production** for important Private School. Resident post with good salary.—B 7806.

**Several important vacancies for well qualified French and German Mistresses.**

N.B.—When making application for any of the above and for other Vacancies, candidates should supply MESSRS. TRUMAN & KNIGHTLEY with full particulars as to their qualifications and experience.

**TRANSFER AND PARTNERSHIP DEPARTMENT.**

Messrs. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for sale and Partnerships to negotiate, as well as the names of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the Transfer of Schools and arranging Partnerships.

The Transfer Department is under the sole direction of one of the Principals of the firm, who devotes his whole time to this work.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected.

All communications and enquiries are treated in the strictest confidence.

A List, giving some particulars of (i.) Schools for Sale, (ii.) Partnerships, and (iii.) School Premises, and also of a large number of intending Purchasers and Partners, will be forwarded on application.

## Mr. EDWARD ARNOLD'S EDUCATIONAL LIST.

**Lingua Materna.**

By R. WILSON, B.A.,

Author of "A First Course in English Analysis and Grammar," &amp;c.

Crown 8vo, 3s. 6d.

This book is intended for teachers who wish to keep themselves abreast of what has been aptly called "The New English Movement." The author discusses in turn each of the branches of school work in English, describes methods adopted in some of the best of our schools, and suggests schemes of work to meet the Government requirements in the native language and literature. The volume aids at being practical and suggestive, a guide to practical work rather than a contribution to airy speculation.

[Ready.

By the Rev. WILLIAM HUNT, M.A., D.Litt., Trinity College, Oxford.

\*\*\* It is hoped that the remaining Volumes will follow at intervals of about two months each.

Full Prospectus sent on application.

## EDUCATIONAL TIMES:

"There is abundant room for this bold and fresh enterprise in the improvement and popularization of historical study. . . . The enterprise is most praiseworthy. The volumes are in handy form, demy 8vo, about 500 pages each, and each is to have its own good index, and two or more maps. The publishers furnish forth the work in a style wholly worthy of their great reputation. . . . The volume, on the whole, must be regarded as the best now available on its period; and, if it be rather expansive for a text-book, it ought to be in the school library, ready to extend and clarify the ordinary history.

"Students will require no compulsion to read it once they have dipped into it; and to the general reader it will be most welcome."

LONGMANS, GREEN, & CO., 39 Paternoster Row, London, E.C.

N.B.—The Geography in this Series is in use at Wellington College.

## TEXT-BOOKS FOR HIGHER SCHOOLS

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

These books are specially prepared for the Oxford and Cambridge Preliminary and Junior **Local Examinations** and Candidates for **Minor Scholarships**. The Series consists of the following books:—

### ARITHMETIC.

Small amount of **Theory**, large amount of **Practice**. Worked-out **Examples** for each step. Prominence given to the **Metric System**. **Laboratory Exercises** in a Special Section.

### GEOGRAPHY.

**Physical** facts made the basis of **Political**. **Commercial** aspects kept constantly in view. British Empire fully treated. **Many Coloured Maps and Diagrams**.

### ENGLISH GRAMMAR.

**Examples** made the basis of instruction. **Analysis** introduced early. Aids to **correct speaking** a prominent feature. Plenty of scope given for "practice."

### ENGLISH HISTORY.

Contains landmarks of our national history. More than usual attention given to last three centuries. **The Growth and Greatness of the Empire specially considered.**

Published at **One Shilling each**.

The *Schoolmaster* says:—"We can speak well of all. Each book will be found just the kind to place in the hands of pupils beginning a systematic course of study in these subjects. The Arithmetic strikes us as being especially good; in fact, the writer of this review has decided to introduce it into his own school. We feel compelled to add a word of commendation to the publishers, who have produced the books in a most pleasant and serviceable form."

## THE VIADUCT SERIES OF HISTORICAL CARTOONS.

An entirely New Series—each picture depicting the principal scene in the movements generally recognised as epoch making or

### Landmarks in English History.

These Pictures are by a well known Artist, and are historically accurate in every detail.

Beautifully reproduced in sepia tones the charm of the originals is well brought out.

These Pictures are of the utmost value as adjuncts to Oral Lessons, and the descriptive letterpress furnished with the Pictures explains briefly the events which conduced to and the consequences of the particular scene.

The first set, which is now ready, comprises:—

INTRODUCTION OF CHRISTIANITY.  
KING ALFRED AND THE DANES.  
BATTLE OF HASTINGS.  
SIGNING MAGNA CHARTA.

SIMON DE MONTFORT AND PROVISIONS OF OXFORD.  
JOHN WYCLIF AND HIS POOR PREACHERS.  
DEATH OF NELSON.

The Pictures are all one size, 27 in. by 35 in., and are supplied in three styles:—

- (a) Framed and glazed in stained oak, with gilt slip... each, net 8/-
- (b) Any Six Pictures in one Frame, stained oak, with hinged back-board to allow of pictures being changed ... per set, net 24/-
- (c) Any Six Pictures, mounted on Cotton and hung from one Roller, with slips ... per set, net 16/-

NOTE.—The price quoted for the Framed and Glazed Pictures (a) and (b) includes the payment of carriage to any part of England, the EDUCATIONAL SUPPLY ASSOCIATION taking all risk of breakages, and charging nothing for packing.

## CAMBRIDGE TRACTS ON MATHEMATICS AND MATHEMATICAL PHYSICS.

General Editors, J. G. LEATHEM, M.A., and E. T. WHITTAKER, M.A., F.R.S.

A series of short works (30 to 70 pages demy octavo) on various topics in Pure Mathematics and Theoretical Physics. . . . The chief purpose of the undertaking is to assist in the maintenance of a high standard in English mathematical teaching, by the continued infusion of new methods and more accurate modes of treatment, and by the extension of knowledge of recent mathematical research.

No. 1.—**Volume and Surface Integrals used in Physics.**  
By J. G. LEATHEM, M.A., Fellow and Lecturer of St. John's College. Demy 8vo, 48 pp., paper covers, 2s. 6d. net.

*A Prospectus of the Series will be sent on application.*

**THE ELEMENTS OF SOLID GEOMETRY.** By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham. Crown 8vo, 2s. 6d. net.

**AN INTRODUCTION TO GEOLOGY.** By J. E. MARR, Sc.D., F.R.S., President of the Geological Society, Fellow of St. John's College, Cambridge. Crown 8vo, 3s. net.

*Athenæum.*—"He who reads and digests the book will acquire a sound knowledge of the rudiments of the science, and will be prepared to take up with advantage the study of any advanced treatise on geology, or, better still, to go forth into the field and read for himself the story of the strata."

### PITT PRESS SERIES.—New Volume.

**HORATIUS AND OTHER STORIES.** Adapted from Livy. With Notes and Vocabulary by G. M. EDWARDS, M.A., Fellow and Lecturer of Sidney Sussex College, Cambridge. Extra fcap. 8vo, 1s. 6d. [Immediately.]

By the same Editor.

**THE STORY OF THE KINGS OF ROME.** Adapted from Livy. With Notes and Vocabulary. 1s. 6d.

*Guardian.*—"A useful and attractive book for early use. . . . This book contains much useful idiom, and is an excellent introduction to the legends of Rome."

Books suitable for College of Preceptors' Examinations, July and December, 1906.

### THE PITT PRESS SHAKESPEARE.

**SHAKESPEARE.—KING HENRY THE FIFTH.** Edited by A. W. VERITY, M.A. 1s. 6d.

**SHAKESPEARE.—TEMPEST.** By the same Editor. 1s. 6d.

## The Educational Times.

*Private Schools and the Board of Education.*

IN our November issue an important remark by Prof. Sadler is quoted : " It is expedient to preserve every efficient form of private enterprise and of varied initiative in our national education." Contrast with this one item of the conditions of recognition in the official Regulations for Secondary Schools (§ 20) : " The school must not be conducted for private profit." To begin with, the phrase " conducted for private profit," though evidently intended to apply to all private and proprietary schools, is not really a true description of the best of such schools—as far, at least, as their day scholars are concerned. It is very doubtful whether, from day scholars, any principal or proprietary body of a school where the assistants are decently paid makes more than a very moderate return on invested capital *plus* reasonable wages of superintendence. Profit is really derived from boarders ; and in this respect public and private schools are equally open to the oft-repeated, but grossly unjust, reproach that they are, in fact—whether conducted on the hostel or on the boarding-house system—carrying on the trade of hotel-keepers.

The Regulations above mentioned constitute an intelligent effort to organize secondary education in the limited field which they cover. They provide for the schools under their control being carried on under wholesome conditions, both physical and intellectual. The sanitary inspection of the school buildings is an obvious precaution ; the requirement of a four years' *course* approved by the Inspector is intended to secure a continuous, progressive, and sufficiently wide curriculum. At the back of these provisions is the power of the purse : grants on account of scholars taking the regular course are made on a liberal, but not extravagant, scale, and no charge is imposed for inspection. Under these conditions we may expect to see a marked improvement in endowed and municipal secondary schools, and the private schoolmaster will be more than ever handicapped in competition with them, while he will be debarred from the incidental advantages of being in touch with the best edu-

cational traditions. In other words, schools in which the conditions leading to initiative and exceptionally thoughtful management are most likely to be present are discouraged. Governing bodies and municipalities generally contain a considerable proportion of Philistines ; unless dominated by the head master or by some devoted member of the body who is himself an experienced educationist, they are apt to trust entirely to officials, who may or may not be competent to take an enlightened view. On the other hand, a competent principal with adequate capital—and such men are to be found occasionally—is able at once to see what is wanted in the way of improvement and to carry it out without the delays incident to the action of a public body. Such men have been, in past times, the life and soul of education, and it is in the public interest that they should still be tempted to throw their energies into school work.

Nor should it be assumed that the earning of a livelihood is the only motive operating on the founder of a private school. It is, indeed, one motive, as in the case of men entering the Christian ministry ; but the realization of a high ideal is often a concurrent inducement, possibly the dominant one. Loretto, Abbotsholme, and Bedales are examples in our own time. And our great novelist, George Meredith, gives us an excellent specimen of a private schoolmaster of the higher type in Matthew Weyburn, the hero of " Lord Ormont and his Aminta." Again, it would be possible to name schools founded as public schools, with a governing body, which have gained considerably by passing practically into the hands of a competent and energetic head master, while nominally retaining their position as public schools.

It seems, then, to follow that private schools fulfilling the conditions imposed upon public schools should be eligible for the public recognition materialized in Treasury grants, so far at least as they educate the children of the neighbourhood in which they are situated. Inspectors would be able not only to ascertain their efficiency, but also, by revising their accounts, to secure the proper payment of their assistants, and to discover whether the principal himself was exploiting them to an extent which would be impossible under a governing body. Government grants have been given freely for many years to denominational elementary

schools conducted mainly for purposes not strictly national, and educational reformers look upon such grants as entirely distinct from local aid in the shape of rates. No doubt the receipt of public money means, or ought to mean, public control; and a private schoolmaster would probably be willing to accept the direct control of the State in return for incorporation in the national system of secondary education. Once recognized in this way by the Central Authority, their relation to Local Authorities would be simplified. There are signs that some Local Authorities are prepared to look upon private schools as part of the educational machinery of the districts in which they are working. Were there any system of effective recognition on the part of the Board of Education, Local Authorities would be practically compelled to follow suit.

There are precedents abroad for establishing direct relations between the Central Authority and private schools. Mr. J. S. Thornton, who has done so much to make the educational system of Northern Europe known to Englishmen, contributed to our last number an interesting paper on the State and the private school in these countries. He points out that in Denmark the annual grant to a group of private schools was increased from about £15,000 to about £22,000 in the year 1902, and that in the same year the private seminaries for teachers passed 70 per cent. of the whole number of successful candidates—and that at a much smaller expense to the State than the other 30 per cent. trained in its own seminaries. In Sweden not one of the higher girls' schools is a State school, but all are aided alike by the Government.

We are at a crisis in the educational history of the country. Local Authorities have had thrown upon them far more work than they can do justice to. If they establish—as they are establishing, and in some places are bound to establish—fresh secondary schools, they will find it hard to secure efficiency, especially with low fees, and meanwhile a great deal of the force of private initiative may run to waste. It is high time for our legislators to take a lesson from Scandinavia.

### NOTES.

MR. J. S. THORNTON'S paper on the schools of the Northern countries of Europe, published in our last issue, has been welcomed by the *Manchester Guardian* as "a suggestive contribution to the subject of education." Our contemporary points out that the attitude of the Local Authorities towards the private secondary school is one of the important questions that they will have to decide. Is the private secondary school "to be eliminated and replaced by municipal institutions, or is it to be recognized by the State and encouraged by grants to develop side by side with the public school?" The writer proceeds:

The important consideration here is not the same as in the case of elementary education. Primary instruction is of necessity cast along pretty definite lines: in the secondary school there is the opportunity and the necessity for variety, flexibility, freedom to experiment. It cannot be denied that a State system makes for uniformity. In Scandinavia the various Governments have treated the private schools with the utmost liberality. They make those which are efficient large grants, while leaving them complete administrative independence; and the conclusion of an expert is that "new ideas and reforms come almost entirely

through the better private schools." That is a weighty judgment, and not to be lightly contemned. In comparison with this central question of principle such questions as co-education, the co-ordination of the primary with the secondary school, the day *versus* the boarding school, are of minor importance, but on all of them we may learn from Scandinavian experience. How valuable the lesson can be may perhaps be brought home to us by the fact that Denmark has evolved a system of boarding schools which has educated nine-tenths of the managers of her co-operative dairies and one-third of her M.P.'s at the inclusive cost of 9s. a week.

IN his distinctive address at the Conference of Head Mistresses Prof. Sadler once more took occasion to urge the public recognition of "efficient and highly trained enterprise" within "the whole area of public organization." He also lifted the whole subject of education to a higher point of outlook, insisting on the national aspect, and on the importance of liberty. "The secret of the greatness of England," he said most truly, "lies in the liberty to develop—liberty to speak our mind, combined with a preference for established social order." "The higher type of secondary education seemed to him the most precious thing England possesses"; and this type—this attitude of mind—ought to be diffused till the whole of the educational system was leavened. He said:

All school education should be regarded from the national point of view, and there should be a common education in aims, curriculum, and spirit up to the age of fifteen for the whole nation. If Educational Authorities would make experiments, especially in careful training in the mother tongue, they would confer a great boon on England. In carrying out the resolution just accepted (in approval of the greater elasticity of the new Code), it would be found possible for the Local Authorities to persist in the view that national education consists of far more elements than simply schools under the direct management of public bodies. If our national system was to reflect the authority of tradition in our national life, we must find place within the whole area of public organization for the public recognition of schools which represent ancient ways of life, and also for efficient and highly trained private enterprise.

WE are not so sure that "it is easy enough to get money for technical education," but we can agree with the *Independent Review* that "it is by no means easy to persuade the English public of the need for more opportunities of general culture," and that "it would be worth the while of our public authorities to foster by larger grants such institutions as" offer facilities for improving the education of working men and working women. "The students come, in almost all cases, from a love of study; for, though the subjects at which they work are often suggested to them by their trade or occupation, the majority of the men are artisans and mechanics, and they do not, except in a few cases, work for the purpose of technical training." It is quite certain that the man with the more liberal education will be the better workman, and also the better citizen.

IN the same *Review* the Head Master of Dulwich sets forth the importance of educators, and comments instructively upon the two main divisions of the subjects of education. Though schoolmasters "are neither the only nor the chief educators in the country," yet they "do much to educate" the young people, and so rank among "the most important people" in it—namely, "those who educate its inhabitants." Perhaps this is no new discovery; but it is a fact that may be usefully insisted on. So it seems obvious enough that "all schools should provide in full measure opportunities for both classes of minds"—the predominantly scientific and the predominantly literary—and recognize

that each of the two great sets of subjects "is a complement of the other"; yet the general theoretical admission of the argument does not preclude the necessity of emphasizing it in view of practice. We do not always see eye to eye with Mr. Gilkes in details; but we like his breadth of view on general principles. "Probably," he concludes, "he best serves the cause of education who keeps his mind open and his eyes fixed upon the individual character of boys, trying humbly to follow the lead that Nature has given, and thus to solve the problem that no nation has yet solved—not England, and not Greece, and not even Germany." True; but what of the practical obstacles? Let Mr. Gilkes now break a lance with some of the obfuscated giants that still bestraddle the path.

THE birth of the British Science Guild after a prolonged incubation ought to mark an epoch in British intellectual and material progress. The institution represents a great and worthy conception, which there is room enough to develop and to realize. It does not trench on the objects of the Royal Society or of the British Association—the promotion of natural knowledge; nor does it invade the sphere of the Society of Arts—the encouragement of arts, manufactures, and commerce. "Its purpose is to stimulate, not so much the acquisition of scientific knowledge as the appreciation of its value, and the advantage of employing the methods of scientific inquiry, the study of cause and effect, in affairs of every kind." Such appreciation requires a certain preliminary cultivation, or at least teachableness; and it is no easy matter to dethrone the rule of thumb among a people that boast themselves above all things "practical." The scientific spirit should not, however, in these days, be "often sadly lacking in some of those who are responsible for the proper conduct of many of the nation's activities." Such a lack should be a fatal barrier to tenure of any such position, and the Guild will perform an incalculable national service if it succeed in rendering such ignorance impossible.

THE Guild will, of course, have no politics. Its objects are enumerated specifically as follows:—

1. To bring together as members of the Guild all those throughout the Empire interested in science and scientific method, in order, by joint action, to convince the people, by means of publications and meetings, of the necessity of applying the methods of science to all branches of human endeavour, and thus to further the progress and increase the welfare of the Empire.
2. To bring before the Government the scientific aspects of all matters affecting the national welfare.
3. To promote and extend the application of scientific principles to industrial and general purposes.
4. To promote scientific education by encouraging the support of Universities and other institutions where the bounds of science are extended, or where new applications of science are devised.

No doubt the people, broadly speaking, need to be convinced. But even in their unregenerate state they are very slow to grudge support to any educational work whose value has been made sufficiently plain to their understanding. They want leading. The Government, one would imagine, have already before them "the scientific aspects of all matters affecting the national welfare," but probably there will still be scope for the representations of the Guild, backed by popular opinion. The universities and other institutions are plainly in need of large additional pecuniary

encouragement; but they are all capable of misapplications of such funds as they possess, and here also the criticism of the Guild may find scope for practical usefulness. The essential thing, however, is the promulgation of the scientific idea.

THE educational *entente cordiale* between America and Germany is manifested afresh in a mutual establishment of professorships. A "Theodore Roosevelt Professorship of American History and Institutions in the University of Berlin" has been endowed by a gift of 50,000 dollars by Mr. James Speyer, of New York. The Trustees of Columbia University have nominated Prof. J. W. Burgess, Professor of Political Science and Constitutional Law and Dean of the Faculty of Political Science in Columbia University, to fill the post (with summer excursions to other German Universities), and the Prussian Ministry of Education will no doubt appoint him in due course. On the other hand, the German Government will establish at Columbia University a Professorship of German History and Institutions under similar conditions. The idea of such an academic interchange appears to be an inspiration of the German Kaiser's. As President Butler says: "What is really needed is the careful, systematic, and scientific presentation of the culture of the one people to students of the other in the language that the students most fully understand." The reception of the lectures of Prof. Peabody in Berlin, delivered in English, is not encouraging: the students are reported to have pronounced that they knew, or might have known, the subject apart from the Professor's mission. We should have fancied they were right. However, President Butler is "not without hope that before long Columbia University will be put in a position to make similar arrangements with the University of Paris and with an English university, possibly the University of London." How the University of London is to get funds to respond we do not know: it has certainly many purposes very much more urgent.

A WELL informed Anglo-Indian correspondent, writing from an entirely independent point of view, and representing public no less than educational opinion in India, says: "The greatest indignation has been aroused in Bengal by the proposal of the Lieutenant-Governor to appoint a civilian without educational experience or university qualifications to the vacant Directorship of Public Instruction. This post has invariably been held by members of the Bengal Educational Service, and the action of the Lieutenant-Governor, therefore, will deprive them of the only appointment carrying pay equal to that of a civilian of only ten or fifteen years' standing. As the Bengal Educational Service contains many first-class Oxford and Cambridge graduates who have devoted their lives to the cause of education in India, we must confess our inability to understand how the Lieutenant-Governor can justify a step so obviously unjust to the Service and detrimental to the educational interests of the province. In anticipation, no doubt, of the awkward questions that are sure to be raised in the House of Commons in February as to the fitness for the post in question of the officer upon whom Sir Andrew Fraser's choice has

fallen, he has been deputed, it seems, to visit a number of educational institutions in England and America in the course of a rapid tour of two or three months' duration. We trust that this shallow artifice will not impose upon the Secretary of State, and that he will decline to hand over the educational interests of a province containing forty millions of people to the control of an officer whose qualifications for so important an educational post are of so slender and superficial a character."

### SUMMARY OF THE MONTH.

THE Roman Catholic Archbishop of Dublin, in a long address on the subject of Irish education at the Christian Brothers' School, Dublin, referred in detail to the success of Roman Catholic schools and colleges in the recent public examinations, and severely criticized the manner in which the Board of Intermediate Education has made its awards upon the examinations of the present year. Mr. Dillon, M.P., said that in the increasing success of their Roman Catholic schools they were witnessing the uprising of an oppressed nation. When the barriers against the Irish people were removed they would trample down all those Trinity College professors who talked about confining knowledge to a class. They would prove in the open competition of life that they were more fitted to go into a university than a Trinity College man, and, if the Trinity College men did not wake up and work much harder, they would clear them out of all the learned professions in the country.

SIR JOHN BRUNNER distributed (November 13) the prizes at Winnington, Northwich, to the evening classes, which rank amongst the most successful in Cheshire. Messrs. Brunner, Mond, & Co. make it a condition of employment that all their young men must attend evening schools. They return all fees to those making 90 per cent. of attendances. A record has been established, about £60 being returned to 219 students out of 261. On three days weekly the company's apprentices attend technical classes free of charge. The schools have been greatly enlarged.

At the annual presentation of prizes and certificates to the successful candidates in the Local Examinations (London Centre) of Trinity College of Music, London, Mr. J. W. Sidebotham, Mus. Bac., in the chair, it was reported that for the musical knowledge examinations there were 248 candidates, of whom 78 were successful in obtaining honours and 128 were awarded pass certificates. For the practical examinations the total number of candidates was 1,008. Of these 805 satisfied the examiners, 110 obtaining honours and 695 pass certificates. The total number of candidates for the session was 1,256. The chairman, in the course of a short address, said that he had been chairman of the Manchester Centre for many years. The college was no new institution which had its place to make in the musical world, but it stood upon a firm and sound basis. It supplied a public want, its aims were high, and its certificates carried with them a guarantee of solid and satisfactory work. From the very beginning the college had received the support of those who had been at the head of the profession, and at the present time it held an important place among the institutions of its kind in the country. He had lately read in a German newspaper that England was satisfied with the commonplace of the music-hall. This was a sweeping and exaggerated statement, but he was inclined to think that there was some truth in it, and it was for the present-day student to assist in raising the taste for music in this country. Dr. Turpin alluded to the decadence in the musical taste of this country, and said that in the future progress of music in England the one thing necessary would be a more complete and intelligent method of reading.

THE Board of Education have issued to Inspectors of technical institutions a memorandum, in which they say they have had brought to their notice a number of cases in which advantage accrues from the existence of some form of co-operation between employers of labour on the one hand and the managers of technical institutes and evening schools on the other, with regard to the instruction of employees or apprentices. As there appears to be great variety in the character and amount of such co-operation, a short account of a few typical examples is given by

way of showing what has been found actually possible under present conditions. The development and strengthening of the relation which the work of the teaching institution bears to the practice and to the commercial aspects of our industries are, in the opinion of the Board, a necessary part of further industrial progress. It is therefore important that Inspectors should be prepared to discuss with those interested what methods of promoting this connexion are most suitable, or most likely to prove possible of establishment, in the case of particular schools. It should not be forgotten that any effective interest which employers or foremen take in the studies of apprentices who work under them will exercise an important influence in helping these youths to appreciate the fact that technical education has for them a real value. Thus, even where no large measure of success is attained by local efforts to secure for a particular school such a direct form of support as one of those indicated, they will not have been wasted if they succeed in giving those in authority in the workshop or office a clear conception of the nature of the facilities afforded in the school, and of the significance of the records of good work there.

THE Mayor of Hampstead (Alderman D. McMillan) presided (November 1) over a numerously attended meeting in the Town Hall, Haverstock Hill, in connexion with the forthcoming removal of the University College School from Gower Street to Hampstead, where new buildings are now in course of erection. It is estimated that about £100,000 will be required for the building and equipment of the new premises, towards which about £62,000 has already been promised. Among those supporting the chairman were Viscount Hayashi, a former pupil in the school, who was heartily welcomed, Sir William Collins, Chairman of the London County Council Education Committee, Principal Gregory Foster, Dr. E. Collingwood Andrews, Dr. Spenser, the Head Master, Mr. Walter Baily, the Rev. G. A. Herklots, Dr. Horton, and Mr. Eve, a former Head Master. The Town Clerk (Mr. A. P. Johnson) read letters expressing regret for inability to attend from Lord Selby, Lord Reay, Sir Richard Farrant, Mr. Rufus Isaacs, K.C., M.P., and others. The chairman referred to the fact that at least two-thirds of the boys of University College School resided in Hampstead or its vicinity. He believed the new buildings would be worthy of Hampstead, and he thought it but right that Hampstead people should take an interest in the removal. Viscount Hayashi moved: "That this meeting pledges itself to use its best endeavours to support University College School, which is to be removed to Hampstead, and to obtain the sum of £50,000 still required for the necessary buildings and equipment." He remarked that his presence was evidence of his interest in education in general, and more particularly in secondary education as imparted by University College School. He was glad to testify his personal interest in that school, at which he was for some time a pupil. The resolution was seconded by Sir William Collins, and supported by Mr. C. A. Russell, K.C., both former pupils of University College School, and carried unanimously. A committee was then appointed to organize an appeal for the funds needed.

A CONFERENCE on educational questions, under the auspices of the Association of Head Mistresses, was held at the Clothworkers' Hall, E.C., on October 28, Miss F. Gadesden, M.A. (Blackheath High School), President of the Association, in the chair. The following motions came under discussion:—

1. That in the opinion of this Conference (1) co-education in schools for children under ten years of age has many advantages if sufficient care is taken to place it sufficiently under the control of able and responsible women; (2) in rural districts where the secondary-school population is sparse and its character more homogeneous, the mixed school is often the best solution of the educational problem; (3) but that, under the conditions of life in this country, the mixture of social types, the diversity of religious opinion, and, in general, the heterogeneity, of the secondary-school population, it is better that the system of secondary education should proceed on the principle of supplying separate schools for boys and girls over ten years of age.

2. That this Conference welcomes the New Code for Public Elementary Schools, especially on account of its elasticity and freedom, and the opportunities it gives for adapting the curriculum to local requirements.

3. That the widespread realization of the work of the various types of secondary schools is now a matter of vital importance, since Local Education Authorities are empowered to take action in maintaining, aiding, and establishing secondary schools within their areas.

The first resolution (moved by Mrs. Bryant) was carried, and the other two were adopted.

THE *Oxford Magazine* (November 1) contains an analysis of the results of the recent competitive examination for the Civil Service of India, for first-class clerkships in the Home Civil Service, and for Eastern cadetships. The total number of appointments was only 63, but the results for the 83 candidates whose names appeared on the list have been analyzed. The most conspicuous success belongs to Edinburgh University, which has secured the first, second, and third places with 9 successes. Oxford has 36 names on the list, Cambridge 28, Glasgow and the Royal University of Ireland 3 each, Aberdeen, St. Andrews, Trinity College, Dublin, and London, 1 each. Among colleges St. John's, Cambridge, has 7 successes; Balliol takes 6 places, and Trinity, Cambridge, 5. As to the schools from which successful candidates were drawn there is little to record. "4 is the largest from any one, a distinction which falls to Cheltenham. Harrow, St. Paul's, Dulwich, and City of London each have 3; Eton and Winchester 2 each. George Watson's College, Edinburgh, really possesses the best record, having 1st, 3rd, and 37th." This year the average number of subjects taken is a little over 12 per candidate, but in future competitions no candidate will be allowed to take up an unlimited number of subjects, and there will be a fixed maximum of marks.

DR. CLIFFORD contributes to the *Baptist Times* a letter on the settlement of the education controversy. He says:

We are encouraged to hope that the people of England will obtain these three things: (1) popular control of State education; (2) the abolition of theological and ecclesiastical tests in the State teaching profession; (3) the exclusion of sectarianism of every type from the curriculum of the schools. "Let us have," he adds, "an *ad hoc* Authority, such as is now demanded by writers in the *Schoolmaster*. Municipalize education on the broadest and most democratic lines. Abolish secrecy of management; bring the administration to the light of day. Let the people not only rule themselves through their freely and directly elected representatives, but also let them know all their representatives do, and how they do it."

A BILL has been drafted to enable the Governing Body of Rugby School to make provision for the establishment, constitution, and incorporation of an Education Authority for the purpose of acquiring, maintaining, and managing the Lower School (which is to be known as the Subordinate School) and to transfer and vest this in the Education Authority to be established, and also the buildings and lands and special endowments relating to such school, together with the balance of any money belonging or appropriated to the school, and to provide for the making of payments or contributions by the Governing Body to the Education Authority. Provision is also to be made for the maintenance and management of the Subordinate School by the Education Authority as a school for higher or secondary education, and such Authority is to be responsible for all maintenance charges and other expenses in connexion with the school, and for the maintenance of, or for any change in, the existing system of foundationerships and scholarships tenable at the school. They are also to receive and apply any sums granted or paid to them by the Local Education or other Authority as if they were an Education Authority appointed under the Act of 1902. They are to be required to afford a good commercial education for students in the Subordinate School, and to maintain the teaching of English, Latin, at least one modern foreign language, and Greek, unless and until the Governing Body shall consent to the discontinuance of Greek.

THE Civil Service Commissioners desire to draw the attention of schoolmasters, parents, and guardians to the fact that the scheme of examination for the forthcoming open competition for not fewer than six appointments to the post of examiner in the Exchequer and Audit Department is very similar to the present schemes of examination for admission to Woolwich and Sandhurst and for junior appointments in the Supply and Accounting Departments of the Admiralty, and that it is, therefore, suitable for gentlemen whose education has been conducted on ordinary public-school lines. The subjects embrace English, Latin, Greek, French, German, Geography, History, Mathematics, and Science; but candidates will not be at liberty to take up all these subjects. They will be permitted, however, to take both Latin and Greek. Candidates must be between eighteen and twenty years of age. Copies of the regulations, together with particulars of the pay and prospects, are obtainable on application, by letter, to the Civil Service Commission.

AN excellent example of the "educational ladder" (says the *Westminster Gazette*) is to be seen in the career of Mr. T. S. Moore, B.A., B.Sc., the newly elected Fellow in Chemistry of Magdalen College, Oxford. Beginning as a London School Board scholar, Mr. Moore successfully pushed his way on through the standards until he had won a London County Council scholarship and had graduated B.Sc. with Honours in London University. Then, after vindicating the worth of the good educational schemes of the late School Board and of the County Council, Mr. Moore turned from the younger university to the older, and, going into residence, as a scholar of Merton in 1899, graduated with First Class Honours in Chemistry in 1902. Immediately afterwards he was appointed Lecturer in Chemistry at Birmingham University, and, after work there which has won the highest praise, was last week elected Fellow in Chemistry at Magdalen after open competition.

At the annual meeting of the subscribers to the British School at Rome, the President of Trinity (Prof. Pelham), who occupied the chair, said the most satisfactory statement in the report was that which had reference to the Government grant (£500). Thanks were due to the signatories to the memorial, which was one of the most representative of learning which had ever been addressed to the Treasury. To the Government also gratitude was due. The grant would begin next year, and until then much work would have to be kept in suspense. But this school and the British School at Athens still lagged far behind the institutions of Germany and other nations. Hereafter we should hope to attain to the level of the German School. This country was sadly handicapped. The French and German student began the study of archaeology with the knowledge that it led to a professional career. In this country there was no such prospect, but it was to be hoped that the growth of universities would bring about a change, and the unduly individualistic English people would learn the value of co-operation and organization. Notwithstanding all these drawbacks, the work of the British School was being recognized, and Dr. Rushforth's labours on the Church of Sta. Maria Antica had been warmly commended by German scholars. There were many fields at Rome—*e.g.*, mediæval times—besides that of classical archaeology; a history of the English in Rome was one *desideratum*, and another was the study of architecture. All who had to do with the school were most deeply indebted to Lord Currie; and in Sir Edwin Egerton, who had done so much for the British School at Athens, they welcomed a worthy successor to Lord Currie. Mr. H. Stuart Jones, late director of the school, gave an address, illustrated by lantern slides, mainly on historical sculpture in Rome.

## UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

Oxford. THE death of Sir John Burdon Sanderson has removed from our midst one of the most striking personalities in Oxford. Many will remember the bitter controversy, that extended even to the University, between vivisectionists and anti-vivisectionists when his appointment to the Regius Professorship of Medicine was first published. But Dr. Burdon Sanderson, as he then was, soon convinced even his opponents that he was a man of wide learning, no extremist or faddist, and one whose real object was to use knowledge and research for the amelioration of human life. Those who have seen him walk to his place in Magdalen Chapel (for he was a Fellow, and afterwards an Honorary Fellow) will not forget quickly the man with the remarkable head and clearly chiselled features. Indeed, in its recent Regius Professors—Sir Henry Acland, Sir John Burdon Sanderson, and now Prof. Osler—the University has rightly claimed three men of real mark.

A *propos* of the new holder of the title, his enthusiasm for his subject was demonstrated by the fact that, after the regular annual medical dinner, when possibly the junior brethren expected bridge and tobacco, their new chief proceeded, as an after-dinner relaxation, to give them a paper on tuberculosis.

Possibly the topic which aroused most interest of late in Oxford has been the interpretation put upon the Bishop of London's sermon to undergraduates by sundry of the London papers. Bishop Ingram has been himself at pains to correct the exaggerated inferences drawn by the *Daily Mail*, for instance. There is not the shadow of a doubt that Oxford is not passing through a "wave of drunkenness"; the Oxford wine merchants and the various junior common rooms could tell a different tale.

The consumption of wine in Oxford has decreased just as much as it has in London clubs and general society. A good deal of the noise and "ragging" at bump supper and other festivities is not due to alcohol at all, but to the contagion of excitement. No one will imagine that in a collection of two thousand young men of all kinds there will not be some who drink; but to talk about general drinking habits or applause of drunkenness is absurd.

We are never satisfied with our examinations. Responsions, of course, has been assailed, and will no doubt be assailed again soon, when the non-Greeks have remmarshalled their forces to the attack. There is a rumour now that once more Honour Moderations is to go into the melting-pot, with the idea of replacing "prepared books" by more general work. No doubt this might be a better test of true scholarship; but, at the same time, the claims of the weaker competitors, who are more numerous, can scarcely be disregarded. The prepared books give these men a chance, by their industry, of doing respectably in the examination, and it is a pity to take any step which would remove the reward of industry. Pass Moderations has been, within the last few weeks, bitterly assailed by tutors in the pages of the *Oxford Magazine*, and possibly the result will be a redistribution of the time allotted to certain papers in the examination and a more frequent change in the "set books."

We had various distinguished visitors in Oxford during the month: Lord Roberts, at the Union, had a fine reception from a crowded house, and his exposition of our national responsibilities and weaknesses was able, if not convincing to every hearer. At the Union debate on the Fiscal Question and Mr. Chamberlain's Proposals, we had Lord Hugh Cecil; at the Palmerston Club, on the day after, Sir Charles Dilke; very soon we are to listen to the fiscal prophet himself. Practically all the tickets for the Tariff Reform League meeting on December 8 have been issued.

In matters athletic our star in some aspects is not very bright: it must have been a long time since a Rugby football team suffered so many reverses, and not even the most sanguine can look forward to the match against Cambridge. The Association team promises well, and, among other successes, defeated a strong Army team. The athletes effected somewhat of a surprise by winning against the L.A.C.: the London club adopted the unusual plan of numbering present Cambridge blues among its representatives. Expert tells us that the Trial Eights are up to a good average, and that the new talent is promising.

The 'Varsity Fours, after a close race, was won by Magdalen, while the Association Cup will almost certainly fall to Oriel, who have to meet Exeter in the final. Oriel had a very narrow escape in the beginning of the competition from being beaten by Merton, while Exeter only triumphed over Christ Church after two games and extra time.

The letter should not close without an allusion to the success scored by Bodley's Librarian in the debate as to whether the Curators should be allowed to put up bicycle stands in the Proscholium. Whatever be the rights or wrongs of the matter, we ought anyhow to be grateful for the beautiful architectural illustrations which appeared in Mr. Nicholson's pamphlet.

(From our own Correspondent.)

It is pleasing to see first one, then another, of Cambridge, the theological colleges, excluded so long by the intolerance of older times, coming to the shelter of the older universities as to their natural home now that religious tests are removed. This term sees another theological college settling at Cambridge. Cheshunt College, founded by Selina, Countess of Huntingdon, in 1768, an outcome of the Evangelical revival of the eighteenth century, has for the last 113 years done its work near London, training men for the ministry of various Evangelical Churches and sending not a few of its sons—such as Gilmour of Mongolia, Chalmers of New Guinea, and Griffith John of China—into the foreign mission field. Since the reorganization of the London University as a teaching university, Cheshunt has been one of its Divinity schools, but, as it was unable, owing to distance and difficulty of communication, effectively to combine its teaching power with that of the other London colleges it has removed to Cambridge to draw on the wealth of teaching resources there. It has at present fifteen students and two tutors. The students are becoming members of the University, attending University and college lectures and classes, and reading for University examinations in Arts and Theology, and the Council of the Senate of the Uni-

versity will be represented on its Governing Body as well as various religious bodies with which it has been connected.

The ninth of November was celebrated by one of the periodical "Rags" for which Cambridge is now famous—or otherwise. The abnormal quiet of the term was far too great to last, and the New Zealand match afforded a pretext for the rowdier elements to assert themselves once more. As a rule, the Cambridge police, burly and kind-hearted, are able to manage the obstreperous undergraduate and the more unmanageable Barnwellite, but on this occasion the police were reinforced by their junior colleagues, and a right royal row ensued. A few heads of comparatively inoffensive persons were cracked; the proctors arrested the tamest of the undergraduates; and property owners are left lamenting the destruction of their gates, fences, and shutters. A few fines were imposed at the Police Court; but these disgraceful affairs will never be stopped until a real example is made. If some of the marauders were sent before a judge of assize, they would be surprised to hear that their childish pranks are visited by a kindly Legislature with a punishment of five years' penal servitude. Perhaps some unsympathetic tradesman some day will lodge a charge of No. 6 shot in the legs of the rioters, and things will come to a crisis. What would the University man say if the mob were to break into the boathouses and demolish a few of the racing eights?

An influentially signed memorial has been addressed to the Council suggesting a very necessary reform. At present the University requires absolutely no test from those who matriculate: everything is left to the colleges. Now, colleges must live, and fees fill the college treasuries. Result: all sorts and conditions of men are received into our midst who would be—to put it mildly—ineligible for the middle forms of a decent school. The memorialists suggest the advisability of imposing upon all candidates the passing of the Previous or some substituted examination as a condition precedent to matriculation in the University. The possibility of inducing Oxford to combine with us in establishing a joint entrance examination is also put forward as one of the objects of the memorialists. The proposal is an obvious one: it would decrease the number of examinations, as it would enable the ordinary schools to frame their work so that boys from the Upper V. might while still at school do all that is necessary to take full advantage of their Cambridge course. It would prevent the scandal of Tripos men wasting six months or a year of their valuable time in learning what can be taught elsewhere and is contemptuously brushed aside up here.

The report of the Local Lectures Syndicate shows that solid progress is being made in the work of that department. Mr. Cranage, the Secretary, does not believe in showy methods of work, and would be the last to trust to the uncertain arbitrament of figures; but there is no doubt that the movement is not only spreading wider, but is throwing its roots deeper. It has given many a working man a chance of refinement, and, what is far more important, has brought an increasing number of able men into touch with the actual realities which underlie national education. We may have taught the masses a little: they have certainly taught us much.

The visit of the New Zealand football team to Cambridge caused a mighty inrush of football devotees. Many a well known "Blue" was seen once more watching the doings of his successors. Happily, our men, though defeated, were far from being disgraced, and gave the colonists quite the best game they have had in England. We have great hopes of beating the Dark Blues on December 12, as it is extremely probable that at least eight of our men will by that time have won their International colours.

The new Mayor of Cambridge is Mr. Durnford, of King's. He will prove a great success if his achievements as Treasurer of the A.O.C. afford any guide.

The Bishop of London has been addressing the undergraduates, and has much to say as to the misinterpretation of his Oxford sermon: fortunately, here in Cambridge people can keep their heads and avoid panic. At the same time, it must be acknowledged that a little more moderation in the consumption of alcohol would make the undergraduate a quieter if not a happier person.

This term has been signalized by a few "rags" of a domestic order in one college, large enough to support two boat clubs, and catholic enough in its sympathies to welcome within its portals sojourners from the Far East. Some jovial spirits have manifested their impatience at the admission of Asiatics to the benefits of their ancient foundation. In a dress-suit and bathing towels arranged to represent the flowing robes of a dusky

potentate, a *soi disant* Poo Bah of Nigeria with his suite compelled some harmless Hindoos to do fealty to their self-constituted ruler. College meetings and retirement to the country followed as the inevitable result.

Sir Edward Candy will, it is announced, deliver a course of lectures next term on "The Causes of Indian Famines." Sir Edward, who is a retired judge of the Bombay High Court and was recently at the head of the Police Commission in India, has had exceptional opportunities of forming an opinion on this important question and will be worth hearing.

The A.D.C. are performing "The New Boy" with vast success. The Club maintains its usual high standard of excellence.

The actual number of matriculations this year was 1,038—a record.

Full term ends on December 8, and we shall get away to sunnier spots.

\*.\* In reference to a statement in our Cambridge letter last month—"Caius is once more encouraging medical students, and has 87 new names on its books in consequence"—an esteemed correspondent writes authoritatively:

"The large entry (86) is no way due to increase in the number of medical students. If any obvious cause is sought, it is due to the considerable increase in the number of engineering students, and the substantial increase in literary and theological students. The fact is that most colleges, and quite rightly, encourage the admission of medical students."

At a meeting of the Court of Governors of the Manchester. Victoria University (November 16), Sir Frank Forbes Adam, in submitting the report of the Council, said since the last meeting an instructor in military history, strategy, and tactics had been appointed, with the object of giving a thorough military education to those who wished to take advantage of the opportunity at the University. In this connexion he might say that, in addition to the nominations which had been placed at the disposal of the University by the War Office, there was reason to believe that before long these would be extended so as to include the grant of nominations in the Royal Engineers, which was *par excellence* the scientific service in the Army. Another matter of interest was that the Professor of Pathology in the University had been appointed a member of the Medical Board of the Royal Infirmary, and the infirmary would now grant facilities for the teaching of morbid anatomy to students. Arrangements had also been made with the Royal Eye Hospital for teaching the subject of ophthalmology to University students when the eye hospital to be erected on part of the infirmary site was completed. These were developments with which they might feel justly satisfied. On the proposition of Sir William Houldsworth, M.P., seconded by Dr. Nield, and supported by Sir John Hibbert and the Vice-Chancellor, the report was adopted. In the course of the discussion it was stated that the number of students was continually increasing, and that the University had now arrived at a state of equilibrium in respect of its finances.

THE annual meeting of the Court of University Wales. College of Wales was held at Aberystwyth on October 27. The most important matter to come before the Court was the consideration of the proposal to appoint a working head for the University of Wales. The Council in the morning passed the following resolution:—"The Council recommends that no scheme for reorganizing the administrative work of the University of Wales be approved by the University Court without first submitting the same to the consideration of the constituent colleges; in the meantime the Council earnestly trusts that no such scheme will be adopted, involving an infringement of the principle which the University charter is designed to safeguard, 'the freedom and equality of the colleges in the organic unity of the University.'" In a long letter protesting against a working head, Lord Rendel, the President of the college, said the proposal tended to set up a University conclave. They must have no separate camps in Welsh education, and so long as the three colleges of the University constituted one indissoluble organization the national cause and position were safe. The resolution was carried unanimously.

Sir Marchant Williams, Warden of the Guild of Graduates of the University of Wales, addressing the Cymmrodorion Society at Cardiff (November 7), advocated the appointment of a Principal or working head for the Federated University; the relieving of the

Principals of the three federated national colleges of their duty each as Vice-Chancellor in turns of two years; the curtailment of the powers assumed by the academic section of the University Court; and the restoration to the University of its original democratic and national character. The hostility to the creation of a Principal or working head for the University, he said, had only developed since the appointment of Sir Isambard Owen as Principal of the Armstrong College of Science, Newcastle-on-Tyne. Sir Isambard is deputy to the Prince of Wales as Chancellor of the Welsh University, and as Deputy Chancellor had exercised many of the functions proposed to be entrusted to the intended Principal. Before his appointment at Newcastle those who now opposed a working head had contemplated creating Sir Isambard "Rector" of the Welsh University, "Rector" being an alternative title for "Principal" or "Working Head." Sir Isambard could not hold the dual office of Rector of the Welsh University and Principal of the Armstrong Science College at Newcastle. The Principals of the three Welsh colleges objected to being deprived, as they would be if the new appointment were made, of their Vice-Chancellorship by rotation. Sir Marchant said they now drew £200 a year salary to which they were not entitled, inasmuch as in the application made to the Treasury this sum was set aside to pay for an assistant or substitute professor at the colleges when the Principal could not take classes owing to his fulfilling the duties of a Vice-Chancellor; but since then the Principals had ceased to hold professorships, and consequently no assistants or substitutes were needed as originally contemplated, but the Principals when Vice-Chancellors continued to draw the £200 per annum intended for the substitute. Sir Marchant maintained that his scheme of reform was inevitable if the University's integrity was to be maintained.

UNIVERSITY COLLEGE, BRISTOL (says the *Bristol Times and Mirror*) had a good account to give (November 15) of its past year's work.

The Lord Bishop was able to say that its position was stronger and its prospects more hopeful than ever; and another staunch friend of the College, Mr. Lewis Fry, regarded the financial position as more satisfactory than it has ever been. The report showed every branch of the College work to be in a healthy state. Changes in the staff, though more numerous than usual, have not permanently interfered with teaching efficiency. An important feature of the College activities—the training of teachers—tends year by year to become more effective and far-reaching. The friends of the institution do not fail, however, to insist on the inadequacy of the local financial support which it receives relatively to similar colleges in Northern and Midland centres. Nor do they lose sight of the ideal of having in Bristol, not merely a university college preparing students to take degrees elsewhere, but a fully equipped university granting degrees of its own. Except that the munificent citizen for whom the Bishop yearns has not yet come to the front, there is no reason why the West of England should lag behind other parts of the country in the modern university movement.

THE completed Honour Lists of the Royal University for the academical year now closed (says the *Irish Independent*)

should furnish food for thought to those who have prevented a settlement of the Irish University question. The splendid successes achieved year after year by the Catholic colleges and convents have been repeated on this occasion, and the State-aided Queen's Colleges show by contrast as unfavourably as ever. Ten colleges and convents divide 271 honours between them, and of these the Catholic institutions, unendowed and unrecognized by the State, secured a large majority, University College alone obtaining over one-fourth of the total. The three Queen's Colleges, in addition to their initial cost, receive annually £41,000 as a subsidy out of the public funds; yet University College carried off within two of the total number of honours awarded to the three State-aided colleges. Or, again, the unendowed Loretto College, St. Stephen's Green, secured 41 honours to the 45 awarded to Queen's College, Belfast. But the case of the Cork and Galway Queen's Colleges, which receive between them £20,000 a year, is even worse. Galway obtained only 24 honours, and Cork figures at the very bottom of the list with 9. If examination is any test of efficiency in education, surely the whole system which squanders money on the Queen's Colleges, while ignoring the Catholic institutions, stands self-condemned.

## CURRENT EVENTS.

THE North of England Educational Conference will be held at Newcastle-on-Tyne on January 5 and 6. The Hon. Secretaries are Mr. A. Goddard, Secretary of the Newcastle Education Committee, and Mr. F. H. Pruen, Secretary of the Armstrong College, Newcastle.

\* \* \*

THE distribution of scholarships, medals, and prizes gained in the examinations for the Commercial Education Certificates of the London Chamber of Commerce will be made at the Mansion House on December 6, at 3.30 p.m., by Prof. W. J. Ashley, Dean of the Faculty of Commerce in the University of Birmingham.

\* \* \*

THE L.C.C. Free Popular Lectures on Saturday afternoons at the Horniman Museum for the month will be: December 2, "The Decorative Art of Primitive Man," by Dr. Harrison; December 9, "The Work of our Primitive Ancestors; and what we learn from it," by Mr. E. Lovett; and December 16, "The Weapons of Savages," by Dr. Harrison.

\* \* \*

At the Parkes Museum (Margaret Street, W.) there will be a "Discussion on Infant Classes" on December 7, at 8 p.m. (arranged by the Childhood Society); and a Lecture on "Moral Intuition and Common Sense: a Study of Original or Inherited Moral Capacity," by H. Thiselton Mark, M.A., B.Sc., Lecturer in Education to the University of Manchester, on December 14, at 8 p.m. (arranged by the British Child-Study Association).

\* \* \*

MR. F. B. KIRKMAN, B.A. Oxon., will expound a Moral Lesson on the subject of "A Gentleman" to the Moral Instruction Circle (19 Buckingham Street, Strand, W.C.) on December 11, at 7 p.m.

\* \* \*

At an ordinary meeting of the Sociological Society (School of Economics and Political Science, Clare Market, W.C.), M. Waxweiler, Director of the Institut de Sociologie, University of Brussels, will discourse on "L'Institut de Sociologie: its Equipment and Work," on December 18, at 8 p.m.; and at a research meeting on "Biological Methods in application to Social Problems," on December 19, at 4 p.m.

Honours. MR. R. B. HALDANE, K.C., M.P., LL.D., &c., has been elected Lord Rector of the University of Edinburgh, by 877 votes against 847 for Lord Dunedin, Lord President of the Court of Session; Mr. H. H. Asquith, K.C., M.P., D.C.L., &c., Lord Rector of the University of Glasgow, by 866 votes against 655 for the Marquis of Linlithgow, Secretary for Scotland; and Sir Frederick Treves, Bart., F.R.C.S., LL.D., &c., Lord Rector of the University of Aberdeen, by 390 votes against 153 for Mr. C. T. Ritchie, M.P., the preceding Lord Rector, who had withdrawn before the vote was taken.

\* \* \*

PROF. G. H. DARWIN, F.R.S., President of the British Association, has been made a K.C.B.

\* \* \*

THE Royal University of Ireland has conferred the honorary degree of LL.D. upon Mr. Robert Cochrane, F.R.I.B.A., C.I.S.O., &c., President of the Institution of Civil Engineers of Ireland and Hon. General Secretary of the Royal Society of Antiquaries of Ireland.

THE VERY REV. JAMES MOORHOUSE, D.D., formerly Bishop of Manchester, has been elected an Honorary Fellow of St. John's College, Cambridge.

AN anonymous donor has promised £50,000 towards the completion of the new buildings of the University of Birmingham at Bournbrook.

\* \* \*

SOME £5,855 has been promised towards establishing a Students' Union at Liverpool University. The sum includes £1,000 each from Mr. Edward Whitley and Sir John Brunner; £500 each from Mrs. George Holt, Miss Holt, Mr. C. W. Jones, Mr. E. K. Muspratt, and Mr. T. Sutton Timmis; £250 each from Mr. Walter Holland, Mr. John W. Hughes, and Sir W. H. Tate; £200 from the late Dr. Button; and £100 each from the Vice-Chancellor (Dr. Dale), Mr. Holbrook Gaskell, and Mr. W. B. S. Hughes.

\* \* \*

MR. HENRY MORRIS, F.R.C.S., Senior Surgeon, Middlesex Hospital, has given £1,000 to form the nucleus of a permanent endowment fund for the maintenance of the Medical School of the hospital.

\* \* \*

MR. JAMES DAVENPORT, Hey-in-Lees, Lancashire, has left £1,000 to provide three annual scholarships in the day schools at Hey, and £500 to the Oldham Blue Coat School.

Scholarships and Prizes. MR. THOMAS H. KELLY, of New York, has given £300 to the Irish Catholic Scholarship Fund, to endow two scholarships of £50 a year for three years.

\* \* \*

PRELIMINARY examinations for 15 free open scholarships at the Royal College of Music, South Kensington, will be held on January 31, 1906, in various local centres throughout the United Kingdom. The scholarships to be competed for are as follows:—Composition, 1; Singing, 4; Piano-forte, 3; Organ, 1; 3 among Violin and Violoncello; 3 among Double Bass, Viola, Flute, Bassoon, Horn, and Trombone. They entitle the holders to free musical education at the College, and are, as a rule, tenable for three years. Further information and official forms of entry may be obtained from the Registrar. No entry form can be received after December 21, 1905.

\* \* \*

ONE scholarship, £50, will be offered for competition amongst new students entering for a two-year course (commencing January next) at St. Bride Foundation Physical Training College (Bride Lane, Fleet Street, E.C.). No examination will be held unless there be five entries. Apply to the Clerk or Manager to the Governors, or to the Gymnasium Instructor.

\* \* \*

BEDFORD COLLEGE, LONDON, offers two open scholarships, £20 each for one year, for the course of secondary training, beginning in January next, to candidates holding a degree or equivalent in Arts or Science. Apply to the Head of the Training Department by December 18.

Appointments and Vacancies. AT University College, London, the following appointments have been made:—Dr. Herbert Tilley to be Surgeon of the Ear and Throat Department of University College Hospital; Dr. Thiele to be Pathologist to the hospital for a further period of twelve months; Prof. Gardner to be Yates Lecturer in Archaeology for the current session; Mr. J. H. Walker to be Assistant in Coptic in the Department of

Egyptology; Mr. N. F. MacLeod to be Assistant in the Department of Hygiene.

\* \* \*

IN Liverpool University, Dr. A. W. Titherly has been appointed Lecturer in Organic Chemistry; Dr. W. G. Smith, Lecturer in Experimental Psychology; Dr. G. Schaafs, Assistant Lecturer in German; Dr. H. Bassett, Demonstrator in Chemistry; Messrs. W. Mason and G. E. Scholes, Assistant Lecturers in Engineering; and Mr. C. A. Sadler, Assistant Demonstrator in Physics.

\* \* \*

MR. F. C. BURKITT, M.A., has been appointed to the Norrisian Chair of Divinity in Cambridge University.

Mr. Burkitt (who was educated at Harrow and Trinity) came out twenty-eighth Wrangler in 1886, and took a First Class in the Theological Tripos, 1888, being also awarded the Hebrew prize. He was successively Carus Prizeman, Jeremie Prizeman, second Tyrwhitt Scholar, Mason Prizeman, and Kay Prizeman. He has been University Lecturer in Palæography, and Examiner for the Theological Tripos.

\* \* \*

DR. W. A. BONE, Ph.D., D.Sc., F.R.S., has been appointed Professor of Applied Chemistry (Fuel and Metallurgy) in the University of Leeds.

\* \* \*

AT University College, Cardiff, Mr. F. S. Pinkerton, M.A., has been appointed Professor of Applied Mathematics; and Mr. D. G. Taylor, M.A., and Mr. J. G. Smith, M.A., Lecturers in Mathematics.

\* \* \*

MR. H. STANLEY JEVONS, M.A., B.Sc., of the University of Sydney, has been appointed (for one session) Lecturer in the Department of Political and Commercial Science in University College, Cardiff.

\* \* \*

MR. ADAM B. WEBSTER, M.A., succeeds Prof. G. Gregory Smith as Assistant Professor of Rhetoric and English Literature in Edinburgh University.

\* \* \*

MR. GOLLANZ has resigned the University Lectureship in English at Cambridge.

\* \* \*

MR. EDWARD J. THOMAS, M.A. St. Andr., B.A. Lond., has been appointed Assistant Lecturer in Greek and Latin at University College, Bangor.

\* \* \*

MISS MABEL E. HOWELL, B.Sc., has been appointed Assistant Lecturer in Mathematics in University College, Bristol.

\* \* \*

THE following members of the teaching staff of the Manchester Municipal School of Technology have been appointed Lecturers of the University:—Messrs. J. P. Wrapson, J. Radcliffe, T. W. Fox, H. G. Jordan, W. W. Haldane Gee, E. Knecht, J. Hübner, and Charles W. Gamble.

\* \* \*

MR. L. A. BORRADAILE, Lecturer in Natural Science at Selwyn College, has been appointed Assistant Secretary for Lectures to the Cambridge Local Examinations and Lectures Syndicate, in succession to Mr. Archbold.

\* \* \*

MR. FRANCIS R. B. WATSON, B.Sc. (Engin.) Edin., has been appointed Assistant Lecturer and Demonstrator in Engineering in the Merchant Venturers' Technical College, Bristol, in succession to Mr. W. K. Beard, who has been appointed one of H.M. Inspectors of Factories.

\* \* \*

AT Wigan Mining and Technical College, Mr. Arthur J. Jackson, Art Master, Wednesbury Art Gallery, has been appointed to the Art Department; Mr. Ernest B. Naylor, M.Sc., F.C.S., Lecturer in Chemistry at the Technical School,

and Chemistry Master at the Secondary School, Widnes, to the Chemistry Department; and Mr. H. G. Cotsworth, A.M.I.M.E., Lecturer at Battersea Polytechnic, and inventor of the Cotsworth arc lamp, to the Electrical Engineering Department.

\* \* \*

THE REV. F. S. WILLIAMS, M.A. Cantab., assistant master of Rugby School, has been appointed Head Master of Eastbourne College.

\* \* \*

MR. R. O. BISHOP, M.A. Cantab., has been appointed Head Master of Andover Grammar School.

\* \* \*

THE Second Mastership at Bancroft's School is vacant through the premature death of the Rev. James Hall, B.A., B.Sc.

\* \* \*

MISS AMY T. STEELE, M.A. London, second mistress of George Watson's Ladies' College, Edinburgh, has been appointed Head Mistress of the Portsmouth and Southsea High School of the Girls' Public Day School Trust, in succession to Miss Adamson.

\* \* \*

AT the College, Ramsgate, Mr. Tudor Foulkes Jones, B.Sc. Wales, assistant master, Lurgan College, has been appointed senior mathematical and science master; Mr. R. M. Williams, B.A. Oxon., second form master; Mr. W. E. Weber, M.A. Cantab., senior modern language master; Mr. William G. Patton, assistant master, Hall Gate School, Doncaster, master of the commercial form; and Mr. D. K. Petano, B.A. Oxon., assistant master, Guildford Grammar School, Head Master of the Junior School.

\* \* \*

MR. ROBERT JOHNSON, M.A. Oxon, second master, Pocklington School, has been appointed to King Edward VII. School, Sheffield.

\* \* \*

MR. R. O. V. THORP, B.A. Cantab., assistant master, Pocklington School, has been appointed to Trent College, Long Eaton.

\* \* \*

MR. JOHN PEILE, B.A. Cantab., Aske's School, Cricklewood, has been appointed to University College School, London.

\* \* \*

MR. ALFRED H. SCHOLEFIELD, B.A., B.Sc. Lond., assistant master, Wolverhampton School, has been appointed to Leigh Grammar School.

\* \* \*

MR. A. H. WEBBER, assistant master, Liverpool College Middle School, has been appointed to Hulme Grammar School, Oldham.

Literary Items. *South Africa* for August 19 contains a full and appreciative sketch of the career of Dr. Thomas Muir, F.R.S., C.M.G., &c., Superintendent-General of Education in Cape Colony, and an old and esteemed contributor to our mathematical columns—with portrait. We quote part on another page.

\* \* \*

MESSRS. BLACKIE & SON will publish almost immediately "Indian Echoes," by John Renton Denning—a series of poems by an Anglo-Indian, comprising ballads and other pieces, in which various phases of Indian life, or subjects suggested by the author's Indian experiences, are dealt with, together with some poems having no special bearing on India.

\* \* \*

MESSRS. W. HEFFER & SONS, Cambridge, will publish a

series of phonographic records for the teaching of English, French, German, and other languages, which have been made under the supervision of Mrs. J. G. Frazer. They claim to have almost eliminated the metallic quality of the sound of the phonograph.

\* \* \*

THE Oxford University Press is about to issue a new edition of the poetical works of William Blake in two forms—one for the library, the other for the pocket. It gives a *verbatim* text from the manuscript, engraved and letterpress originals, and various readings, bibliographical notes, and prefaces by John Sampson, Librarian in the University of Liverpool. Mr. Frowde also announces a volume of "Counsels and Ideals from the Writings of William Osler," Regius Professor of Medicine at Oxford.

\* \* \*

The *Hereford Times* of October 28 contained the interesting report of the Rev. J. O. Bevan, M.A., F.C.P., &c., as delegate to the British Association from the Woolhope Naturalists' Field Club, together with supplementary experiences by Mr. Luther Davis, his companion, a member of the Club.

\* \* \*

A DETAILED and very suggestive Report on an Ideal Curriculum in Modern Languages by a special sub-committee of the Education Sub-Committee of the Assistant Masters' Association appears in the Association's "Circular to Members" for November. The sub-committee consisted of Messrs. A. Hargreaves, W. G. Hartog, H. L. Hutton, A. M. Saville, A. A. Somerville, and three co-opted members—Messrs. C. Brereton, W. Rippmann, and F. Storr.

\* \* \*

MESSRS. BLACKIE will publish *Who's Who* on December 8. It will contain some two thousand more biographies than this year's edition, besides some fresh features. Their other year books will be ready about the same time.

\* \* \*

MR. FISHER UNWIN is issuing a shilling edition (fourth impression) of Mr. Thiselton Mark's "The Teacher and the Child."

\* \* \*

AT Aberdeen University, Sir William D. Geddes, late Principal, has been commemorated by a medallion portrait in marble, placed in the Geddes Memorial Library; and the late Prof. Fyfe (Moral Philosophy) by a stained-glass window.

\* \* \*

THE University of Ireland has decided to confer the degrees of Bachelor and Doctor in Veterinary Medicine.

\* \* \*

It is proposed to raise a subscription to acquire that part of the library of the late Provost of Oriel which relates to Homeric studies, and present it to the Bodleian Library as a memorial of him. Bodley's Librarian has kindly undertaken that the books should be kept together and referenced as one set. The collection, which is probably unique, may be had for the moderate sum of £120; but it is hoped that a larger sum may be subscribed in order that the balance may be given to the Bodleian Library, as the acceptance of the gift will, for various reasons, involve considerable expense.

\* \* \*

THE Report of the Inter-Departmental Committee on the Medical Inspection and Feeding of Children in Public Elementary Schools was signed on November 9. The Committee has held 25 meetings and has examined 44 witnesses, of whom 21 gave evidence as to London and 23 as to other parts of the country.

MR. CHARLES FRY'S Shakespearean *matinées*, usually given in November, are postponed till spring. They will be given at the Royal Court Theatre, April 21 and 28, and May 5 and 12.

## CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

### TEACHERS FOR SOUTH AFRICA.

To the Editor of "The Educational Times."

SIR,—In consequence of my having visited South Africa of late and of having seen something of the state of affairs, I have been asked by a leading member of the South African Colonization Society to do what I can to make known the educational wants of these colonies and the efforts the Society is making to cope with them.

Their Education Committee acts as an intermediary between (1) teachers in Great Britain desiring posts in South Africa and (2) Government Departments for Education or private employers in South Africa.

The Committee invites communication and co-operation from (1) principals of training colleges or other educational bodies and qualified teachers of all sorts in Great Britain, (2) officials and private persons in South Africa who require the services of first-rate teachers.

There is a growing demand for qualified men and women teachers, both elementary and secondary, as well as for trained musicians, private governesses, and technical teachers; also typists and shorthand writers are sent out through this Committee, and should apply in the same way.

The following educational authorities have expressed their approval of these objects, and have consented to give the benefit of their advice on points of special difficulty:—Sir W. R. Anson, Sir R. C. Jebb, Sir H. Craik, and Mr. H. T. Gerrans.

Over so wide a field—comprising the greatest part of the continent south of the Equator—it would be misleading to generalize as to conditions of service and emolument, but full particulars can be obtained from the Education Secretary, South African Colonization Society, 47 Victoria Street, London, S.W.; whilst applications respecting Scotch teachers should be addressed to the Scottish Representative on the Education Committee, S.A.C.S., 42 Frederick Street, Edinburgh.

As to the need for experienced teachers and the importance of the work—both from an educational and an Imperial point of view—no doubt can exist in the mind even of the most cursory visitor.

Naturally, the conditions of climate and of life in South Africa vary enormously. This is evident as one glances at the map and sees the names: Cape Colony, Natal, The Transvaal, Orange River Colony, Rhodesia, and the South African Protectorates. Herein a location can be offered which would suit every taste.

As to the strenuousness of the people and their hospitable instincts, surely every member of our late expedition can do no other than speak well of these.—I am, Sir, &c.,

J. O. BEVAN,

Member of the General Committee and of the Sectional Education Committee of the British Association for the Advancement of Science.

Chillenden Rectory, Dover.

November 14, 1905.

### EDUCATION IN NORTHERN EUROPE.

To the Editor of "The Educational Times."

SIR,—The new secondary school in Sweden is not, as I stated on page 483 of *The Educational Times*, a ten-year school, but a nine-year school, viz., *Realskola*, five years, and *Gymnasium*, four years. The sixth year of the *Realskola* is only for those who do not enter the *Gymnasium*.

When I stated also, with regard to our own Secondary School Commissioners, that there seemed no immediate prospect of their recommendations being carried out in their entirety, it occurred

to me that the words were probably more appropriate to the years before 1902 than to those after; and, on consulting Prof. Sadler on the matter, he sent me the following interesting answer:—"I have looked through the recommendations made by the Secondary Education Commission in 1895. They were 160 in number. Of these, 13 have not been adopted, 12 have been virtually adopted, and no less than 135 are now (in some cases with slight modifications) in force. I am surprised to find how large a proportion of the Commissioners' recommendations have been taken up and put into practice. Of course, the Act of 1902 covered the whole field of educational administration, whereas the Commissioners were only authorized to deal with secondary education. But an essential part of the Act of 1902 was modelled on the lines indicated by the Commission."

The paper bearing the above title has now been reprinted in octavo, with these two corrections embodied; and I shall be glad to send a copy to any of your readers on receipt of a stamped directed wrapper.—I am, Sir, &c.,  
J. S. THORNTON.  
6 Kirkdale Road, Leytonstone.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on November 18. Present: Dr. Wormell, President, in the Chair; Prof. Adams, Mr. Armitage Smith, Mr. Barlet, Rev. Canon Bell, Rev. J. O. Bevan, Mr. Bidlake, Mr. Bowen, Mr. E. A. Butler, Mr. Charles, Miss Crookshank, Mr. Eve, Mr. Hawe, Mr. Holland, Miss Jebb, Mr. Kelland, Mr. Ladell, Dr. Lawrence, Rev. G. E. Mackie, Sir Philip Magnus, Mr. Millar Inglis, Dr. Moody, Mr. Morgan, Miss Punnett, Mr. Rule, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Starbuck, Rev. J. Stewart, Mr. Storr, Mr. Vincent, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the number of entries for the forthcoming Certificate and Lower Forms Examinations was 8,280, or about 1½ per cent. below the number of entries for the corresponding examinations in December last.

Diplomas were granted to the following who had completed their subjects for the respective grades:—*Licentiate*: Miss M. Bolton, J. W. M. Gale; *Associate*: Miss B. Gavan, Miss M. Keenan, Miss L. E. Wright.

Prof. Foster Watson, M.A., University College of Wales, Aberystwyth, was elected a member of the Council in place of Prof. Findlay, resigned.

Mr. H. W. Eve was appointed to represent the Council of the College on the Teachers' Registration Council, in place of Mr. E. E. Pinches, resigned.

The following resolutions were adopted:—

1. "That the Council are not prepared to recommend to the members of the College that application should be made to the Privy Council for a Supplementary Charter, but are strongly desirous to secure federation by other means."

2. "That the Council communicate with the Federation Committee, suggesting the formation of a Standing Committee of representatives of Associations of Secondary Teachers to meet from time to time at the College, and to deal with matters of common interest."

The following persons were elected members of the College:—

Mr. J. Cameron, M.A. Aberdeen, 1, Upper Hornsey Rise, N.  
Mr. W. S. Denton, A.C.P., Dunelm, South Road, Taunton.  
Mr. L. R. W. Gibbens, Ronaldsholme, Churchfield Avenue, N. Finchley, N.  
Mr. W. F. Hopkins, 27 Powis Square, Bayswater, W.  
Mr. E. E. Kitchener, M.A. Leeds, L.C.P., Providence House, Mirfield, Yorks.  
Mrs. M. O'Brien Harris, D.Sc. Lond., L.C.P., 84 Petherton Road, Highbury, N.  
Miss F. H. Tait, Dagnall Park School, South Norwood, S. E.  
Mr. W. T. Wright, Central Training College, Lahore, India.

The following books had been presented to the Library since the last meeting of the Council:—

By Dr. A. E. C. DICKINSON.—Pattison's Pope's Satires and Epistles; Sweet's Anglo-Saxon Reader.

By E. ARNOLD.—Nabarro's Laws of Health; Wilson's Lingua Materna.

By G. BELL & SONS.—Stern and Topham's Practical Mathematics.

By THE CAMBRIDGE UNIVERSITY PRESS.—Godfrey and Bell's Winchester Arithmetic.

By CASSELL & Co.—Cassell's New French-English and English-French Dictionary.  
By GINN & Co.—Collar's First Year German; Duerr's Essentials of German Grammar.

By MACMILLAN & Co.—Marchant's Thucydides, Book I.

By J. MURRAY.—Thompson's Elementary Greek Grammar.

By G. PHILIP & SON.—Taylor's First Reader in Health and Temperance.

By RELFE BROS.—Carter's Old Testament History and History of England, Part I.; Evans's Outlines of English Literature.

By THE UNIVERSITY TUTORIAL PRESS.—London University Guide and U.C.C. Calendar, 1906.

By WHITTAKER & Co.—Bird's School Geography.

Calendars of Armstrong College, Newcastle-on-Tyne; University College, London; King's College, London; and City of London College.

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to  
**THE CLERGY AND THEIR RELATIVES.**

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, **£4,194,485.**

Annual Income, **£398,982.**

Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

**No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.**

**Assurances can be readily effected by direct communication with the Office.**

**IMPORTANT  
NOTICE.**

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.

2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.

3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.

4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widow of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.

5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (See Prospectus.)

## SEELEY &amp; CO.'S NEW BOOKS.

\*\* A Miniature Illustrated Catalogue will be sent on application.

**SIR JOSHUA REYNOLDS'S DISCOURSES.** Edited, with Introductions and Notes on Text and Illustrations, by ROGER FRY. With 33 Illustrations. Extra crown 8vo, 7s. 6d, net.

"A beautiful edition of these classic lectures."—*Standard*.

**THE CATHEDRAL BUILDERS IN ENGLAND.** By E. S. PRIOR, F.S.A., Author of "A History of Gothic Art in England." With 4 Plates printed in colour and many other Illustrations. Super royal 8vo, sewed, 5s. net; or in cloth, gilt top, 7s. net.

"Mr. Prior has a thorough understanding of his subject."—*Daily Telegraph*.

"The reader can hardly fail to derive keen artistic pleasure from its series of illustrations."—*Scotsman*.

**OXFORD.** By ANDREW LANG. With 50 Illustrations by J. H. LORIMER, R.S.A., J. PENNELL, &c. Including a Frontispiece in Colour. New Edition. Extra crown 8vo, 6s.

"Andrew Lang's delightful book on Oxford."—*Academy*.

**THE GOLDEN RECITER.** Recitations and Readings from Kipling, Stevenson, Thomas Hardy, Austin Dobson, Conan Doyle, A. W. Pinero, &c. With a Practical Introduction by CAIRNS JAMES. Over 700 pp., extra crown 8vo, 3s. 6d. Also a Thin-Paper Pocket Edition, 6½ by 4¼ inches, and only ¼ inch thick, gilt edges, 5s.

"One of the best books for reciters we have seen. It caters for every mood and every audience, and is quite absorbing too as a volume for general reading."—*Bookman*.

PROFESSOR CHURCH'S NEW BOOK.

**THE CROWN OF PINE.** A Tale of Corinth and the Isthmian Games. By the Rev. A. J. CHURCH, Author of "Stories from Homer," &c. With 8 Coloured Illustrations by GEORGE MORROW. Extra crown 8vo, cloth, 5s.

"The story gives a vivid picture of Corinth at the height of her glory."—*Graphic*.

**HIS MOST DEAR LADY.** A Story of the Days of the Countess of Pembroke, Sir Philip Sidney's Sister. By BEATRICE MARSHALL, Author of "The Siege of York," &c. With Illustrations. Crown 8vo, 5s.

"A charming story. . . A delightful book, beautifully printed and illustrated, and attractively got up."—*Educational Times*.

**THE LAST OF THE WHITE COATS.** A Story of Cavaliers and Roundheads. By G. I. WHITHAM. With Illustrations in Colour. Crown 8vo, 5s.

"From first page to last the story lives and moves."—*Educational News*.

"A handsome book, good to handle and good to read."—*Yorkshire Post*.

**THE LITTLE COLONEL IN ARIZONA.** By A. F. JOHNSTON, Author of "The Little Colonel's House Party," &c. With Illustrations. Crown 8vo, 5s.

"Thoroughly healthy and absorbing reading."—*British Weekly*.

"Written with crispness and lively humour."—*Scotsman*.

### THE ROMANCE LIBRARY. New Volumes.

With many Illustrations. Extra crown 8vo, each 5s.

**THE ROMANCE OF INSECT LIFE.** Describing the curious and interesting in Insect Life. By EDMUND SELOUS.

"Most interesting descriptions of strange and curious inhabitants of the insect world . . . in free and charming exposition and narrative."—*Educational Times*.

**THE ROMANCE OF MODERN MECHANISM.** By ARCHIBALD WILLIAMS, Author of "The Romance of Modern Exploration," &c.

"A book of absorbing interest . . . written in simple and lucid style."—*Educational Times*.

**THE ROMANCE OF MODERN ELECTRICITY.** By CHARLES R. GIBSON.

"The authors deserve hearty congratulations for the excellent manner in which they make intelligible to the humblest mind the most complex subjects."—*Daily News*.

Previously Published.

**THE ROMANCE OF MODERN EXPLORATION.** By ARCHIBALD WILLIAMS, F.R.G.S.

**THE ROMANCE OF THE ANIMAL WORLD.** By EDMUND SELOUS.

### PROFESSOR CHURCH'S HISTORICAL STORIES.

**The Crusaders.** A Story of the Wars for the Holy Sepulchre. 5s.

**Greek Story and Song.** 5s.

**Helmet and Spear.** 5s.

**Stories from Homer.** 5s.

**Stories from Virgil.** 5s.

**Stories from Greek Tragedians.** 5s.

**Stories from Greek Comedians.** 5s.

**Stories of the East, from Herodotus.** 5s.

**The Story of the Persian War.** 5s.

**Stories from Livy.** 5s.

**Roman Life in the Days of Cicero.** 5s.

**The Story of the Iliad.** 5s.

**The Story of the Odyssey.** 5s.

**Heroes of Chivalry and Romance.** 5s.

**The Count of the Saxon Shore.** 5s.

**With the King at Oxford.** 5s.

**The Hammer.** 5s.

**The Story of the Last Days of Jerusalem.** 3s. 6d.

**Three Greek Children.** 3s. 6d.

**The Chantry Priest.** 2s. 6d.

**A Young Macedonian.** 2s. 6d.

**A Greek Gulliver.** 1s. 6d.

**Heroes of Eastern Romance.** 2s. 6d.

**The Stories of the Iliad and the Aeneid.** 1s. 6d.

**To the Lions.** 1s. 6d.

**The Burning of Rome.** 3s. 6d.

**Stories from English History.** With many Illustrations. 3s. 6d.

### POPULAR SCIENCE.

**Sun, Moon, and Stars.** Astronomy for Beginners. By AGNES GIBERNE. With Illustrations. 5s.

**The Great World's Farm.** How Nature grows her Crops. By SELINA GAYE. With 16 Illustrations. 5s.

**The Story of the Hills.** By the Rev. H. N. HUTCHINSON. With Illustrations. 5s.

**The Ocean of Air.** Meteorology for Beginners. By AGNES GIBERNE. With Illustrations. 5s.

**The World's Foundations.** Geology for Beginners. By AGNES GIBERNE. With Illustrations. 5s.

**Among the Stars.** A Child's Book of Astronomy. By AGNES GIBERNE. With Illustrations. 5s.

## Mr. MURRAY'S LIST.

### Murray's History of England. 3s.

**An Outline History for Middle Forms.** From the Earliest Times to the Death of Queen Victoria. By M. A. TUCKER, formerly Marion Kennedy Student at Newnham College, Cambridge. With many Coloured and other Maps, Plans, Tables, &c.

"We can confidently recommend this book for use with middle forms. It is lucidly and concisely written, the author has aimed at the intelligent presentation of the facts of history, trusting the teacher to add picturesqueness of detail, and she has shown sound judgment in deciding what should be omitted, as well as what should be included, in a book of this type. The binding is strong, the type and spacing restful to the eye, and the price is by no means prohibitive."—*Guardian*.

### Elementary Greek Grammar for Schools. 3s.

By JOHN THOMPSON, M.A., formerly Scholar of Christ's College, Cambridge; Senior Classical Master at The High School, Dublin.

PART I., ACCIDENCE, 1s. 6d. PART II., SYNTAX, 1s. 6d.

COMPLETE, WITH FULL INDEXES, 3s.

The object of this book is to give in a form suitable for beginners the elements of Greek Grammar. Owing to the great importance of the appeal to the eye in the case of young students, special attention has been paid to the type and arrangement of the printed matter. Attic Greek only has been included, and the usages of poetry distinguished throughout from those of prose. Unnecessary and unusual forms have been left out, and the author has endeavoured to state all the requisite facts both of accidence and syntax in the clearest possible manner. At the same time advantage has been taken of the developments of modern scholarship, so that the work may be thoroughly up to date.

### On Translating Homer. 3s. 6d.

A New School Edition of Matthew Arnold's Essay, edited, with Introduction and Notes, by W. H. D. ROUSE, M.A., Litt.D., Head Master of Perse Grammar School, Cambridge.

" . . . it was a happy thought to add to the resources of a sixth form teacher by editing, with introduction and notes, Matthew Arnold's Essay on Translating Homer. In this volume a boy will find set forth the first principles of translation from classical languages in a manner which he is not likely to forget, in the phrases of critics from Longinus to Matthew Arnold. Dr. Rouse's introductory essay is a valuable piece of work, characterised by breadth and grip."—*School World*.

### Manual of English Grammar. 2s. 6d.

With Exercises and Examination Papers. By T. D. HALL, M.A. NEW EDITION, REVISED AND ENLARGED.

The new edition has been thoroughly revised and brought up to date. The chapters on the classification of languages, sound shifting, and the historical development of English have been entirely re-written, and embody the most recent philological discoveries. The whole text has been re-set in a clear and striking type.

"The work of revising this new edition has been well done."—*School World*.

### A Primer of Logic. 1s. 6d.

By E. E. CONSTANCE JONES, Mistress of Girton College, Cambridge. With Examination Papers, Diagrams, Tables, &c.

This is the latest addition to Mr. Murray's Series of Primers. It is an attempt to supply, at a price within the reach of everybody, a trustworthy book on the elements of LOGIC—a subject which is being more widely studied every day. Those who wish to use the book for examination purposes should find great assistance from the papers included. Other Volumes in the Series are—PHILOSOPHY, by A. S. RAPPOPORT; PHYSIOLOGY, by E. H. STARLING; and THE USE OF WORDS, by Miss KINNEAR.

### Arithmetic Made Easy. 2s.

A Manual of Method, with Illustrations for Teachers and Pupils. By MABEL A. MARSH.

This Manual applies the heuristic method to arithmetic teaching, and is specially recommended for use in Training Colleges, and for all members of the teaching profession.

### The Rudiments of Practical Mathematics. 2s. 6d.

By A. CONSTERDINE, M.A., and A. BARNES, M.A. With Diagrams, Answers, and Index. Fcap. 8vo.

This book is intended for the use of students over twelve years of age, and especially for those who wish to make practical use of their knowledge in after life. The method adopted throughout is that the materials used for calculation shall be got for the most part from reasonably accurate measurements made by each student for himself, and that these measurements shall, as far as possible, be measurements of actual objects selected for the purpose. In this way the several branches of elementary mathematics (measurement, drawing, arithmetic, geometry, algebra) are not merely correlated, but actually fused. A companion volume—PRACTICAL ARITHMETIC—for younger students has recently been issued. Prospectuses of both books may be obtained, post free, on application.

# COLLEGE OF PRECEPTORS' CERTIFICATE EXAMINATIONS.

SPECIAL SUBJECTS, 1906.

**CAESAR.—GALLIC WAR, Book I.** By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

**CAESAR.—GALLIC WAR, Book II.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

**EURIPIDES.—ALCESTIS.** By J. H. HAYDON, M.A. Camb. and Lond. 2s. 6d. Vocabulary, 1s.

**HORACE.—ODES, Book I.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

**VIRGIL.—AENEID, Book I.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. With or without Lexicon. 1s. 6d. Vocabulary, 1s.

**SHAKESPEARE.** Edited, with Introduction and Notes, by W. J. ROLFE, D.Litt. *Henry V.*, 2s. 6d. *Tempest*, 2s.

**MATRICULATION MODERN HISTORY.** Being the History of England, 1485–1901, with some reference to the Contemporary History of Europe and Colonial Developments. By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d.

**ENGLISH HISTORY, THE INTERMEDIATE TEXT-BOOK OF.** (1603–1714). By C. S. FEARENSIDE, M.A. Oxon., and A. JOHNSON EVANS, M.A. Camb. 4s. 6d.

Complete Catalogues, and Lists of Books Classified for each of the following Examinations, may be had post free on application:—

## TO WHOM SHALL WE TEACH LATIN AND GREEK, AND HOW SHALL WE TEACH THEM?

At the Evening Meeting of the members of the College of Preceptors on November 15, Mr. H. W. EVE, M.A., Dean of the College, in the Chair, Mr. FRANCIS STORR, B.A., read a paper on "To whom shall we teach Latin and Greek, and how shall we teach them?" He said:

All I desire in this paper is to moot a question that at the present moment faces every educational authority in the kingdom, and has to be solved in practice by every—or nearly every—secondary head master or head mistress. I am not so vain or foolish as to imagine that I can solve it: I do not believe that a general solution is possible. I can only contribute as my *ερανος* to the *symposium* a few observations which are the outcome of thirty years' experience of teaching—mainly language teaching, both classical and modern—supplemented by a pretty wide acquaintance with schools and scholars of all grades, that I have since gained as an inspector and examiner. If my remarks are couched in a somewhat dogmatic form, it will be solely from my desire to be brief and provocative—I mean to elicit the opinion of teachers whose experience differs from mine or leads them to other conclusions. I desire, further, to restrict the subject to secondary schools, excluding at the one extreme the primary scholars, to whom Mr. M. Arnold would have some Latin taught, and at the other the Universities. It is not open to me to exclude Greek altogether from the discussion, but I shall confine myself mainly to the consideration of Latin, because that is a question that affects a far larger number of teachers than Greek, and also because what is true of Latin teaching in general holds good of Greek teaching, as far as aims and methods are concerned. It may, however, be well to enter at starting a *caveat* against the common fallacy—Latin is a good subject for A., B., C., and Greek is a good subject for A., B., C.; therefore it behoves us to teach A., B., C. Latin and Greek.

The question To whom shall we teach Latin? involves the previous question—Why we teach Latin?—and this opens out a vast vista, historical, sociological, and psychological. I can only glance at the fringe of it, take a few snapshots, or, to vary the metaphor, jot down a few shorthand notes. In the Middle Ages Latin was what Esperanto essays to be, the *lingua franca*, the universal language of the civilized world. With the Renaissance Latin came to be studied, not solely for its practical utility as a means of communication, but, with Greek, as a key to all, or nearly all, the best literature of the world. Our grammar schools were Latin schools. The "Utopia" was written in Latin; Bacon apologizes for writing his "Essays" in English; Milton wrote his foreign despatches in Latin; Mulcaster is the first English schoolmaster to plead that English children should be instructed in their native tongue.

All this is common form which appears in every text-book of the history of education, but I was compelled to rehearse it in brief in order to direct attention to a strange phenomenon which is generally overlooked or imperfectly recognized by the thorough-going supporters of a classical education. "Cessante causa, non cessat effectus." Latin has ceased to be a spoken language. The Russo-Japanese Treaty was not drawn up in Latin. And, as far as literature is concerned, the literature of at least four modern European nations—of England, France, Germany, and Italy—each of them far outweighs, not only in its contents and matter, its usefulness and interest, but in depth of thought and imaginative power, in masterpieces of style and diction, the whole literature of Rome from Emilius to Ausonius, from Livy to St. Augustine.

As far as practical utility and literary culture are concerned, we may lay it down at starting that, if it is a choice between French and Latin, or between reading Shakespeare and reading Ovid, we shall choose for our

pupils the French language and English literature. This position will, I know, be disputed, and we find so high an authority as Prof. Simon Laurie maintaining that Latin should take precedence over French; but he does so on other than literary grounds. Even the foremost champion of classics against modern languages frankly acknowledges that the orthodox defence of classical training on the ground of the incomparable beauty of the great masterpieces of ancient literature must be abandoned. "When closely questioned, no advocate of classics ever professes that this is really the object in view with the mass of boys." Those literary outworks which have served so long to keep at bay the invading host of modern studies are found, on closer inspection, to resemble a Chinese fortification, with cardboard guns and mandarins disguised as gunners. The classicists have been driven back to their inner lines, and have entrenched themselves in what still appears to them the impregnable fort of discipline.

The position is clearly set forth in the essay from which I have just quoted, and I will give it in the words of Mr. Lyttelton—I wish that time permitted me to quote the passage in full: "The learning of these ancient languages in its earliest stages affords an opportunity for training in precision of thought, memory, inference, and accuracy. . . . If there had not been in the study of these languages some peculiar quality which braces the faculties of the learners, it might quite safely be said that classics would long ago have been restricted to a small coterie of scholars. But teachers, with whatever opinions they have embarked on their task, have been forced to acknowledge that the failure to stimulate the love of literature by means of Latin and Greek has been compensated by the admirable tonic virtue which resides in these languages owing to the fact that they are no longer spoken as they have been written. . . . Latin is an admirable instrument for stimulating the reasoning faculties at an age in which their very existence might almost seem open to doubt."

Now, if I may say so without irreverence towards the Head Master of Eton, who also holds the Cambridge Teaching Certificate, this "oratio pro domo sua" appears to me a survival of the Ptolemaic system of education. It rests on the assumption that there are certain distinct faculties that must be exercised—in this case *par excellence* the reasoning faculty—and that the problem of the educator is to find out what gymnastic will best develop a particular faculty; just as a gymnastic master might prescribe: "This child is weak in the biceps—give him dumb-bell exercise; this other is spindle-legged—make him kick for an hour a day." Surely we have changed all this. On the one hand, modern psychology teaches us that the mind is one and indivisible: to plead that any study exercises the memory is to us a lame and impotent argument. On the other hand, in our modern educational cosmogony the centre of gravity is transferred from *discipline to interest*. We may admit to the full that the study of Latin has a high disciplinal value; but we go on to inquire, or rather we ask the previous question: Will it interest our pupils? It is from this point of view that we must weigh the study of Latin against the study of French or any proposed alternative for Latin.

Put in another form, "the one great merit of Latin as a teaching instrument is in its stupendous difficulty." Such are the actual words of Mr. Tarver ("Observations of a Foster-Parent"), and he prescribes that his foster-child shall begin Latin at ten, and for the next three years devote to the study five hours a day, by the end of which time, if he has been taught by a true foster-parent in a select preparatory school where the classes are small, he will have been well grounded in the rudiments of the language. I would call Mr. Tarver's attention to an observation of Bismarck: "Russian is quite as difficult as Greek and much more useful." And a corollary of this theory expounded both by Mr. Tarver and Mr. Lyttelton is that there are to be no short-cuts—no "Latin without tears," no easy colloquial methods which may suit very well courier languages that are learned for use, to be spoken and understood, such as French and German. "The acquisition of a language [I again quote Mr. Tarver] is educationally of no importance: what is of importance is the process of acquiring it." The bilingual Welshman or the Swiss hotel porter is no more educated than the Wilts clod-hopper with his vocabulary of two hundred words. Let me quote as a counterblast a dictum of Mr. Bowen, of Harrow, which may be found in the same volume as the Sidgwick essay to which I shall subsequently refer. After laying down as an essential of all teaching that the study must be in itself, or must be made to the pupil, attractive, he proceeds:—"Above all the work must be easy. Few boys are ever losers from finding their task too simple; for they can always aspire to learning what is harder; many have had their school career ruined by being set to attack what is too hard." Look on this picture and on that, and say which of the two is the truer pedagogic.

I may dismiss another theory which is set forth, not quite seriously, I take it, in an article entitled "Latin for Girls" which appears in the

current number of the *Nineteenth Century*. Dr. Stephen Paget starts from the same point as Mr. Lyttelton, but he diverges widely, and it is difficult to determine what is his goal. First among the advantages of an enforced study of the classics, he also puts discipline; but next to discipline come "an ear for poetry, a proper respect for style," and, as a crowning grace, "a store of apt quotations." Girls are to begin their study of Latin by discovering the meaning of *£ s. d.*, of B.A. and M.D. and other grains of gold that have been embedded in our barbarous tongue (Dr. Paget has no opinion of the vulgar English tongue); they are next to learn in Latin the Lord's Prayer and the Canticles, to decipher (whether in church or in the "Corpus Inscriptionum" is not stated) epitaphs and lapidary Latin, and, finally, to prove their mastery of the language by turning into elegant Latin with the help of a dictionary and, if available, a brother:

"Every little boy or girl  
That's born into the world alive  
Is either a little Liberal  
Or else a little Conservative."

Dr. Paget allows that this may seem a poor makeshift for the body of the classics; but then he reminds us that he is prescribing only for girls, and not for boys.

This last, as Bacon remarks, were fitter for a satire than a serious observation, and yet it is worth noting as an indication that what we may call the "gentlemanly theory" of Latin maintained as a social distinction—Colonel Newcome's "emollunt mores"—is scotched, but not killed. Dr. Paget would have Latin learnt "suaviter in modo" (as the Mayor of Reading pronounced it), but not "fortiter in re."

To return from this digression to our main argument, though discipline is the main object alleged by the modern upholders of the classical tradition, subsidiary claims are likewise advanced which have to be considered before we can enter on the question of curriculum and method.

In an interesting monograph on "The Teaching of Latin and Greek in the Secondary School," by two professors in the Cornell University, Prof. Bennett sets down training in English as the first and most important reason for studying Latin: "First and foremost, I should say that Latin is of value because it confers a mastery over the resources of one's mother tongue. To my own mind this reason weighs more than all others combined." This mastery, according to Prof. Bennett, is acquired by constant practice in translation from Latin into English, translation which must be once accurate and elegant, and it cannot be acquired so surely or so fully by any other method, neither by the study of a modern language, nor assuredly by the study of English alone.

In my judgment this line of defence is much sounder and more reasonable than the treadmill theory, and, with some reservations and considerable qualifications, I am prepared to allow the plea as valid.

When we pass beyond the elementary stage of education, the study of a foreign tongue is, by almost universal consent, an integral part of the curriculum. Further, translation combines most of the *desiderata* in a scholastic exercise. It can be graduated to suit every age and capacity; it gives the pupil something to do, not merely to learn—he feels himself a poet, a maker in his small way, just as does the carver of a Sloyd spoon or one of Mr. Ablett's impressionists; it sets him a number of little problems of infinite variety which tax his memory, his common sense, his *Sprachgefühl*. And, incidentally, there can be no doubt that he does thereby gain a more intimate acquaintance with his own language, a practical knowledge of its qualities and its limitations, and a command of it as an instrument of expression. But that Latin, even if taught as it is taught at Cornell University (and how few are the teachers who even aim at such results!)—that Latin can be a substitute for English teaching is a chimera relegated to the limbo of the philosopher's stone and "aurum potabile"; so at least we imagined till we read Prof. Bennett's volume.

If we needed a refutation of the old fallacy that a good Latinist is "ex vi termini" a good English scholar, we have only to turn the page and peruse the English of a fellow-professor who is quoted by Prof. Bennett as an authority: "The iridescent threads of cultivated and flexible æsthetic and ethical institutions must be shot through the intellectual warp of the mind at the loom."

We should like to set Prof. Shorey to turn that sentence of his into Latin prose. Would it be possible to pick an instance of such inflated and meaningless bombast from the writings of Jane Austen and Artemus Ward, Bright and Bret Harte, Cobbett and Cobden, Dickens and Darwin? One might go through the alphabet with English authors who have had no tincture of Latin.

To sum up this point of the discussion, the argument for classical education on account of its many-sidedness—an argument that Mr. Thring was constantly enforcing with sledge-hammer blows—will not bear examination. It was refuted forty years ago in a memorable essay on "The Theory of Classical Education," and I cannot improve upon the refutation of my old friend Henry Sidgwick: "We may allow that the education is many-sided: still, if it is defective on each side, this many-sidedness will not count much in its favour. And the very fact that the same instrument is made to serve various educational purposes, which seems at first sight a very plausible argument in its favour, is really, for the majority of boys, a serious disadvantage. In the actual process of education one or other of the purposes is continually sacrificed. Some boys, with strong taste for literature and natural power of expression, pass with moderate

success through their classical work by means of their literary taste alone, and yet, after the first rudiments of grammar are acquired, very little training in close observation or accurate reasoning. But, with the greater number (especially of boys who do not go to the University), the process is reversed. The mind, exhausted with the labours of language, imbibes miserably little of the lessons of literature. . . . The consequence is that half the undergraduates at our Universities and a large proportion of the boys at all of our public schools, if they have received a literary education at all, have got it for themselves: the fragments of Latin and Greek that they have struggled through have not given it them."

Thus far I have been clearing the way. I have shown, or attempted to show, to whom we should *not* teach Latin, and *a fortiori* Greek. I have pointed out that the stock arguments advanced by its professors rest on no sound psychological basis; that they have been manufactured *a posteriori* to bolster up a falling cause built on no more solid foundation than tradition. My conclusions have been wholly negative, and some of you, I fear, will have set me down as a sworn foe to the classics, a Trojan whose gifts (if I may transpose the Virgilian parts) are to be regarded with suspicion. I hope before we part to convince you that I am no renegade; that, if to my dying day I shall regret that at school I was taught no word of English literature, or history, or science, I am grateful every day of my life that I learnt at school the elements of Latin and Greek, and scarce a day passes on which I do not read some portion of a Greek or Latin classic.

"Usque adeo nihil est quod nostra infantia caelum  
Hausit Aventini bacca nutrita Sabina."

"I too amid the hills of Rome was bred,  
And yet a child with Sabine olives fed."

For those who endure to the end, who carry on the study of Latin and Greek to the stage of ability to read ancient literature, and of finding pleasure in reading it, I am profoundly convinced of the value of classical studies; and, with the proviso that it is not to be made the one way of salvation, that a man may be highly educated and highly cultured too without knowing a word of Latin or Greek, I would subscribe to all the glowing eulogiums that have been pronounced on the study by Thring and Kennedy, by Prof. Butcher and Sir Richard Jebb. My protest has been against enforcing Latin on unwilling pupils who will not get beyond the accident; whose knowledge of Latin literature will be confined to a book of Caesar's "Commentaries" and some scraps of Ovid or Tibullus, to a sacrifice of the multitude of narthex-bearers for the sake of the few initiated.

The scathing words of Ruskin might be addressed to-day to the Head Masters' Conference. "We pour this kind of knowledge [classical scholarships] on one and all alike, like snow upon the Alps, and are proud if here and there a river descends from their crests into the valleys, forgetting that we have made the loaded hills themselves barren for ever." I don't suppose that there are any of that august body among my audience. They are not wont to attend such gatherings of teachers, holding, as a late episcopal head master expressed it, that "the theory of education is a number of platitudes that can only be of speculative interest," and *that* only elementary teachers and adventurers in private schools. If any were here, I should certainly be arraigned, not for the first time, on a charge of *scandalum magnatum*, and they would point triumphantly in self-justification to bifurcation, or, in some cases, trifurcation, to the alternatives they offer for Latin verse and Greek, to modern sides and Army classes. I am far from denying the reforms that have taken place in public schools since Ruskin wrote; but I maintain that these reforms have been forced upon the Head Masters by public opinion, that modern languages and modern subjects generally have been admitted grudgingly and of necessity, thrown as a bone for the dull dogs and lazy hounds to mumble after they have shown that they cannot digest the ambrosia of the gods.

Further I complain that the scales of moderns and ancients are not evenly poised, and that the moderns are prejudiced at starting by the prevailing system of entrance, and still more of scholarship, examinations at public schools. A knowledge of Latin is insisted on for all, and the majority of entrance scholarships are awarded for a knowledge of Latin and Greek, a few being reserved for the mathematicians. English, including history and geography, science (which at this stage should signify natural history, *Heimatkunde*, the elements of botany and perhaps physics), drawing (which should form a universal subject of instruction), and French—all these, if recognized at all, count as dust in the balance. The Head Masters call the tune and the Preparatory Masters are forced to pipe to them. The consequence is that, as these plaintively confess in their own organ, they see and approve the better and still follow the worse. They would fain "take the child out of doors and let Nature enter the school-room"; they would fain exercise his senses, train his eye to see and his hand to imitate or record what he sees; they would teach him to speak and write his mother tongue, to know the rudiments of English grammar, and to appreciate the simple masterpieces of English literature, the ballads and lyrics that appeal to his age; and when he passes on to a foreign language they would tackle one language at a time, and choose the easiest—not the hardest—as food for babes. Instead of this, they are compelled by *force majeure* to make Latin, Greek, and mathematics the staple of their curriculum. Needs must when the Head Masters drive. The success of their schools depends on winning scholarships. It is the

possible scholarship winners who force the pace, and we have in consequence the monstrous spectacle, which moves at once our laughter and our tears, of Grecians in knickerbockers and Latinists in petticoats.

I remember being shown an almost faultless copy of Latin elegiacs, the unaided composition of an Elstree boy of thirteen. I expressed my unbounded admiration for the verses, but I felt inclined to add, like Mr. Herbert Spencer when he was beaten a love game at billiards by a young subaltern: "Such proficiency in what should be an elegant pastime is evidence of a misspent youth."

There is another practical objection to this preponderance of classical studies and the premature specialization that it entails to which I would call your attention. The Board of Education and Local Education Authorities throughout the country are actively engaged in constructing the Jacob's ladder which is to reach from earth to heaven, from the gutter to the University. Some of us may think it one of those delusive dreams that issue from the gate of ivory; but all will acknowledge in some form or other the advantage of continuity, of rendering it possible for the *élite* of our elementary scholars to pass on to our secondary schools without any violent dislocation of their studies. This is only practicable if we start from a common basis. We cannot demand that the clever ploughboy shall have begun Latin before he is thirteen. We can urge that the boy who enters Eton at thirteen or fourteen should be required to show some knowledge of English grammar, of history and geography.

I have consumed the greater part of my allotted time in beating the bush—as Matthew Arnold said of F. D. Maurice, "beating the bush with infinite emotion and never starting the hare," if I may venture to compare great men with small. But I would plead, with G. K. Chesterton, that "good bush needs no wine." In other words, if I have succeeded in formulating first principles, the deductions follow almost as a matter of course.

Let me attempt to state categorically the conclusions we have so far reached.

1. For boys and girls who leave school at sixteen or earlier—at least as it is at present taught—Latin is not an entrance to Latin literature, and, if it is to be taught to such pupils, it must be taught on other than literary grounds, as a purely linguistic discipline, and, possibly, as an introduction to comparative grammar and philology.

2. For pupils who stay at school till eighteen or nineteen and will carry on their studies at the University till twenty-one or twenty-two Latin and Greek are subjects of pre-eminent, though not of unique, excellence.

3. But the curriculum of the majority must not be determined by what is best for the chosen few, even if it be proved that a purely classical education is best for the latter.

4. Easy studies must precede the more difficult.

"The labour we delight in physics pain."

We must pass from the near to the remote, from sense perceptions to abstractions. To the schoolboy distance does not lend enchantment to the view. French or German must come before Latin or Greek, and English before either.

5. The half is more than the whole. A comparative mastery of French is more than a smattering of French and Latin. Latin and Greek combined are to the average schoolboy of less value and profit than a study of one of the ancient languages.

If these premisses are accepted, we shall be able without much difficulty to answer in general terms the question: "To whom shall we teach Latin and Greek?"

First, we shall not begin teaching Latin under any circumstances before the age of twelve at the earliest. I should myself be inclined to put it later. There is much to be said in favour of beginning French pretty early. The vocal organs are then plastic; a child can catch the French accent with far greater ease than an adult, and, if the conventional method is adopted, learning a new language is both easy and attractive. But ten is quite time enough to begin, and two years is more than too long a time for a child to gain entrance into the tongue, as Bacon phrases it. Secondly, we shall not teach Latin to any who are intending to leave school before the age of sixteen. Four years with (say) four hours a week is the minimum of time required to gain entrance into Latin: by that I mean to have reached the stage at which the pupil will be able to construe a Latin author of average difficulty and be inclined, if his bent lies that way, to pursue for himself the study of Latin literature. My proposed rule would cut out half of the pupils who at present, in my view, waste their time over Latin; but I am prepared to go further. Of those who stay at school till sixteen and over we may say, roughly, that one half are literary and the other half scientific. For the science boys on the modern side I would make the second foreign language after French not Latin, but German.

The superiority of German to Latin as an instrument of practical utility will hardly be disputed. Whatever line of life the pupil may intend to pursue—soldier, sailor, chemist, engineer, medico, man of letters, publicist, or theologian—he will find his way blocked and his attainment of the highest rank almost impossible without a knowledge of German. But I would go further and maintain that in the earlier stages, for the Gibeonites who will remain to the end hewers of wood and drawers of water, German is every bit as good a discipline as Latin.

At the last annual meeting of the Classical Association I listened to an admirable paper by the Head Master of the Bristol Grammar School,

in which Mr. St. Leger maintained that the rudiments of a highly inflected language like Latin gave a liberal education such as no modern language could give. He pointed out the various problems that were presented and the various faculties that were exercised in turning the simplest English sentence into Latin. But I thought, as I listened, that, had he been, like me, the master of a modern side, he would have experienced exactly the same difficulties in getting a boy to turn a simple English sentence into German. "The brave Balbus built a wall"—"Balbus, vir fortis, murum aedificavit"—"Der tapfere Balbus hat eine Mauer gebaut." For difficulty there is not a ha'porth to choose between them; or, if we pass to the next stage: "He had a wall built"—"Murum aedificandum curavit"—"Er hat eine Mauer bauen lassen," here, it seems to me, the German can give points to the Latin.

I would here remark another great advantage that German, or French for that matter, has over Latin for beginners. In German the teacher has an almost unlimited choice of easy reading books, fairy-stories, myths, legends, tales of travel and adventure, nursery rimes, and poetry for children. Almost from the beginning it is possible to give a child a whiff of German atmosphere, a tincture of German letters. What is there in Latin to correspond? Caesar is dull even when illuminated by Mr. Rice's illustrations, difficult even when defecated by Mr. Ritchie's simplifications. Nepos, recommended as a substitute by the American Committee of Ten, is indeed easier and to a boy more interesting; but it labours under the grave objection that its subject matter is Greek, not Latin. Of Latin poetry there is more for beginners. For "Stille Nacht, heilige Nacht" we should have to substitute "Enos, Lases, juvate." Ovid is fairly easy; but what of his poetry and what of his subject matter? The parallel would be a proposal of the moderns to take the "Roman Elegies" of Goethe and Wieland's "Oberon" for our text-books in German, or for German boys to begin their study of English poetry with Swinburne's Ballads and "The Rape of Lucrece." The great Latin poets, to read whom in the original it is, I gladly allow, well worth learning Latin—Lucretius, Catullus, Virgil—must remain to the ordinary schoolboy books with seven seals.

Time, as I said at starting, compels me to deal very perfunctorily with the question of Greek. As a fact, it does not greatly concern the schools which send in pupils for the College of Preceptors examinations, and, in my judgment, it should not concern them at all. In the growing conflict of studies Greek must inevitably tend to become a luxury, not of the few, I hope and trust—for I believe that with the spread of education the genuine, the voluntary students of Greek are bound to increase and multiply—but still a special study reserved for those who have shown in other ways their linguistic and literary aptitudes.

After I had written most of what you have so patiently listened to—I fear I have already bored you—I came across a singular confirmation of the views I have enunciated on independent and purely psychological grounds in an article on "Thinking in a Foreign Language" in the current number of *Modern Language Teaching*. Dr. Lloyd, of Liverpool, draws from self-experience the following conclusions:—"The educational value of learning a language is exceedingly slight in its earlier stages. It is only when the learner can freely wield the language that any worthy and permanent good is done. But this hardly happens in one case out of twenty under the present system. The simple fact is that we attempt too many things. One thing done thoroughly is much better than two things half done; and in language the case is even stronger than that, for the second thing attempted sometimes partly spoils the first. The best thing for a school child would be the thorough acquisition of a single foreign language coupled with an equal acquisition of the mother tongue. One such language is necessary to everybody; for no one knows his mother tongue properly till he properly knows another. But a second foreign language may do more harm than good in that early period antecedent to all specialization."

And, as to the advisability of teaching Greek to the commonalty of schoolboys, he gives us as his personal experience: "I studied Greek and Latin very thoroughly for years, and never showed the slightest tendency to soliloquize in either. [The chief test, as he has previously laid down, of thorough mastery.] But the reason is now clear: it was because I studied both simultaneously." And, after relating a later experience with French and German, he draws the salient lesson: "The third language could only triumph by expelling the second from its privileged position."

May we not, then, safely lay down that, just as Latin should follow French, so Greek should follow Latin; that, as Latin should not be begun before twelve, so Greek should not be begun before fifteen or sixteen? It is not so very long ago that a sixth form in a public school was learning English, Latin, Greek, French, German, Hebrew—six languages simultaneously. This is hardly now conceivable; but we are still far from frankly adopting the intensive method of language teaching.

If I were well advised, I should end here, and hand on the second half of my theme to my "only begetter," our Secretary, or to our Dean and Chairman, who is far more competent to treat it than myself. My experience of teaching Latin to beginners is very limited, and, such as it is, is, I fear, hopelessly out of date. We have—so the Classical Association inform me—changed all that, and I can only serve as a warning to show how not to do it. Yet, to prove that educational theory is not all platitudes of none but speculative interest to practical teachers, I would venture on a few obvious applications.

1. If interest is to be our motive power, we must begin by cleaning the ship's bottom of barnacles and throwing overboard all the supercargo. In grammar teaching we shall be homœopaths: not only shall we administer it in small doses, but in like doses—the grammar, I mean, will follow the Reader. A few regular declensions and conjugations must be learnt by rote—I incline to think that the inductive method is too artificial and too casual—but we shall relegate all irregularities of gender, comparison, &c., to a later stage; and we shall from the first make the pupil see the immediate use of grammar, that without he cannot construe. Half of the difficulty of Latin syntax will have vanished with pupils who have learnt to analyze a sentence in English.

2. The Reader, as already implied, will form the centre of our teaching. The very first lesson will be of the type: "*amo, amas*, I love a lass."

I have not much faith in what may be termed the treacle-and-brimstone treatment of the New Orbilius. The story of "Truthful Tommy" in a Latin dress may amuse the teacher; but it is like to turn the stomach of the pupil who has to spell it out word by word or to have the joke daily rubbed into him. Interest by all means, but it must not be a fictitious interest. It is no good pretending that work is play. Give the genuine article, but at first in extracts, and I see no harm and much gain in "cooking" the extracts.

And from the very first insist on translation as opposed to construing. Jump upon Latinisms such as "The foot having been put to rout." Denounce "All Gaul is divided into three parts" as nonsense. I cannot, as I have said, go so far as Prof. Bennett and hold that English is best taught through Latin; but it is undoubtedly an invaluable auxiliary, and one of our main objects in teaching Latin must be to bring home to our pupils the differences of structure and idiom between the two languages.

Prof. Church at the Classical Association meeting to which I have more than once referred told us that he had just been looking over the translations of some hundreds of scholars in a Caesar paper set by a college which shall be nameless, and that he had not found one decent attempt to turn the Latin into good English. No graver charge could have been brought against the teachers of these pupils. I know not whether he plucked the lot; but indisputably they all failed in Latin.

3. What shall we say of Latin composition? First, we may lighten our ship by throwing overboard Latin verse, in spite of Mr. Lyttelton and Dr. James, that elegant trifling on which I must have squandered on an average some five hours a week for ten years of my life. I verily believe that for the vulgar schoolboy *bouts rimés* and double acrostics would be more instructive and educative.

Some prose composition there must be. It is the best and surest way of driving in the essential facts of the language and of testing accuracy and comprehension. The sentences to be turned into Latin, we are most of us now agreed, should be founded on the Reader. The old Kerchever Arnold, the "Balbus, household word of all," has ceased to sell even in the colonies, and I do not think that the rehabilitated Bradley-Arnold will survive this generation.

Shall we attempt to teach our pupils to write Latin prose? I mean, the prose that is demanded in an Oxford scholarship examination—to turn half a page of Gibbon or Macaulay into Latin. I decline to answer yes or no, and must speak in parables. The late Archbishop Temple, when interviewing candidates for a head mastership, put to each as the crucial question: "What do you think of Latin prose, and how would you teach it?" The same Archbishop once stated that in all his experience at Rugby he had never seen a really good copy of Latin prose.

Mr. Arthur Sidgwick has said that he finds his women pupils at Oxford about equal to the men in translation, and inferior—but not very much inferior—to them in composition. Yet the women have, on a moderate computation, devoted half the time to Latin and Greek before joining the University that men have.

I have already reached, if I have not overstepped, the end of my tether, and I have said nothing of what you doubtless expected to hear from me—of all the modern aids to classical study, art and archaeology, lantern slides and models, parallel grammars and reformed pronunciation.

I have dealt only with the architectonics—how imperfectly and fragmentarily no one is more conscious than myself. I hope the final impression that I shall have left on you is not of a foe to the classics—a renegade who would burn the gods he once adored. I would see the classics taught to fewer, solely because I would have them taught to those alone who can profit by them. I would have them begun later, because we shall then be able to judge who will profit by them. I would restrict composition, that more time may be devoted to literature.

Let me end by subsigning the confession of faith of that noble humanist whose recent death we have all lamented: "Four words above all others come home to the heart of civilized man: these four are beauty, freedom, truth, and goodness. And it is literally accurate to say of three out of the four that the passion for these was first awakened in Greece."

With this for an afterword: Thank God it is possible to be Greeks in spirit without knowing the Greek alphabet, and to practise Roman *virtus* though unable to decline it.

Mr. STORR having replied to several questions put to him by members of the audience, a vote of thanks to the lecturer concluded the proceedings.

## THOMAS LUPSET.

1498 (?)—1530.

By Prof. FOSTER WATSON, M.A.

THE sufferings of the martyrs in the reign of Queen Mary, together with the religious struggles connected with Puritanism and Nonconformity, have given the Protestant Reformation something of the appearance to the English mind of a cataclysm in history. There has seemed a hard and fast barrier placed between post-Reformation and pre-Reformation history. To our forefathers this was perfectly established. But the investigation of history, and the application to it of a scientific method, has familiarized us with the idea of continuity in the world of history, as in the world of science. Accordingly our minds are becoming open to reconsider the history of the Reformation times without preconceptions and prejudices. Mr. A. F. Pollard tells us that, in thinking out measures for the amelioration of social evils in the reign of Edward VI., reformers were not confined to "one form of theological belief: the greatest of all was Sir Thomas More, and of similar religious views were Thomas Starkey and Thomas Lupset; but, for the most part, they were, like Henry Brynkelow and Robert Crowley, Protestants as well as social reformers." This is readily intelligible; for those who wish for change in one direction are likely enough to see that other changes have equally good ground. The "progressive" in religion is often enough the "progressive" in social questions. But Mr. Pollard's recognition that the social reformers were both Catholics and Protestants can now be frankly made, without apology, explanation, or reserve, as simply the statement of a fact. In questions of education, Mr. Leach can speak of Edward VI. as the "spoiler," rather than the "founder," of schools, and can write his books and produce his documents to attempt the demonstration "of the antiquity and ubiquity of secondary education in centuries long anterior to its hitherto reputed beginnings, whether we place them under Edward VI. and his reputed foundation of free grammar schools or, with more knowledge, under Edward III., with Winchester College and William of Wykeham." In other words, Mr. Leach claims that pre-Reformation education was more widespread than post-Reformation education; that Catholic England had a more complete system of education than Protestant England. The appeal must be to the facts. We all feel we must listen to these facts with an open mind, as each one who has made a thorough investigation presents us with a statement of those facts in an accessible form. So, too, we recognize, as matter of common knowledge, that such fine spirits of the age of the Reformation as Colet and Erasmus were Catholics. Or, to quote the words of Father Gasquet:

The main fact cannot be gainsaid—namely, that the chief ecclesiastics of the day, Wolsey, Warham, Fisher, Tunstall, Langton, Stokesley, Fox, Selling, Grocyn, Whitford, Linaere, Colet, Pace, William Latimer, and Thomas Lupset, to name only the most distinguished, were not only ardent humanists, but thorough and practical Churchmen.

It will be noticed that both Mr. Pollard and Father Gasquet mention Thomas Lupset as a man of outstanding importance. Lupset was a Catholic, whose whole heart went out to the new revival of letters; but the spirit in which he writes concerning education shows religious warmth in its attitude towards the new classical learning such as is often identified with the Protestant reforming zeal.

The best account of Thomas Lupset is to be found in the *Gentleman's Magazine* for February, 1856. He was born about 1498 and died in 1530. He writes with such apparent experience of life that it is not easy to realize that he died by the age of thirty-two years. On the title-page of his books he more than once describes himself as "Thomas Lupset, Londoner." He had the privilege of being taken under the protection of Dean Colet, who sent him to the newly founded school of St. Paul's, where he was taught by William Lily and John Rightwise. Colet not only took an interest in the boy's schooling, but left in his will directions that Lupset should be remembered "after the discretion of" his executors and "to have all such printed books as may be necessary for his learning." It is supposed that Lupset was a student in the University of Cambridge. It is certain, however,

that at the age of seventeen years he was fortunate enough to go to Italy, in 1515, as secretary to Richard Pace, Ambassador to Venice. On his return to England he succeeded John Clement in the Lectureship in Rhetoric and Humanities and also in Greek founded by Cardinal Wolsey. In 1520 he was lecturing, with considerable acceptance and credit, on Cicero's "Philippics." There is another reference in which Lupset is spoken of as lecturing on Linaere's version of the "Sphere" of Proclus.

Amongst his friends were Reginald Pole, whom he had met in Italy, Sir Thomas More, and Erasmus. He was also well known to Wolsey, who committed to him the charge of his natural son Sir Thomas Winter. Lupset himself tells of a pupil, Christopher, the son of Andrew Smith; and the "Exhortation to Young Men," the book which I propose to describe presently, is addressed to my "dearly beloved" Edmund, though the surname is not added.

Lupset held the following ecclesiastical livings:—(1) The Free Chapel of St. Nicholas, in the parish of Stanford-le-Hope, in the county of Essex; (2) Great Mongeham, in Kent; (3) St. Martin Ludgate; (4) Cheriton, near Southampton; (5) was Prebendary of Ruscombe in the Cathedral Church of Canterbury. He was buried in St. Alphage within Cripplegate.

Samuel Knight, in his life of Erasmus, 1726, says: "Of all our countrymen I know of none he had a greater respect for, on account of his uncommon abilities, than Thomas Lupset." Knight speaks of Erasmus as having changed the current of Lupset's thoughts. "It seems," he says, "Lupset had been deeply engaged in the study of school divinity, but, being better informed by Erasmus,\* he left the rubbish of the schools for the more polite learning then coming into vogue. We are told that immediately upon this change he sold his musty schoolmen, and bought Greek authors. He was very serviceable to the learned men of that time, in preparing and correcting their works for the press, so he served Linaere in his work 'De Sanitate tuenda'; so Sir Thomas More's 'Utopia,' in its second edition, of which he was supervisor."

On the death of Dean Colet, Erasmus wrote to Lupset. The letter contains these words of deep feeling: "I never had any familiar or free conversation with him but that I went from him better than I came; or at least not so bad." And then Erasmus directly addresses Lupset: "You ought, therefore, my Lupset, to endeavour to resemble, as near as possible, your great master, in whose family you lived so many years,† both in his erudition and piety."

Dr. J. H. Lupton, in his biography of Dean Colet, shows how eager Erasmus was to write the life of Colet, and how he appealed to Lupset to supply him with details. He says he has said what he could within the compass of a letter. If Dean Colet's life and character "is thought [I am quoting Dr. Lupton's translation] to be not very artistically portrayed, the fault will be partly set down to you, for not having fully provided me with those embellishments of the picture, which none could have done better than yourself." It is possible that Lupset provided for the tomb of Dean Colet the prose inscription given in Dr. Lupton's book. But, whatever Lupset did to honour the memory of Colet, it appears he did not supply that full detailed sketch that Erasmus had begged.

The educational book written by Lupset to which I would call attention is entitled: "An Exhortation to Younge men, perswadyng them to walke in the pathe way that leadeth to honestie and goodnes: written to a frende of his by Thomas Lupsete Londoner."

Apparently this was written in 1529 and published in 1534. My own copy was published in 1538, but it appears that it is printed from the same plates as the 1534 edition. I have already mentioned that the book is written to an old pupil—Edmund. Lupset's purpose in writing it is to give Edmund hints on the conduct of his life, and particularly to suggest the intellectual and moral paths in which he should walk.

The "Exhortation" has this further interest. It was written whilst Lupset was a member of the household of Cardinal Wolsey. The picturesque opening of the book sets this forth:—

\* Erasmus, in a letter to Thomas More, says: "Lupset existimat se nostra renatum opera, planeque ab inferis emersisse. Magistri moluntur omnia, quo retrahant adolescentem, in suum pistrinum. Nam statim eodem die, sophisticis libris distractis, Graecos emerat. Vide ut, cum inciderit opportunitas, gnaviter agas partes tuas, nihil hujus ingenio gratius, nihil amantius."

† "Quicum tot annos domesticum consuetudinem egeris."

To my withipol,\*—It happeneth at this time (my hearty beloved Edmund) that I am in such place where I have no manner of books with me, to pass the time after my manner and custom. And though I had here with me plenty of books, yet the place suffereth me not to spend in them any study. For you shall understand that I lie waiting on my lord cardinal, whose hours I must observe, to be alway at hand, lest I be called when I am not by—the which should be straight taken for a fault of great negligence. Wherefore, now that I am well satiated with the beholding of these gay hangings that garnish here every wall, I will turn me and talk with you. For you must know that my mind hath long coveted to show what effect I bear toward you; the which, peradventure, I never uttered unto you so plainly that you might take thereof any perfect knowledge. And that I did so keep in such outward tokens whereof when you were with me, you should have perceived my love: the cause was none other but that indeed I loved you. For long I have been taught that the master never hurteth his scholar more than when he uttereth and showeth by cherishing and cockering the love that he beareth to his scholars. I think you lacked with me no cherishing, but of cockering you had very little, because I was loath to hurt you; the which loathness came, I say, of that I loved you. But now, in as much as you be of age, and also by the common board of houseling admitted into the number of men, to be no more in the company of children, and especially for as much as my rule over you is ceased, I will not defer any longer the expressing of mine heart, that no less loveth and favoureth you than if nature had made you either my son or my brother.

Lupset tells us himself that "the place" where he was waiting on my Lord Cardinal was at More. Otherwise he gives us no further details of Wolsey or of himself. We can, however, readily gather his chief educational views.

Perhaps, in the first place, it should be mentioned that Lupset insists upon allegiance to the Church. It is true that the open steps of rupture with the Pope had not taken place in 1529. It may surprise some readers that Lupset advises Edmund to read the New Testament,† with due reverence—

For I would not have you in that book forget with whom you talk. It is God that there speaketh; it is you, a poor creature of God, that readeth. Consider the match and meek down your wits. Presume not in no case to think that you understand aught: leave devising thereupon: submit yourself to the exposition of holy doctors; and ever conform your consent to agree with Christ's Church. This is the surest way that you can take, both before God and man. Your obedience to the universal faith shall excuse you before God, although it might be in a false belief. . . . It is your part to obey and to follow the Church.

Lupset wishes Edmund to "read the story of our master Christ, that lively expresseth the whole course of a virtuous life." But the Renaissance spirit had already claimed Lupset. Though he would have his pupil hold by the authority of the Church, he had no hesitation in naming along with the Gospels the works of Chrysostom and Jerome, to get a more perfect understanding of the text. He adds the "Ethics" of Aristotle, which should be studied "rather under some expert philosopher or else with comment of Futtiratus." Plato, too, should be familiar—especially the "De Republica." Cicero's moral philosophical books should be known, and "especially read with diligence the works of Seneca, of whom ye shall learn as much of virtue as man's wit can teach you." These are the books to make a man grow to a high courage and to rise in a judgment "above the common sort." "If you rejoice in these books they shall lift you up from the clay of this earth and set you in a hill of high contemplation, from whence you shall look down and despise the vanity that foolish men take in the deceitful pomp of this short and wretched life." To these books Lupset would add Erasmus's "Encheiridion."

The juxtaposition of the New Testament, Chrysostom, Jerome with Aristotle, Plato, Seneca, &c., is characteristic enough of the incoming Renaissance spirit. It is the attempt to reconcile the so-called sacred and profane. It is the spirit of Erasmus,

\* "Withy-poll: a term of endearment."—See J. O. Halliwell, "Dictionary of Archaic and Provincial Words." The well informed writer in the *Gentleman's Magazine* already quoted says: "One Richard Withipol was Vicar of Walthamstow, Essex. But the person here addressed is styled Edmund, and appears to have been a pupil to the author and was now come to age. Perhaps he was the son of Richard." This is ingenious research, but the merest conjecture.

† Father Gasquet, however, has shown—in "The Old English Bible and other Essays" and in "The Eve of the Reformation"—that Catholics were not forbidden to read the Scriptures in the vernacular, but that translations into the vernacular were on various occasions approved.

and leads logically to the comparative method.\* Such tendencies lead in other educational directions than those associated with Luther and Calvin, whose followers, as Mark Pattison points out, made so clean-cut a division between the sacred Scriptures and "profane" writers.

The educational end with Lupset means to be "stayed" for the whole course of life in learning "what is to be done" to become a "good and honest man."† A guide is necessary at the first entry to life, "for there be so many by-paths and for the most part all by-paths be more worn with the steps of your fore-goers than is the very true path of living." It is, therefore, so easy to wander out of the straight path. Lupset trusts he can point out certain marks so that his old pupil "cannot err nor fail of the way." In his ethical enthusiasm, he declares, if this be so, "he will nourish himself with an incomparable delight and gladness that will continually reign in his clean and pure conscience." Lupset believes that virtue can be taught. If so, it can be learned from the great and the good. He would have his old pupil grow into the spirit of these, and let them mould his life. But he warns Edmund: "It is not the reading of many books that getteth increase of knowledge and judgment, for the most part of them that readeth all indifferently confound their wits and memory without any notable fruit of their reading." It is a selection and an order of reading well observed that brings profit. Before proceeding to mention the books, the names of which I have already given, Lupset urges: "First and last (mine own good withipol) remember earnestly to have in your mind three certain things, the which be of such valure, that he that forgetteth *either their dignity and nature, or else the degrees and order of them*, he cannot please neither God, nor himself, nor the world." These three certain things are: The soul, the body, and the goods of this world. "Care for your soul as for your chief jewel and only treasure. Care for your body for the soul's sake. Care for the world for the body's sake."

It is from the books already named that the right conduct of the soul can be learned. From Galen, "De bona Valetudine tuenda," directions can be got for the due care of the body. As to the goods of this world, Lupset, with, for once, a glimpse of humour, observes: "I can give you small advice of myself, for I have had but small experience herein." Nevertheless, he is quite sure of this:

There is no tittle so small of virtue that is not to be valued ‡ without comparison above the whole power of earth and seas throughout Asia, Africa, and Europe. He who retains the good soul is an invincible emperor. We may despise all violence of princes, all worldly chances touching the keeping of virtue maugre the whole power of the devil and all his retinue. . . . Other goods be not called properly goods. § . . . This onely care must be to get and keep the true goods—the goods of the mind. . . . This should be a great gladness to consider in how strong a tower you be from all hurt. . . . You cannot be hurted, but of one. This is your own Free Will. This will of yours, and nothing else, hath power to hurt you.

We thus see that Lupset recognizes the moral end in education—the formation of character, the making of a good and honest man, and the preservation of his integrity as the supreme end of education. There is no trace of asceticism, of separation from the world. The ideal is to live in the world without being of it, to have a due sense of proportion in his aims, to be fully persuaded in his own mind as to the *summum bonum*.

There are other points which Lupset treats of as he passes along the main current of his plea. On the importance of friendship in a man's development, he says:

Above all things in this world procure to have plenty of friends and

\* Erasmus, like Lupset, never left the Catholic Church. But the unwillingness to draw distinctions between goodness in the Church and out of it is seen where in the "Colloquies" there is a reference to the saying of Socrates: "Whether God will approve of our deeds I know not; but at least it has been our constant effort to please Him." Erasmus makes one of the interlocutors say: "When I read such passages as these, I can scarcely keep myself from saying, 'Sancte Socrates, ora pro nobis!'"

† One is reminded of R. L. Stevenson: "To be honest, to be kind . . . here is a task for all that a man has of fortitude and delicacy. He has an ambitious soul who would ask more: he has a hopeful spirit who should look in such an enterprise to be successful." (Christmas sermon in "Across the Plains.")

‡ The form of the word in the text is "valured."

§ Compare Kant: "There is nothing in the world which can be termed absolutely and altogether good: a good will alone excepted." (At the beginning of "The Metaphysics of Ethics.")

make of them your comfort, as of your best and most precious goods. Always your friend shall be more profitable to you than any treasure or power beside can be. How you shall know them that be worthy to be your friends and by what means and what way friends be both gotten and also kept, ye shall best learn in Cicero's little book, "De Amicitia."

He advises Edmund as to his wife, "when the time shall come that you shall have one." On this point Lupset is of opinion: "The very truth is that there is no evil housewife but for her faults the good man is to be blamed. I am utterly of this opinion that the man may make, shape, and form the woman, as he will." But he does not elaborate this position, since the whole question of house management, he thinks, can be best studied as a whole by Edmund in Xenophon's "Œconomicus." Lupset adds that he has himself translated the Greek text into English, and offers Edmund the MSS. when his "pleasure is to read it." Furthermore, Lupset would have Edmund read Aristotle's "Politics."

Finally, Lupset is painfully aware of the unrest of men's minds in connexion with the religious controversies of the times. We have seen that he remains inside the Old Church, apparently because he believes that it is comprehensive enough to include all who seek "the good" of the mind. As a means of confirming Edmund in "these right opinions" he would have him read the "Encheiridion" of Epictetus,\* and he believes that, with a proper application and help in the understanding of the "Encheiridion," "it will ravish you into a higher contemplation than a great sort of our religious men come to."

Moreover, Lupset feels that there is need to withstand the disturbers of men's peace of mind, these leaders of revolt against the religion of the Old Church. How are they to be met?

And one thing believe me, my good withipol: that reading of these old substantial works the which I have named unto you shall, beside the perfection of knowledge, gender a certain judgment in you that you shall never take delight nor pleasure in the trifles and vain inventions that men now a days write, to the inquieting of all good order; by reason that the most part of men that read these new fluttering works lack perfect judgment to describe a weighty sentence from a light clause, the which judgment cannot be gotten but by a *long exercising of our wits with the best sort of writers*. And to me it is a pitiful thing to behold the foolish dreams of these young clerks in men's hands, and to see these noble old works of the holy fathers and philosophers lie untouched.

This appeal of Lupset recalls Matthew Arnold's call to culture in our own generation. "Culture," says Mr. Matthew Arnold, "is a pursuit of our total perfection by means of getting to know, on all the matters which most concern us, the best which has been thought and said in the world." Is it too much to suggest that Thomas Lupset and Matthew Arnold join hands across the centuries? With both "the dissidence of dissent" is painfully blind before the white light and heat of the unifying "best of what has been thought and said in the world." Paulus Jovius, in his "Elogia," says of Lupset that "Lupset was a man who preferred to keep the results of his learning for his own private use at home rather than to leave works to be published and read after his death." Samuel Knight reproaches him for not contributing further materials for a biography of Dean Colet. But, whatever his omissions and shortcomings, no one can read the "Exhortation" to Edmund, his pupil, without recognizing that, though, like Vittorino da Feltre, he left no school text-books and no systematic treatise for schoolmasters, his heart was full of that irresistible sympathy for the highest and best interests of his pupils which is the surest test of teachership, and that he helped in his day and generation to pass on to his pupils those ideals of life-culture which maintain throughout the ages the high road of pedagogic progress in spite of the clash of creeds, ecclesiastical and political. Let it be noted, too, he died soon after reaching thirty years of age.

\* Lupset tells Edmund that he is in mind, should he find leisure, to translate the comment of Simplicius upon Epictetus.

BOTH the Cheshire and Surrey Education Committees have just adopted a scheme of training in citizenship which is practically the same as the Graduated Syllabus of Moral Instruction for Elementary Schools issued by the Moral Instruction League. The West Riding of Yorkshire, Brighouse, Ebbw Vale, and West Hartlepool Local Education Authorities had already adopted the same scheme. Copies of it may be obtained on application to the Secretary, Moral Instruction League, 19 Buckingham Street, Strand, London, W.C.

## AN EMINENT COLONIAL EDUCATIONIST.

DR. THOMAS MUIR, LL.D., F.R.S., C.M.G.,

SUPERINTENDENT-GENERAL OF EDUCATION IN CAPE COLONY.

A RECENT issue of *South Africa* (August 19) contains an appreciative sketch of the career of Dr. Thomas Muir, Superintendent-General of Education in Cape Colony, and a well known contributor to our mathematical columns for many a year. Dr. Muir is a Lanarkshire man, born in 1845, and educated at Glasgow University, and at Berlin and Göttingen. He made his mark in mathematics while Head of the Mathematical and Science Department of the High School, Glasgow, Prof. Chrystal describing him as "one of the very best teachers of mathematics in Great Britain." In 1892 he went out to his present post in Cape Colony. "It was the influence of Mr. Rhodes," he says, "that decided me to go to the Cape, and I cannot say that I ever regretted it." *South Africa* writes:

On arriving at the Cape Dr. Muir found himself in a position which demanded exceptional tact and administrative power. Educational affairs were in a very unsatisfactory condition, and the first three or four years were devoted to the work of organization, and to getting the Education Department into sound working order from a business man's point of view. After that he began to try and get legislative measures passed in connexion with matters which, as a Government official, he could not accomplish single-handed, namely, the introduction of School Boards and compulsory education. It was uphill work, but for nine years he never ceased his efforts. It was a very ticklish subject from a political point of view, and one Ministry after another fought shy of bringing in a comprehensive Education Bill. Four or five Bills were drafted in the course of the years between 1895 and 1904, but none of them got very far, simply because of the difficulty of getting the Dutch and British parties to work together. But, with

### THE ADVENT OF DR. JAMESON'S MINISTRY,

Dr. Muir found that he had a supporter in the Cape Premier, who was strong enough to say: "This shall be done." Dr. Jameson simply put his foot down and said, in effect: "We will pass an Education Bill even if we have to have all-night sittings for a week." And it was done. Before the determined attitude of the Cape Premier, backed up as it was by the uncompromising advocacy of Colonel Crewe, the Colonial Secretary, the Opposition backed down. The Bill, being taken on its merits, became law, with the consent of both parties in the Cape Legislature. But, with regard to the Bill itself, something more remains to be said—something that until to-day has never been printed in black and white. It is a fact that the Bill was originally drafted by Dr. Muir, and that every amendment to the original clauses—and there were several—was submitted to Dr. Muir for his consideration before being voted upon in the Legislative Assembly. Financial considerations may, perhaps, have prevented the measure being as wide and sweeping in its provisions as Dr. Jameson, Colonel Crewe, and Dr. Muir would have liked it to be; but it can easily be extended in the future.

Although, therefore, Dr. Muir himself assigns the credit in the first place to Dr. Jameson, the Premier, who perceived the pressing need for reform, and had the courage and determination to resolve that, whatever happened during the Parliamentary Session of 1905, such a measure must perforce be passed, and in the second place to Colonel Crewe, the Colonial Secretary, who had the energy, tact, and knowledge of men and parties necessary to pilot the Bill through the Assembly and Council, it is a matter of common knowledge that the planning head and guiding hand were his own. Assuredly he it was who for years had been preparing the way for the acceptance of the main provisions of the Bill, but who, by

### HIS SUCCESS IN ADMINISTERING THE OLD ACT,

increasing the number of schools to 2,900 from about half that number, unwillingly gave conservative-minded politicians an excuse for delaying the day of serious reform. What will be the immediate effect of the Act no public man has yet ventured to prophesy. On all hands, however, it is felt that ultimately it will be of enormous benefit to South Africa. It is the natural analogue at the Cape to the English Act of 1870; and it will be strange indeed if the priceless results of that Act do not slowly, but surely, accrue to Cape Colony also, and equally strange if

the Progressive Government of Dr. Jameson does not, as years go on, receive from educationists similar honour to that bestowed on Mr. Gladstone's Liberal Administration of 1868-74. Unfortunately, at the Cape, as elsewhere, education is apt to become the battle-ground of political parties; and it stands to reason that, if the elections to the new School Boards be run on lines prepared by party wire-pullers, improvement will be more or less seriously delayed, and the good influences inherent in the Act will not flow out in full measure. Dr. Muir, however, firmly believes that the sound sense of the moderate men of all parties will prevail; that the increasing desire for education among the farming population will lead to the choice of good representatives on the new Boards; and that, by strictly impartial administration from headquarters, all sections of the community will be induced to secure from the Act the greatest amount of good possible. Our readers are well acquainted with its provisions; but we may again remind them of

#### THE TWO MOST IMPORTANT PRINCIPLES.

The first is the establishment of local School Boards, who have been entrusted with the management of educational affairs in their own districts, with power to levy the necessary rates. The second point is the fact that the Bill embraces the principle of compulsion, but it is put in a very agreeable way, so much of the administration being placed in the hands of the local bodies that the provisions of the measure cannot press too hardly upon the poorer classes of the population.

In estimating the elements which have contributed to Dr. Muir's success as Superintendent-General—and leaving aside all questions of scholarship, educational experience, and managing power—it is impossible not to lay stress on one which in a country like England might seem of little moment, viz., his strict avoidance of all connexion with parties or cliques. This came notably into evidence during the period of the late war, one of the most trying times for an administrator in the whole history of South Africa. His inflexible determination to act impartially and to be just and fair to all races, all political sides, and all ecclesiastical sects, brought on his head in those days

#### MUCH BITTER CRITICISM AND DENUNCIATION,

which probably, however, was easier to bear in view of the fact that it came now from one side and now from another, and thus was mutually destructive. Soon after the war one was glad to notice that the work of such extremists ceased to attract attention, and by the time that Parliament met, and the new Education Bill had been discussed by the country, the normal state of feeling had returned. The debate on the first reading showed this most clearly. When the Leader of the Opposition was expected to ban he blessed. "Especially noticeable," says the *Cape Times* of March 21, "was his splendid, generous, and unqualified tribute to Dr. Muir's work as Superintendent-General of Education. It may be doubted whether so notable a panegyric has ever been passed in the House of Assembly upon the services of a Government officer, and the cordial cheers which rose from all sides of the House showed that the eulogy was felt by all parties to be just and well merited."

The country people, Dr. Muir believes, are beginning to see how the coloured population, by reason of their anxiety for education, may possibly tread upon the heels of the poorly educated whites, so that here there is an inducement for the latter to take a greater interest in education than they have done in the past. The revival of interest in

#### EDUCATION AMONG THE COLOURED PEOPLE

is quite wonderful. Dr. Muir does not believe in educating the blacks too much, but, as they have been given the franchise, he holds that it is desirable that they should be fairly well instructed, in order that they may know how to exercise the privilege which a vote gives them. As the administrator of the Education Act it will be his duty to see that it is administered in such a way that neither section nor political party shall have a word to say against its fairness to everybody concerned. Judging from Dr. Muir's record, the administration of the Act is perfectly safe in his hands. Under his guidance the cause of education in Cape Colony has advanced by leaps and bounds during the past thirteen years, and he has deservedly won the encomiums of Dutch and British alike—the reason being, as we have already indicated, the fact that he has never shown partisanship for either, and is consequently impartially admired and respected by both.

## REVIEWS.

### THE OMARIC HOMER.

*The Odyssey.* Translated by J. W. Mackail. Books IX.-XVI. (5s. net. Murray.)

We can only repeat our judgment of Mr. Mackail's first instalment. To our mind the dissection of the flowing original into four-line self-contained stanzas introduces a uniformity of break alien to Homer, and so far by regular and constant recurrence rendering the verse steadily unhomeric. The riming of three of the four lines of each stanza on one note shackles the translator, the odd line furnishing the single chance of free movement. Moreover, the run of the verse in no way recalls or suggests the characteristic qualities of the Homeric line. Against all this must be set Mr. Mackail's mastery of the Omaric stanza, distinctive poetic feeling, and skilful manipulation of language, which combine to maintain a strong interest of a peculiar kind. As a rule, too, it seems to us at least the first line of each stanza gives a fresh impulse, by reason of superior verve, directness, and freedom of expression. Take the scene following the operation upon the Cyclops' eye:

Then from his lips a great and awful shout  
 Brake, that the rock-walls echoed round about,  
 And we in terror fled away, while he  
 The stake bespattered all with blood pulled out  
 With both his hands and cast it far away,  
 And called out loudly, wallowing where he lay,  
 For help to the Cyclopes who in caves  
 Dwelt on the wind-swept headlands round the bay.

Hearing him call, they came from far and nigh  
 And questioned him what ailed him, standing by  
 About the cave, and asked: "What ails you so,  
 O Polyphemus, that aloud you cry,

To break our sleep, through the immortal night?  
 Is any mortal man in your despite  
 Driving away your flocks? Is any man  
 Slaying yourself, by treachery or by might?"

And mighty Polyphemus from the den  
 Answered: "O friends, no man it is of men  
 Slays me, by treachery nor by any might."  
 Then answered they in winged words again:

"Now then, if no man does you violence  
 And all alone you are, upon your sense  
 Some malady is come from Zeus on high  
 Against the which there is no more defence.

Then to your father, Lord Poseidon, pray  
 To heal you." So they said, and went their way.  
 But in my heart I laughed, because my name  
 And pure device had led him quite astray.

The following stanzas illustrate the overflowing of the sense—as in Omar, no doubt—in spite of the natural close of the rime; and two at least of the first lines are of masterly effectiveness, though some other verses verge on the mechanical and commonplace:

So spake Alcinous, and they gave assent.  
 Then each to his own house to sleep they went.  
 But when rose-fingered Dawn of Morning shone  
 Down to the ship they came incontinent,

Hasting the well-forged bronze aboard to bring:  
 And through the ship his Majesty the King  
 Alcinous passing, stowed it well away  
 Under the thwarts, that in their voyaging

It should not cumber any of the crew  
 When swift beneath their oars the galley flew.  
 Then to Alcinous' house to meat they went,  
 Where the King's Highness for the banquet slew

A bull to him who has dark clouds for pall,  
 Zeus, Cronus' son, who is the lord of all:  
 And, having burned the thigh-pieces, they shared  
 A noble banquet, making festival;

While at their feast the godlike minstrel sung,  
 Demodocus, well-prized the folk among;  
 But oft and oft Odysseus turned his head  
 Impatient to the splendid sun that hung

In heaven, and for his longing sank too slow;  
 Even as a man to supper longs to go,  
 Whose wine-red oxen all day long have drawn  
 Across the tilth the plough frame to and fro;

And welcome to him is the dusking grey  
At sundown, when to supper go he may,  
And his knees ache in going: with such joy  
Odysseus watched the sunlight fade away.

Occasional weaknesses of execution, being practically inevitable, need not be dwelt upon. Apart from comparison with Homer, the poem is an extremely able and scholarly work, and sure to be attractive to readers that know not Homer. To such as do know Homer it will be most interesting as a *tour de force* on hopeless lines of reproduction. No doubt Mr. Mackail will complete his courageous experiment in a third volume. We certainly hope he will; for, though the circumstances preclude any alteration of our opinion, the work will be a very distinctive literary achievement.

#### THE "DISMAL" SCIENCE.

*Foundations of Political Economy.* By William Bell Robertson. (5s. Walter Scott.)

A few months back we had occasion to notice favourably Mr. Robertson's volume of selections from the works of eminent writers on political economy. Now he challenges attention with an original systematic exposition of great logical acuteness and independence of handling. While professing adherence to the method of the orthodox or classical school, he finds himself driven to conclusions often widely divergent from the views of his predecessors. Recognizing wealth as an abstract term, he refuses to confound it with property: "the right view of wealth," he says, "is to regard it as a species of power—viz., the power to satisfy wants or desires or to achieve aims"—not altogether a new view, but new (we think) as a formal definition. This involves a difference as to the scope of the science: one "simply wishes to know how that power is acquired, how it is increased, and how it may not be lost." The faculty of exchange is the "great augmentor" of wealth, and it brings to the front the importance of a correct theory of value. Mr. Robertson decides against all previous theories of value, excluding the conditions of utility and labour; and he holds that the essential conditions are the possession of the object by somebody and the desire for it by somebody else. On the determinants of value and on quantity of labour as regulating value Mr. Robertson offers some shrewd criticisms of Ricardo, more especially on certain of Ricardo's strictures upon Adam Smith. Having pursued the analysis of value through several chapters in order to the establishment of the conditions of exchange value, he proceeds to deal with wages and profits. "Hitherto rate of wages has been regarded as what a labourer receives per hour, or per day, or per week, &c."—an idea that "is all very well in the ordinary operations of the world and practice," but is "of very little use in political economy." So Mr. Robertson explains rate of wages as "not what a man receives for labouring during any period of time, but the rate per commodity or per each creation of exchange value his labour results in." "The important thing in political economy is the share in every separate creation of exchange value resulting from labour that goes to the labourer, and it is the sum of these shares that goes to make up his hour's, day's, or week's pay, as the case may be." This must be read with the chapter on the differentiation of value into maintenance of efficiency, wages, and profits. We cannot help thinking that Mr. Robertson is hypercritical on Mill in some respects with regard to the explanation of profits. A discussion of the effect of diminished output on wages and profits leads to a consideration of the question of an eight hours' day, and particularly an eight hours' day for miners, the conclusions of which will hardly satisfy the miners; indeed, Mr. Robertson thinks it likely that "the only class that will permanently benefit will be the receivers of rents from mines." The effect of his theory of wages and profits is displayed in two chapters on abridgments of labour, one regarding them as a spur to production, the other regarding them as a curb to consumption, and both setting forth the forces at work in producing unemployment, in building up colossal and breaking down small industrial establishments, in bringing about commercial crises, and generally, as Carlyle has it, "crushing out the life of us and ours." On the population question Malthus and Malthusians are passed in review, and fresher aspects are presented, touching closely questions of national as well as of merely industrial interest. "A Glance at some Popular Misconceptions" is usefully suggestive. Two chapters on international trade and the profits of international commerce might well have been expanded. In an appendix is reprinted Mr. Robertson's pamphlet (1897) on "The Industrial Problem." The large subjects of Money and

Rent will be treated in a subsequent volume. Mr. Robertson displays a decided turn for economic thinking, a keen logical faculty, and a lucid and engaging style of exposition. He keeps his mind steadily on the truth of the matter, undisturbed by any particular deflecting interest; he disagrees with Ricardo or with a trade-unionist with like indifference. His distinctive positions will, of course, be challenged, and that will no doubt lead to fuller exposition and illustration in another edition. The volume is fresh and piquant—not to say provocative—and there is not a "dismal" page between the boards.

#### CELTIC MYTHOLOGY.

*The Mythology of the British Islands.* An Introduction to Celtic Myth, Legend, Poetry, and Romance. By Charles Squire. (12s. 6d. net. Blackie.)

Mr. Squire has essayed a task of some magnitude and difficulty—"to put the English reader into possession, in clear, compact, and agreeable form, of the mythical, legendary, and poetic traditions of the earliest inhabitants of our islands who have left us written records—the Gaelic and the British Celts." Various books cover particular parts of the field, though usually with little elucidatory matter. Mr. Squire believes he now makes the first attempt to present a general view by digesting the matter into a systematic exposition, embodying all explanations necessary to the reader that brings with him no preliminary knowledge of the subject. Mr. Squire tempts him on thiswise:

Here he will at last make the formal acquaintance of all the chief characters of Celtic myth; of the Gaelic gods and the giants against whom they struggled; of the "Champions of the Red Branch" of Ulster, heroes of a martial epopee almost worthy to be placed beside "the tale of Troy divine"; and of Finn and his Fenians. He will meet also with the divine and heroic personages of the ancient Britons; with their earliest gods, kin to the members of the Gaelic Pantheon; as well as with Arthur and his knights, whom he will recognize as no mortal champions, but belonging to the same mythic company. Of all these mighty figures the histories will be briefly recorded, from the time of their unquestioned godhood, through their various transformations, to the last doubtful dying recognition of them in the present day, as "fairies." Thus the volume will form a kind of handbook to a subject of growing importance—the so-called "Celtic Renaissance," which is, after all, no more—and, indeed, no less—than an endeavour to refresh the vitality of English poetry at its most ancient native fount.

This is a sufficiently attractive, and at the same time a very fair, outline of the substance of the volume. There are four introductory chapters, setting forth the interest and importance of Celtic mythology, the sources of our knowledge of it, an inquiry as to who the "Ancient Britons" were, and an account of their religion. A final chapter deals briefly with survivals of the Celtic paganism into modern times. Appended is a select bibliography of recent and accessible works for such readers as may wish to go deeper into the subject. And the index is serviceably full. The work is very ably executed, and cannot fail to surprise and charm those that have little or no acquaintance with the "remnants of a mythology as splendid in conception and as brilliant in colour as that of the Greeks." The author is enthusiastic; but he does not let his enthusiasm overbear his judgment. The style is simple, easy, and agreeable.

## GENERAL NOTICES.

#### CLASSICS.

"Bell's Classical Translations."—(1) *The Iliad of Homer, Books I. and II.* Translated into English Prose by E. H. Blakeney, M.A., Head Master of King's School, Ely. (1s.) (2) *The Choephoroe of Aeschylus.* Translated from a revised text by Walter Headlam, Litt.D., Fellow of King's College, Cambridge. (1s.)

(1) Mr. Blakeney renders the Greek closely and accurately, manifesting throughout very great care and assiduous study, and placing alternative renderings and other select illustrations in footnotes. The transliteration of proper names seems occasionally open to objection, and we do not like some of the archaic turns; but, altogether, there is probably no better prose translation than this. (2) Dr. Headlam has a very exacting task. His footnotes on textual difficulties imply thorough-going study, and will be found to be very helpful. The translation is most careful and able. It will be of great and legitimate assistance to students of this difficult play.

*Criticisms and Elucidations of Catullus.* By H. A. J. Munro.  
Second Edition. (7s. 6d. net. George Bell.)

Classical students will be grateful to the publishers for rendering more accessible this esteemed work. The first edition came out in 1878, and was soon exhausted. But, as Mr. J. D. Duff states in a preface note, the book "contains some of Munro's finest and most characteristic work," which scholars like to have by them. The only differences in the present edition are these: the addition of three short papers printed by Munro in the *Journal of Philology* after the publication of the first edition, of a few illustrations taken from a copy in which they had been entered by Munro himself, and of several references to later discussions of particular points dealt with; and the correction of a few misprints. The new edition is extremely welcome.

#### MATHEMATICS.

*The Elements of Plane Trigonometry.* By R. Lachlan, Sc.D., and W. C. Fletcher, M.A. (2s. Edward Arnold.)

The authors have spared no pains in the preparation of this comparatively small but very valuable text-book designed for beginners and other junior students. The matter has been carefully selected and carefully arranged, and the treatment of the individual articles is excellent. The little work differs from the best of its predecessors chiefly in the arrangement of the contents. It is to be observed that the writers, in considering order, have preferred to assign to the earlier chapters such portions of the subject as tend to create and foster appreciation of principles and skill in their application, whilst the purely algebraical development of theory is rightly regarded as more appropriate to later stages in the study of the science. Due prominence is given to accurate drawing as a factor in producing power in the solution of problems.

*The Elements of Geometry.* By Braithwaite Arnett, M.A. (Books I., II., and III., 2s. each. Simpkin, Marshall, & Co.)

The work is deserving of a good place amongst elementary text-books, whether considered with regard to the matter contained, the manner of treatment, or the form of publication. It is intended that the study of the text should be accompanied by the instruction of a teacher, and the course is framed to meet the requirements of candidates reading for university and Civil Service Commission examinations. The treatise is in three "Books": the first dealing with the substance of Euclid's First Book up to the thirty-fourth proposition, the second treating of the Circle and the theory of Ratio and Proportion, and the third devoted to the consideration of Areas and Similar Figures. Very many well known riders find a place amongst the propositions recognized by Euclid as fundamental. The subject of Symmetry receives here closer attention than it does in the average work of similar scope, and, further, the author includes an interesting discussion of the motions of translation and rotation as affecting plane figures.

*Arnold's Number Lessons (Scheme B).* (Books for the Pupil: I., II., III., 2d. each; IV., V., VI., 3d. each. Books for the Teacher: I., II., III., 4d. each; IV., V., VI., 6d. each. Edward Arnold.)

A practical and useful series, embodying the general scheme laid down by the Education Code in Scheme B, but giving effect also to the principal recommendations of the Committee of the Mathematical Association. The plan of the work is novel and excellent, the series consisting of six pairs of complementary volumes, of which, in any pair, that intended for the pupil contains tables, worked examples to be studied as general types, and numerous exercises; whilst that designed for the teacher supplies valuable notes as to suitable methods, plenty of exercises arranged for the purposes of oral work, and in addition the results of the questions set in the pupil's book for practice in written work. Much prominence is given to decimals, and great care is taken to emphasize the fact that the principles underlying their use are the natural extension of the laws that govern calculation with integers.

#### FRENCH GRAMMARS AND COURSES.

- (1) *French by the Direct Method (First Course), Part II.* Adapted from the German of Rossmann and Schmidt by T. Cartwright. (1s. 8d. Jack.) (2) *A First Year of French.* By J. E. Mansion. (1s. Harrap.) (3) *Sure Steps to Intelligent French.* By H. R. Beasley. (1s. Swan Sonnenschein.) (4) *La Première Année de Français and French Lesson Notes.* By F. B. Kirkman. (1s. 6d. Black.) (5) *A First Book of French Oral Teaching.* By C. B. Calvert and W. G. Hartog. (2s. Rivingtons.) (6) *Grammaire Française.* By Mary S. Bruce. (3s. Heath.) (7) *The Essentials of French Grammar.* By A. Barriball. New Edition. (2s. 6d. Ralph, Holland, & Co.) (8) *A Practical French Grammar.* By F. W. Aveling. (3s. Swan Sonnenschein.)

(1) The so-called Direct Method, which originated in Germany, has taken root in England, and is already represented by a number of text-books of varying degrees of goodness. It was therefore desirable to present to the English public an adaptation of the book by Messrs. Rossmann and Schmidt, which has been selected by the Prussian Board of Education as the one book on that method for use in Prussian schools. It begins, as such books generally do, with the class-room, the human body, and Hölzel's picture of Spring, and a number of small woodcuts.

Among the early lessons are also some on numbers, and on the maps of Europe and of France. The conjugation of verbs is shown in action by taking verbs like *montrer*, *compter*. The vocabulary seems to be increased rather too rapidly for young pupils. For example, the names of a good many animals and their cries come early in the book. One point strikes one in studying all books on the direct method: the book is of little use to the pupil. The teacher must do the work, and all that need be put in the hands of the pupils is a reference grammar and a sort of exercise-book containing reading extracts, questions to be answered on paper, sentences to be altered, and so on. In arithmetic all that need be given to the scholar is a book containing models and examples to be worked out, possibly only the latter. The gradual spread of the direct method in language teaching will probably produce such books to be aids to the teacher, not his guides.

(2) Mr. Mansion's "First Year" is distinctly a drill-book, in which, in accordance with the direct method, translation from English into French plays a very small part. But what is known as the intuitive part of the method, the use of pictures to connect the French words with the things seen, is wanting. There is an appendix reproducing the reading extracts in phonetic script.

(3) "Sure Steps to Intelligent French" is simply a series of instructions and examples on peculiarities of French pronunciation. Phonetic symbols are introduced and explained gradually.

(4) Mr. Kirkman, in his "Notes," supplies valuable suggestions to teachers using the direct method. The directions given are very full, and particular pains is taken to introduce fresh matter as slowly as possible. His "Première Année" details a day of the life of an English boy in a French family in Paris, illustrated by coloured pictures of "La famille Pascal à table," of a street scene ("La Porte Saint-Martin"), a plan of Paris, and numerous smaller woodcuts—a great improvement on the hackneyed pictures of the Seasons. Songs are introduced, the music of which is supplied in another book.

(5) Messrs. Calvert and Hartog have drawn up a method which they believe to contain the advantages of both systems of teaching French. The staple of the book is a series of short readings, most of which refer to pictures, followed by a set of questions to be answered from the piece given for reading. Most of the extracts introduce fresh portions of simple grammar. There is an appendix, containing a brief accidence written in French. The book is well adapted for the use of teachers who cannot rise to the vigorous cross-questioning required for the efficient use of the direct method.

(6) Miss Bruce's grammar is written entirely in French. No doubt this plan has advantages, but there are obvious objections. Grammatical terminology is of little value for teaching French as a spoken language, and difficulties which generally involve differences of idiom between English and French are more easily and more lucidly met by an English explanation. To each chapter are subjoined French grammatical questions to be answered in French, and exercises partly consisting of translation from English and partly of the alteration and completion of French sentences.

(7 and 8) Mr. Aveling's and Mr. Barriball's French Grammars are carefully drawn up, but present no special features of method.

#### MENTAL SCIENCE.

*A Survey of English Ethics: being the First Chapter of Mr. Lecky's "History of European Morals."* Edited, with Introduction and Notes, by W. A. Hirst, Principal of Gujarat College, Ahmedabad. (3s. 6d. Longmans.)

Mr. Hirst finds that "students learn far more by reading a standard work than by studying a handbook." That would seem to depend partly on what they want to learn, and partly on what is the standard work and what is the handbook. We think it well that students should have easy access to Mr. Lecky's chapter, as here provided, but we are not so sure as Mr. Hirst that "it is in every way suitable to students who are beginning to attend a course of lectures," except as an able representation of a particular view. Mr. Hirst's introduction supplements at points Mr. Lecky's exposition, but his sharp antithesis of "the schools of Pleasure for Pleasure's sake and Duty for Duty's sake" narrows and obscures the real points at issue.

*The Existential Import of Categorical Predication: Studies in Logic.* By A. Wolf, M.A. Lond., B.A. Camb., Lecturer in Philosophy at the University of London. (4s. net. Cambridge University Press.)

These studies are amplifications of the substance of a dissertation that gained a Certificate of Research at Cambridge, and will be of service in the elucidation of "a rather obscure subject"—namely, in the words of Dr. Keynes, "the question whether the assertion of a categorical proposition necessarily implies that its terms are the names of actually existing things." It seems curious that this problem, though traceable as far back as Plato and Aristotle, has hitherto "received neither separate nor independent treatment." Mr. Wolf clears the ground in two chapters. First he discusses some aspects of Names, in order to settle which of them his inquiry is concerned with; and next he inquires what is to be understood by Existence or Reality. Then he examines the existential import of categorical propositions in general, and proceeds to a more detailed inquiry into the several kinds.

The final chapter indicates the bearing of his results upon Formal and Symbolic Logic. The little volume, though lucid and patiently argued, is not so very easy reading, but it is an independent and able contribution to the discussion of important points of logical theory.

*A Primer of Logic.* By E. E. Constance Jones, Principal of Girton College, Cambridge. (1s. 6d. Murray.)

The volume appears as one of Mr. Murray's excellent series of "Primers." It covers the subjects usually treated under Deduction and Induction, and expounds them quite simply and freshly. Appended are useful analytical tables, questions on the different chapters, examination papers that have actually been set, and a combined index and vocabulary. A pupil cannot go through the little work intelligently without obtaining a firm grip of the essentials, while the appended matters will test and clinch the study of the text.

#### ART—DRAWING—WRITING.

The Educational Supply Association issues a new series of Historical Cartoons ("The Viaduct Series"), representing important scenes in English history. They "have been specially painted by a well known artist, and are historically accurate in every detail," and are beautifully printed in sepia tones by the colotype process. The size is 27 x 35 inches. They will make capital decorations for schoolroom walls. The example before us, "St. Augustine preaching the Gospel," is tastefully framed (and glazed) in stained oak, with gilt slip, and costs only 8s. net (including carriage to any part of England and all risk of breakages). We should add that a descriptive letterpress, with historical explanations, accompanies each picture.

Messrs. West, Newman, & Co. are furnishing a varied and attractive series of landscapes in colour—"and some in glowing colours"—from water-colour drawings by Luther Hooper, Fritz Althaus, and other artists, with the special view of "brightening schools." The actual picture measures 32 x 20 inches (5s. each, unmounted).

*The Art Workers' Quarterly* for October (2s. 6d., Chapman & Hall) is the "National Competition number." Apart from this special attraction, it includes several excellent articles, with much minor matter of usefulness and interest. The illustrations are abundant and admirable. One coloured and six supplementary plates.

*Sir Benjamin Stone's Pictures*—"records of national life and history"—reproduced from the extraordinarily varied and valuable collection of photographs made by Sir Benjamin during an active experience of some forty years, are being brought out in Parts (7d. net each) by Messrs. Cassell. The series forming the first volume will depict festivals, ceremonies, and customs. The pictures given in the Parts already issued are characteristic and most interesting; and the collection will be unique. They are skilfully reproduced, and each is accompanied by descriptive letterpress.

*Nelson's New Drawing Course (Teacher's Handbook), Stage V.*, by J. Vaughan, Superintendent of Drawing and Manual Instruction under the Glasgow School Board (2s. 6d.), is excellent in point of selection of material, practical treatment, and exposition. There are 24 full-page plates, and 66 figures in the text, all remarkably well reproduced. The introductory observations are most useful.

Parts II. and III. of Messrs. W. & A. K. Johnston's *The Nature-Study and Free-Arm Drawing Cards* (1s. 6d. each set), "illustrating the correlation of Drawing and Object Lessons," contain 20 cards each, judiciously selected, and well drawn and coloured. Each set is accompanied by a Drawing Book corresponding to the Cards (4d. net). The series will be very serviceable.

*Blackie's Commercial Course of Writing and Book-Keeping* comprises a series of six writing copy-books (2d. each), specially designed for commercial and continuation classes. The aims are two: to train in a neat, clear, fluent, official hand, and to give practical lessons in book-keeping and in the use of commercial forms and terminology. The style is modelled on Vere Foster's "Medium," and is admirably distinct and rational, without affectations.

The French series of *Philips' Semi-Upright Copy-Books* has recently received three additions—Nos. 10b, 10c, and 10d (2d. each). They are well fitted to train to clear and fluent penmanship.

Sir Isaac Pitman & Sons have begun to issue *Illustrated Aids to Composition*, by H. J. Barnell. The first series consists of 32 cards (3s.). The left side of each card is fitted with drawings of the subject of composition, and the right side contains the heads and outline. The notion is to help the flow of ideas. The cards are carefully designed, and "the author, in practice, has found it a splendid device." It seems well worth a trial.

#### MAPS—CHARTS—DIAGRAMS.

Of *Snelling's Large-sheet Demonstration Tracing Maps* (6d. net per sheet), we have (4) The Balkan Peninsula; (6) Japan, Korea, Manchuria, &c.; (13) Russia; and (14) S.W. Asia. Also the corresponding *Snelling's Comprehensive Tracing and Colouring Maps* (6d. net a dozen): Nos. 104, 106, 113, and 114. The use of these aids should help to render the geography work both agreeable and efficient.

Mr. Edward Stanford offers a very fine and elaborate sheet showing

the Public Elementary Schools of the County of London in 1903, both Board schools and efficient non-Board schools, the School Board divisions being outlined (10s.; mounted in case, 14s.).

*McDougall's Twin Maps for Class Use*—Nos. 1-12, 1d. net each—work out an excellent idea with good effect. The "twins" in each case are a coloured map and a photo-relief physical map opposite each other: and on the other side of the maps is printed a summary of the main geographical points, with allied information as to productions, industries, &c.

*Philips' Sixpenny Scripture Atlas*, ably edited by George Philip, F.R.G.S., consists of a series of sixteen coloured plates, containing over thirty maps and plans, illustrating the books of the Old and New Testaments. It is very complete, detailed, and clear, and cannot but be a most helpful companion to the text.

The *Europe and British Colonies* numbers of "Bacon's 'Excelsior' Upper Class Atlases and Text Books Combined" (3d. net each), for use with the "Excelsior" Wall Atlases V. and VI. respectively, are remarkably comprehensive, convenient and clear, and moderate in price.—*Bacon's "Excelsior" Upper Standard Atlas*, for Standard IV. (3d.) is very creditably prepared and produced, and will be very serviceable.

#### REGISTERS.

Messrs. Philip publish a "*Simplex*" *Attendance Chart*, mounted on millboard and eyeletted, 17½ x 22 inches (1s. 6d.), showing at a glance the average attendance each for a period of two years. They claim that the chart "has proved a great stimulus to the attendance wherever it has been in use." At all events, it exhibits the facts very simply and effectively.

The "*Eurēso*" *Mark Book* (2s. 6d. net) and the accompanying *Preparation Book* (4s. per dozen), compiled by Charles M. Parks, B.A. (Relfe Brothers), provide for a comprehensive record of the pupils' school career, and engage the pupils' own interest, while a most convenient means of reference for the master.

#### DIARIES AND CALENDARS.

Of Letts's useful Diaries, published by Messrs. Cassell, we have No. 12 (Pocket Diary and Almanack), three days on page (3s.); No. 17D (Pocket Diary with an Almanack), week on page, with blank page opposite (1s.); No. 34 (Rough Diary), week on page, interleaved blotting (1s.); No. 36 (Rough Diary), week on page interleaved blotting (1s.); No. 61 (Oblong Diary), week at opening, nicely bound, for pocket (2s.); Engagement and Address Diary (2s.); and Daily Health Diary (by Eustace Miles, M.A.; 1s. 6d.). Each diary contains an accident insurance coupon for £1,000.

Messrs. George Gill & Sons publish the interesting *Modern Language Calendar*, by J. Eisner and Rose L. Yates, with analogous mottoes for each day in French, English, and German. Another block calendar is *Letts's Office Calendar and Reminder Tablet* (2s.).

*Pitman's Shorthand and Typewriting Year Book and Diary* (1s.) contains the usual variety of information upon the special subjects, the diary showing a week on a page.

## CHRISTMAS BOOKS.

### I.

#### HISTORICAL TALES.

A new and cheaper edition of outstanding works by the late G. A. Henty is announced by Messrs. Blackie. The volumes are in cloth, with ornamental cover design and olivine edges, agreeably printed, and liberally illustrated (3s. 6d. each). *In Freedom's Cause*, which comes first, is a spirited story of the days of Wallace and Bruce, not quite so close to history as Henty believed, but all in the right vein, and thoroughly deserving of a renewed popularity. Eight illustrations. *A Soldier's Daughter* and other stories (2s.), also by Henty, is full of dashing adventure; first on the north-west frontier of India (where the daughter of a British officer fights, is captured, escapes, &c.), next in Middle Age Germany (in the Electorate of Trèves), and then in the Australian bush. Six illustrations by Frances Ewan.

If what the critics say be true, then the mantle of Henty has fallen upon Herbert Strang. Last year Mr. Strang furnished a stirring romance of the earlier phases of the Russo-Japanese War—"Kobo"—mainly from the Japanese standpoint; this year he works the later incidents of the war into a background for the adventures of *Brown of Moukden* (5s., Blackie), the standpoint being on the Russian side. The story is sufficiently stirring and diversified, while the situation is presented in many important aspects in accordance with actual facts without embarrassment to the narrative. The book is a capital boy's book, but it is also well worth reading for its varied collateral illustrations of the war at a notable conjuncture. Six plates by William Rainey, R.I., and four maps and plans.

*The Adventures of Harry Rochester*, also by Mr. Strang (6s., Blackie), is "a story of the days of Marlborough and Eugene." The hero gets kidnapped and shipped for the West Indies, but escapes and takes

service with a Dutchman, who is a contractor for the allied forces in the Low Countries. In the execution of a mission on behalf of Mynheer Jan Grootz he distinguishes himself so markedly in a skirmish with the French in protection of his convoy that he is presented with a commission; and eventually he fights at Blenheim. The operations that lead up to the victory are outlined, and the life and manners of the time are incidentally illustrated with careful regard to the historical facts. The story, however, is the thing; it is full of adventure, and goes briskly forward. And there is an underplot of romantic charm. Eight plates by William Rainey, R.I., a map of the Low Countries in 1703, and plan of the Battle of Blenheim.

Captain F. S. Brereton also furnishes a similar couple of volumes—one on the Russo-Japanese War, the other on an older historical episode. The hero of *A Soldier of Japan* (5s., Blackie) is shelled in his junk passing opposite Port Arthur at the time of the first naval engagement of the war, is rescued by Japs, and joins the Japanese forces in the second dash upon Port Arthur, when he is made prisoner; escapes as he is being sent up country, joins some Hunhuse brigands, and has a tussle with a band of Cossacks; presently falls in with Kuroki's army, and takes part in the battle of the Yalu; and in many another adventure, here and there in Manchuria, he displays dash and courage, "earning a wonderful reputation amongst both Russians and Japanese," and showing his comrades, the men of the Dai Nippon, "that he was, like themselves, a true soldier of Japan." Naturally the pages are full of bustle. Six illustrations by Stanley L. Wood.

*A Knight of St. John*, also by Captain Brereton (6s., Blackie), is a story of the Siege of Malta by the Turks in 1564. There is fighting in abundance as well as plotting and counterplotting, a taste of the galleys, a brush with the "Brave men of Algiers," and so forth. Before that, however, the young hero finds use for his sword at Havre, whither he had come with a fleet of provision ships for the succour of the starving garrison under the Earl of Warwick. The story has more substance than some other of the author's books, and the interest is briskly maintained throughout. Eight illustrations by William Rainey, R.I.

*The Old Moat Farm*, by Eliza F. Pollard (2s. 6d., Blackie), is a story of the times of Queen Elizabeth. The Farm is the Kentish home of John Weston, yeoman, whose nephew Derward was the companion of John Rolfe in the hands of Powhattan, whose daughter Pocahontas saved the lives of both the captives. The Virginian expedition brings Sir Richard Grenville and Raleigh into the narrative; and Sir Philip Sidney plays a part. There are secrets to be discovered and tangles to be unravelled. The story is very carefully written, and the voyage of discovery to Virginia, as well as the history of Pocahontas, is fully narrated. The book will be read with sustained interest. Four illustrations by Frances Ewan.

*Squire and Page*, by G. I. Whitham (2s., Blackie), is "a story of olden days"—the time of King Henry V., who appears in person and transacts important business. The page, Mador de la Garde, a chorister in the Abbey of Marlay, carrying a message for a knight sorely wounded in an ambush near the Abbey, gets involved in plot and counterplot through the chance knowledge of the purport of the message by the knight's enemies. His fidelity, alertness, and acuteness bring him well on the road to fame and fortune. The story is sufficiently charged with adventure, rapid in movement, and clearly and pleasantly presented. Three illustrations by Frances Ewan.

*Soldiers of the Cross*, by Eliza F. Pollard (3s. 6d., Nelson), takes us to Spain in the days of Ferdinand and Isabella, with Anthony Scales, Lord Rivers, and Don Rodrigo Ponce de Leon, Marquis of Cadiz, to make war on the Moors of Granada. The power of the Inquisition is illustrated, and Torquemada is one of the personages of the story. There are also private complications, of course, to furnish a softer interest as a foil to the more stirring warlike adventures. The colour of time and place is carefully applied to the canvas. The story is fresh, vigorous, and full of interest. Four coloured illustrations.

#### TALES OF FAERIE.

*The Red Book of Romance*, edited by Andrew Lang (6s., Longmans), stands eighteenth (we think) in "The Fairy Book Series." It contains some thirty stories "done by Mrs. Lang, out of the old romances"—"William of Palermo," various sagas, "The Faerie Queene," "Don Quixote," the Early English metrical romances, and other sources. Mr. Lang explains in his preface how such stories come into a series of fairy books. They make very charming reading, anyhow, and they cannot be read too widely. The volume, like the rest of the series, is beautifully got up, with eight coloured plates and forty-four other illustrations.

*Fairy Tales, Old and New* (3s. 6d., Cassell), is a pretty and handy little volume, containing a good selection of stories from the old fairy tales—Grimm, Andersen, and the King Arthur cycle, with twenty full-page coloured plates and other illustrations. They are also obtainable in five separate books (6d. each). They are written in simple and attractive style, and—"are carefully graduated for the various standards," a sadly utilitarian consideration. However, they will delight the children, who will arrange them to suit themselves.

#### LITERARY AND ARTISTIC INTERESTS.

Mr. Heinemann opportunely issues a new and revised edition of Dr. Edmund Gosse's short history of *Modern English Literature*, with

72 plates (8 of them photogravures), which light up the volume with points of fresh interest. It is beautifully printed and in tasteful binding. A very stimulating and suggestive work.

The Standard Oxford editions of *The Talisman* and *Ivanhoe* (2s. each), in beautiful type and pleasant binding, and having respectively 9 and 19 excellent illustrations, would gladden a modest heart at Christmas time. The volumes are handy and agreeable, and every youngster should read them.—With these we may place the similar editions of *The Complete Poetical Works of William Cowper*, edited by H. S. Milford, M.A., and *Poems of Robert Browning*. Mr. Milford gives "every poem of Cowper's hitherto printed (besides a few from MS.), except the translations of Homer and *Adamo*"—the most complete collection available; and he has laboured diligently and most usefully to constitute and present the best text. The edition is thus the most satisfactory in the market. The Browning volume contains "Dramatic Lyrics, Dramatic Romances, Men and Women, Dramas, Pauline, Paracelsus, Christmas Eve and Easter Day, and Sordello." Otherwise, it "includes (1) the contents of the three-volume edition of Browning's poems published in 1863; (2) *Pauline*, taken from the first edition (1833); (3) two short poems, a *Sonnet* and *Ben Karshook's Wisdom*, not reprinted by Browning in any collected edition of his poems." The edition is most welcome, as likely to spread widely an acquaintance with Browning's poetry.

Messrs. Seeley offer a charmingly tasteful edition of Sir Joshua Reynolds's *Discourses*, delivered to the students of the Royal Academy (7s. 6d. net). The introduction and notes provided by Mr. Roger Fry are most careful and instructive. There are thirty-three illustrations, judiciously chosen and skilfully reproduced.

*Longfellow* (Select Poems) has been added to Messrs. Blackie's dainty "Red Letter Library." The Bishop of Ripon (Dr. Boyd Carpenter) furnishes a concise and discriminating introduction. Also a beautiful edition of *Essays of Montaigne* (Florio's translation), with introduction by Charles Whibley.

#### FOR GIRLS.

*The Ghost of Exlea Priory*, by E. L. Haverfield (5s., Nelson), describes the trials and troubles of a little girl at school burdened with perplexities and aspirations brought with her from home, and animated by as keen a spirit as her brother, a Repton boy. Family difficulties lead to evacuation of the Priory, in which the representative of a family for generations at feud with the Exlea folk is installed as lessee. A fortune in Chancery was at the root of the enmity; and the Ghost was not unconnected with the resultant perplexities. What comes of it all we will not explain: it is told pleasantly and attractively, and boys and girls alike will read it with interest. Six coloured illustrations from oil paintings by Miss N. Tenison.

*The Heiress of Aylewood*, by Geraldine Mockler (5s., Nelson), tells how the heroine came into possession of a fine estate, but presently found that cousins of her own had been unjustly passed over by a will in her favour. "Won't you tell me what will was iniquitous, and why it was iniquitous?"—"Really, Miss Dunn, you are the most inquisitive person I have ever met." The situation is disturbing to a mind that has a lively sense of equity as opposed to law. The story will disclose the answer. It is brightly written. Six coloured illustrations by W. D. Almond.

*The Romance of Woman's Influence*, by Alice Corkran (6s., Blackie), illustrates very effectively the helpfulness of good and capable women to men, whether as mothers, wives, sisters, or friends, under many varied conditions. The volume consists of nineteen biographical sketches of actual women, eleven of whom are represented in excellent portraits: Margaret Roper (daughter of Sir Thomas More), Monica (mother of Augustine), Mrs. Gladstone, Lady Beaconsfield, Mrs. Booth, Madame Curie, Caroline Herschel, &c. The idea is excellent, and the volume is instructive and pleasantly written. An admirable book for girls.

Another excellent volume of like character, by Mrs. Henry Fawcett, LL.D., depicts the lives of *Five Famous French Women* (6s., Cassell). The five famous French women are Joan of Arc; Renée, Duchess of Ferrara, daughter of Louis XII.; Louise of Savoy, mother of Francis I. and Regent of France during his Spanish captivity; Margaret of Angoulême, Duchess of Alençon and Queen of Navarre, sister of Francis I., the foundress of the Collège de France, the friend of Erasmus and other leaders of the Reformation, the "Marguerite des Marguerites"; and Jeannet d'Albret, the fearless Queen of Navarre, daughter and granddaughter of the foregoing, and mother of Henry IV. The sketches are written with great care and in a very interesting way; and there are thirty good and pertinent illustrations.

On the same lines, too, is a third volume, *Famous Sisters of Great Men*, by Marianne Kirlew (2s. 6d., Nelson). The ladies sketched are Henriette Renan, Caroline Herschel, Dorothy Wordsworth, Mary Lamb, and Fanny Mendelssohn. There are interesting portraits of the first four in colours; and the biographies are attractively presented.

*A Daughter of the Ranges*, by Bessie Marchant (3s. 6d., Blackie), is a story of Western Canada, in the wild range of country of Southern Alberta. Owing to an accident to her father, Caryl Mason takes on herself the management of a large farm and cattle range; there is an

**THE PREPARATION OF THE CHILD FOR SCIENCE.** By M. E. BOOLE. Crown 8vo, cloth, uniform in size, binding, and price with Mrs. BOOLE'S "Logic of Arithmetic." 2s.

*The following seven School Books exemplify the new Methods of Teaching:—*

**MA PREMIÈRE VISITE À PARIS.** Par A. E. C. Being an Illustrated Elementary French Reading Book. Crown 8vo, cloth, 1s. 6d.

**COMBINED GERMAN READER, WRITER, AND GRAMMAR.** By H. G. SPEARING, M.A. 8vo, cloth, 3s. Memory Test-Book for use with the foregoing. 6d. net.

**A HISTORICAL GEOGRAPHY OF THE BRITISH COLONIES.** By C. P. LUCAS, C.B. Vol. II. THE WEST INDIES. Second Edition. Revised and brought up to date by C. ATCHLEY, I.S.O. Crown 8vo, cloth, 7s. 6d.

**ELEMENTARY CHEMISTRY.** Progressive Lessons in Experiment and Theory. Part I. By F. R. L. WILSON, M.A., and G. W. HEDLEY, M.A. Demy 8vo, cloth, 3s.

**A CLASS-BOOK OF ELEMENTARY CHEMISTRY.** By W. W. FISHER, M.A., F.C.S. Fifth Edition. Crown 8vo, cloth. Revised and Enlarged, with 59 Engravings on Wood. 4s. 6d.

**ELEMENTARY MODERN GEOMETRY. Part I.** Experimental and Theoretical (Ch. I-IV), Triangles and Parallels. By H. G. WILLIS, M.A. Demy 8vo, cloth, 2s.

**EXPERIMENTAL AND THEORETICAL COURSE OF GEOMETRY.** By A. T. WARREN. With or without Answers. Third Edition, with Additions. Crown 8vo, cloth, 2s.

## BOOKS FOR PRIZES.

### THE OXFORD POETS SERIES.

Crown 8vo, cloth, 3s. 6d.; on Oxford India paper, from 5s. Each contains a Portrait.

NEW VOLUMES.

\***BROWNING (R.)—POEMS. 1833-1863.**

\***COWPER.—COMPLETE POETICAL WORKS.** Edited by H. S. MILFORD, M.A.

\***THE INGOLDSBY LEGENDS.**—By R. BARHAM. With 25 Illustrations by CRUIKSHANK, LEECH, and others.

**SHELLEY.—COMPLETE POETICAL WORKS.** Including materials never before printed in any edition of the Poems. Edited, with Textual Notes, by T. HUTCHINSON, M.A.

The volumes marked \* may also be obtained in the

### OXFORD EDITIONS OF STANDARD AUTHORS.

In crown 8vo volumes. Printed in large type, with Portrait of the Author or other Illustrations. Cloth, gilt lettered on side and back, 2s. each; paste grain, from 3s. 6d. each. The Volumes may also be had in superior leather bindings—Rutland, half-calf, half-vellum, &c.

*The Series also includes the following Volumes:—*

**BUNYAN.—THE PILGRIM'S PROGRESS.** With CRUIKSHANK'S Illustrations. (Also the PRIZE EDITION. 4s.)

**GRIMM.—POPULAR STORIES.** First English Translation. With 22 Illustrations by CRUIKSHANK.

**KINGSLEY.—WESTWARD HO!** With 12 Illustrations.

**LAMB.—TALES FROM SHAKESPEARE.** With 16 Illustrations taken from the Boydell Gallery.

**SCOTT.—IVANHOE.** With 18 Illustrations.

**SCOTT.—THE TALISMAN.** With 9 Illustrations.

*Uniform Volumes, extra fcap. 8vo, cloth, 2s. 6d. net each; and in leather, 3s. 6d. net each.*

### POEMS AND EXTRACTS

Chosen by William Wordsworth from the Works of the COUNTESS OF WINCHELSEA and others, for an Album presented to Lady Mary Lowther, Christmas, 1819. With Introduction by Prof. H. LITTLEDALE, and Preface by Mr. ROGERS REES.

### WORDSWORTH'S LITERARY CRITICISM.

Edited, with an Introduction, by NOWELL C. SMITH.

### WORDSWORTH'S GUIDE TO THE LAKES.

FIFTH EDITION (1835).

With Introduction, Notes Critical and Textual, and Appendices, by E. DE SÉLINCOURT. With a Map and 8 Illustrations.

### THE LYRICAL POEMS OF BLAKE.

Text by JOHN SAMPSON. With an Introduction by Prof. WALTER RALEIGH.

**THE WORLD'S CLASSICS.** Pott 8vo, cloth, 1s. net; leather gilt, 2s. net. 65 vols. have now been published, and others are in preparation. All volumes, with the exception of works of Fiction, can be obtained bound in buckram, with paper label, gilt top, 1s. 6d. net; and in parchment gilt, with silk marker, in case, 2s. 6d. net.

**THE BOYS' CLASSICS.** Pott 8vo, cloth, cover design in colours, 1s. net each. Six Volumes now ready; others in preparation.

**THE OXFORD INDIA PAPER DICKENS.** Complete Copy-right Edition in 17 fcap. 8vo Volumes. With Portraits and reproductions of the original Illustrations. Price per volume in decorated cloth, 2s. 6d. net; in decorated leather, 3s. 6d. net; in superior bindings, 5s. net and 6s. 6d. net; and in sets.

**THE FIRESIDE DICKENS.** With Portraits and reproductions of the original Illustrations. In 22 Volumes, each obtainable separately. Crown 8vo. The 12 longer works, cloth, 2s. net each; in leather, from 3s. 6d. net each. The 10 shorter works, cloth, 1s. 6d. net each; in leather, from 3s. net each.

London: HENRY FROWDE, Oxford University Press Warehouse, Amen Corner, E.C.

# BLACKIE'S LIST

## Blackie's Latin Texts

The features of this Series are (1) a plain text, clearly printed, the long vowels marked; (2) brief Introductions; (3) a few Critical Notes, intended to serve as an introduction to textual criticism. The Series has already been adopted by several Public Schools, and promises to be exceedingly popular.

Volumes ready:—

- Eutropius.** Edited by W. H. S. JONES, M.A. 8d. net.  
**Horace.—Odes. I.—IV.** Edited by W. H. D. ROUSE, Litt.D. 6d. net each.  
**Cicero.—De Amicitia.** Edited by Professor J. S. REID, Litt.D.  
**Livy.—Books V., VI.** Edited by E. SEYMER THOMPSON, M.A.  
**Virgil.—Aeneid VI.** Edited by S. E. WINBOLT, M.A. 6d. net.  
**Virgil.—Eclogues.** Edited by S. E. WINBOLT, M.A. 6d. net.

## Blackie's English Texts

Price 6d. each.

Complete list on application.

This Series has at once established itself. The variety of subject-matter, the novelty of treatment, and the real literary value of the books selected, have commended themselves to teachers desirous of getting out of the old ruts.

**THE SCHOOL WORLD** says: "They may be commended without reserve to the attention of teachers."

**THE ACADEMY** says: "The series is worthy of special attention, marking as it does a new departure in educational books."

**THE GUARDIAN** says: "Messrs. Blackie's excellent series of English School Texts."

**THE SPEAKER** says: "They should find their way as reading books into all our schools."

**SCHOOL** says: "This series is heartily to be commended to all those who are teaching the older girls and boys in our schools."

## Blackie's French Texts

**Vie de Polichinelle et ses nombreuses Aventures.** OCTAVE FEUILLET. 1s.  
**Histoire de la Mère Michel et de son Chat.** E. DE LA BÉDOLLIÈRE. 1s.

Two lavishly illustrated Volumes. Stories that have been popular with several generations of French children.

**L'Anniversaire de Blanche.** (Scenes for young pupils.) By CLÉMENCE SAUNOIS. Illustrated. Price 1s.

## French Plays

**Bouilly.—L'Abbé de l'Épée.** W. G. HARTOG, B.A. Price 8d.

**Molière.—Les Précieuses Ridicules.** G. H. CLARKE, M.A.

Two New Volumes of Blackie's Series of French Plays. Mr. Clarke's edition is specially valuable by reason of its complete Glossary to Molière's works.

## Blackie's Library of Pedagogics

**THE TEACHING OF MODERN LANGUAGES.** By CLOUDESLEY BRERETON, M.A. 1s. net.

Mr. Brereton is a well known inspector and lecturer, who has studied the subject of this brochure very carefully both at home and abroad. This book reproduces the subject of three lectures, and will be found worthy of perusal by all teachers of modern languages. *Just published.*

**THE TEACHING OF LATIN.** By W. H. S. JONES, M.A., Perse School, Cambridge. Fcap. 8vo, 1s. net.

The first chapter considers the claim of classical study to a unique educational value, and tries to determine the nature and extent of its peculiar contribution to education. Building on this foundation, the succeeding chapters sketch a three years' course in Latin conceived on the lines of the latest educational thought and practice, and give many valuable suggestions as to method.

**The Athenæum** says:—"An eminently sane exposition of the 'new' method of studying Latin and Greek. Most teachers will find something in these pages that they would do well to assimilate." **The Guardian** says:—"Well worth reading." **The Spectator** says:—"Mr. Jones gives some very valuable hints."

**THE TEACHERS' RABELAIS.** Prepared by GERALDINE HODGSON, Univ. Coll., Bristol. Fcap. 8vo, 1s. net.

**The Literary World** says:—"Seven short chapters from Rabelais' immortal work have been translated and purged of any coarseness that might offend, so as to enable the most particular among schoolmistresses to read them. A well written introduction shows the importance of this section of Rabelais' work to all who study the science of education." **The Morning Post** says:—"It contains a really valuable essay on Rabelais as an educator." **The Teachers' Aid** says:—"We most warmly commend this little book to the notice of teachers."

**THE EDUCATION OF GIRLS IN SWITZERLAND AND BAVARIA.** By Miss ISABEL RHYS.

EXCERPT FROM PREFACE.—"This book is the report of my work as Gilehrst Travelling Student in 1902. It is published at the recommendation of the Council of the Cambridge Training College. . . . The towns in Switzerland which I visited were Neuchâtel, Lausanne, Geneva, Berne, Basle, Zurich; and, in Bavaria, Munich, Nuremberg, Augsburg. I spent most of my time in the Public Secondary Schools for Girls, but went also to Primary Schools, Normal Schools, and Training Colleges, Schools of Domestic Science, Private Schools, and, in Bavaria, to Convents."

## Experimental Science

**An Introduction to the Study of the Scientific Method.** By MAYHOWE HELLER, B.Sc., and E. G. INGOLD. Price 2s. 6d. net.

This excellent work is intended as a First Year's Course for pupils entering on the study of Science. It is based on the Scheme of the Committee of the British Association appointed to report on the teaching of Science and the means by which it might be improved.

LIST OF CONTENTS.—Aims and Methods—Practical Arithmetic—Measurement of Length—Measurement of Area—Measurement of Volume—Measurement of Mass—Methods of Finding the Weight of Unit Volume of Various Materials—Floating Bodies—The Principle of Archimedes—The Weight and Pressure of Air—Measurement of the Pressure of the Atmosphere—General Effects of Heat on Matter—The Measurement of Hotness or Temperature—Measurement of Expansion—Solubility and Fusion—Evaporation and Crystallization—Simple Laboratory Operations—Object Lessons—Index.

## Layng's New Algebra

Part I. Just published. 2s. 6d.

An entirely new work, by Mr. A. E. LAYNG, whose **Arithmetic, Euclid, Exercises in Algebra, &c.**, are so widely known and appreciated.

LIST OF CONTENTS.—1. Positive and Negative Numbers. 2. Plotting a Point. 3. Operations with Negative Numbers. 4. Generalized Arithmetic. 5. Numerical Substitution. 6. Graphs—Applications of Algebraic Methods (i.). 7. Operations with Monomials. 8. Operations with Brackets. 9. Simple Equations. 10. Problems—Applications (ii.), Miscellaneous Exercises (ii.). 11. Simultaneous Simple Equations involving two Unknowns. 12. Problems. 13. Factors. 14. Easy Quadratic Equations. 15. Problems—Applications (iii.), Miscellaneous Exercises (iii.).

## French Composition

**French Composition by Imitation, with Exercises in Syntax and in Free Composition.** By HUBERT BROWN, B.A. Cloth, 2s.

The method followed is of particularly novel and practical character. The main purpose is so to drive home by repetition the words and idioms used in a piece of composition that they are thoroughly assimilated from the first, and the danger of their being forgotten as far as possible eliminated. On each of the left-hand pages three English extracts (A, B, and C) are given. The pieces B and C contain the same subject matter as A, put into a different form, but requiring the same words, phrases, and idioms as have been used in A. The right-hand or opposite pages contain a version in French of the extract A.

Full particulars of this excellent little work will be sent on application.

enemy of her father's, and a daughter of this enemy becomes Caryl's companion; and there is the will of Giles Harper to complicate events. It is a tangled story, written with verve and insight; and we daresay the constancy and devotion of the girls do not go unrewarded. Six illustrations by Arthur A. Dixon.

*Molly and her Brothers*, by Mabel Earle (2s. 6d., Blackie), is a bright and stirring story of adventurous girl life in the Far West of America. Molly and an elder brother seek fortune in the Rockies, at Boulder Gulch, where, after camping and prospecting vicissitudes, they discover a mine and a plot; and the plot develops some of the briskest writing in the book. There is a younger brother, too, who seeks fortune elsewhere, but turns up dramatically in the long run. Six illustrations by Frederick Lowenheim.

*Little Sunbeam*, by Eleanora H. Stooke, and *Averil's Wild Oats*, by Mary Neilson, are issued from the National Society's Depository (1s. each). The former is a pretty story of a little blind girl; the scene partly in a London East-End parish and partly on a Cornish flower farm. The latter is the story of a self-willed girl at a boarding school, who is eventually charged (wrongly, of course) with an ugly escapade, but (again of course) a way of rehabilitation is discovered. Each volume has an appropriate frontispiece.

## FOR BOYS.

*Maitland Major and Minor*, by Charles Turley (5s., Heinemann), depicts the experiences of two brothers for six years at Crayford School—a school of some forty boys. Mr. Turley handles freshly varieties of the ordinary events of such a situation, and fairly maintains the honours he has already gained. The difference between a head master that knows and sympathizes with his boys and one that does not comes out in the narrative. Boys will read the story with keen enjoyment. There are six illustrations by Gordon Browne, and the get-up is tasteful.

## FOR CHILDREN.

*Micky*, by Evelyn Sharp (4s. 6d., Macmillan), relates the doings of Micky and his elder brother Tristram (an eleven-year-old that "sits in front of his Latin verses," and discerns "the glories of 'socker'") during a three months' absence of their mother on a voyage to Australia and back. There are also the neighbouring children—little Maurice, and Bettine ("a little ball of white fur"). Other children will follow the proceedings with interest. Eight illustrations by H. M. Brock.

*In the Reign of Coyote*, by Katherine Chandler (2s., Ginn), is a collection of stories embodying folk-lore from the Pacific coast. "Why, Coyote is the most cunning of all the animals; and all the other animals know it." Coyote is to the front, of course; but many of the other animals also play parts in the various narratives. The language is very simple, and the stories are interesting. There are numerous illustrations by J. W. Ferguson Kennedy.

*Tallday's Treasure*, by Katherine E. Vernham (1s., National Society's Depository), takes its title from the first of the seven stories of which the book consists. The stories, which are all simply told, are of a domestic type, with an occasional spice of the marvellous or extravagant.

*A Tale of Six Travellers*, daintily written and pictured by Mrs. Arthur Gaskin (1s. net, Allenson), is sure to be a favourite. The pictures are quaint enough, and they are cleverly reproduced in colours.

*Mr. Ubbledjeb and the House Fairies*, by A. Thorburn (2s., Nutt), is a collection of five stories, attractively told, with numerous excellent illustrations by May Faraday and Dorothy Newell. The volume is spaciouly printed and nicely got up.

## CONSTANT FAVOURITES.

Messrs. Blackie issue in their "Standard Library" a new edition of Hawthorne's *Tanglewood Tales* (2s.), in bold type on good paper and in attractive binding, and with four illustrations by A. A. Dixon. The editor, "William Keith Leask," gives notice that "the American setting of the tales has been omitted as needlessly local in colour for other readers," that "some of the exuberantly full diction of the original text has been compressed," and that "a few literary references by way of chapter headings have been added." The editing has been very skilfully and considerably done, and the volume will delight a fresh circle of readers.—*The Children of the New Forest*, by Captain Marryat (1s. 6d., Blackie), will be all the more attractive in gilt edges and tasteful cover.

*Uncle Tom's Cabin* is presented by Messrs. Cassell in generous form, with about a hundred excellent original illustrations by Jenny Nystrom-Stoopendaal (5s.). An interesting frontispiece represents Mrs. Beecher-Stowe at the date when the book was written (1850). It would be fastidious to want a more handsome edition.

Messrs. Macmillan publish a beautiful edition of Thackeray's *Esmond* (6s.), with an appreciative introduction by Austin Dobson and fifty admirably characteristic illustrations by Hugh Thomson. The volume is nicely printed and flexibly and gorgeously bound.

## ANNUALS.

The varied contents of *The Playroom Annual* (1s. net, Horace Marshall) include stories, songs with music, pictures to colour, to sew,

or to weave, with illustrations galore, mostly coloured. It will be welcome in every playroom.

*Blackie's Children's Annual* (3s. 6d.) makes its second appearance, with appropriate stories and rhymes by many well known writers for young folk, and with 114 illustrations by many esteemed designers. A large proportion of the pictures are in colours. The present issue should go far to confirm the popularity of the annual.

## MISCELLANEOUS.

*Northern Trails*, by William J. Long (Ginn), is another of the author's most charming, sympathetic, and instructive books of first-hand description of the ways of animals. He now takes us away "into a new country, a land of space and silence where it is good to be, away up among the mountains and woods and salmon rivers and mossy barren grounds of Labrador and Newfoundland," and brings us "face to face with new animals—white wolf, fisher, salmon, wild goose, polar bear, and a score of others big and little." "Every smallest incident recorded here is as true as careful and accurate observation can make it," excepting only the ways of the salmon "beyond the breakers and beneath the tide," where "no man has ever followed or seen him," the description of these being "a guess at probable truth." Mr. Long observes as patiently, and loves his animals as warmly, as Water-ton himself. The volume is beautifully written, intensely interesting, and lavishly illustrated.

Messrs. George Philip & Son offer a considerable variety of sound books of interest very suitable as prizes or gifts to thoughtful lads. Of the "Ludgate Prize Series" we have (1) *Heroes of Industry*, by Frances E. Cook, with thirty illustrations; and (2) *Round the Coast*, by George F. Bosworth, F.R.G.S., with numerous illustrations and sketch maps (1s. 6d. cloth; 2s. 6d. net, quarto morocco).—Of the "World's Great Explorers Series" *Mungo Park*, by Joseph Thomson, with thirteen full-page illustrations, seven illustrations in text, seven maps in colours, and four maps in text (3s. 6d.).—Of the "Science Ladders Series" *The Story of Animals*, by Mrs. Arthur Bell (N. D'Anvers), with 211 illustrations (3s. 6d.). All the volumes are in agreeable presentation bindings.

*The Golden Reciter* (3s. 6d., Seeley) contains over seven hundred passages in prose and verse, for reading and recitation, with introductory remarks of a usefully practical character by Cairn James, Professor of Elocution at the Royal College of Music and the Guildhall School of Music. The passages are carefully selected from the best writers, fresh sources being largely drawn upon, and many of the pieces being still under copyright. The book is an excellent collection, and the form is quite convenient in spite of the number of pages, for the paper is judiciously thin. It ought to be a general favourite.

*The Little Folks Sunday Book*, by S. H. Hamer (5s., Cassell), consists of Bible stories simply narrated, with a great many excellent full-page illustrations, mostly in colour. A handsome and attractive volume.

## MATHEMATICS.

15802. (Communicated by JAMES BLAIKIE, M.A.)—Étant donnés deux points A et B, on prend les points I et I' qui partagent le segment AB dans un rapport donné  $a/\beta$  et l'on considère toutes les droites D telles que le rapport de leurs distances aux points A et B soit égal à  $a/\beta$ . Démontrer que les plans ID et I'D sont rectangulaires. En conclure:—(1) que les droites D qui passent par un point fixe S engendrent un cône dont les sections circulaires sont perpendiculaires aux droites SI et SI'; (2) que les droites D qui sont situées dans un plan  $\Pi$  enveloppent une conique ayant pour foyers les projections des points I et I' sur le plan  $\Pi$ . Indiquer ce qui arrive lorsque le point S est situé sur la sphère qui a pour diamètre II' ou lorsque le plan  $\Pi$  est tangent à cette sphère. (See Guichard, *Compléments de Géométrie*.)

Solution by JAMES BLAIKIE, M.A.

Let E, K, F, K' be the feet of the perpendiculars drawn from the points A, I, B, I' to the straight line D. By hypothesis,  $AE/BF = AI/BI$

$$= AI'/BI' = a/\beta.$$

The three straight lines AE, IK, BF are in three

parallel planes; therefore  $KE/KF = IA/IB = AE/BF$ . The right-angled triangles AEK, BFK are accordingly similar, whence

$$AK/BK = AE/BF = AI/BI = AI'/BI'.$$

This shows that KI, KI' bisect the angle AKB internally and externally. Hence IK, which is perpendicular to D, is also perpendicular to KI', and therefore IK is perpendicular to the plane I'D. The plane ID, which contains a perpendicular to the plane I'D, is therefore perpendicular to that plane.

(1) SKI, IKI' being right angles, the locus of K is the intersection of

the spheres on SI and II' as diameters, that is, a circle whose plane is perpendicular to the line joining the mid-points of SI and II', and therefore also perpendicular to SI'. Similarly the locus of K' is a circle whose plane is perpendicular to SI. Thus the straight line D traces out a cone having two systems of circular sections perpendicular to SI and SI'. If the point S is on the sphere with II' as diameter, this cone reduces to two planes, perpendicular to the plane KII', and passing through KI and KI'.

(2) Let  $i, i'$  be the projections of I, I' on the plane  $\Pi$ . Then, as IK is perpendicular to the straight line D in the plane  $\Pi$ , Ki and similarly K'i' are perpendicular to D. And, since the points K, K' describe a circle (the intersection of the plane  $\Pi$  with the sphere on II' as diameter), the straight lines D envelop a conic having  $i, i'$  as foci. This conic is an ellipse or a hyperbola according as the plane  $\Pi$  meets the straight line II' between I and I' or not. If the plane  $\Pi$  is tangent to the sphere of diameter II', the conic is a hyperbola reduced to the straight line passing through the point of contact and perpendicular to  $ii'$ .

15871. (Professor SANJANA, M.A. Suggested by Question 15748.)—A, B, C are three fixed points on a conic, and from another fixed point K a chord is drawn terminated by the curve at P and Q. Find the locus of the intersection of AQ and BP, and investigate when it is of the first degree.

Solution by W. J. DOBBS, M.A.

The point C is not required in the Question. Project the conic into a circle of centre K. Then, if BP and AQ meet at R,

$$\angle BRA = \angle BPA - 90^\circ = \text{const.}$$

Therefore the locus of R is a circle through A and B, which reduces to the straight line at infinity when BA is a diameter. Hence, returning to the original problem, we see that the locus required is a conic through A and B and the intersections of the polar of K with the original conic; and that it reduces to the polar of K when A, B, and K are collinear.

Mr. H. L. TRACHTENBERG, B.A., solves the first part of the Question by isogonal transformation as follows:—

Transform with regard to the triangle KAB. The conic, passing through AB, becomes another conic through AB, and, if P', Q' be the points corresponding to P, Q, the straight lines KPQ, AQ, BP become, since they pass through an angular point, the straight lines KP'Q', AQ', BP', passing through the same angular points respectively.

Hence the locus of the intersection of AQ and BP transforms into the locus of the intersection of AQ' and BP', a locus which bears the same relation to the transformed conic and the points K, A, B as the locus sought does to the original conic and the points K, A, B. Hence, if the degree of the locus sought is  $n$ , that of its transformation is  $n$ .

Now a conic through KAB cuts the locus sought in  $2n$  points, two of which coincide with A, B, since these are points on the locus found by taking limiting positions KA, KB for KPQ. Hence the  $2n-2$  points which do not coincide with an angular point must correspond to the points in which the straight line corresponding to the conic through KAB cuts the transformed locus, but the number of these points is  $n$ . Therefore  $2n-2 = n$ . Hence  $n = 2$ . Thus the locus required is a conic through A, B.

15862. (F. N. MAYERS, M.A.)—Discuss the possibility or otherwise of the congruence  $2^{p-1} \equiv 1 \pmod{p^2}$ .

Note by Lt.-Col. ALLAN CUNNINGHAM, R.E.

In the *Comptes Rendus des Séances de l'Acad. des Sciences*, Paris, t. LXXXIII., p. 1288, there are given the enunciations of several theorems by M. M. F. Proth, one of which is that "If  $2^p - 2 \equiv 0 \pmod{p}$  a prime, then  $2^p - 2 \not\equiv 0 \pmod{p^2}$  or  $p^3$ ." It is not stated whether this is a mere empirical theorem, or whether the author of the paper had found actual proof of the same.

15679. (ALEXANDER HOLM, M.A.)—In Diophantus v. 19 it is required to find three numbers such that, if each is subtracted from the cube of their sum, the remainder may be a cube.

Diophantus' method leads to the numbers

$$\begin{array}{ccc} 68574961 & 134953109 & 162707336 \\ 549353259 & 549353259 & 549353259 \end{array}$$

In the *Ladies' Diary* for 1716-17 (Leybourn's *Math. Questions*, Vol. I., pp. 52-62) it is stated that the lowest numbers hitherto found to satisfy the problem are  $\frac{13851}{85184}, \frac{18954}{85184}, \frac{19467}{85184}$ ; required to find still lower

numbers, for example,  $\frac{351}{3136}, \frac{832}{3136}, \frac{833}{3136}$ .

Solution by the PROPOSER.

Let  $x, y, z$  be the required numbers, and their sum

$$x + y + z = u \dots\dots\dots(1);$$

$$\text{then } \left. \begin{array}{l} u^3 - x = \text{a cube} = (lu)^3, \quad u^3 - y = \text{a cube} = (mu)^3 \\ u^3 - z = \text{a cube} = (nu)^3 \end{array} \right\} \dots\dots\dots(2),$$

where  $l, m, n$  are arbitrary; therefore

$$x = (1-l^3)u^3, \quad y = (1-m^3)u^3, \quad z = (1-n^3)u^3 \dots\dots\dots(3).$$

Hence, from (1),  $3 - l^3 - m^3 - n^3 = 1/u^2 = \square$ . Thus it is necessary to seek for three positive cubes each  $< 1$  [cf. (2), (3)], such that, their sum being taken from 3, a square is left. Setting out from Diophantus' particular case,  $3 - (\frac{5}{6})^3 - (\frac{2}{3})^3 - (\frac{1}{2})^3 = \square = (\frac{2}{3})^2$ , let us take  $\frac{5}{6}, \frac{2}{3}, X, -\frac{1}{2} + X$  for the roots of the required cubes. These assumptions leave the sum of the roots of the cubes unaltered. (Diophantus keeps the sum of the cubes themselves constant.) Thus  $3 - (\frac{5}{6})^3 - (\frac{2}{3} - X)^3 - (-\frac{1}{2} + X)^3 = \square$ ; therefore  $\frac{5}{6} + \frac{7}{12}X - \frac{1}{2}X^2 = \square = (-\frac{2}{3} + rX)^2$ , where  $r$  is arbitrary; therefore  $X = (36r + 7)/(12r^2 + 6)$ . To make the last two cubes positive, choose

$$X = (36r + 7)/(12r^2 + 6) > \frac{1}{2} < \frac{2}{3};$$

whence  $r > \frac{1}{3}(9 - \sqrt{87}) < \frac{1}{4}(9 - \sqrt{87})$  or  $> \frac{1}{4}(9 + \sqrt{87}) < \frac{1}{3}(9 + \sqrt{87})$ .

If  $r = \frac{11}{2}$ , then  $X = \frac{5}{6}$ . Thus  $3 - (\frac{5}{6})^3 - (\frac{2}{3})^3 - (\frac{1}{2})^3 = \square = (\frac{2}{3})^2$ . Taking  $l = \frac{15}{18}, m = \frac{2}{18}, n = \frac{1}{18}, u = \frac{1}{18}$ , we have  $x = \frac{3 \cdot 5 \cdot 1}{3 \cdot 1 \cdot 3 \cdot 6}, y = \frac{8 \cdot 2 \cdot 2}{3 \cdot 1 \cdot 3 \cdot 6}, z = \frac{8 \cdot 3 \cdot 3}{3 \cdot 1 \cdot 3 \cdot 6}$ .

15844. (ROBT. W. D. CHRISTIE.)—Divide a straight line into two such parts that the square on one part shall equal three times the square on the other. Can it be solved generally?

Solutions (I.) by HENRY RIDDELL, M.E.; (II.) by RAM KRISHNA RAO; (III.) by W. J. GREENSTREET, M.A., the PROPOSER, and others; (IV.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.; (V.) by Professor LANGHORNE ORCHARD, M.A., B.Sc.

(I.) Let it be required to divide AB into two parts AP, PB, so that  $AP^2/PB^2 = m/n$ . Produce AB to C, making  $AB/BC = m/n$ , which can always be done as long as the ratio  $m/n$  can be got in linear form. On AC describe a semicircle, and erect BE perpendicular to AB and cutting the semicircle at E. Join AE, and through B draw BD, making the angle ABD half a right angle, and drop DP perpendicular to AB. Then

$$AP^2/PB^2 = AP^2/PD^2 = AB^2/BE^2 = AB/BC = m/n.$$

(II.) Let AB be the given straight line. At A and B make angles of  $45^\circ$  and  $60^\circ$  respectively. Draw CX perpendicular to AB. Then X shall be the required point. Now  $CX = AX$  and  $CX/BX = \sqrt{3}$ ; therefore  $AX/BX = \sqrt{3}$ ; therefore  $AX^2 = 3BX^2$ ; therefore X is the required point.

The general solution for dividing a straight line into two parts so that the square on one part may be  $n$  times the square of the other:—Take a straight line PQ. Divide it at R in the ratio of 1 to  $n$ . Find a mean proportional PS to PR and RQ.

$$PS^2 = PR \cdot RQ = nPR^2.$$

Now divide AB at X in the ratio of PS to PR.

Then  $AX : XB = PS : PR$ ;

therefore  $AX^2 : XB^2 = PS^2 : PR^2$ ; therefore  $AX^2 = nXB^2$ .

(III.) Let AB be the given line. Construct a triangle ABC with angles  $A = 30^\circ, B = 45^\circ$ . Then  $CD = \frac{1}{2}AC, CD = DB$ . Then CD, perpendicular on AB, gives D, the point required. For  $4CD^2 = AC^2$ ; therefore  $AD^2 + CD^2 = 4CD^2$ ; therefore  $AD^2 = 3CD^2 = 3DB^2$ . If  $AB = a$  and D is on AB such that  $AD^2 = nDB^2$ , let  $AD = x$ ; then  $x^2 = n(x-a)^2$ ,

$x^2(n-1) - 2anx + a^2n = 0$ ; therefore  $x = a\sqrt{n}/(\sqrt{n} \pm 1)$ . Now a length  $a\sqrt{n}$  can always be drawn and the section required can always be effected.

Perhaps the simplest process is as follows:—

(1)  $n = 5$ .—Trisect any line AD in C; draw CE perpendicular to CD and equal to it. Produce AE to F, so that  $CE = EF$ . Join FB. EK, parallel to FB, gives the point required. For

$$AE^2 = AC^2 + CE^2 = 5CE^2, \quad EF^2 = CE^2,$$

$$AE/EF = AK/KB,$$

$$AK^2/KB^2 = AE^2/EF^2 = 5.$$

(2)  $n = 6$ .—Divide any line AD in C, so that  $AC^2 = 5CD^2$ . Draw CE perpendicular and equal to CD. Produce AE to F, so that

$$EF = CE = CD.$$

Draw EK parallel to FB. Then

$AE^2 = AC^2 + CE^2 = 6CE^2$ ,  $EF^2 = CE^2$ ,  $AK^2/KB^2 = AE^2/EF^2 = 6$ ,  
and, by repeating this process, we get each point of section in turn.

Rest in Reprint.]

15764. (R. F. DAVIS, M.A.)—The tangent at A to the circum-circle of the triangle ABC meets the base BC produced in T. From T perpendiculars are drawn upon AB, AC, meeting the circum-diameter through A in P, Q respectively. Prove (geometrically) that P, Q are equidistant from the circum-centre.

[Want of space prevents the publication of more than a few of the many solutions sent in.—ED.]

Note by CONSTANCE I. MARKS, B.A.

The problem appears to require something more to complete its solution than has been given in either of the articles sent in. It is to be observed that P and Q will be within or without the circle according as the circum-diameter through A falls without or within the angle A of the triangle ABC. The applicability to both figures of a method of solution based on either one of them is not obvious.

Solutions (I.) by C. E. WILLIAMS, M.A.; (II.) by J. A. H. JOHNSTON, M.A., and others; (III.) by A. M. NESBITT, M.A.; (IV.) by H. W. WEBSTER, M.D.

(I.) Since  $\angle ABA' = 90^\circ = \angle AHP$ ,

$$A'P : BH = AA' : AB.$$

Also  $\angle QTA = 90^\circ - \angle TAC = \angle A'AC$   
 $= \angle A'BC = \angle PTB.$

and  $\angle HTA = 90^\circ - \angle TAH = \angle BAA'.$

Therefore

$$AQ : BH = AT : TH = AA' : AB.$$

Thus  $A'P = AQ.$

(II.) Let TQ meet AC in L and AB in M. Join PC, QB.

Then  $TA^2 = TC \cdot TB.$

But  $TA^2 = TL \cdot TQ;$

for QAT and ALT are right angles. Therefore B, Q, L, C are concyclic; therefore QBT is a right angle. Similarly B, P, M, C are concyclic; therefore PCT is a right angle. Let PC meet the circle in D, and draw diameter BD. Comparison of the triangles OBQ, ODP, which have two angles and a side equal in each, shows at once that  $OP = OQ.$

[Rest in Reprint.]

10693. (Professor LAMPE, LL.D.)—Find all the values of  $x$  that satisfy the equation  $64 \sin^2 x \sin^2 2x \sin^2 3x = 7.$

Solution by the PROPOSER.

$$\begin{aligned} \text{The relation } \sin 7x &= 7 \sin x - 56 \sin^3 x + 112 \sin^5 x - 64 \sin^7 x \\ &= \sin x (7 - 56 \sin^2 x + 112 \sin^4 x - 64 \sin^6 x) \end{aligned}$$

leads immediately to the conclusion that the equation

$$64y^6 - 112y^4 + 56y^2 - 7 = 0 \dots\dots\dots(1)$$

has the roots  $y_1^2 = \sin^2 \frac{1}{7}\pi$ ,  $y_2^2 = \sin^2 \frac{2}{7}\pi$ ,  $y_3^2 = \sin^2 \frac{3}{7}\pi$ , and thence

$$\sin^2 \frac{1}{7}\pi \sin^2 \frac{2}{7}\pi \sin^2 \frac{3}{7}\pi = \frac{7}{64} \dots\dots\dots(2).$$

Comparing (2) with  $64 \sin^2 x \sin^2 2x \sin^2 3x = 7 \dots\dots\dots(3),$

we see that  $x_1 = \frac{1}{7}\pi$ ,  $x_2 = \frac{2}{7}\pi$ ,  $x_3 = \frac{3}{7}\pi$  are roots of (3). But it is possible that there are still other roots of (3). Reduced to powers of  $\sin x = y,$

$$(3) \text{ becomes } 4096y^{12} - 10240y^{10} + 8448y^8 - 2304y^6 + 7 = 0 \dots\dots\dots(4).$$

The polynome forming the left side of (4) must admit of the polynome in (1) as a factor. Dividing, we get

$$64y^6 - 48y^4 - 8y^2 - 1 = 0 \dots\dots\dots(5).$$

This equation possesses a positive root for  $y^2, = 0.9068412 = \sin^2 x,$  whence we derive  $x = 72^\circ 13' 43.2''.$  Thus we have the following values for  $0 < x < 90^\circ:$ —

$$\begin{aligned} x_1 &= \frac{1}{7}\pi = 25^\circ 42' 51.43'', & x_2 &= \frac{2}{7}\pi = 51^\circ 25' 42.86'', \\ x_3 &= 72^\circ 13' 43.2'', & x_4 &= \frac{3}{7}\pi = 77^\circ 8' 31.29''. \end{aligned}$$

Similar questions result from the relations

$$2^{\frac{1}{2}(n-1)} \sin \pi/n \sin 2\pi/n \sin 3\pi/n \dots \sin [(n-1)\pi]/2n = \sqrt{n},$$

$$2^{\frac{1}{2}(n-1)} \cos \pi/n \cos 2\pi/n \cos 3\pi/n \dots \cos [(n-1)\pi]/2n = 1,$$

$n$  being any odd number.

15856. (Professor COCHEZ.)—Trouver le lieu des points tels que leurs polaires relatives à trois cercles concourent en un même point.

Solutions (I.) by HENRY RIDDELL, M.E., and W. J. GREENSTREET, M.A.

(II.) by H. M. TAYLOR, M.A., F.R.S., and C. M. ROSS.

(I.) Let there be any two circles cutting each other at right angles, and through any point P on the circumference of one draw the chord PABD, passing through the centre of the second circle and cutting the two circumferences in P, B, A, D. Since the two circles cut at right angles,

$$CB \cdot CP = CA^2,$$

and hence the polar of P with regard to the circle having C as centre passes through B, and, being at right angles to PC, also passes through Q, the point diametrically opposite P. Hence, if any number of circles be described cutting the first circle at right angles, the polars of P with regard to them will be concurrent at Q. In general, a circle can be drawn to cut three circles at right angles, and this circle is the required locus.

The case in which the circles are co-axial is worth notice. As a circle cutting a system of co-axial circles at right angles can be drawn through any point, the polars of any point with regard to such co-axial system will concur.

(II.) Let the equations of the three circles referred to rectangular co-ordinates be

$$\begin{aligned} x^2 + y^2 - 2a_1x - 2b_1y + c_1 &= 0, \\ x^2 + y^2 - 2a_2x - 2b_2y + c_2 &= 0, \\ x^2 + y^2 - 2a_3x - 2b_3y + c_3 &= 0. \end{aligned}$$

Then the condition that the polars of the point  $(x, y)$  with respect to the three circles should meet in a point is

$$\begin{vmatrix} x - a_1 & y - b_1 & a_1x + b_1y - c_1 \\ x - a_2 & y - b_2 & a_2x + b_2y - c_2 \\ x - a_3 & y - b_3 & a_3x + b_3y - c_3 \end{vmatrix} = 0.$$

The locus is therefore apparently a cubic curve; but it is easily seen that the coefficients of the highest terms  $x^2y, xy^2$  vanish. This suggests that the line at infinity is part of the locus, as is clear from the fact that the polars of a point at infinity are parallel. The remaining part of the locus is therefore a conic. The coefficient of the term  $xy$  is zero, and the coefficients of  $x^2, y^2$  are equal; the locus is therefore a circle.

If we choose the radical centre of the three given circles as origin of co-ordinates, then  $c_1 = c_2 = c_3 = t^2$ . The coefficients of the terms  $x, y$  will then vanish, and the equation of the locus circle reduces to  $x^2 + y^2 = t^2$ . This shows that the locus circle cuts the given circles orthogonally. It may be proved that the polars of any point on the locus circle meet in the other extremity of the diameter through that point of the locus circle, and it may be observed that each of the points where the locus circle cuts the line joining the centres of two of the given circles has the same polar with respect to each of those circles. It is easily seen that, if the centres of the given circles are collinear, the locus circle reduces to the line at infinity and the line of the centres.

These results can very easily be verified geometrically.

15841. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Jack and Jill run a race of 300 yds. to the top of a hill, and then the same distance down the other side to a fixed goal. Going up the hill Jill takes 5 steps to Jack's 4, and going down takes 6 steps to Jack's 5. If Jack's speed in ascending is half what it is in descending, and if the length of Jill's step to Jack's is as 3 to 4, how much start should be given to Jill in order that they may reach the goal together?

Solutions (I.) by JAMES BLAIKIE, M.A.; (II.) by B. C. WALLIS, F.C.P., B.Sc. (Econ.); (III.) by R. J. WHITAKER; (IV.) by T. BRILL.

(I.) If the length of Jill's step be  $3a$  and Jack's  $4a$ , then up hill Jill travels  $15a$  while Jack travels  $16a$ , and down hill Jill travels  $18a$  while Jack travels  $20a$ . Then, if  $x$  be the required start and we take Jack's rate up hill as unity, equating the times taken, we have

$$300 + \frac{300x}{3} = (300 - x) \frac{1}{4} + 300 \frac{1}{5},$$

which gives  $x = 34\frac{2}{3}$  yds., Jill's start.

(II.) Up hill Jill goes 15 units to Jack's 16. Down hill Jill goes 18 units to Jack's 20. Jill goes 300 yds. down hill, while Jack could go  $\frac{1}{5} \cdot 300 = 333\frac{1}{3}$  yds., an excess of  $33\frac{1}{3}$  yds. Therefore Jack is  $16\frac{2}{3}$  yds. from the top when Jill is just there. Therefore Jack goes  $(300 - 16\frac{2}{3}) = 283\frac{1}{3}$  yds. up hill while Jill ascends completely from her starting point. Therefore Jill's distance up is  $\frac{1}{5}$  of  $283\frac{1}{3} = 265\frac{2}{3}$  yds. Therefore Jill should receive  $34\frac{2}{3}$  yds. start. [Rest in Reprint.]

Note on Two Isogonal Conjugates.

By R. CHARTRES.

Let P and Q be isogonal conjugates; then, if  $x^2 + y^2 + z^2$  be a minimum .....(1), while  $ax + by + cz = \text{constant} = 2\Delta$  .....(2), then  $(a^2 + b^2 + c^2)$  times (1) - (2) squared or  $(bx - ay)^2 + (cy - bz)^2 + (az - cx)^2$  will be a minimum; therefore  $x : y : z = a : b : c$ . But  $xX = yY = zZ$ ; therefore  $aX = bY = cZ$ , or Q is the centroid and P the Lemoine point, and evidently P is the centroid of DEF.

15079. (Rev. T. ROACH, M.A.)—Prove geometrically  $\sin^{-1} \frac{4}{5} + \sin^{-1} \frac{5}{13} + \sin^{-1} \frac{16}{65} = \frac{1}{2}\pi$ .

Solution by C. E. YOUNGMAN, M.A.

A general formula of this kind can be obtained as follows:—If N be an even number greater than 2,  $N^2$  can always be resolved in two ways into a pair of unequal factors, say  $N^2 = ab = cd$ , where  $a > b$ ,  $c > d$ , and  $a + b > c + d$ . Make two right-angled triangles ABC, ADC, with the right angle C common, and  $AC = 2N$ ,  $AB = a + b$ ,  $AD = c + d$ . Then  $BC = a - b$  and  $DC = c - d$ . Let p be the perpendicular from D on AB. We have  $p \cdot AB = AC \cdot DC$ ; i.e.,  $p = 2N(a + d - b - c)/(a + b)$ . And, since the sum of the angles at A and B is  $90^\circ$ ,

$$\sin^{-1} [2N/(a + b)] + \sin^{-1} [p/(c + d)] + \sin^{-1} [(c - d)/(c + d)] = 90^\circ.$$

This gives the formula in the Question when  $N^2 = 12 \cdot 3 = 9 \cdot 4$ . When  $N^2 = 18 \cdot 2 = 9 \cdot 4$ , or when  $N^2 = 50 \cdot 2 = 20 \cdot 5$ , the three sines are  $\frac{4}{5}, \frac{3}{5}, \frac{5}{13}$ .

QUESTIONS FOR SOLUTION.

15894. (Prince C. DE POLIGNAC.)—A ball moves along OB, making an acute angle with OA. The velocity of sound is V, that of the ball nV,  $n > 2$ . If  $n > \sec \theta$ , the whizzing of the ball along OB will be heard by an observer placed in A in the reverse order in which it is produced. (Tait and Steele, 2nd ed., p. 30, Ex. 10.) There is then a point M from which the whizzing of the ball is first heard and a point O' on the other side of M such that the sound from O and O' reaches A at the same moment. Let OA = a and AP be perpendicular to OB. Prove: (1) If  $n < \sec \theta + \tan \theta$ , O' lies between M and P; if  $n = \sec \theta + \tan \theta$ , O' coincides with P; if  $n > \sec \theta + \tan \theta$ , O' lies beyond P. (2) When n increases indefinitely OO' converges towards  $2a \cos \theta$ . (3) If  $\theta = 0$  and  $OB = x$ ,  $OB' = x'$  are any two distances such that the sound proceeding from B and B' reaches A at the same moment, then

$$(n - 1)x + (n + 1)x' - 2na = 0.$$

15895. (B. KRISHNAMACHARI, B.A.)—Solve the equation

$$9xy^2 \frac{d^2y}{dx^2} + 2 = 0.$$

[I observe that  $y = x^3$  is a particular solution.]

15896. (H. BATEMAN, B.A.)—Prove that, with the usual notation,

$$\text{dn } u = \frac{2K'}{2K} \text{sech} \frac{\pi}{2K'} (u + 2iK).$$

15897. (Rev. J. CULLEN.)—Solve the congruence  $xa^x + 1 \equiv 0 \pmod{p}$ , where p is a given prime and a any integer prime to p. Hence show that with one possible exception there is no prime of the form  $q \cdot 2^a + 1$ ,  $1 < q < 100$ .

15898. (Lt.-Col. CUNNINGHAM, R.E.)—Show that the roots (y) of the congruence  $y^3 + 1 \equiv 0 \pmod{p}$  can be found if a root  $Y = 2\eta^2$  be known in the congruence  $Y^4 + 1 \equiv 0 \pmod{p}$ . Ex.—Given  $p = 38737$  a divisor of  $(512^4 + 1)$ , find some roots of  $y^3 + 1 \equiv 0 \pmod{p}$ .

15899. (ROBERT W. D. CHRISTIE.)— $N = 73439775749$  is an exact power. Find its root by a strictly mathematical process. Generalize for any odd power.

15900. (ALEXANDER HOLM, M.A.)—Show how to find an infinite number of rational right-angled triangles such that the sum of given rational multiples a, b, c, d of the three sides and of the area may be equal to a given rational number e. [Note.—This problem is a generalization of Diophantus, vi. 6, 7, 8, 9, 10, 11, and of the analogous problems added by Bachet and Fermat.]

15901. (Professor SANJANA, M.A., and M. V. A. SASTRY, B.A.)—Prove that

$$R(1) - \frac{1}{2}R(3) + \frac{1}{3}R(5) - \dots - \frac{1}{2n}R(4n-1) + \frac{1}{2n+1}R(4n+1) - \dots \text{ad inf.} = \frac{1}{16}\pi^2,$$

where R  $(2p + 1)$  denotes the sum of the reciprocals of the odd numbers from 1 up to  $2p + 1$ .

15902. (A. M. NESBITT, M.A.)—If  $t_r$  denote the  $(r + 1)$ -th term of the expansion  $(x + y)^n$ , n being a positive integer, then will

$$(t_0 - t_2 + t_4 - \dots)^2 + (t_1 - t_3 + t_5 - \dots)^2 = (x^2 + y^2)^n.$$

Hence deduce that, if  $c_r$  be for shortness written for  ${}_n C_r$ ,

$$(c_0 - c_2 + c_4 - \dots)^2 + (c_1 - c_3 + c_5 - \dots)^2 = 2^n.$$

15903. (Communicated by Professor R. W. GENESE.)—A box just holds 160 cigarettes packed regularly in rows of 20. Prove that on repacking in alternate rows of 20 and 19 the box will hold 16 more cigarettes.

15904. (S. C. BAGCHI, B.A.)—If  $\begin{vmatrix} g_2 - g_3 & g_2 - g_1 \\ f_2 - f_3 & f_2 - f_1 \\ c_2 - c_3 & c_2 - c_1 \end{vmatrix} = 0$ , then there

are two points from either of which the three circles specified by the elements of the above matrix can be inverted into concentric circles.

15905. (W. F. BEARD, M.A.)—ABC is a triangle, I its in-centre, H its orthocentre; AD, BE, CF are the three altitudes. Prove (1) that the circles through AID, BIE, CIF are coaxial; (2) that the line of centres of these circles is the polar of H with regard to the in-circle; (3) that, if the circles AID, BIE, CIF meet BC, CA, AB respectively in X, Y, Z, then X, Y, Z are collinear; (4) if L, M are the inverses of A, D with respect to the in-circle, then LM bisects IH; (5) if LM meets AD at K and A' is the middle point of BC, then A'K is perpendicular to AI. Similar results are true in the case of the ex-circles.

15906. (D. BIDDLE.)—From P, a point in a rectangle, perpendiculars are drawn to the four sides. Prove that the sum of the products of those drawn to opposite sides is equal to the product of the segments of any chord of the circumscribed circle, determined by P. [This ought to be in Casey's Euclid, or the Sequel thereto, but I cannot find it.]

15907. (C. E. YOUNGMAN, M.A.)—Find geometrically the two single foci of a strophoid—the pedal of a parabola with respect to a point on the directrix—and show that they are the ends of a diameter of the rectangular hyperbola which has the same focus and directrix as the parabola.

15908. (Professor NEUBERG.)—Si de chaque point M(x, y) d'une courbe plane C on déduit un point M<sub>1</sub>(x<sub>1</sub>, y<sub>1</sub>) d'après les formules

$$x_1/y_1 + a x/y = b, \quad 1/y_1 + a/y = c,$$

le point M<sub>1</sub> décrit une seconde courbe C<sub>1</sub> telle que les tangentes en M à C et en M<sub>1</sub> à C<sub>1</sub> se coupent constamment sur l'axe Ox.

15909. (H. L. TRACHTENBERG, B.A.)—ABC is a triangle; X is the point of contact with the side BC of the escribed circle corresponding to A. Show that an ellipse can be described with A, X as foci passing through B and C, and show that the lengths of the semi-major axis, semi-minor axis, and semi-latus rectum are respectively  $\frac{1}{2}s$ ,  $\sqrt{[s(s-b)(s-c)/a]}$ ,  $2(s-b)(s-c)/a$ ; also eccentricity = AX/s.

15910. (Professor NANSON.)—P, Q, R are points on three diameters of an ellipse. Show that the conjugates of these diameters meet QR, RP, PQ in collinear points.

15911. (K. S. PATRACHAN.)—The normal at a point P of an ellipse meets the curve again at Q; p and q are points on the auxiliary circle corresponding to P and Q. If the angle pCq be bisected by CR, show that CP and CR are in the directions of conjugate diameters.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9915. (ARTEMAS MARTIN, LL.D.)—A point is taken at random in the surface of a given circle and two random chords drawn through it at right angles to each other. Find the average area of the quadrilateral formed by joining the extremities of the chords.

10184. (Professor SCHOUTE.)—Find the sum of the series

$$\frac{1}{1} + \frac{1}{2+3} + \frac{1}{4+5+6} + \frac{1}{7+8+9+10} + \dots$$

10780. (H. MCCOLL, B.A.)—If  $f(\theta)$  denote the cubic expression  $x\theta^3 + y\theta^2 + z\theta + u$ , and if  $\phi(\theta)$  denote  $u\theta^3 + z\theta^2 + y\theta + x$ , so that  $f(\theta) = 0$  and  $\phi(\theta) = 0$  are equations with reciprocal roots, find the chance that the roots of the two quadratic equations  $f'(\theta) = 0$  and  $\phi'(\theta) = 0$  are all four real, the coefficients x, y, z, u being each taken at random between -u and u.

11831. (Professor DÉPREZ.)—Soient P, Q deux points d'une sphère, les arcs AP, BP, CP rencontrent les côtés correspondants BC, CA, AB du triangle sphérique ABC aux points A', B', C'. On a la relation  $\cos PQ = \cos AQ (\sin PA'/\sin AA') + \cos BQ (\sin PB'/\sin BB') + \cos CQ (\sin PC'/\sin CC')$ .

12154. (Professor CATALAN.)—Si a, b, c sont les longueurs des côtés d'un triangle rectiligne, démontrer qu'on a

$$a^2b(a-b) + b^2c(b-c) + c^2a(c-a) \geq 0, \\ ab^2(b-a) + bc^2(c-b) + ca^2(a-c) \geq 0.$$

12155. (Professor ORCHARD, M.A., B.Sc.)—If the Earth's velocity round her axis varied inversely with her velocity round the Sun, how would this affect the (true) weight of objects on her surface?

## NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

*Vol. VIII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

## THE LONDON MATHEMATICAL SOCIETY.

Thursday, November 9th, 1905 (Annual General Meeting).—Prof. A. R. Forsyth, President, in the Chair.

Messrs. P. I. Anderson and J. A. H. Johnston were elected members.

The De Morgan Medal was presented to Dr. H. F. Baker.

The Council and Officers for the ensuing Session were elected, as follows:—President, Prof. A. R. Forsyth; Vice-Presidents, Prof. W. Burnside and Sir W. Niven; Treasurer, Prof. J. Larmor; Secretaries, Prof. A. E. H. Love and Mr. J. H. Grace; other members of the Council, Dr. H. F. Baker, Mr. A. Berry, Mr. J. E. Campbell, Prof. E. B. Elliott, Dr. J. W. L. Glaisher, Mr. G. H. Hardy, Dr. E. W. Hobson, Major P. A. MacMahon, Mr. A. E. Western, Mr. A. Young.

The following papers were communicated:—

"On Improper Multiple Integrals," Dr. E. W. Hobson.

"On the Arithmetic Continuum," Dr. E. W. Hobson.

"On the Arithmetical Nature of the Coefficients in a Group of Linear Substitutions (second paper)," Prof. W. Burnside.

"On the Asymptotic Value of a Type of Finite Series," Mr. J. W. Nicholson.

"On an Extension of Dirichlet's Integral," Prof. T. J. P.A. Bromwich.

"The Continuum and the Second Number-Class," Mr. G. H. Hardy.

The White Light of Truth is behind the Statement that

# L. & C. HARDTMUTH'S KOH-I-NOOR

*Pencil is the Best.*

The KOH-I-NOOR PENCIL is made by L. & C. HARDTMUTH, the most famous pencil makers in the world. You can get pencils cheaper than the Koh-I-Noor, but not so good—not even if you pay the same price.

The fact is the Koh-I-Noor Pencil cannot be emulated. It is a thing apart. No one can reproduce its velvety smoothness, its delicacy of touch. No one can make a pencil to point so well or to keep its point so long.

Koh-I-Noor Pencils are 4d. each, 3/6 per doz., everywhere.

Of Stationers, Artists' Colourmen, Photographic Dealers, &c.

L. & C. HARDTMUTH, 12 Golden Lane, London, E.C.

IS YOUR  
PENCIL  
A  
KOH-I-NOOR  
OR ONLY AN  
IMITATION?

## A most valuable French Dictionary.

JUST PUBLISHED, PRICE 3s. 6d., A CHEAP EDITION.

### Cassell's NEW French Dictionary.

Compiled from the best Authorities in both Languages. Revised and considerably enlarged by

**JAMES BOÏELLE, B.A. (Univ. Gall.).**

This Cheap Edition has been newly revised by

**DE V. PAYEN-PAYNE,**

Assistant Examiner in French in the University of London.

Cassell's New French Dictionary, which was originally published at 7s. 6d., is now placed within universal reach by its issue at a popular price. The New Dictionary contains upwards of 1,200 pages—a large increase on the number of pages in the previous edition. Extra crown 8vo, strongly bound in cloth, price 3s. 6d.

### SPECIAL FEATURES OF THIS GREAT WORK.

1. It is set in a new type specially selected for its clearness.
2. It consists of over 1,200 pages, and is beautifully printed on paper of excellent quality.
3. Many thousands of new words and phrases, idioms and idiomatic expressions, and hundreds of proverbs with their English equivalents, have been selected and included after extensive research.
4. The latest classical, general, scientific, commercial, and naval and military terms are incorporated.
5. The pronunciation of words where necessary is carefully indicated.
6. In the English-French part the notation of words has been carefully marked throughout.
7. The different prepositions affixed to verbs have been printed in bold clarendon type.
8. The list of geographical names of countries and places has been largely increased.

### PRESS OPINIONS.

"QUITE THE BEST DICTIONARY of its size that has been issued."—*Globe*.

"THE BEST at the price in the market."—*London Quarterly Review*.

"THE BEST French and English Dictionary of an ordinary size in existence."—*Critical Review, Paris*.

### OPINIONS OF EDUCATIONAL AUTHORITIES.

"Your 'NEW French Dictionary' is a magnificent book, and a marvel at the price. It will meet every difficulty of the young student. I should be doing my pupils a great injustice did I not introduce them to this excellent work—it will be used here henceforth."—J. McCUBBIN, B.A., Burgh Academy, Kilsyth, Glasgow.

"It appears to me to be the best dictionary at the price, or at anything like the price. It is an excellent piece of work, and ought to prove the standard School and College Dictionary."—Rev. HENRY GEE, D.D., Master of University College, Durham.

"It strikes me as a good working dictionary, carefully edited, convenient in size, and well printed."—H. J. MAC-KINDER, M.A., University College, Reading.

Dr. ROBERTSON, D.D., of King's College, London, considers it to be a work of great value and completeness.

A prospectus of CASSELL'S NEW FRENCH DICTIONARY will be sent post free on application.

CASSELL & COMPANY, LTD., La Belle Sauvage, London, E.C.

# MACMILLAN & CO.'S LIST.

A NEW SERIES. FIRST VOLUME JUST READY.

## SIEPMANN'S CLASSICAL FRENCH TEXTS.

**LES CARACTÈRES OU LES MŒURS DE CE SIÈCLE.** Par LA BRUYÈRE. Adapted and Edited by EUGÈNE PELLISSIER. Globe 8vo, 2s. 6d.

FOURTH EDITION, REVISED AND ENLARGED. NOW READY.

## ELEMENTARY TRIGONOMETRY.

By H. S. HALL and S. R. KNIGHT. Globe 8vo, 4s. 6d.

This edition is adapted to all the modern requirements. In particular, it contains Graphs of the Trigonometrical Functions, and Examples of their use. A special feature is the large number of Examples in illustration of Four-figure Tables. Tables of Logarithms, Antilogarithms, Natural and Logarithmic Functions (specially compiled) are given at the end of the book. \*\*\* The old edition is still on sale.

## A New Arithmetic by S. L. Loney and L. W. Grenville.

### A SHILLING ARITHMETIC.

By S. L. LONEY, M.A., and L. W. GRENVILLE, M.A. 1s. With Answers, 1s. 6d.

[Shortly.]

NEW BOOK BY SIR OLIVER LODGE.

## EASY MATHEMATICS: Chiefly Arithmetic.

Being a Collection of Hints to Teachers, Parents, self-taught Students, and Adults, and containing a Summary or Indication of most things in Elementary Mathematics useful to be known.

By SIR OLIVER LODGE, F.R.S., D.Sc., Principal of the University of Birmingham. Crown 8vo, 4s. 6d.

*SCHOOL GOVERNMENT CHRONICLE.*—"It is excellent to have a book of Arithmetic and easy Mathematics written from a standpoint so authoritative, yet so frankly devoted to promoting the freedom of teaching from the trammels of obsolete authorities."

## ELEMENTS OF QUANTITATIVE ANALYSIS.

By G. H. BAILEY, D.Sc., Ph.D. Globe 8vo, 4s. 6d.

# BOARD OF EDUCATION NEW REGULATIONS.

## GEOGRAPHY FOR SECONDARY SCHOOLS.

Just Published. Globe 8vo, 3s. 6d.

**AN INTRODUCTION TO PRACTICAL GEOGRAPHY.** By A. T. SIMMONS, B.Sc., Associate of the Royal College of Science, London, and HUGH RICHARDSON, M.A., Senior Science Master of Bootham School, York.

\* \* \* *The Exercises in this book include the practical work suggested in the New Regulations issued by the Board of Education.*

F. WINCH, M.A. 1s.                                                          |

*PRACTICAL TEACHER.*—"This series is likely to satisfy a long felt want in connection with the teaching of English literature in Secondary Schools. The series is carefully graduated, and each book is provided with a useful introduction, notes, a good glossary, a set of questions on the text, and suggestions for essays. The volumes are attractive in appearance, well printed and well bound, and can be warmly recommended."
